Early Historical Period.—With the emperor Richi, who came to the throne A.D. 400, the historical period may be said to commence; for though the chronology of the records is still questionable, the facts are generally accepted as credible. Conspicuous loyalty towards the sovereign was not an attribute of the Japanese Imperial family in early times. Attempts to usurp the throne were not uncommon, though there are very few instances of such essays on the part of a subject. Love or lust played no insignificant part in the drama, and a common method of placing an irate sovereign was to present a beautiful damsel for his delectation. The veto of consanguinity did not receive very strict respect in these matters. Children of the same father might intermarry, but not those of the same mother; a canon which becomes explicable on observing that as wives usually lived apart from their husbands and had the sole custody of their offspring, two or more families often remained to the end unconscious of the fact that they had a common sire. There was a remarkable tendency to organize the nation into groups of persons following the same pursuit or charged with the same functions. A group thus composed was called be. The heads of the great families had titles—as omi, muraji, misakke, wake, &c.—and affairs of state were administered by the most renowned of these nobles, wholly subject to the sovereign's ultimate will. The provincial districts were ruled by scions of the Imperial family, who appear to have been, on the whole, entirely subservient to the Throne. There were no tribunals of justice; the ordeal of boiling water or heated metal was the sole test of guilt or innocence, apart, of course, from confession, which was often exacted under menace of torture. A celebrated instance of the ordeal of boiling water is recorded in 415, when this device was employed to correct the genealogies of families suspected of falsely claiming descent from emperors or divine beings. The test proved efficacious, for men conscious of forgery refused to undergo the ordeal. Deprivation of rank was the lightest form of punishment; death the commonest, and occasionally the whole family of an offender became serfs of the house against which the offence had been committed or which had been instrumental in disclosing a crime. There are, however, frequent examples of wrong-doing expiated by the voluntary surrender of lands or other property. We find several instances of that extreme type of loyalty which became habitual in later ages—suicide in preference to surviving a deceased lord. The sovereigns of the successive sovereigns of these early times appear to have ruled over cleared areas, and their object was the people's welfare. But there were two notable exceptions—Yuriaku (457-479) and Muretsu (490-506). The former slew men ruthlessly in fits of passion or resentment, and the latter was the Nero of Japanese history, a man who loved to witness the agony of his fellows and knew no sentiment of mercy or remorse. Yet even Yuriaku did not fail to promote industrial pursuits. Skilled artisans were obtained from Korea, and it is related that, in 462, this monarch induced the empress and the ladies of the palace to plant mulberry trees with their own hands in order to encourage sericulture. Throughout the 5th and 6th centuries many instances are recorded of the acquisition of landed estates by the Throne, and their occasional bestowal upon princes or Imperial consorts, such gifts being frequently accompanied by the assignment of bodies of agriculturists who seem to have accepted the position of serfs. Meanwhile Chinese civilization was gradually becoming known, either by direct contact or through Korea. Several immigrations of Chinese
or Korean settlers are on record. No less than 7093 householders of Chinese subjects came, through Korea, in 540, and one of their number received high rank together with the post of director of the Imperial treasury. From these facts, and from a national register showing the derivation of all the principal families in Chinese and Korean blood runs in the veins of many Japanese subjects.

The most signal and far-reaching event of this epoch was the importation of the Buddhist creed, which took place in 552.

A Korean monarch acted as propagandist, sending a special envoy with a bronze image of the Buddha and with several volumes of the Sutras. Unfortunately the coming of the foreign faith happened to synchronize with an epidemic of plague, and conservatives at the Imperial court were easily able to attribute this visitation to resentment on the part of the ancestral deities against the invasion of Japan by an alien creed. Thus the spread of Buddhism was checked; but only for a time. Thirty-five years after the coming of the Sutras, the first temple was erected to enshrine a wooden image of the Buddha 16 ft. high. It has often been alleged that the question between the imported and the indigenous cults had to be decided by the sword. The statement is misleading. That the final adoption of Buddhism resulted from a war is true, but its adoption or rejection did not constitute the motive of the combat. A contest for the succession to the throne at the opening of Sujun's reign (588-592) found the partisans of the Indian faith ranged on one side, its opponents on the other, and in a moment of stress the leaders of the former, Soma and Prince Umayado, vowed to erect Buddhist temples should victory rest on their arms. From that time the future of Buddhism was assured. In 588 Korea sent Buddhist relics, Buddhist priests, Buddhist ascetics, architects of Buddhist temples, and casters of Buddhist images. She had already sent men learned in divination, in medicine, and in the calendar. The building of temples began to be fashionable in the closing years of the 6th century, as did also abdication of the world by people of both sexes; and a census taken in 623, during the reign of the emperor Suiko (583-628), showed that there were then 46 temples, 816 priests and 569 nuns in the empire. This rapid growth of the alien faith was due mainly to two causes: first, that the empress Suiko, being of the Soga family, naturally favoured a creed which had found its earliest Japanese patron in the great statesman and general, Soga no Umako; secondly, that one of the most illustrious scholars and philosophers ever possessed by Japan, Prince Shōtoku, devoted all his energies to fostering Buddhism.

The adoption of Buddhism was an important step in the acquisition of a practical religion with a code of clearly defined morality in place of the amorphous and jejune cult of Shintō. It meant the introduction of Chinese civilization. Priests and scholars crossed in numbers from China, and men passed over from Japan to study the Sutras at what was then regarded as the fountain-head of Buddhism. There was also a constant stream of immigrants from China and Korea, and the result may be gathered from the fact that a census taken of the Japanese nobility in 814 indicated 382 Korean and Chinese families against only 706 of pure Japanese origin. The records show that in costume and customs a signal advance was made towards refinement. Hair-ornaments of gold or silver chiselled in the form of flowers; caps of sarsenet in twelve special tints, each indicating a different grade; garments of brocade and embroidery with figured thread of various colours—all these were worn on ceremonial occasions; the art of painting was introduced; a recorder’s office was established; perfumes were largely employed; court picnics to gather medicinal herbs were instituted, princes and princesses attending in brilliant raiment; Chinese music and dancing were introduced; cross bows and catapults were added to the weapons of war; domestic architecture made signal strides in conformity to the examples of Buddhist sacred edifices, which, from the first, showed magnificence of dimension and decoration hitherto unconceived in Japan; the arts of metal-casting and sculpture underwent great improve-

ment; Prince Shōtoku compiled a code, commonly spoken of as the first written laws of Japan, but in reality a collection of maxims evincing a moral spirit of the highest type. In some respects, however, there was no improvement. The succession to the throne still tended to provoke disputes among the Imperial princes; the sword constituted the principal weapon of punishment, and torture the chief judicial device. Now, too, for the first time, a noble family is found seeking to usurp the Imperial authority. The head of the Soga house, Umako, having compassed the murder of the emperor Sujun and placed on the throne his own niece (Suiko), swept away all opposition to the latter’s successor, Jomei, and controlled the administration of state affairs throughout two reigns. In all this he was strongly seconded by his son, Iruka, who even surpassed him in contumelious assumption of power and parade of dignity. Iruka was slain in the presence of the empress Kögyoku by Prince Naka, with the assistance of the minister of the interior, Kamako, and it is not surprising to find the empress (Kögyoku) abdicating immediately afterwards in favour of Kamako’s protégé, Prince Karu, who is known in history as Kōtoku. This Kamako, planner and leader of the conspiracy which overthrew the Soga, is remembered by posterity under the name of Kamatarî and as the founder of the most illustrious of Japan’s noble houses, the Fujiwara. At this time (645), a habit which afterwards contributed materially to the effacement of the Throne’s practical authority was inaugurated. Prince Furubito, pressed by his brother, Prince Karu, to assume the sceptre in accordance with his right of primogeniture, made his refusal peremptory by abandoning the world and taking the tonsure. This retirement to a monastery was afterwards dictated to several sovereigns by ministers who found that an active occupant of the throne impeded their own exercise of administrative autocracy. Furubito’s recourse to the tonsure proved, however, to be merely a cloak for ambitious designs. Before a year had passed he conceived to usurp the throne and was put to death with his children, his consorts strangling themselves. Suicide to escape the disgrace of defeat had now become a common practice. Another prominent feature of this epoch was the prevalence of superstition. The smallest incidents—the growing of two lotus flowers on one stem; a popular ballad; the reputed song of a sleeping monkey; the condition of the water in a pond; rain without clouds—all these and cognate trifles were regarded as omens; wizards and witches deluded the common people; a strange form of caterpillar was worshipped as the god of the everlasting world, and the peasants impoverished themselves by making sacrifices to it. This fascinating epoch is now reached, the first legislative era of early Japanese history. It commenced with the reign of the emperor Kōtoku (645), of whom the Chronicles say First that he “honoured the religion of Buddha and defaced Shintō”; that he “was of gentle disposition; loved men of learning; made no distinction of noble and mean, and continually dispensed beneficent edicts.” The customs calling most loudly for reform in his time were abuse of the system of forced labour; corrupt administration of justice; spoliation of the peasant class; assumption of spurious titles to justify oppression; indiscriminate distribution of the families of slaves and serfs; diversion of taxes to the pockets of collectors; formation of great estates, and a general lack of administrative centralization. The first step of reform consisted in ordering the governors of provinces to prepare registers showing the numbers of freemen and serfs within their jurisdiction as well as the area of cultivated land. It was further ordained that the advantages of irrigation should be shared equally with the common people; that no local governor might try and decide criminal cases while in his province; that any one convicted of accepting bribes should be liable to a fine of double the amount as well as to other punishment; that in the Imperial court a box should be placed for receiving petitions and a bell hung to be sounded in the event of delay in answering them or unfairness in dealing with them; that all absorption of land into great estates should cease; that barriers, outposts, guards and post-horses should be
provided; that high officials should be dowered with hereditary estates by way of emolument, the largest of such grants being 3000 homesteads; that men of unblemished character and proved capacity should be appointed aldermen for adjudicating criminal matters; that there should be chosen as clerks for governors and vice-governors of provinces men of solid competence "skilled in writing and arithmetic"; that the land should be parcelled out in fixed proportions to every adult unit of the population with right of tenure for a term of six years; that forced labour should be commuted for taxes of silk and cloth; and that for fiscal and administrative purposes households should be organized in groups of five, each group under an elder, and ten groups forming a township, which, again, should be governed by an elder. Incidentally to these reforms many of the evil customs of the period were expunged. The most important of these is that when they visited the capital the were accustomed to travel with great retinues who appear to have constituted a charge on the regions through which they passed. The law now limited the number of a chief governor's attendants to nine, and forbade him to use official houses or to fare at public cost unless journeying on public business. Again, men who had acquired some local distinction, though they did not belong to noble families, took advantage of the absence of historical records or official registers, and, representing themselves as descendants of magnates to whom the charge of public granaries had been entrusted, succeeded in usurping valuable privileges. The office of provincial governor had in many cases become hereditary, and not only were governors largely independent of Imperial control, but also, since the adoption of the new system there had grown up about these officials a population relying largely on the law of force. Kōtoku's reforms sought to institute a system of temporary governors, and directed that all arms and armour should be stored in arsenals built in waste places, except in the case of provinces adjoining lands where unsubdued aborigines (Yemishi) dwelt. Punishments were drastic, and in the case of a man convicted of treason, all his children were executed with him, his wives and consorts committing suicide. From a much earlier age suicide had been freely resorted to as the most honourable exit from pending disgrace, but as yet the samurai's method of disembowelment was not employed, strangulation or cutting the throat being the regular practice. Torture was freely employed and men often died under it. Signal abuses prevailed in many parts where the government failed to pay the imperial revenues. Though thus it has been shown that from early days the numerous scions of the Imperial family had generally been provided for by grants of provincial estates. Gradually the descendants of these men, and the representatives of great families who held hereditary rank, extended their domains unscrupulously, employing forced labour to reclaim lands, which they let to the peasants, not hesitating to appropriate large slices of public property, and remitting to the central treasury only such fractions of the taxes as they found convenient. So prevalent had the exaction of forced labour become that country-folk, repairing to the capital to seek redress of grievances, were often compelled to remain there for the purpose of carrying out some work in which dignitaries of state were involved. Moreover, one evil led to another. Thus the exchange of sovereign involved a vast quantity of unproductive toil. It is recorded that in 656, when the empress Saimëi occupied the throne, a canal was dug which required the work of 30,000 men and a wall was built which had employed 70,000 men before its completion. The construction of tombs for grandees was another heavy drain on the people's labour. Some of these sepulchres attained enormous dimensions—that of the emperor Ojin (270-310) measures 2312 yds. round the outer moat and is some 60 ft. high; the emperor Nintoku's (313-309) is still larger, and there is a tumulus in Kawachi on the flank of which a good-sized village has been built. Kōtoku's laws provided that the tomb of a prince should not be so large as to require the work of more than 1000 men for seven days, and that the grave of a petty official must be completed by 50 men in one day. Moreover, it was forbidden to bury with the body gold, silver, copper, iron, jewelled shirts, jade armour or silk brocade. It appears that the custom of suicide or sacrifice at the tomb of grandees still survived, and that people sometimes cut off their hair or stabbed their thighs preparatory to declaring a threnody. All these practices were vetoed. Abuses had grown up even in connexion with the Shintō rite of purgation. This rite required not only the reading of rituals but also the offering of food and fruits. For the sake of these edibles the rite was often harshly enforced, especially in connexion with pollution from contact with corpses; and thus it fell out that when of two brothers, returning from a scene of forced labour, one lay down upon the road and died, the other, dreading the cost of compulsory purgation, refused to take up the body. Many other evil customs came into existence in connexion with this rite, and all were condemned by the new system. The least important of the reforms thus introduced was the organization of the ministry after the model of the Tang dynasty of China. Eight departments of state were created, and several of them received names which are similarly used to this day. Not only the institutions of China were borrowed but also her official costumes. During Kōtoku's reign 19 grades of head-gear were instituted, and, in the time of Tenchi (668-671) the number was increased to 26, with corresponding robes. Throughout this era intercourse was frequent with China, and the spread of Buddhism continued steadily. The empress Saimëi (655-661), who succeeded Kōtoku, was an earnest patron of the faith. By her command several public expositions of the Sutras were given, and the building of temples went on in many districts, estates being liberally granted for the maintenance of the places of worship. The Fujiwara Era.—In the Chronicles of Japan the year 672 is treated as a kind of interregnum. It was in truth a year of something like anarchy, a great part of it being occupied by a conflict of unparalleled magnitude between Prince Ōtomo (called in history Emperor Kōbun) and Prince Ōama, who emerged victorious and is historically entitled Temmu (673-686). The four centuries that followed are conveniently designated the Fujiwara era, because throughout that long interval affairs of state were controlled by the Fujiwara family, whose daughters were given as consorts to successive sovereigns and whose sons filled all the high administrative posts. It has been related above that Kamako, chief of the Shintō officials, inspired the assassination of the Soga chief, Iruka, and thus defeated the ascendant priest who was the favourite, but the empress Kōgyoku, Kamako's brother, had grown abhorrent to a few generations as Kamatari, was thenceforth regarded with unlimited favour by successive sovereigns, and just before his death in 670, the family name of Fujiwara was bestowed on him by the emperor Tenchi. Kamatari himself deserved all the honour he received, but his descendants abused the high trust reposed in them, reduced the sovereign to a mere puppet, and exercised Imperial authority without openly usurping it. Much of this was due to the adoption of Chinese administrative systems, a process which may be said to have commenced during the reign of Kōtoku (643-654) and to have continued almost uninterrupted until the 11th century. Under these systems the emperor ceased directly to exercise supreme civil or military power: he became merely the nominal head of state, the executive and administrative functions being delegated to a bureaucracy and the military to a separate class. Possibly he had the custom held of transferring the capital to a new site on each change of sovereign, and had the growth of luxurious habits been thus checked, the comparatively simple life of early times might have held the throne and the people in closer contact. But from the beginning of the 8th century a strong tendency to avoid these costly migrations developed itself. In 709 the court took up its residence at Nara, remaining there until 784: ten years after the latter date Kōto became the permanent metropolis. The capital at Nara—established during the reign of the empress Gemmyō (708-715)—was built on the plan of the Chinese metropolis. It had nine gates and nine avenues, the palace being situated in the northern section and approached by a broad, straight avenue, which divided the city into two perfectly equal halves, all the other streets running parallel to this main
avenue or at right angles to it. Seven sovereigns reigned at Hei-jō (castle of peace), as Nara is historically called, and, during this period of 75 years, seven of the grandest temples ever seen in Japan were erected; a multitude of idols were cast, among them a colossal bronze Daibutsu 53 ft. high; large temple-bells were founded, and all the best artists and artisans of the era devoted their services to these works. This religious mania reached its acme in the reign of the emperor Shōmu (724-748), a man equally superstitious and addicted to display. In Temmu's time the custom had been introduced of compelling large numbers of persons to enter the Buddhist priesthood with the object of propitiating heaven's aid to heal the illness of an illustrious personage. In Shōmu's day every natural calamity or abnormal phenomenon was regarded as calling for religious services on a large scale, and the great expense involved in all these buildings and ceremonial, supplemented by lavish outlays on court pageants, was severely felt by the nation. The condition of the agricultural class, who were the chief tax-payers, was further aggravated by the operation of the emperor Kōtoku's land system, which rendered tenure so uncertain as to deter improvements. Therefore, in the Nara epoch, the principal occupation of the landed classes, even if they did not possess land, was to be recognized. Attention was also paid to road-making, bridge-building, river control and house construction, a special feature of this last being the use of tiles for roofing purposes in place of the shingles or thatch hitherto employed. In all these steps of progress Buddhist priests took an active part. Costumes were now governed by purely Chinese fashions. This change had been gradually introduced from the time of Kōtoku's legislative measures—generally called the Taikwa reforms after the name of the era (645-659) of their adoption—and was rendered more thorough by supplementary enactments in the period 701-703 while Mommu occupied the throne. Ladies seem by this time to have abandoned the strings of beads worn in early eras round the neck, wrists and ankles. They used ornaments of gold, silver or jade in their hair, but in other respects their habiliments closely resembled those of men, and to make the difference still less conspicuous they straddled their horses when riding. Attempts were made to facilitate travel by establishing stores of grain along the principal highways, but as yet there were no hosterries, and if a wayfarer did find shelter in the house of a friend, he had to hivouac as best he could. Such a state of affairs in the provinces offered a marked contrast to the luxurious indulgence which had now begun to prevail in the capital. There festivals of various kinds, dancing, verse-composing, flower picnics, archery, polo, football—of a very refined nature—hawking, hunting and gambaling absorbed the attention of the aristocracy. Nothing disturbed the serenity of the epoch except a revolt of the northern Yemishi, which was temporarily subdued by a Fujiwara general, for the Fujiwara had not yet laid aside the martial habits of their ancestors. In 704 the Imperial capital was transferred from Nara to Kiōto by order of the emperor Kwammu, one of the greatest of Japanese sovereigns. Education, the organization of the civil service, riparian works, irrigation improvements, the separation of religion from politics, the abolition of sinewine offices, devices for encouraging and assisting agriculture, all received attention from him. But a twenty-two years' campaign against the northern Yemishi; the building of numerous temples; the extension of such a passionate love of the chase that the chaus really organized 140 hunting excursions during his reign of 25 years; profuse extravagance on the part of the aristocracy in Kiōto and the exactions of provincial nobles, conspired to sink the working classes into greater depths of hardship than ever. Farmers had to borrow money and seed-rice from local officials or Buddhist temples, hypothecating their land as security; thus the temples and the nobles extended their already great estates, whilst the agricultural population gradually fell into a position of servile toil.

Meanwhile the Fujiwara family were steadily developing their influence in Kiōto. Their methods were simple but thoroughly effective. By progressive exercises of arbitrariness they gradually contrived that the choice of a consort for the sovereign should be legally limited to a daughter of their family, five branches of which were specially designated to that honour through all ages. When a son was born to an emperor, the Fujiwara took the child into one of their palaces, and on his accession to the throne, the particular Fujiwara noble that happened to be his maternal grandfather became regent of the empire. This office of regent, created towards the close of the 9th century, was part of the scheme; for the Fujiwara did not allow the purple to be worn by a sovereign after he had attained his majority, or, if they suffered him to wield the sceptre during a few years of manhood, they compelled him to abdicate so soon as any independent aspirations began to impair his docility; and since for the purposes of administration in these constantly recurring minorities an office more powerful than that of prime minister (dajo daljin) was needed, they created that of regent (kwambaku), making it hereditary in their own family. In fact the history of Japan from the 9th to the 10th century may be described as the history of four families, the Fujiwara, the Taira, the Minamoto and the Tokugawa. The Fujiwara governed through the emperor; the Taira, through the Minamoto; the Minamoto, through the emperor; the Tokugawa based their power on matrimonial alliances with the Throne; the Taira, the Minamoto and the Tokugawa based theirs on the possession of armed strength which the throne had no competence to control. There another broad line of cleavage is seen. Throughout the Fujiwara era the centre of political gravity remained always in the court. Throughout the era of the Taira, the Minamoto and the Tokugawa the centre of political gravity was transferred to a point outside the court, the headquarters of a military feudalism. The process of transfer was of course gradual. It commenced with the granting of large tracts of tax-free lands to noblemen who had wrested them from the aborigines (Yemishi) or had reclaimed them by means of serf-labour. These tracts lay for the most part in the northern and eastern parts of the main island, at such a distance from the capital that the writ of the central government did not run there; and since such lands could be rented at rates considerably less than the tax levied on farms belonging to the state, the peasants by degrees abandoned the latter and settled on the former, with the result that the revenues of the Throne steadily diminished, while those of the provincial magnates correspondingly increased. Moreover, in the 7th century, at the time of the adoption of Chinese models of administration and organization, the court began to rely for military protection on the services of guards temporarily drafted from the provincial troops, and, during the protracted struggle against the Yemishi in the north and east in the 8th century, the fact that the power of the sword lay with the provinces began to be noted.

Kiōto remained the source of authority. But with the growth of luxury and effeminacy in the capital the Fujiwara became more and more averse from the hardships of campaigning, and in the 9th and 10th centuries, respectively, the Taira and the Minamoto families came into prominence as military leaders, the field of the Taira operations being the south and west, that of the Minamoto the north and east. Had the court reserved to itself and munificently exercised the privilege of rewarding these services, it might still have retained power and wealth. But by a sanguinary and corruptious policy the former, the Taira, not only were the Minamoto let slip out of their hands but also they assumed the right of recompening their followers with tax-free estates, an example which the Taira leaders quickly followed. By the early years of the 12th century these estates had attracted the great majority of the farming class, whereas the public land was left wild and uncultivated. In a word, the court and the Fujiwara found themselves without revenue, while the coffers of the Taira and the Minamoto were full: the power of the purse and the power of the sword had passed effectually to the two military families. Prominent features of the moral condition of the capital at this era (12th century) were superstition, refinement and effeminacy. A belief was widely held that calamity...
could not be averted or success insured without recourse to Buddhist priests. Thus, during a reign of only 13 years at the close of the 11th century, the emperor Shirakawa caused 5430 religious pictures to be painted, ordered the casting of 127 statues of Buddha, each 11 ft. high, of 3150 life-sized images and of 2030 smaller idols, and constructed 21 large temples as well as 446,630 religious edifices of various kinds. Side by side with this faith in the supernatural, sexual immorality prevailed widely, never accompanied, however, by immodesty. Literary proficiency ranked as the be-all and end-all of existence. “A man estimated the conjugal qualities of a young lady by her skill in finding scholarly similes and by her perception of the cadence of words. If a woman was so fortunate as to acquire a reputation for learning, she possessed a certificate of universal virtue and amiability.” All the pastimes of the Nara epoch were pursued with increased fervour and elaboration in the Heian (Kiotó) era. The building of fine dwelling-houses and the laying out of landscape gardens took place on a considerable scale, though in these respects the ideals of later ages were not yet reached. As to costume, the close-fitting, business-like and comparatively simple dress of the 8th century was exchanged for a much more elaborate style. During the Nara epoch the many-hued hats of China had been abandoned for a sober headgear of silk gauze covered with black lacquer, but in the Heian era this was replaced by an imposing structure glistening with jewels: the sleeves of the tunic grew so long that they hung to the knees when a man’s arms were crossed, and the trousers were made so full and baggy that they resembled a divided skirt. From this era may be said to have commenced the manufacture of the tasteful and gorgeous textile fabrics for which Japan afterwards became famous. “A fop’s ideal was to wear several suits, one above the other, disposing them so that their various colours showed in harmoniously contrasting lines at the folds on the bosom and at the edges of the long sleeves. A successful costume created a sensation in court circles. Its wearer became the hero of the hour, and under the pernicious influence of such ambition men began even to powder their faces and rouge their cheeks like women. As for the fair sex, their costume reached the acme of unpracticality and extravagance in this epoch. Long flowing hair was essential, and what with developing the volume and multiplying the number of her robes, and wearing above her trousers a many-plied train, a grand lady of the time always seemed to be struggling to emerge from a catarrh of habiliments.” It was fortunate for Japan that circumstances favoured the growth of a military class in this age of her career, for had the conditions existing in Kiotó during the Heian epoch spread throughout the whole country, the penalty never escaped by a demoralized nation must have overtaken her. But by the middle of the 12th century the pernicious influence of the Fujiwara had paled before that of the Taira and the Minamoto, and a question of succession to the throne marshalled the latter two families in opposite camps, thus inaugurating an era of civil war which held the country in the throes of almost continuous battle for 450 years, placed it under the administration of a military feudalism, and educated a nation of warriors. At first the Minamoto were vanquished and driven from the capital, Kiyomori, the Taira chief, being left complete master of the situation. He established his headquarters at Rokuharu, in Kiotó, appropriated the revenues of 30 out of the 60 provinces forming the empire, and filled all the high offices of state with his own relatives or connexions. But he made no radical change in the administrative system, preferring to follow the example of the Fujiwara by keeping the throne in the hands of minors. And he committed the blunder of sparing the lives of two youthful sons of his defeated rival, the Minamoto chiefs. They were Yoritomo and Ositane; the latter the greatest strategist Japan ever produced, with perhaps one exception; the former, one of her three greatest statesmen, the founder of military feudalism. By these two men the Taira were so completely overthrown that they never raised their heads again, a sea-fight at Dan-no-ura (1155) giving them the coup de grâce. Their supremacy had lasted 22 years.

The Feudal Era.—Yoritomo, acting largely under the advice of an astute counsellor, Oye no Hiromoto, established his seat of power at Kamakura, 300 m. from Kiotó. He saw that, effectively to utilize the strength of the military class, propinquity to the military centres in the provinces was essential. At Kamakura he organized an administrative body similarly in mechanism to that of the metropolitan government but studiously differentiated in the matter of nomenclature. As to the country at large, he brought it effectually under the sway of Kamakura by placing the provinces under the direct control of military governors, chosen and appointed by himself. No attempt was made, however, to interfere in any way with the polity in Kiotó: it was left intact, and the nobles about the Throne—kuge (courty houses), as they came to be called in contradistinction to the bake (military houses)—were placated by renewal of their property titles. The Buddhist priests, also, who had been treated most harshly during the Taira tenure of power, found their fortunes restored under Kamakura’s sway. Subsequently Yoritomo obtained for himself the title of sei-i-tai-shōgun (barbarian-subduing generalissimo), and just as the office of regent (kambaku) had long been hereditary in the Fujiwara family, so the office of shōgun became thenceforth hereditary in that of the Minamoto. These changes were radical. They signified a complete shifting of the centre of power. During eighteen centuries from the time of Jimmu’s invasion—as Japanese historians reckon—the country had been ruled from the south; now the north became supreme, and for a civilan administration a purely military was substituted. But there was no composure towards the court in Kiotó. Kamakura made a show of seeking Imperial sanction for every one of its acts, and the whole of the military administration was carried on in the name of the emperor by a shōgun who called himself the Imperial deputy. In this respect things changed materially after the death of Yoritomo (1198). Kamakura then became the scene of a drama analogous to that acted in Kiotó from the 10th century.

The Hōjō family, to which belonged Masa, Yoritomo’s consort, assumed towards the Kamakura shōgun an attitude similar to that previously assumed by the Fujiwara family towards the emperor in Kiotó. A child, who on the state occasions was carried to the council chamber in Masa’s arms, served as the nominal repository of the shōgun’s power, the functions of administration being discharged in reality by the Hōjō family, whose successive heads took the name of shikkken (constable). At first care was taken to have the shōgun’s office filled by a near relative of Yoritomo; but after the death of that great statesman’s two sons and his nephew, the puppet shōguns were taken from the ranks of the Fujiwara or of the Imperial princes, and were deposed so soon as they attempted to assert themselves. What this meant becomes apparent when we note that in the interval of 83 years between 1220 and 1308, there were six shōguns whose ages at the time of appointment ranged from 3 to 16. Whether, if events had not forced their hands, the Hōjō constables would have maintained towards the Throne the reverent demeanour adopted by Yoritomo must remain a matter of conjecture. What actually happened was that the ex-emperor, Go-Toba, made an ill-judged attempt (1221) to break the power of Kamakura. He issued a call to arms which was responded to by so many thousands of commoners and as many soldiers of Taira extraction. In the brief struggle that ensued the Imperial partisans were wholly shattered, and the direct consequences were the dethronement and exile of the reigning emperor, the banishment of his predecessor together with two princes of the blood, and the compulsory adoption of the succession by Go-Toba; whereas the indirect consequence was that the succession to the throne and the tenure of Imperial power fell under the dictation of the Hōjō as they had formerly fallen under the direction of the Fujiwara. Yoshihori, then head of the Hōjō family, installed his brother, Tokitoki, as military governor of Kiotó, and confiscating about 300 estates, the property of those who had espoused the Imperial cause, distributed these lands among the adherents of his own family, thus
greatly strengthening the basis of the feudal system. "It fared with the Hōjō as it had fared with all the great families that preceded them: their own misrule ultimately wrought their ruin. Their first eight representatives were talented and upright administrators. They took justice, simplicity and truth for guiding principles; they despised luxury and pomp; they never aspired to high official rank; they were content with two provinces for estates, and they sternly repelled the effeminate, depraved customs of Kiōto." Thus the greater part of the 13th century was, on the whole, a golden era for Japan, and the lower orders learned to welcome feudalism. Nevertheless no century furnished more conspicuous illustrations of the peculiarly Japanese system of vicarious government. Children occupied the position of shōgun in Kamakura under authority emanating from children on the throne in Kiōto; and members of the Hōjō family as shikken administered affairs at the mandate of the child shōguns. Through all three stages in the dignities of mikado, shōgun and shikken, the strictly regulated principle of heredity was maintained, according to which no Hōjō shikken could ever become shōgun; no Minamoto or Fujiwara could occupy the throne. At the beginning of the 14th century, however, several causes combined to shake the supremacy of the Hōjō. Under the sway of the ninth shikken (Takatoki), the austere simplicity of life and earnest discharge of executive duties which had distinguished the early chiefs of the family were exchanged for luxury, debauchery and perfunctory government. Thus the management of fiscal affairs fell into the hands of Takesuke, a man of usurious instincts. It had been the wise custom of the Hōjō constables to store grain in seasons of plenty, and distribute it at low prices in times of dearth. There occurred at this epoch a succession of bad harvests, but instead of opening the state granaries with benevolent liberality, Takesuke sold their contents at the highest obtainable rates; and, by way of contrast to the prevailing indigence, the people saw the constable in Kamakura affecting the pomp and extravagance of a sovereign waited upon by 37 mistresses, supporting a band of 2000 dancers, and keeping a pack of 5000 fighting dogs. The throne happened to be then occupied (1319-1338) by an emperor, Go-Daigo, who had reached full maturity before his accession, and was correspondingly averse from acting the puppet part assigned to the sovereigns of his time. Female influence contributed to his impatience. One of his concubines bore a son for whom he sought to obtain nomination as prince imperial, in defiance of an arrangement made by the Hōjō that the succession should pass alternately to the senior and junior branches of the Imperial family. Kamakura refused to entertain Go-Daigo's project, and thenceforth the child's mother importuned her sovereign and lover to overthrow the Hōjō. The entourage of the throne in Kiōto at this time was a counterpart of former eras. The Fujiwara, indeed, willed nothing of their ancient influence. They had been divided by the Hōjō into five branches, each endowed with an equal right to the office of regent, and their strength was thus dissipated in struggling among themselves for the possession of the prize. But what the Fujiwara had done in their days of greatness, what the Taira had done during their brief tenure of power, the Saionji were now doing, namely, aspiring to furnish prime ministers and empresses from their own family solely. They had already given consorts to five emperors in succession, and jealous rivals were watching keenly to attack this clan which threatened to usurp the place long held by the most illustrious family in the land. A petty incident disturbed this state of very tender equilibrium before the plan of the Hōjō's enemies had fully matured, and the emperor presently found himself, with courtiers, on the island of Oki. But there now appeared upon the scene three pairs of great rivals, the Hōjō, the Minamoto, Nitta Yoshisada and Ashikaga Takauji. The first espoused from the outset the cause of the throne and, though commanding only a small force, held the Hōjō troops in check. The last two were both of Minamoto descent. Their common ancestor was Minamoto Yoshiyone, whose exploits against the northern Yemishi in the second half of the 11th century had so impressed his countrymen that they gave him the title of Hachiman Tarō (first-born of the god of war). Both men took the field originally in the cause of the Hōjō, but at heart they desired to be avenged upon the latter for disloyalty to the Minamoto. Nitta Yoshisada marched suddenly against Kamakura, carried it by storm and committed the city to the flames. Ashikaga Takauji occupied Kiōto, and with the suicide of Takatoki the Hōjō fell finally from rule after 115 years of supremacy (1219-1334). The emperor now returned from exile, and his son, Prince Moriyoshi, having been appointed to the office of shōgun at Kamakura, the restoration of the administrative power to the Throne seemed an accomplished fact.

Go-Daigo, however, was not in any sense a wise sovereign. The extermination of the Hōjō placed wide estates at his disposal, but instead of rewarding those who had deserved well of him, he used a great part of them to enrich his favourites, the companions of his dissipation. Ashikaga Takauji sought just such an opportunity. The following year (1335) saw him proclaiming himself shōgun at Kamakura, and after a complicated pageant of incidents, the emperor Go-Daigo was obliged once more to fly from Kiōto. He carried the regalia with him, refused to submit to Takauji, and declined to recognize his usurped title of shōgun. The Ashikaga chief solved the situation by deposing Go-Daigo and placing upon the throne another scion of the imperial family who is known in history as Komyō (1336-1348), and who, of course, confirmed Takauji in the office of shōgun. Thus commenced the Ashikaga line of shōguns, and thus commenced also a fifty-six-year period of divided sovereignty, the emperor Go-Daigo and his descendants reigning in Yoshino as the southern court (nanboku), and the emperor Komyō and his descendants reigning in Kiōto as the northern court (hokuchō). It was by the efforts of the shōgun Yoshimitsu, one of the greatest of the Ashikaga potentates, that this quarrel was finally composed, but during its progress the country had fallen into a deplorable condition. "The constitutional powers had become completely disorganized, especially in regions at a distance from the chief towns. The peasant was impoverished, his spirit broken, his hope of better things completely gone. He dreamed away his miserable existence and left the fields untilled. Bands of robbers followed the armies through the interior of the country, and increased the feeling of lawlessness and insecurity. The coast population, especially that of the island of Kishin, had given itself up in a great measure to piracy. Even on the shores of Korea and China these enterprising Japanese corsairs made their appearance." The shōgun Yoshimitsu checked piracy, and there ensued between Japan and China a renewal of cordial intercourse which, upon the part of the shōgun, developed phases plainly suggesting an admission of Chinese suzerainty. For a brief moment during the sway of Yoshimitsu the country had rest from internecine war, but immediately after his death (1394) the struggle began afresh. Many of the great territorial lords had now grown too puissant to concern themselves about either mikado or shōgun. Each fought for his own hand, thinking only of extending his sway and his territories. By the middle of the 16th century Kiōto was in ruins, and little vitality remained in any trade or industry except those that ministered to the wants of the warrior. Again in the case of the Ashikaga shōguns the political tendency to exercise power vicariously was shown, as it had been shown in the case of the mikados in Kiōto and in the case of the Minamoto in Kamakura. What the regents had been to the emperors and the constables to the Minamoto shōguns, that the wardens (kwanryō) were to the Ashikaga shōguns. Therefore, for possession of this office of kwanryō, while venal conflicts were waged, and at one time five rival shōguns were used as figure-heads by contending factions. Yoshimitsu had apportioned an ample allowance for the support of the Imperial court, but in the continuous warfare following his death the estates charged with the duty of paying this allowance ceased to return any revenue; the court nobles had to seek shelter and sustenance with one or other of the feudal chiefs in the provinces, and the court itself was reduced to such a state of indigence that when the emperor Go-Tauchi died (1500),
his corpse lay for forty days awaiting burial, no funds being available for purposes of sepulture.

Alone among the vicissitudes of these troubled times the strength and influence of Buddhism grew steadily. The great monasteries were military strongholds as well as places of worship. When the emperor Kwammu chose Kïto for his capital, he established on the hill of Hiyei-zan, which lay north-east of the city, a magnificent temple to ward off the evil influences supposed to emanate from that quarter. Twenty years later, Kïbô, the most famous of all Japanese Buddhist saints, founded on Koya-san in Yamato a monastery not less important than that of Hiyei-zan. These and many other temples had large tax-free estates, and for the protection of their property they found it expedient to train and arm the cenobites as soldiers. From that to taking active part in the political struggles of the time was but a short step of accommodatingly as the great temples often became refuges of sovereigns and princes who, though nominally forsaking the world, retained all their interest, and even continued to take an active part, in its vicissitudes. It is recorded of the emperor Shirakawa (1073-1086) that the three things which he declared his total inability to control were the waters of the river Kamo, the fall of the dice, and the monks of Buddha. His successors might have confessed equal inability. Kiyômori, the puissant chief of the Taira family, had fruitlessly essayed to dethrone the Buddhists; Yoritomo, in the hour of his most signal triumph, thought it wise to placate them. Where these representatives of centralized power found themselves impotent, it may well be supposed that the comparatively petty chiefs, who fought each for his own hand in the 15th and 16th centuries, were incapable of accomplishing anything. In fact, the task of centralizing the administrative power, and thus restoring peace and order to the distracted empire, seemed, at the middle of the 16th century, a task beyond achievement by human capacity.

But if ever events create the men to deal with them, such was the case in the second half of that century. Three of the greatest captains and statesmen in Japanese history appeared upon the stage simultaneously, and moreover worked in union, an event altogether inconsistent with the nature of the age. They were Oda Nobunaga, Hideyoshi (the taïkô) and Tokugawa Ieyasu. Nobunaga belonged to the Taira family and was originally ruler of a small fief in the province of Owari. Ieyasu, a sub-feudatory of Nobunaga's enemy, the powerful daimyô of Mikawa, who had proved himself a son of the Miin dynasty and therefore eligible for the shogunate. Hideyoshi was a peasant's son, equally lacking in patrons and in personal attractions. No chance seemed more remote than that such men, above all Hideyoshi, could possibly rise to supreme power. On the other hand, one outcome of the commotion with which the country had seethed for more than four centuries was to give special effect to the principle of natural selection. The fittest alone surviving, the qualities that made for fitness came to take precedence of rank or station, and those qualities were prowess in the battle-field and wisdom in the statesman's closet. "Any plebeian that would prove himself a first-class fighting man was willingly received into the armed comitatus which every feudal potentate was eager to attach to himself and his flag." It was thus that Nobunaga was originally enrolled in the ranks of Nobunaga's retainers.

Nobunaga, succeeding to his small fief in Owari in 1542, added to it six whole provinces within 25 years of continuous endeavour. Being finally invited by the emperor to undertake the pacification of the country, and appealed to by Yoshichiaki, the last of the Ashikaga chiefs, to secure for him the shôgunate, he marched into Kïto at the head of a powerful army (1568), and, having accomplished the latter purpose, was preparing to complete the former when he fell under the sword of a traitor. Throughout his brilliant career he had the invaluable assistance of Hideyoshi, who would have attained immortal fame on any stage in any age. Hideyoshi entered Nobunaga's service as a groom and ended by administering the whole empire. When he accompanied

---

1 Daimyô ("great name") was the title given to a feudal chief.

Nobunaga to Kïto in obedience to the invitation of the mikado, Okimachi, order and tranquillity were quickly restored in the capital and its vicinity. But to extend this blessing to the whole country, four powerful daimyôs as well as the militant monks still to be dealt with. The monks had from the outset sheltered and succoured Nobunaga's enemies, and one great prelate, Kenryû, hierarch of the Monto sect, whose headquarters were at Osaka, was believed to aspire to the throne itself. In 1571 Nobunaga attacked and gave to the flames the celebrated monastery of Hiyei-zan, established nearly eight centuries previously; and in 1580 he would have similarly served the splendid temple Hongwan-ji in Osaka, had not the mikado sought and obtained grace for it. The task then remained of subduing four powerful daimyôs, three in the south and one in the north-east, who continued to follow the bent of their own warlike ambitions without paying the least attention to either sovereign or shogun. The task was commenced by sending an army under Hideyoshi against Môri of Chôshû, whose fief lay on the northern shore of the Shimonoseki strait. This proved to be the last enterprise planned by Nobunaga. On a morning in June 1582 one of the corps intended to reinforce Hideyoshi's army marched out of Kameyama under the command of Akechi Mitsuhide, who either harboured a personal grudge against Nobunaga or was swayed by blind ambition. Mitsuhide suddenly changed the route of his troops, led them to Kïto, and attacked the temple Honnô-ji where Nobunaga was sojourning all unsuspicious of treachery. Rescue and resistance being alike hopeless, the great soldier committed suicide. Thirteen days later, Hideyoshi, having concluded peace with Môri of Chôshû, fell upon Mitsuhide's forces and shattered them. Mitsuhide himself being killed by a peasant as he fled from the field.

Nobunaga's removal at once made Hideyoshi the most conspicuous figure in the empire, the only man with any claim to dispute that title being Tokugawa Ieyasu. These two had hitherto worked in concert. But the question of the succession to Nobunaga's estates threw the country once more into tumult. He left two grown-up sons and a baby grandson, whose father, Nobunaga's first-born, had perished in the holocaust at Honnô-ji. Hideyoshi, not unmindful, it may be assumed, of the privileges of a guardian, espoused the cause of the infant, and wrested from Nobunaga's three other great captains a reluctant endorsement of his choice. Nobutaka, third son of Nobunaga, at once drew the sword, which he presently had thrown aside. Mitsuhide, son of a year's departure from his elder brother, Nobu, took the field under the aegis of Tokugawa Ieyasu. Hideyoshi and Ieyasu, now pitted against each other for the first time, were found to be of equal prowess, and being too wise to prolong a useless war, they reverted to their old alliance, subsequently confirming it by a family union, the son of Ieyasu being adopted by Hideyoshi and the latter's daughter being given in marriage to Ieyasu. Hideyoshi had now been invested by the mikado with the post of regent, and his position in the capital was omnipotent. He organized in Kïto a magnificent pageant, in which the principal figures were himself, Ieyasu, Nobu and twenty-seven daimyôs. The emperor was present. Hideyoshi sat on the right of the throne, and all the nobles did obeisance to the sovereign. Prior to this event Hideyoshi had wielded for a year's deputation, his ally of Kôshi, especially Shimazu of Satsuma, the greatest army ever massed by any Japanese general, and had reduced the island of the nine provinces, not by weight of armament only, but also by a signal exercise of the wise clemency which distinguished him from all the statesmen of his era.

The whole of Japan was now under Hideyoshi's sway except the fiefs in the extreme north and those in the region known as the Kwanû, namely, the eight provinces forming the eastern elbow of the main island. Seven of these provinces were virtually under the sway of Hôjo Ujimasa, fourth representative of a family established in 1476 by a brilliant adventurer of ise, not related in any way to the great but then extinct house of Kama-kura Hôjôs. The daimyôs in the north were comparatively powerless to resist Hideyoshi, but to reach them the Kwanû had
to be reduced, and not only was its chief, Uijima, a formidable foe, but also the topographical features of the district represented fortifications of immense strength. After various unsuccessful overtures, having for their purpose to induce Uijima to visit the capital and pay homage to the emperor, Hideyoshi marched from Kiotó in the spring of 1590 at the head of 170,000 men, his colleagues Nobuo and Ieyasu having under their orders 80,000 troops

The campaign ended as did all Hideyoshi's enterprises, except that he treated his vanquished enemies with unusual severity. During the three months spent investing Odawara, the northern daimyos surrendered, and thus the autumn of 1590 saw Hideyoshi master of Japan from end to end, and saw Tokugawa Ieyasu established at Yedo as recognized ruler of the eight provinces of the Kwantō. These two facts should be bracketed together, because Japan's emergence from the deep gloom of long-continued civil strife was due not more to the brilliant qualities of Hideyoshi and Ieyasu individually than to the fortunate synchronism of their careers, so that the one was able to carry the other's work to completion and permanence. The last eight years of Hideyoshi's life—i.e., he died in 1598—were chiefly remarkable for his efforts to invade China through Korea, and for his attitude towards Christianity (see VI. [FOREIGN INTERCOURSE]).

The Tokugawa Era.—When Hideyoshi died he left a son, Hideyori, then only six years of age, and the problem of this child's future had naturally caused supreme solicitude to the peasant statesman. He finally entrusted the care of the boy and the management of state affairs to five regents, five ministers, and three intermediary councillors. But he placed chief reliance upon Ieyasu, whom he appointed president of the board of regents. Among the latter was one, Ishida Mitsunari, who to insatiable ambition added an extraordinary faculty for intrigue and great personal magnetism. These qualities he utilized with such success that the dissensions among the daimyos, which had been temporarily composed by Hideyoshi, broke out again, and the year 1600 saw Japan divided into two camps, one composed of Tokugawa Ieyasu and his allies, the other of Ishida Mitsunari and his partisans.

The situation of Ieyasu was eminently perilous. From his position in the east of the country, he found himself menaced by two powerful enemies on the north and on the south, respectively, the former barely contained by a greatly weaker force of his friends, and the latter moving up in seemingly overwhelming strength from Kiotó. He decided to hurl himself upon the southern army without awaiting the result of the conflict in the north. The encounter took place at Sekigahara in the province of Mino on the 21st of October 1600. The army of Ieyasu had to move to the attack in such a manner that its left flank and its left rear were threatened by divisions of the enemy posted on commanding eminences. But with the leaders of these divisions Ieyasu had come to an understanding by which they could be trusted to abide so long as victory did not declare against him. Such incidents were naturally common in an era when every man fought for his own hand. The southerners suffered a crushing defeat. The survivors fled pell-mell to Osaka, where in a colossal fortress, built by Hideyoshi, his son, Hideyori, and the latter's mother, Yodo, were sheltered behind ramparts held 80,000 men. Hideyori's cause had been openly put forward by Ishida Mitsunari and his partisans, but Ieyasu made no immediate attempt to visit the son upon the head of his deceased benefactor's child. On the contrary, he sent word to the lady Yodo and her little boy that he absolved them of all complicity. The battle of Sekigahara is commonly spoken of as having terminated the civil war which had devastated Japan, with brief intervals, from the latter half of the 12th century to the beginning of the 17th. That is incorrect in view of the fact that Sekigahara was followed by other fighting, especially by the terrible conflict at Osaka in 1615 when Yodo and her son perished. But Sekigahara's importance cannot be over-rated. For had Ieyasu been finally crushed there, the wave of internecine strife must have rolled again over the empire until providence provided another Hideyoshi and another Ieyasu to stem it. Sekigahara, therefore, may be truly described as a turning-point in Japan's career and as one of the decisive battles of the world. As for the fact that the Tokugawa leader did not at once proceed to extremities in the case of the boy Hideyori, though the events of the Sekigahara campaign had made it quite plain that such a course would ultimately be inevitable, we have to remember that only two years had elapsed since Hideyoshi was laid in his grave. His memory was still green and the glory of his achievements still enveloped his family. Ieyasu foresaw that to carry the tragedy to its bitter end at once must have forced into Hideyori's camp many puissant daimyos whose sense of allegiance would grow less cogent with the lapse of time. When he did lay siege to the Osaka castle in 1615, the power of the Tokugawa was wellnigh shattered against its ramparts; had not the onset been aided by treachery, the stronghold would probably have proved impregnable.

But signal as were the triumphs of the Tokugawa chieftain in the field, what distinguished him from all his predecessors is the ability he displayed in consolidating his conquests. The immense estates that fell into his hands he parcelled out in such a manner that all important strategic positions were held by daimyōs whose fidelity could be confidently trusted, and every feudalist of doubtful loyalty found his niche within touch of a Tokugawa partisan. This arrangement, supplemented by a system which required all the great daimyōs to have mansions in the shōgun's capital, Yedo, to keep their families there always and to reside there themselves in alternate years, proved so potent a check to disaffection that from 1615, when the castle of Osaka fell, until 1864, when the Chōshū rōnin attacked Kioto, Japan remained entirely free from civil war.

It is possible to form a clear idea of the ethical and administrative principles by which Ieyasu and the early Tokugawa chiefs were guided in elaborating the system which gave to Japan an unprecedented era of peace and prosperity. Evidence is furnished not only by the system itself but also by the contents of a document generally called the Testament of Ieyasu, though probably it was not fully compiled until the time of his son, Iemitsu (1623–1650). The Tokugawa chief, though he munificently patronized Buddhism and though he carried constantly in his bosom a miniature Buddhist image to which he ascribed all his success in the field and his safety in battle, took his ethical code from Confucius. He held that the basis of all legislation and administration should be the five relations of sovereign and subject, parent and child, husband and wife, brother and sister, friend and friend. The family was, in his eyes, the essential foundation of society, to be maintained at all sacrifices. Beyond these broad outlines of moral duty it was not deemed necessary to instruct the people. Therefore out of the hundred chapters forming the Testament only 22 contain what can be called legal enactments, while 55 relate to administration and politics; 16 set forth moral maxims and reflections, and the remainder record illustrative episodes in the career of the author. No distinct line is drawn between law and morals, between the duty of a citizen and the virtues of a member of a family. Substantive law is entirely wanting, just as it was wanting in the so-called constitution of Prince Shōtoku. Custom, as sanctioned by public observance, must be complied with in the civil affairs of life. What required minute exposition was criminal law, the relations of social classes, etiquette, rank, precedence, administration and government.

Society under feudalism had been moulded into three sharply defined groups, namely, first, the throne and the court nobles (kuge); secondly, the military class (buke or samourai); Social distinctions in the Tokugawa Era. The divine origin of the mikado was held to separate him from contact with mundane affairs, and he was therefore strictly secluded in the palace at Kioto, his main function being to mediate between his heavenly ancestors and his subjects, entrusting to the shōgun and the samurai the duty of transacting all worldly business on behalf
of the state. In obedience to this principle the mikado became
a kind of sacrosanct abstraction. No one except his consorts
and his chief ministers ever saw his face. In the rare cases
when he gave audience to a privileged subject, he sat behind a
curtain, and when he went abroad, he rode in a closely shut car
drawn by oxen. A revenue of ten thousand koku of rice—the
equivalent of about as many guineas—was apportioned for his
support, and the right was reserved to him of conferring empty
titles upon the living and rank upon the dead. His majesty had
one wife, the empress (kōgō), necessarily taken from one of the
ten chosen families (go-sekke) of the Fujiwara, but he might also
have twelve consorts, and if direct issue failed, the succession
passed to one of the two princely families of Arisugawa and
Fushimi, adoption, however, being possible in the last resort.
The kuge constituted the court nobility, consisting of 155 families
all of whom traced their lineage to ancient mikados; they ranked
far above the feudal chiefs, not excepting even the shōgun;
filled by right of hereditary nearly all the offices at the court, the
emoluments attached being, however, a mere pittance; they were
entirely without the great estates which had belonged to them
in ante-feudal times, and lived lives of proud poverty, occupying
themselves with the study of literature and the sciences of music
and art. After the kuge and at a long distance below them in theoretical rank came the military families, who, as a class,
were called buke or samurai. They had hereditary revenues,
and they filled the administrative posts, these, too, being often
hereditary. The third, and by far the most numerous, section
of the nation were the commoners (heimin). They had no social
status; were not allowed to carry swords, and possessed
no income except what they could earn with their hands.
About 55 in every 1000 units of the nation were samurai, the
latter’s wives and children being included in this estimate.

Under the Hōjō and the Ashikaga shōguns the holders of
the great estates changed frequently according to the vici-
situdes of those troublesome times, but under the

Daimyōs. Tokugawa no change took place, and there thus
grew up a landed nobility of the most permanent character. Every one of these estates was a feudal kingdom, large or small,
with its own usages and its own laws, based on the general
principles above indicated and liable to be judged according to
the principles of the warriors’ code and the Chinese Confucian
law of the samurai. A daimyō or feudal chief drew from the peasants on his estate the means of subsistence for himself and his retainers. For this purpose the produce of his estate was assessed by the shōgun’s
officials in koku (one koku = 180-350 litres, worth about £1),
and about one-half of the assessed amount went to the feudalatory,
the other half to the tillers of the soil. The richest daimyō was
Mayeda of Kaga, whose fief was assessed at a little over a million
koku, his revenue thus being about half a million sterling. Just
as an emperor had to be taken from one of five families designated
to that distinction for all time, so a successor to the shōgunate,
failing direct heir, had to be selected from three families
(sanke), namely, those of the daimyōs of Owari, Kii and Mito,
whose first representatives were three sons of Ieyasu. Out
of the total body of 255 daimyōs existing in the year 1662,
141 were specially distinguished as fudai, or hereditary vassals
of the Tokugawa house, and 18 of these were strictly limited
the perpetual privilege of filling all the high offices in the Yedo administration, while of 4 of them was reserved
the special honour of supplying a regent (go-tairō) during the
minority of the shōgun. Moreover, a fudai daimyō was of
necessity appointed to the command of the fortress of
Nijō in Kiōto as well as of the great castles of Osaka and
Fushimi, which Ieyasu designated the keys of the country.
No intermarriage might take place between members of the
court nobility and the feudal houses without the consent of
Yedo; no daimyō might apply direct to the emperor for an
official title, or might put foot within the imperial district of
Kiōto without the shōgun’s permit, and at all entrances to the
region known as the Kwanto there were established guard-
houses, where every one, of whatever rank, must submit to be
examined, in order to prevent the wives and children of the
daimyōs from secretly leaving Yedo for their own provinces.
In their journeys to and from Yedo every second year the feudal
chiefs had to travel by one of two great highways, the Ōsaka-
or the Nanakendō, and as they moved with great retinues,
these roads were provided with a number of inns and tea-houses
equipped in a sumptuous manner, and having an abundance
of female servants. A puissant daimyō’s procession often num-
ered as many as 1000 retainers, and nothing illustrates more
forcibly the wide interval that separated the soldier and the
plebeian than the fact that at the appearance of the heralds who
preceded these progresses all commoners who happened to be
abroad had to kneel on the ground with bowed and uncovered
heads; all sides houses had to close the shutters of windows
giving on the road, and none might venture to look down from a
height on the passing magnate. Any violation of these rules
of etiquette exposed the violator to instant death at the hands of
the daimyō’s retinue. Moreover, the samurai and the heimin
lived strictly apart. A feudal chief had a castle which generally
occupied a commanding position. It was surrounded by from
one to three broad moats, the innermost crowded with a high
wall of huge cut stones, its trace arranged so as to give flank
defences, which was further provided by pagoda-like towers
placed at the salient angles. Inside this wall stood the houses
of the high officials on the outskirts of a park surrounding the
residence of the daimyō himself, and from the scarps of the moats
or in the intervals between them rose houses for the military
retainers, barrack-like structures, provided, whenever possible,
with small but artistically arranged and carefully tended gardens.
All this domain of the military was called yashiki in distinction
to the machi (streets) where the despised commoners had their
habitat.

The general body of the samurai received stipends and lived
frugally. Their pay was not reckoned in money: it took the
form of so many rations of rice delivered from their chief’s granaries. A few had landed estates,
usually bestowed in recognition of conspicuous merit. They
were probably the finest type of hereditary soldiers the world
ever produced. Money and all devices for earning it they profoun-
dedly despised. The right of wearing a sword was to them
the highest conceivable privilege. They counted themselves
privileged to use weapons, excepting the sword. At any moment they were prepared cheerfully to sacrifice their
lives on the altar of loyalty. Their word, once given, must never
be violated. The slightest insult to their honour might not be
condoned. Stoicism was a quality which they esteemed next to
courage: all outward display of emotion must be suppressed.
The sword might never be drawn for a petty cause, but, if once
drawn, must never be returned to its scabbard until it had done
its duty. Martial exercises occupied much of their attention,
but book learning also they esteemed highly. They were
profoundly courteous towards each other, profoundly contemptuous
towards the commoner, whatever his wealth. Filial piety ranked
next to loyalty in their code of ethics. Thus the Confucian
maxim, endorsed explicitly in the Testament of Ieyasu,
that a man must not live under the same sky with his father’s
murderer or his brother’s slayer, received most literal obedience,
and many instances occurred of vendettas pursued in the face of
apparently insuperable difficulties and consummated after years
of effort. By the standard of modern morality the Japanese
samurai would be counted cruel. Holding that death was the
natural sequel of defeat and the only certain way of avoiding
disgrace, he did not seek quarter himself or think of extending it
to an enemy. Yet in his treatment of the latter he loved to dis-
play courtesy until the supreme moment when all considerations
of mercy were laid aside. It cannot be doubted that the prac-
tice of employing torture judicially tended to educate a mood
of callousness towards suffering, or that the many idle hours of
a military man’s life in time of peace encouraged a measure
of dissipation. But there does not seem to be any valid ground
for concluding that either of these defects was conspicuous in
the character of the Japanese samurai. Faithlessness towards
women was the greatest fault that can be laid to his door. The
samurai lady claimed no privilege of timidity on account of her sex. She knew how to die in the cause of honour just as readily as her husband, her father or her brother died, and conjugal fidelity did not rank as a virtue in her eyes, being regarded as a simple duty. But her husband held martial faith in small esteem and ranked his wife far below his sword. It has to be remembered that when we speak of a samurai’s suicide, there is no question of poison, the bullet, drowning or any comparatively painless manner of exit from the world. The invariable method was to cut open the abdomen (hara-kiri or sepuku) and afterwards, if strength remained, the sword was turned against the throat. To such endurance had the samurai trained himself that he went through this cruel ordeal without flinching in the smallest degree.

The heimin or commoners were divided into three classes—husbandmen, artisans and traders. The farmer, as the nation lived by his labour, was counted the most respectable among the bread-winners, and a cultivator of his own estate might even carry one sword but never two, that privilege being strictly reserved to a samurai. The artisan, too, received much consideration, as is easily understood when we reflect that included in his rank were artists, sword-smiths, armours, sculptors of sacred images or sword-furniture, ceramists and lacqueers. Many artisans were in the permanent service of feudal chiefs from whom they received fixed salaries. Tradesmen, however, were regarded with disdain and stood lowest of all in the social organization. Too much despised to be even included in that organization were the eta (defiled folks) and the hinin (outcasts). The exact origin of these latter pariahs is uncertain, but the ancestors of the eta would seem to have been prisoners of war or the enslaved families of criminals.

To such people were assigned the despised duties of tending tombs, disposing of the bodies of the dead, slaughtering animals or tanning hides. The hinin were mendicants. On them devolved the task of removing and burying the corpses of executed criminals. Living in segregated hamlets, forbidden to marry with heimin, still less with samurai, not allowed to eat, drink or associate with persons above their own class, the eta remained under the ban of ostracism from generation to generation, though many of them contrived to amass much wealth. They numbered by tens of thousands. Kii, Osaka and Edo, each city, and three chief towns—Omi, Sakai and Kioto. All these members of the submerged classes were relieved from proscription and admitted to the ranks of the commoners under the enlightened system of Meiji. The 12th of October 1871 saw their enfranchisement, and at that date the census showed 287,111 eta and 695,689 hinin.

Naturally, as the unbroken peace of the Tokugawa régime became habitual, the mood of the nation underwent a change.

Decline and Fall of the Shogunate

The samurai, no longer required to lead the frugal life of camp or barracks, began to live beyond their incomes. They found difficulty in meeting the pecuniary engagements of everyday existence, so that money acquired new importance in their eyes, and they gradually forfeited the respect which their traditional disinterestedness had won for them in the past. At the same time the abuses of feudalism were thrown into increased salience. A large body of hereditary soldiers become an anomaly when fighting has passed even out of memory. On the other hand, the agricultural and commercial classes acquired new importance. The enormous sums disbursed every year in Edo, for the maintenance of the great establishments which the feudal chiefs vied with each other in keeping there, enriched the merchants and traders so greatly that their scale of living underwent radical change. Buddhism was a potent influence, but its ethical restraints were weakened by the conduct of its priests, who themselves often yielded to the temptation of the time. The aristocracy adhered to its refined pastimes—performances of the no; tea reunions; poem composing; polo; football; equestrian archery; fencing and gambling—but the commoner, being excluded from all this realm, and, at the same time, emerging rapidly from his old position of penury and degradation, began to develop luxurious prodigies and to demand corresponding amusements. Thus the theatre came into existence; the dancing girl and the jester found lucrative employment; a popular school of art was founded and quickly carried to perfection; the lute-player assumed unprecedented dimensions; rich and costly costumes acquired wide vogue in despite of sumptuary laws enacted from time to time; wrestling became an important institution, and plotters asserted itself in the face of caste distinctions.

Simultaneously with the change of social conditions thus taking place, history repeated itself at the shogun's court. The substance of administrative power passed into the hands of a minister, its shadow alone remaining to the shogun. During only two generations were the successors of Ieyasu able to resist this traditional tendency. The representative of the third—Iyetsuna (1661-1680)—succeeded to the machinations of an ambitious minister, Sakai Takakiyto, and it may be said that from that time the nominal repository of administrative authority in Edo was generally a species of magnificent recluse, secluded from contact with the outer world and hearing only through the eyes and ears of the ladies of his household. In the latter half of the 17th and the first years of the 18th century, they found themselves reduced to a position precisely analogous to that of the emperor in Kioto. Sovereign and shogun were alike mere abstractions so far as the practical work of government was concerned. With the great mass of the feudal chiefs things fared similarly. These men who, in the days of Nobunaga, Hideyoshi and Ieyasu, had directed the policies of their fiefs and led their armies in the field, were gradually transformed, during the long peace of the Tokugawa era, into voluptuous faintards or, at best, thoughtless dilettanti, willing to abandon the direction of their affairs to senechsals and majors, who, while on the whole their administration was able and loyal, found their account in contriving and perpetuating the effacement of their chiefs. Thus, in effect, the government of the country, taken out of the hands of the shogun and the feudatories, fell into those of their vassals. There were exceptions, of course, but so rare as to be merely accidental.

Another important factor has to be noted. It has been shown above that Ieyasu bestowed upon his three sons the rich stipends of 15,000 koku, which became known as the "three hundred" to Kioto. In the latter half of the 17th and the first years of the 18th century, these families exclusively enjoyed the privilege of furnishing an heir to the shogun that should the latter be without direct issue. Mito ought therefore to have been a most unlikely place for the conception and propagation of principles subversive of the shogun’s administrative autocracy. Nevertheless, in the days of the second of the Mito chiefs at the close of the 17th century, there arose in that province a school of thinkers who, revolting against the ascendancy of Chinese literature and of Buddhism, devoted themselves to compiling a history such as should recall the attention of the nation to its own annals and revive its allegiance to Shinto. It would seem that in patronizing the compilation of this great work the Mito chief was swayed by the spirit of pure patriotism and studium, and that he discerned nothing of the goal to which the new researches must lead the litterati of his fief. "He and they, for the sake of history and without any thought of politics, undertook a retrospect of their country’s annals, and their frank analysis furnished conclusive proof that the emperor was the prime source of administrative authority and that its independent exercise by a shogun must be regarded as a usurpation. They did not attempt to give practical effect to their discoveries; the era was essentially academical. But this galaxy of scholars projected into the future a light which burned with growing force in each succeeding generation and ultimately burst into a flame which consumed feudalism and the shogunate, fused the nation into one, and restored the governing authority to the emperor. Of course the Mito men were not alone in this matter: many students subsequently trod in their footsteps and many others sought to stem the tendency; but the net result was fatal to faith in the dual system of government. Possibly had nothing occurred to furnish signal proof of the system’s practical defects,
it might have long survived this theoretical disapproval. But the crisis caused by the advent of foreign ships and by the forceful renewal of foreign intercourse in the 19th century afforded convincing evidence of the shōgunate's incapacity to protect the state's supposed interests and to enforce the traditional policy of isolation which the nation had learned to consider essential to the empire's integrity.

Another important factor made for the fall of the shōgunate. That factor was the traditional disaffection of the two great southern fiefs, Satsuma and Chōshū. When Ieyasu parcelled out the empire, he deemed it the wisest policy to leave these chieftains in full possession of their large estates. But this measure, construed as an evidence of weakness rather than a token of liberality, neither won the allegiance of the big feudatories nor cooled their ambition. Thus no sooner did the nation divide into two camps over the question of renewed foreign intercourse than men of the above clans, in concert with representatives of certain of the old court nobles, placed themselves at the head of a movement animated by two loudly proclaimed purposes: restoration of the administration to the emperor, and expulsion of aliens. This latter aspiration underwent a radical change when the bombardment of the Satsuma capital, Kagoshima, and the destruction of the Chōshū forts and ships at Shimonoseki proved conclusively to the Satsuma and Chōshū clans that Japan in her unequipped and backward condition could not hope to stand for a moment against the Occident in arms. But the unwelcome discovery was accompanied by a conviction that only a thoroughly united nation might aspire to preserve its independence, and thus the abolition of the dual form of government became more than ever an article of public faith. It is unnecessary to recount the successive incidents which conspired to undermine the shōgun's authority, and to destroy the prestige of the Yedo administration. Both had been reduced to vanishing quantities by the year 1866 when the shōgun was overthrown.

Keiki, known historically as Yoshinobu, the last of the shōguns, was a man of matured intellect and high capacities. He had been put forward by the anti-foreign Conservatives for the succession to the shōgunate in 1857 when the complications of foreign intercourse were in their first stage of acuteness. But, like many other intelligent Japanese, he had learned, in the interval between 1857 and 1866, that to keep her doors closed was an impossible task for Japan, and very quickly after taking the reins of office he recognized that national union could never be achieved while power was divided between Kiōto and Yedo. At this juncture there was addressed to him by Yōdo, chief of the great Tosa fief, a memorial setting forth the hopelessness of the position in which the Yedo court now found itself, and urging that, in the interests of good government and in order that the nation's united strength might be available to meet the exigencies of its new career, the administration should be restored to the emperor. Keiki received this memorial in Kiōto. He immediately summoned a council of all the feudatories and high officials then in the Imperial city, announced to them his intention to lay down his office, and, the next day, presented his resignation to the sovereign. This happened on the 14th of October 1867. It must be ranked among the signal events of the world's history, for it signified the voluntary surrender of kingly authority wielded uninterrupted for nearly three centuries. That the shōgun's resignation was tendered in good faith there can be no doubt, and had it been accepted in the same spirit, the great danger it involved might have been consummated without bloodshed or disorder. But the clansmen of Satsuma and Chōshū were distrustful. One of the shōgun's first acts after assuming office had been to obtain from the throne an edict for imposing penalties on Chōshū, and there was a probability for suspecting that the renunciation of power by the shōgun might merely prelude its resumption on a firmer basis. Therefore steps were taken to induce the emperor, then a youth of fifteen, to issue a secret rescript to Satsuma and Chōshū, denouncing the shōgun as the nation's enemy and enjoining his destruction. At the same time all officials connected with the Tokugawa or suspected of sympathy with them were expelled from office in Kiōto, and the shōgun's troops were deprived of the custody of the palace gates by methods which Verged upon the use of armed force. In the face of such provocation Keiki's earnest efforts to restrain the indignation of his vasals and adherents failed. They marched against Kiōto and were defeated, whereupon Keiki left his castle at Osaka and retired to Yedo, where he subsequently made unconditional surrender to the Imperial army. There is little more to be set down on this page of the history. The Yedo court consented to lay aside its dignities and be stripped of its administrative authority, but all the Tokugawa vasals and adherents did not prove equally placable. There was resistance in the northern provinces, where the Aizu feudatory refused to abandon the Tokugawa cause; there was an attempt to set up a rival candidate for the throne in the person of an Imperial prince who presided over the Uyeno Monastery in Yedo; and there was a wild essay on the part of the admirals of the shōgun's fleet to establish a republic in the island of Yezo. But these were mere ripples on the surface of the broad stream which set towards the peaceful overthrow of the dual system of government and ultimately towards the fall of feudalism itself. That this system, the outcome of five centuries of nearly continuous warfare, was swept away in almost as many weeks with little loss of life or destruction of property constitutes, perhaps, the most striking incident, certainly the most momentous, in the history of the Japanese nation.

The Meiji Era.—It must be remembered that when reference is made to the Japanese nation in connexion with these radical changes, only the nobles and the samurai are indicated—in other words, a section of the population representing about one-sixteenth of the whole. The bulk of the people—the agricultural, the industrial, and the mercantile classes—remained as before, whether for or against the alienizing influences, or taking any serious interest in the great questions of the time. Foreigners often noted with surprise the contrast between the fierce antipathy displayed towards them by certain samurai on the one hand, and the genial, hospitable reception given to them by the common people on the other. History teaches that the latter was the natural disposition of the Japanese, the former a mood educated by special experiences. Further, even the comparatively narrow statement that the restoration of the administrative power to the emperor was the work of the nobles and the samurai must be taken with limitations. A majority of the nobles entertained no idea of any necessity for change. They were either held fast in the vice of Tokugawa authority, or paralyzed by the sensuous seductions of the lives provided for them by the machinations of their retainers, who transferred the administrative authority of the fiefs to their own hands, leaving its shadow only to their lords. It was among the retainers that longings for a new order of things were generated. Some of these men were sincere disciples of progress—a small band of students and deep thinkers who, looking through the narrow Dutch window at Deshima, had caught a glimmering perception of the realities that lay beyond the horizon of their country's prejudices. But the influence of such Liberals was comparatively insignificant. Though they showed remarkable moral courage and tenacity of purpose, the age did not furnish any strong object lesson to enforce their propaganda of progress. The factors chiefly making for change were, first, the ambition of the southern clans to oust the Tokugawa, and, secondly, the samurai's loyal instinct, reinforced by the teachings of his country's history, by the revival of the Shinto cult, by the promptings of national enterprise, and by the object-lessons of foreign intercourse.

But though essentially imperialistic in its prime purposes, the revolution which involved the fall of the shōgunate, and ultimately of feudalism, may be called democratic with regard to the personnel of those who planned and directed it. They were, for the most part, men without either official rank or social standing. That is a point essential
to a clear understanding of the issue. Fifty-five individuals may be said to have planned and carried out the overthrow of the Yedo administration, and in five of them were territorial nobles. Eight, belonging to the court nobility, laboured under the traditional disadvantages of their class, poverty and political insignificance; and the remaining forty-two, the hearts and hands of the movement, may be described as ambitious youths, who sought to make a career for themselves in the first place, and for their country in the second. The average age of the whole did not exceed thirty. There was another element for which any student of Japanese history might have been prepared: the Satsuma samurai aimed originally not merely at overthrowing the Tokugawa but also at obtaining the shōgunate for their own chief. Possibly it would be unjust to say that all the leaders of the great southern clan harboured that idea. But some of them certainly did, and not until they had consented to abandon the project did their union with Chōshū, the other great southern clan, become possible—a union without which the revolution could scarcely have been accomplished. This ambition of the Satsuma clansmen deserves special mention, because it bore remarkable fruit; it may be said to have laid the foundation of political sovereignty in the southern districts. Possibly it was this distrust engendered by such aspirations, the authors of the Restoration agreed that when the emperor assumed the reins of power, he should solemnly pledge himself to convene a deliberative assembly, to appoint to administrative posts men of intellect and erudition wherever they might be found, and to decide all measures in accordance with public opinion. This promise, referred to frequently in later times as the Imperial Oath at the Restoration, came to be accounted the basis of representative institutions, though in reality it was intended solely as a guarantee against the political ascendancy of any one clan.

At the outset the necessity of abolishing feudalism did not present itself clearly to the leaders of the revolution. Their sole idea was the unification of the nation. But when they came to consider closely the practical side of the problem, they understood how far it would lead them. Evidently that one homogeneous system of law should replace the more or less heterogeneous systems operative in the various fiefs was essential, and such a system could not be arrived at without the renunciation of their local autonomy and, incidentally, of their control of local finances. That was a stupendous change. Hitherto each feudal chief had collected the revenues of his fief and had employed them at will, subject to the sole condition of maintaining a body of troops proportionate to his income. He had been, and was still, an autocrat within the limits of his territory. On the other hand, the active authors of the revolution were a small band of men mainly without prestige or territorial influence. It was impossible that they should dictate any measure sensibly impairing the local and fiscal autonomy of the feudatories. No power capable of enforcing such a measure existed at the time. All the great political changes in Japan had formerly been preceded by wars culminating in the accession of some strong clan to supreme authority, whereas in this case there had been a displacement without a substitution—the Tokugawa had been overthrown and no new administrators had been set up in their stead. It was, moreover, certain that an attempt on the part of any one clan to constitute itself executor of the sovereign's mandates would have stirred the other clans to vehement resistance. In short, the leaders of the revolution found themselves pledged to a new theory of government without any machinery for carrying it into effect, or any means of abolishing the old practice. An ingenious exit from this curious dilemma was devised by the young reformers. They induced the feudal chiefs of Satsuma, Chōshū, Tosa and Hizen, the four most powerful clans in the south, publicly to surrender their fiefs to the emperor, praying his majesty to reorganize them and to bring them all under the same system of law. In the case of Shimazu, chief of Satsuma, and Yōdō, chief of Tosa, this act must stand to their credit as a noble sacrifice. To them the exercise of power had been a reality and the effort of surrendering it must have been correspondingly costly. But the chiefs of Chōshū and Hizen obeyed the suggestions of their principal vassals with little, if any, sense of the probable cost of obedience. The same remark applies to all the other feudatories, with exceptions so rare as to emphasize the rule. They had long been accustomed to abandon the management of their affairs to their leading clansmen, and they allowed themselves to follow the same guidance at this crisis. Out of more than 250 feudatories, only 17 hesitated to imitate the example of the four southern fiefs.

An explanation of this remarkable incident has been sought by supposing that the samurai of the various clans, when they advised a course so inconsistent with fidelity to the interests of the feudal chiefs, were influenced by motives of personal ambition, imagining that they themselves might find great opportunities under the new régime. Some hope of that kind may fairly be assumed, and was certainly realized, in the case of the leading samurai of the four southern clans which headed the movement. But it is plain that no such expectations can have been generally entertained. The simplest explanation seems to be the true one: a certain course, indicated by the action of the four southern clans, was forced on the rest to be in accord with the spirit of the Restoration: if not, it would have been to shrink publicly from a sacrifice dictated by the principle of loyalty to the Throne—a principle which had acquired supreme sanctity in the eyes of the men of that era. There might have been some uncertainty about the initial step; but so soon as that was taken by the southern clans their example acquired compelling force. History shows that in political crises the Japanese samurai is generally ready to pay deference to certain canons of almost romantic morality. There was a fever of loyalty and of patriotism in the air of the year 1869. Any one hesitating, for obviously selfish reasons, to adopt a precedent such as that offered by the procedure of the great southern clans, would have seemed to forfeit the right of calling himself a samurai. But although the leaders of this remarkable movement now understood that they must contrive the total abolition of feudalism and build up a new administrative edifice on foundations of constitutional monarchy, they appreciated the necessity of advancing slowly towards a goal which still lay beyond the range of their followers' vision. Thus the first steps were conceived to be in accord with the spirit of the Restoration: to appoint the feudatories to the position of governors in the districts over which they had previously ruled; to confirm the samurai in the possession of their incomes and official positions; to put an end to the distinction between court nobles and territorial nobles, and to organize in Kioto a cabinet consisting of the leaders of the restoration. Each new governor received one-tenth of the income of the fief by way of emoluments; the pay of the officials and the samurai, as well as the administrative expenses of the district, was defrayed from the same source, and the residue, if any, was to pass into the treasury of the central government.

The defects of this system from a monarchical point of view soon became evident. It did not give the power of either the purse or the sword to the sovereign. The revenues of the administrative districts continued to be collected and disbursed by the former feudatories, who also retained the control of the troops, the right of appointing and dismissing officials, and almost complete local autonomy. A further radical step had to be taken, and the leaders of reform saw nothing better than to continue the method of procedure which had thus far proved so successful, contrived, first, that several of the administrative districts should send in petitions offering to surrender their local autonomy and be brought under the direct rule of the central government; secondly, that a number of samurai should apply for permission to lay aside their swords. While the nation was digesting the principles embodied in these petitions, the government made preparations for further measures of reform. The ex-chief of Satsuma, who showed some umbrage because the services of his clan in promoting the restoration had not been more fully recognized, was induced to take high ministerial office, as were also the ex-chiefs of Chōshū and Tosa. Each of the four
great clans had now three representatives in the ministry. These clans were further persuaded to send to Tōkō—whither the emperor had moved his court—individuals of troops to form the nucleus of a national army. Importance attaches to these details because the principle of clan representation, illustrated in the organization of the cabinet of 1871, continued to be approximately observed for many years in forming ministries, and ultimately became a target for the attacks of party politicians.

On the 20th of August 1871 an Imperial decree announced the abolition of the system of local autonomy, and the removal of the territorial nobles from the posts of governor. The taxes of the former fiefs were to be paid henceforth into the central treasury; all officials were to be appointed by the Imperial government, and the feudatories, retaining permanently an income of one-tenth of their original revenues, were to make Tōkō their place of residence. As for the samurai, they remained for the moment in possession of their hereditary pensions. Radical as these changes seem, the disturbance caused by them was not great, since they left the incomes of the military class untouched. Some of the incomes were for sale, but the majority were hereditary, and all had been granted as a privilege of their position and devotion not to themselves to military service. Four hundred thousand men approximately were in receipt of such emoluments, and the total amount annually taken from the taxpayers for this purpose was about £2,000,000. Plainly the nation would have to be relieved of this burden sooner or later. The samurai were essentially an element of the feudal system, and that they should survive the latter’s fall would have been incongruous. On the other hand, suddenly and wholly to deprive these men and their families—a total of some two million persons—of the means of subsistence on which they had hitherto relied with absolute confidence, and in return for which they and their forefathers had rendered faithful service, would have been an act of inhumanity. It may easily be conceived that this problem caused extreme perplexity to the administrators of the new Japan. They left it unsolved for the moment, trusting that time and the loyalty of the samurai themselves would suggest some solution. As for the feudal chiefs, who had now been deprived of all official status and reduced to the position of private gentlemen, without even a patent of nobility to distinguish them from others of the same class, they found nothing specially irksome or regrettable in their altered position. No scrutiny had been made into the contents of their treasuries. They were allowed to retain unquestioned possession of all the accumulated funds of their former fiefs, and they also became public creditors for annual allowances equal to one-tenth of their feudal revenues. They had never previously been so pleasantly circumstanced. It is true that they were entirely deprived of all administrative and military authority; but since their possession of such authority had been in most cases merely nominal, they only felt the change as a relief from responsibility.

By degrees public opinion began to declare itself with regard to the samurai. If they were to be absorbed into the bulk of the people and to lose their fixed revenues, some capital must be placed at their disposal to begin life again. The samurai themselves showed a noble faculty of resigning. They had been a privileged class, but they had purchased their privileges with their blood and by serving as patterns of all the qualities most prized among Japanese national characteristics. The record of their acts and the recognition of the people entitled them to look for specific treatment at the hands of the government which they had been the means of setting up. Yet none of these considerations blinded them to the painful fact that the time had passed by; that no place existed for them in the new polity. Many of them voluntarily stepped down into the company of the peasant or the tradesman, and many others signified their willingness to join the ranks of common bread-winners if some aid was given to equip them for such a career. After two years’ consideration the government took action. A decree announced, in 1873, that the treasury was prepared to commute the pensions of the samurai at the rate of six years’ purchase for hereditary pensions and four years for life pensions—one-half of the commutation to be paid in cash, and one-half in bonds bearing interest at the rate of 8%. It will be seen that a perpetual pension of £50 would be exchanged for a payment of £30 in cash, together with securities giving an income of £2, 8s.; and that a £50 life pensioner received £30 in cash and securities yielding £1, 12s. annually. It is scarcely credible that the samurai should have accepted such an arrangement. Something, perhaps, must be ascribed to their want of business knowledge, but the general explanation is that they made a large sacrifice in the interests of their country. Nothing in all their career as soldiers became them better than their manner of abandoning it. They were told that they might lay aside their swords, and many of them did so, though from time immemorial they had cherished the sword as the mark of a gentleman, the most precious possession of a warrior, and the one outward evidence that distinguished men of their order from common tollers after gain. They saw themselves deprived of their military employment, were invited to surrender more than one-half of the income it brought, and knew that they were unprepared alike by education and by tradition to earn bread in any calling save that of arms. Yet, driven from the scene of their former power, they established, many of them bowed their heads quietly to this sharp reverse of fortune. It was certainly a striking instance of the fortitude and resignation which the creed of the samurai required him to display in the presence of adversity. As yet, however, the government’s measures with regard to the samurai were not compulsory. Men laid aside their swords and commuted their pensions at their own option.

Meanwhile differences of opinion began to occur among the leaders of progress themselves. Coalitions formed for constructive purposes are often found unable to endure the strain of constructive efforts. Such lack of cohesion might easily have been foreseen in the case of the Japanese reformers. Young men without experience of public affairs, or special education to fit them for responsible posts, found the duty suddenly imposed on them not only of devising administrative and fiscal systems universally applicable to a nation hitherto divided into a congeries of semi-independent principalities, but also of shaping the country’s demeanour towards foreign nations. The old system as long as the heat of their assault upon the shōgunate fused them into a homogeneous party they worked together successfully. But when they had to build a brand-new edifice on the ruins of a still vivid past, it was inevitable that their opinions should vary as to the nature of the materials to be employed. In this divergence of views many of the capital incidents of Japan’s modern history had their origin. Of the fifty-five men whose united efforts had compassed the fall of the shōgunate, five stood conspicuous above their colleagues. They were Itagaki and Saigō, court nobles; Saigō and Okubo, samurai of Satsuma, and Kido, a samurai of Chōshū. In the second rank came many men of great gifts, whose youth alone disqualified them for prominence—Itō, the constructive statesman of the Meiji era, who inspired nearly all the important measures of the time, though he did not openly figure as their originator; Inouye, who never lacked a resource or swerved from the dictates of loyalty; Okuma, a politician of subtle, versatile and vigorous intellect; Itagaki, the Rousseau of his era; and a score of others created by the extraordinary circumstances with which they had to deal. But of the five mentioned were the captains, the rest only lieutenants. Among the five, four were sincere reformers—not free, of course, from selfish motives, but truthfully bent upon promoting the interests of their country before all other aims. The fifth, Saigō Takamori, was a man in whom boundless ambition lay concealed under qualities of the noblest and most enduring type. His absolute freedom from every trace of sordidness gave currency to a belief that his aims were of the simplest; the story of his career satisfied the highest canons of the samurai; his massive physique, commanding presence and sunny aspect impressed and attracted even those who had no
opportunity of admiring his life of self-sacrificing effort or appreciating the remarkable military talent he possessed. In the first part of his career, the elevation of his clan to supreme power seems to have been his sole motive, but subsequently personal ambition appears to have swayed him. To the consummation of either object the preservation of the military class was essential. By the swords of the samurai alone could a new imperium in imperio be carved out. On the other hand, Saigō's colleagues in the ministry saw clearly not only that the samurai were an unwarrantable burden on the nation, but also that their continued existence after the fall of feudalism would be a menace to public peace as well as an anomaly. Therefore they took the steps already described, and followed them by a conscription law, making every adult male liable for military service without regard to his social standing. It is easy to conceive how painfully unwelcome this conscription law proved to the samurai. Many of them were not unwilling to commute their pensions, since their creed had always forbidden them to care for money. Many of them were not unwilling to abandon the habit of carrying swords, since the adoption of foreign costume rendered such a custom incongruous and inconvenient. But very few of them could readily consent to step down from their cherished position as the military class, and relinquish their traditional title to bear the whole responsibility and enjoy the whole honour of fighting their country's battles. They had supposed, not unreasonably, that service in the army and navy would be reserved exclusively for them and their sons, whereas now the commonest rustic, mechanic or tradesman would be equally eligible.

While the pain of this blow was still fresh there occurred a trouble with Korea. The little state had behaved with insulting contumely, and when Japan's course to be split among the reformers, and in the ranks of the reformers, Saigō saw in a foreign war the sole remaining chance of achieving his ambition by lawful means. The young nation, which in its infancy, had not produced even the skeleton of an army. If Korea had to be conquered, the samurai must be employed; and their employment would mean, if not their rehabilitation, at least their organization into a force which, under Saigō's leadership, might dictate a new policy. Other members of the cabinet believed that the nation would be disgraced if it tamely endured Korea's insults. Thus several influential voices swelled the clamour for war. But a peace party offered strenuous opposition. Its members saw the collateral issues of the problem, and declared that the country must not think of taking up arms during a period of radical transition. The final discussion took place in the emperor's presence. The advocates of peace understood the national significance of the issue and perceived that they were debating, not merely whether there should be peace or war, but whether the country should halt or advance on its newly adopted path of progress, to a position four years hence, the cabinet, including Saigō, resigned. This rupture was destined to have far-reaching consequences. One of the seceders immediately raised the standard of revolt. Among the devices employed by him to win adherents was an attempt to fan into flame the dying embers of the anti-foreign sentiment. The government easily crushed the insurrection. Another seceder was Itagaki Taisuke. The third and most prominent was Saigō, who seems to have concluded from that moment that he must abandon his aims or achieve them by force. He retired to his native province of Satsuma, and applied his whole resources, his great reputation and the devoted loyalty of a number of able followers to organizing and equipping a strong body of samurai. Matters were facilitated for him by the conservatism of the celebrated Shimazu Saburō, former chief of Satsuma, who, though not opposed to foreign intercourse, had been revolted by the wholesale iconoclasm of the time, and by the indiscriminate rejection of Japanese customs in favour of foreign. He protested vehemently against what seemed to him a slavish abandonment of the nation's individuality, and finding his protest fruitless, he set himself to preserve in his own distant province, where the writ of the Yedo government had never run, the fashions, institutions and customs which his former colleagues in the administration were ruthlessly rejecting. Satsuma thus became a centre of conservative influences, among which Saigō and his constantly augmenting band of samurai found a congenial environment. During four years this breach between the central government and the southern clan grew constantly.

In the meanwhile (1876) two extreme measures were adopted by the government: a veto on the wearing of swords, and an edict ordering the compulsory commutation of the pensions and allowances received by the nobles and the samurai. Three years previously the discard of swords had been declared optional, and a scheme of voluntary commutation had been announced. Many had bowed quietly to the spirit of these enactments. But many still retained their swords and drew their pensions as of old, obstructing, in the former respect, the government's projects for the reorganization of society, and imposing, in the latter, an intolerable burden on the resources of the treasury. The government thought that the time had come, and that its own strength sufficed, to substitute compulsion for persuasion. The financial measure—which was contrived so as to affect the smallest pension-holders least injuriously—evoked no complaint. The samurai remained faithful to the creed which forbade them to be concerned about money. But the veto against sword-wearing overtaxed the patience of the extreme Conservatives. It seemed to them that all the most honoured traditions of their country were being ruthlessly sacrificed on the altar of alien innovations. Armed protests ensued. A few score of samurai, equipping themselves with the hauberk and weapons of old times, fell upon the garrison of a castle, killed or wounded some 300, and then, retiring to an adjacent mountain, died by their own hands. Their example found imitators in other two places, and finally the Satsuma samurai rebels under the command of Saigō.

The Satsuma Insurrection was a matter of very different in dimensions and motives from the outbreaks that had preceded it. During four years the preparations of the Satsuma men had been unremitting. They were equipped with rifles and cannon; they numbered some 30,000; they were all of the military class, and in addition to high training in western tactics and in the use of modern arms of precision, they knew how to wield that formidable weapon, the Japanese sword, of which their opponents were for the most part ignorant. Ostensibly their object was to restore the samurai to their old supremacy, and to secure for them all the posts in the army, the navy and the administration. But although they doubtless entertained that intention, it was put forward mainly with the hope of winning the co-operation of the military class throughout the empire. The real purpose of the revolt was to secure the governing power for Satsuma. A bitter struggle ensued. Beginning on the 26th of January, 1876, it ended, with a close on the 4th of September by the death, voluntary or in battle, of all the rebel leaders. During that period the number of men engaged on the government's side had been 66,000 and the number on the side of the rebels 40,000, out of which total the killed and wounded aggregated 35,000, or 33% of the whole. Had the government's troops been finally defeated, there can be no doubt that the samurai's exclusive title to man and direct the army and navy would have been re-established, and Japan would have found herself permanently saddled with a military class, heavily burdening her finances, seriously impeding her progress towards constitutional government, and perpetuating all the abuses incidental to a policy in which the power of the sword rests entirely in the hands of one section of the people. The nation scarcely appreciated the great issues that were at stake. It found more interest in the struggle as furnishing a conclusive test of the efficiency of the new military system compared with the old. The army sent to quell the insurrection consisted of recruits drawn indiscriminately from every class of the people. Viewed in the light of history, it was an army of commoners, deficient in the fighting instinct, and traditionally
DEMOCRATIC HISTORY] JAPAN 269
demoralized for all purposes of resistance to the military class. The Satsuma insurgents, on the contrary, represented the flower of the samurai, long trained for this very struggle, and led by men whom the nation regarded as its bravest captains. The result dispelled all doubts about the fighting quality of the people at large.

Concurrently with these events the government diligently endeavoured to equip the country with all the paraphernalia of Occidential civilization. It is easy to understand that the master-minds of the era, who had planned and carried out the Restoration, continued to take the lead in all paths of progress. Their intellectual superiority entitled them to act as guides; they had enjoyed exceptional opportunities of acquiring enlightenment by visits to Europe and America, and the Japanese people had not yet lost the habit of looking to officialdom for every initiative. But the spectacle thus presented to foreign onlookers was not altogether without disquieting suggestions. The go-slow, and servile forms of foreign outfitting the nation's readiness for them, and the results were an air of some artificiality and confusion. Englishmen were employed to superintend the building of railways, the erection of telegraphs, the construction of lighthouses and the organization of a navy. To Frenchmen was entrusted the work of recasting the laws and training the army in strategy and tactics. Educational affairs, the organization of a postal service, the improvement of agriculture and the work of colonization were supervised by Americans. The teaching of medical science, the compilation of a commercial code, the elaboration of a system of local government, and ultimately the training of military officers were assigned to Germans. For instruction in sculpture and painting Italians were engaged. Was it possible that so many novelties should be successfully assimilated, or that the nation should adapt itself to systems planned by a motley band of aliens who knew nothing of its character and customs? The change did not trouble them, since they tended to outside influences. The truth is that conservatism was not really required to make the great sacrifices suggested by appearances. Among all the innovations of the era the only one that a Japanese could not lay aside at will was the new fashion of dressing the hair. He abandoned the queue irreversibly. But for the rest he lived a dual life. During hours of duty he wore a fine uniform, shaped and decorated in foreign style. But so soon as he stepped out of office or off parade, he reverted to his own comfortable and picturesque costume. Handsome houses were built and furnished according to Western models. But each had an annex where alcoves, verandas, matted floors and paper sliding doors continued to do traditional duty. Beefsteaks, beer, "grape-wine," knives and forks came into use on occasion. But rice-bowls and chopsticks held their everyday place as of old. In a word, though the Japanese adopted every convenient and inoffensive product of Occidental civilization, such as railways, steamships, telegraphs, post-offices, banks and machinery of all kinds; though they accepted Occidental sciences, and, to a large extent, Occidental philosophies; though they recognized the superiority of European jurisprudence and set themselves to bring their laws into accord with it, they nevertheless preserved the essentials of their own mode of life and never lost their individuality. A remarkable spirit of liberalism and a fine eclectic instinct were needed for the part they acted, but they did no radical violence to their own traditions, creeds and conventions. There was indeed a certain element of incongruity and even grotesqueness in the nation's doings. Old people cannot fit their feet to new roads without some clumsiness. The Japanese had grown very old in their special paths, and their novel departure was occasionally disfigured by solecisms. The refined taste that guided them unconsciously in all the affairs of life as they had been accustomed to live it, seemed to fail them signally when they emerged into an alien atmosphere. They have given their proofs, however. It is now seen that the apparently excessive rapidity of their progress did not overtax their capacities; that they have emerged safely from their destructive era and carried their constructive career within reach of certain success, and that while they have still to develop some of the traits of their new civilization, there is no prospect whatever of its proving ultimately unsuited to them.

After the Satsuma rebellion, nothing disturbed the even tenor of Japan's domestic politics except an attempt on the part of some of her people to force the growth of parliametary government. It is evident that the united effort made by the fiefs to overthrow the system of dual government and wrest the administrative power from the shogun could have only one logical outcome: the combined exercise of the recovered power by those who had been instrumental in recovering it. That was the meaning of the oath taken by the emperor at the Restoration, when the youthful sovereign was made to say that wise counsels should be widely sought, and all things determined by public discussion. But the framers of the oath had the samurai alone in view. Into their consideration the common people—farmers, mechanics, tradesmen—did not enter at all, nor had the common people themselves any idea of advancing a claim to be considered. A voice in the administration would have been to them an embarrassing rather than a pleasing privilege. Thus the first deliberative assembly was composed of nobles and samurai only. A mere debating club without any legislative authority, it was permanently dissolved after two sessions. Possibly the problem of a parliament might have been long postponed after that fiasco, had it not found an ardent advocate in Itagaki Taisuke (afterwards Count Itagaki). A Tosa samurai conspicuous as a leader of the restoration movement, Itagaki was among the advocates of recourse to strong measures against Korea in 1873, and his failure to carry his point, supplemented by a belief that a large section of public opinion would have supported him there been any machinery for appealing to it, gave fresh impetus to the popular representation in the Restoration. On account of the Korean question, he became the nucleus of agitation in favour of a parliamentary system, and under his banner were enrolled not only discontented samurai but also many of the young men who, returning from direct observation of the working of constitutional systems in Europe or America, and failing to obtain official posts in Japan, attributed their failure to the oligarchical form of their country's polity. Thus in the interval between 1873 and 1877 there were two centres of disturbance in Japan: one in Satsuma, where Saigō figured as leader; the other in Tosa, under Itagaki's guidance. When the Satsuma men appealed to arms in 1877, a widespread apprehension prevailed lest the Tosa politicians should throw in their lot with the insurgents. Such a fear had its origin in failure to understand the object of the one side or to appreciate the sincerity of the other. Saigō and his adherents fought to substantiate their stand for the old regime. Itagaki and his followers struggled for constitutional institutions. The two could not have anything in common. There was consequently no coalition. But the Tosa agitators did not neglect to make capital out of the embarrassment caused by the Satsuma rebellion. While the struggle was at its height, they addressed to the government a memorial, charging the administration with oppressive measures to restrain the voice of public opinion, with usurpation of power to the exclusion of the nation at large, and with levelling downwards instead of upwards, since the samurai had been reduced to the rank of commoners, whereas the commoners should have been educated up to the standard of the samurai. This memorial asked for a representative assembly and talked of popular rights. But since the document admitted that the people were uneducated, it is plain that there cannot have been any serious idea of giving them a share in the administration. In fact, the Tosa Liberals were not really contending for popular representation in the full sense of the term. What they wanted was the creation of some machinery for securing to the samurai at large a voice in the management of state affairs. They clung against the fact that, whereas the efforts and sacrifices demanded by the Restoration had fallen
equally on the whole military class, the official prizes under the new system were monopolized by a small coterie of men belonging to the four principal clans. It is on record that Itagaki would have been content originally with an assembly consisting half of officials, half of non-official samurai, and not including any popular element whatever.

But the government did not believe that the time had come even for a measure such as the Tosa Liberals advocated. The statesmen in power conceived that the nation must be educated up to constitutional standards, and that the first step should be to provide an official model. Accordingly, in 1874, arrangements were made for periodically convening an assembly of prefectural governors, in order that they might act as channels of communication between the central authorities and the provincial population, and mutually exchange ideas as to the safest and most effective methods of encouraging progress within the limits of their jurisdictions. This was intended to be the embryo of representative institutions. But the governors, being officials appointed by the cabinet, did not bear in any sense the character of popular nominees, nor could it even be said that they reflected the public feeling of the districts they administered, for their habitual and natural tendency was to try, by means of heroic object lessons, to win the people’s allegiance to the government’s progressive policy, rather than to convince the government of the danger of overstepping the people’s capacities.

These conventions of local officials had no legislative power whatever. The foundations of a body for discharging that function were laid in 1875, when a senate (genro-in) was organized. It consisted of official nominees, and its duty was to discuss and revise all laws and ordinances prior to their promulgation. It is to be noted, however, that expediency not less than a spirit of progress presided at the creation of the senate. Into its ranks were drafted a number of men for whom no places could be found in the executive, and who, without some official employment, would have been drawn into the current of disaffection. From that point of view the senate soon came to be regarded as a kind of hospital for administrative invalids, and undoubtedly its discharge of quasi-legislative functions proved suggestive, useful and instructive.

The second meeting of the provincial governors had just been prorogued when, in the spring of 1878, the great minister, Okubo Toshimitsu, was assassinated. Okubo, uniformly ready to bear the heaviest burden of responsibility in every political complication, had stood prominently before the nation as Saigō’s opponent. He fell under the swords of Saigō’s sympathizers. They immediately surrendered themselves to justice, having taken previous care to circulate a statement of motives, which showed that they ranked the government’s failure to establish representative institutions as a sin scarcely less heinous than its alleged abuses of power. Well-informed followers of Saigō could never have been sincere believers in representative institutions. These men belonged to a province far removed from the scene of Saigō’s desperate struggle. But the broad fact that they had sealed with their lives an appeal for a political change indicated the existence of a strong public conviction which would derive further strength from their act. The Japanese are essentially a brave people. Throughout the troublesome events that preceded and followed the Restoration, it is not possible to point to one man whose obedience to duty or conviction was visibly weakened by prospects of personal peril. Okubo’s assassination did not alarm any of his colleagues; but they understood its suggestiveness, and hastened to give effect to a previously formed resolve.

Two months after Okubo’s death, an edict announced that elective assemblies should forthwith be established in various prefectures and cities. These assemblies were to consist of members having a high property qualification, elected by voters having one-half of that qualification; the voting to be by signed ballot, and the session to last for one month in the spring of each year. As to their functions, they were to determine the method of levying and spending local taxes, subject to approval by the minister of state for home affairs to scrutinize the accounts for the previous year, and, if necessary, to present petitions to the central government. Thus the foundations of genuine representative institutions were laid. It is true that legislative power was not vested in the local assemblies, but in all other important respects they discharged parliamentary duties. Their history need not be related at any length. Sometimes they came into violent collision with the governor of the prefecture, and unsightly struggles resulted. The governors were disposed to advocate public works which the people considered extravagant; and further, as years went by, and as political organizations grew stronger, there was found in each assembly a group of men ready to oppose the governor simply because of his official status. But on the whole the system worked well. The local assemblies served as training schools for the future parliament, and their members showed devotion to public duty as well as considerable aptitude for debate.

This was not what Itagaki and his followers wanted. Their purpose was to overthrow the clique of clansmen who, holding the reins of administrative power, monopolized the Liberal prizes of officialdom. Towards the consummation of such an aim the local assemblies helped little. Itagaki redoubled his agitation. He organized his fellow-thinkers into an association called jiyūkai (Liberals), the first political party in Japan, to whose ranks there very soon gravitated several men who had been in office and resented the loss of it; many that had never been in office and desired to be; and a still greater number who sincerely believed in the principles of political liberty, but had not yet considered the possibility of immediately adapting such principles to Japan’s case. It was in the nature of things that an association of this kind, professing such doctrines, should present a picturesque aspect to the public, and that its collisions with the authorities should invite popular sympathy. Nor were collisions infrequent. For the government, arguing that if the nation was not ready for representative institutions, neither was it ready for full freedom of speech or of public meeting, legislated consistently with that theory, and entrusted the police large powers of control over the press and public platform. The exercise of these powers often created situations in which the Liberals were able to pose as victims of official tyranny, so that they grew in popularity and the contagion of political agitation spread.

Three years later (1881) another split occurred in the ranks of the ruling oligarchy. Okuma Shigenobu (afterwards Count Okuma) seceded from the administration, and was followed by a number of able men who had owed their appointments to his patronage, or who, during his tenure of office as minister of finance, had passed under the influence of his powerful personality. If Itagaki be called the Rousseau of Japan, Okuma may be regarded as the Peel. To remarkable financial ability and a lucid, vigorous judgment he added the faculty of placing himself on the crest of any wave which a genuine aura popularis had begun to swell. He, too, inscribed on his banner of revolt against the oligarchy the motto “constitutional government,” and it might have been expected that his followers would join hands with those of Itagaki, since the avowed political purpose of both was identical. They did nothing of the kind. Okuma organized an independent party, calling themselves Progressivists (shimpōdai), who not only stood aloof from the Liberals but even assumed an attitude hostile to them. This fact is eloquent. It shows that Japan’s first political parties were grouped, not about principles, but about persons. Hence an inevitable lack of cohesion among their elements and a constant tendency to break up into caves and coteries. These are the characteristics that render the story of political evolution in Japan so perplexing to a foreign student. He looks for differences of platform and finds none. Just as a true Liberal must be a Progressivist, and a true Progressivist a Liberal, so, though each may cast his profession of faith in a mould of different phrases, the ultimate shape must be the same. The mainsprings of early political agitation in Japan were personal
grievances and a desire to wrest the administrative power from the hands of the statesmen who had held it so long as to overtax the patience of their rivals. He that searches for profound moral or ethical bases will be disappointed. There were no Conservatives. Society was permeated with the spirit of progress. In a comparative sense the epithet “Conservative” might have been applied to the statesmen who proposed to defer parliamentary institutions until the people, as distinguished from the former samurai, had been in some measure prepared for such an innovation. But since these very statesmen were the guiding spirits of the whole Meiji revolution, it was plain that their convictions must be radical, and that, unless they did violence to their record, they must finally lead the country to representative institutions, the logical sequel of their own reforms.

Okubo’s assassination had been followed, in 1878, by an edict announcing the establishment of local assemblies. Okuma’s secession in 1881 was followed by an edict announcing that a national assembly would be convened in 1891.

The political parties, having now virtually attained their object, might have been expected to desist from further agitation. But they had another task to perform—that of disseminating anti-official prejudices among the future electors. They worked diligently, and they had an undisputed field, for no one was put forward to champion the government’s cause. The campaign was not always conducted on lawful lines. There were plots to assassinate ministers; there was an attempt to employ dynamite, and there was a scheme to foment an insurrection in Korea. On the other hand, dispersals of political meetings by order of policeinspectors, and suspension or suppression of newspapers by the unchallengeable verdict of a minister for home affairs, were common occurrences. The breach widened steadily. It is true that Okuma rejoined the cabinet for a time in 1887, but he retired again in circumstances that aggravated his party’s hostility to officialdom. In short, during the ten years immediately prior to the opening of the first parliament, an antigovernment propaganda was incessantly preached from the platform and in the press.

Meaning men in power resolutely pursued their path of progressive reform. They codified the civil and penal laws, remodelling them on Western bases; they brought a vast number of affairs within the scope of minute regulations; they rescued the finances from confusion and restored them to a sound condition; they recast the whole framework of local government; they organized a great national bank, and established a network of subordinate institutions throughout the country; they pushed on the work of railway construction, and successfully enlisted private enterprise in its cause; they steadily extended the postal and telegraphic services; they economized public expenditures so that the state’s income always exceeded its outlays; they laid the foundations of a strong mercantile marine; they instituted a system of postal savings-banks; they undertook large schemes of harbour improvement and road-making; they planned and put into operation an extensive programme of riparian improvement; they made civil service appointments depend on competitive examination; they sent out numbers of students to Europe and America to complete their studies; and by tactful, persevering diplomacy they gradually introduced a new tone into the empire’s relations with foreign powers.

Japan’s affairs were never better administered.

In 1890 the Constitution was promulgated. Imposing ceremonies marked the event. All the nation’s notables were summoned to the palace to witness the delivery of the important document by the sovereign to the prime minister; salvoes of artillery were fired; the cities were illuminated, and the people kept holiday. Marquis (afterwards Prince) Itô directed the framing of the Constitution. He had visited the Occident for the purpose of investigating the development of parliamentary institutions and studying their practical working. His name is connected with nearly every great work of constructive statesmanship in the history of new Japan, and perhaps the crown of his legislative career was the drafting of the Constitution, to which the Japanese people point proudly as the only charter of the kind voluntarily given by a sovereign to his subjects. In other countries such concessions were always the outcome of long struggles between ruler and ruled. In Japan the emperor freely divested himself of a portion of his prerogatives and transferred them to the people. That view of the case, as may be seen from the story told above, is not untinged with romance; but in a general sense it is true.

No incident in Japan’s modern career seemed more hazardous than this sudden plunge into parliamentary institutions. There had been some preparation. Provincial assemblies had partially familiarized the people with the methods of deliberative bodies. But provincial assemblies were at best petty arenas—places where the making or mending of roads, and the policing and sanitation of villages came up for discussion, and where political parties exercised no legislative function nor found any opportunity to attack the government or to debate problems of national interest. Thus the convening of a diet and the sudden transfer of financial and legislative authority from the throne and its entourage of tried statesmen to the hands of men whose qualifications for public life rested on the verdict of electors, themselves apparently devoid of all light to guide their choice—this sweeping innovation seemed likely to tax severely, if not to overtax completely, the progressive capacities of the nation. What enhanced the interest of the situation was that the oligarchs who held the administrative power had taken no pains to win a following in the political field. Knowing that the opening of the diet would be a veritable letting loose of the dogs of war, an unmuzzling of the agitators whose mouths had hitherto been partly closed by legal restrictions upon free speech, but who would now enjoy complete immunity within the walls of the assembly whatever the nature of their utterances—foreseeing all this, the statesmen of the day nevertheless stood severely aloof from alliances of every kind, and discharged their administrative functions with apparent indifference to the changes that popular representation could not fail to induce. This somewhat inexplicable display of unconcern became partially intelligible when the constitution was promulgated, for it then appeared that the cabinet’s tenure of office was to depend solely on the emperor’s will; that ministers were to take their mandate from the Throne, not from parliament. This fact was merely an outcome of the theory underlying every part of the Japanese polity. Laws might be redrafted, institutions remodelled, systems recast, but amid all changes and mutations one steady point must be carefully preserved, the Throne. The makers of new Japan understood that so long as the sanctity and inviolability of the imperial prerogatives could be preserved, the nation would be held by a strong anchor from drifting into dangerous waters. They laboured under no misapprehension about the inevitable issue of their work in framing the constitution. They knew very well that party cabinets are an essential outcome of representative institutions, and that to some kind of party cabinet Japan must come. But they regarded the Imperial mandate as a conservative safeguard, pending the organization and education of parties competent to form cabinets. Such parties did not yet exist, and until they came into unequivocal existence, the Restoration statesmen, who had so successfully managed the affairs of the nation during a quarter of a century, resolved that the steady point furnished by the throne must not be abandoned.

On the other hand, the agitators found here a new platform. They had obtained a constitution and a diet, but they had not obtained an instrument for pulling down the “clan” administrators, since these stood secure from attack under the aegis of the sovereign’s mandate. They dared not raise their voices against the unfettered exercise of the mikado’s prerogative. The nation, loyal to the core, would not have suffered such a protest, nor could the agitators themselves have found heart to formulate it. But they could read their own interpretation into the text of the Constitution, and they could demonstrate practically that a cabinet not acknowledging responsibility to the legislature was virtually impotent for law-making purposes.
These are the broad outlines of the contest that began in the first session of the Diet and continued for several years. It is unnecessary to speak of the special points of controversy. Just as the political parties had been formed on the lines of persons, not principles, so the opposition in the Diet was directed against men, not measures. The struggle presented varying aspects at different times, but the fundamental question at issue never changed. Obstruction was the weapon of the political parties. They sought to render legislation and finance impossible for any ministry that refused to take its mandate from the majority in the lower house, and they imparted an air of respectability and even patriotism to their destructive campaign by making “anti-clanism” their war-cry, and industriously fostering the idea that the struggle lay between administration guided by public opinion and administration controlled by a clique of clansmen who separated the throne from the nation. Had not the House of Peers stood sturdily by the government throughout this contest, it is possible that the nation might have suffered severely from the rashness of the political parties.

There was something melancholy in the spectacle. The Restoration statesmen were the men who had made Modern Japan; the men who had raised her, in the face of immense obstacles, from the position of an insignificant Oriental state to that of a formidable unit in the comity of nations; the men, finally, who had given to her a constitution and representative institutions. Yet these same men were now fiercely attacked by the arms which they had themselves served; were held up to public obloquy as self-seeking usurpers, and were declared to be impeding the people’s constitutional route to administrative privileges, when in reality they were only holding the breach until the people should be able to march into the citadel with some show of orderly and competent organization. That there was no corruption, no abuse of position, is not to be pretended; but on the whole the conservatism of the clan statesmen had only one object—to provide that the newly constructed representative machine should not set working until its parts were duly adjusted and brought into proper gear. On both sides the leaders understood the situation accurately. The heads of the parties, while publicly clamouring for parliamentary cabinets, privately confessed that they were not yet prepared to assume administrative responsibilities; and the so-called “clan statesmen,” while refusing before the world to accept the Diet’s mandates, admitted within official circles that the question was one of time only. The situation did not undergo any marked change until, the country becoming engaged in war with China (1894–95), domestic squabbles were forgotten in the presence of foreign danger. From that time an era of coalition commenced. Both the political parties joined hands to vote funds for the prosecution of the campaign, and one of them, the Liberals, subsequently gave support to a cabinet under the presidency of Marquis Itō, the purpose of the union being to carry through the Diet an extensive scheme of enlarged armaments and public works planned in the sequel of the war. The Progressives, however, remained implacable, continuing their opposition to the thing called bureaucracy quite irrespective of its measures.

The next phase (1898) was a fusion of the two parties into one large organization which adopted the name “Constitutional Fusion of the Two Parties” (kensetsu-tō). By this union the chief obstacles to parliamentary cabinets were removed. Not only did the Constitutionalists command a large majority in the lower house, but also they possessed a sufficiency of men who, although lacking ministerial experience, might still advance a reasonable title to be entrusted with portfolios. Immediately the emperor, acting on the advice of Marquis Itō, invited Counts Okuma and Itagaki to form a cabinet. It was essentially a trial. The party politicians were required to demonstrate in practice the justice of the claim they had been so long asserting in theory. They had worked

1 Neither the Liberals nor the Progressists had a working majority in the house of representatives, nor could the ranks of either have furnished men qualified to fill all the administrative posts.
political combinations for the better practical conduct of parliamentary business, but that the seiyū-kai, founded by
Prince Itō and led by Marquis Saionji, should ever hold office in
defiance of the sovereign's mandate is unhonorable. Con-
stitutional institutions in Japan are therefore developing along
lines entirely without precedent. The storm and stress of early
parliamentary days have given place to comparative calm.
During the first twelve sessions of the Diet, extending over 8 years,
there were five dissolutions of the lower house. During the next
thirteen sessions, extending over 11 years, there were two
dissolutions. During the first 8 years of the Diet's existence there
were six changes of cabinet; during the next 11 years there were five
changes. Another healthy sign was that men of affairs
were beginning to realize the importance of parliamentary
representation. At first the constituencies were contested
almost entirely by professional politicians, barristers and
journalists. In 1909 was a solid body (the boshin club)
of business men commanding nearly 50 votes in the lower
house; and as the upper chamber included 45 representatives of
the highest tax-payers, the interests of commerce and
industry were intelligently debated. (F. B.)

X.—THE CLAIM OF JAPAN: BY A JAPANESE STATESMAN

It has been said that it is impossible for an Occidental to
understand the Oriental, and vice versa; but, admitting that
the mutual understanding of two different races or peoples
is a difficult matter, why should Occidentals and Orientals
be thus set in opposition? No doubt, different peoples of
Europe understand each other better than they do the Asiatic;
but can Asiatic peoples understand each other better than they
can Europeans or than the Europeans can understand any of
them? Do Japanese understand Persians or even Indians
better than English or French? It is true perhaps that Japane-
se can and do understand the Chinese better than Europeans;
but that is due not only to centuries of mutual intercourse,
but to the wonderful and peculiar fact that they have adopted
the old classical Chinese literature as their own, somewhat in the
way the Greeks, Romans, and Hindus are to this day, the
pride, in which the European nations have adopted the old Greek and Latin
literatures. What is here contended for is that the mutual understanding of
two peoples is not so much a matter of race, but of the know-
ledge of each other's history, traditions, literature, &c.

The Japanese have, they think, suffered much from the
misunderstanding of their motives, feelings and ideas; what
they want is to be understood fully and to be known for what they
really are, be it good or bad. They desire, above all, not to be
lumped as Oriental, but to be known and judged on their own
account. In the latter half of the 19th century, in fact up to
the Chinese War, it irritated Japanese travelling abroad more
than anything else to be taken for Chinese. Then, after the
Chinese War, the alarm about Japan leading Eastern Asia
to make a general attack upon Europe—the so-called Yellow
Peril—seemed so ridiculous to the Japanese that the bad effects of
such wild talk were not quite appreciated by them. The aim of the
Japanese constitution, ever since, at the time of the Restoration
(1868), they laid aside definitively all ideas of seclusion and
entered into the comity of nations, has been that they should
rise above the level of the Eastern peoples to an equality with
the Western and should be in the foremost rank of the brother-
hood of nations; it was not their ambition at all to be the
champion of the East against the West, but rather to beat
down the barriers between themselves and the West.

The intense pride of the Japanese in their nationality, their
patriotism and loyalty, arise from their history, for what other
nation can point to an Imperial family of one unbroken lineage
reigning over the land for twenty-five centuries? Is it not a
glorious tradition for a nation, that its emperor should be de-
sceled directly from that grandson of the great heaven-

The following expression of the Japanese point of view, by a
statesman of the writer's authority and experience, may well supple-
ment the general account of the progress of Japan and its inclusion
among the great civilized powers of the world.—(Ed. E. B.)

illuminating goddess," to whom she said, "This land (Japan)
is the region over which my descendants shall be the lords.
Do thou, my august child, proceed thither and govern it. Go! The prosper-
ity of thy dynasty shall be coeval with heaven and earth.
" Thus they call their country the land of kami (ancient gods of
tradition). With this spirit, in the old days when China held the
hegemony of the East, and all neighbouring peoples were
regarded as its tributaries, Japan alone, largely no doubt on
account of its insular position, held itself quite aloof; it set at
defiance the power of Kublai and routed utterly the combined
Chinese and Korean fleets with vast forces sent by him to conquer
Japan, this being the only occasion that Japan was threatened
with a foreign invasion.

With this spirit, as soon as they perceived the superiority of
the Western civilization, they set to work to introduce it into
their country, just as in the 7th and 8th centuries they had
adopted and adapted the Chinese civilization. In 1868, the first
year of the era of Meiji, the emperor swore solemnly the memo-
bable oath of five articles, setting forth the policy that was to be and
has been followed thereafter by the government. These
five articles were:

1. Deliberative assemblies shall be established and all measures
of government shall be decided by public opinion.
2. All classes, high and low, shall unite in vigorously carry-
ing out the plan of government.
3. Officials, civil and military, and all common people shall as far
as possible be allowed to fulfil their just desires so that there
may not be any discontent among them.
4. Uncivilized customs of former times shall be broken through,
and everything shall be based upon just and equitable principles
of heaven and earth (nature).
5. Knowledge shall be sought for throughout the world, so that
the welfare of the empire may be promoted.

(Translation due to Prof. N. Hozumi of Tōkyō Imp. Univ.)

It is interesting, as showing the continuity of the policy of
the empire, to place side by side with these articles the words of the
Imperial rescript issued in 1908, which are as follows:

"We are convinced that with the rapid and unceasing advance of
civilization, the East and West, mutually dependent and helping
each other, are bound by common interests. It is our sincere wish
to continue to enjoy for ever its benefits in common with other
powers by entering into closer and closer relations and strengthening
our friendship with them. Now in order to be able to move onward
along with the constant progress of the world and to share in the
benefits of civilization, it behoves us to develop our internal resources;
our nation, but recently emerged from an ex-
hausting war, must put forth increased activity in every branch of
administration. It therefore behoves our people to endeavour
with all our might, from the highest to the lowest, to pursue their
callings honestly and earnestly, to be industrious and thrifty,
to abide in faith and righteousness, to be simple and warm-hearted,
to put away ostentation and vanity and strive after the useful and
solid, to avoid idleness and indulgence, and to apply themselves
incessantly to strenuous and arduous tasks . . ."

The ambition of the Japanese people has been, as already
stated, to be recognized as an equal by the Great Powers.
With this object in view, they have spared no efforts to introduce what
they considered superior in the Western civilization, although it
may perhaps be doubted whether in their eagerness they have
always been wise. They have always resented any discrimination
against them as an Asiatic people, not merely protesting against
it, knowing that such would not avail much, but making every
effort to remove reasons or excuses for it. Formerly there
were troops stationed to guard several legations; foreign postal
service was not entirely in the hands of the Japanese government
for a long time; these and other indignities against the sove-
ignty of the nation were gradually removed by proving that
they were not necessary. Then there was the question of the
extra-territorial jurisdiction; an embassy was sent to Europe
and America as early as 1871 with a view to the revision of
treaties. It was to do away with this improper in empire, that
being the date originally fixed for the revision; the embassy,
however, failed in its object but was not altogether fruitless,
for it was then clearly seen that it would be necessary to revise
thoroughly the system of laws and entirely to reorganize the
law courts before Occidental nations could be induced to forgo
this privilege. These measures were necessary in any case as a consequence of the introduction of the Western methods and ideas, but they were hastened by the fact of their being a necessary preliminary to the revision of treaties. When the new code of laws was brought before the Diet at its first session, and there was a great opposition against it in the House of Peers on account of its many defects and especially of its ignoring many established usages, the chief argument in its favour, or at least one that had a great influence with many who were unacquainted with technical points, was that it was necessary for the revision of treaties and that the defects, if any, could be afterwards amended at leisure. These preparations on the part of the government, however, took a long time, and in the meantime the whole nation, or at least the more intelligent part of it, was chafing impatiently under what was considered a national indignity. The United States, by being the first to agree to its abandonment, although this agreement was rendered nugatory by a conditional clause, added to the stock of goodwill with which the Japanese have always regarded the Americans on account of their attitude towards them. When at last the consummation so long and evidently desired was attained, great was the joy with which it was greeted, for now it was felt that Japan was indeed on terms of equality with Occidental nations. Great Britain, by being the first to conclude the revised treaty—an act due to the remarkable foresight of her statesmen in spite of the opposition of their countrymen in Japan—did much to bring about the cordial feeling of the Japanese towards the British, which made them welcome with such enthusiasm the Anglo-Japanese alliance.

The importance of this last as a powerful instrument for the preservation of peace in the extreme East has been, and always will be, appreciated at its full value by the more intelligent and thoughtful among the Japanese; but by the mass of the people it was received with great acclamation, owing partly to the already existing good feeling towards the British, but also in a large measure because it was felt that the fact that Great Britain should leave its "splendid isolation" to enter into this alliance proclaimed in the clearest possible way that Japan had entered on terms of full equality among the brotherhood of nations, and that thenceforth there could be no ground for that discrimination against them as an Asiatic nation which had been so galling to the Japanese public.

There have been, and there still are being made, many charges against the Japanese government and people. While admitting that some of them may be founded on facts, it is permissible to point out that traits and acts of a few individuals have often been generalized to be the national characteristic or the result of a fixed policy, while in many cases such charges are due to misunderstandings arising from want of thorough knowledge of each other's language, customs, usages, ideas, &c. Take the principle of "the open door," for instance; the Japanese government has been charged in several instances with acting contrary to it. It is natural that where (as in China) competition is very keen between men of different nationalities, individuals should sometimes feel aggrieved and make complaints of unfairness against the government of their competitors; it is also natural that people should not listen to and believe in those charges made against the Japanese by their countrymen in the East, while unfortunately the Japanese, being so far away and often unaware of them, have not a ready means of vindicating themselves; but subsequent investigations have always shown those charges to be either groundless or due to misunderstandings, and it may be asserted that in no case has the charge been substantiated that the Japanese government has knowingly, deliberately, of malice prepense been guilty of breach of faith in violating the principle of "the open door" to which it has solemnly pledged itself. That it has often been accused by the Japanese subjects of weakness vis-a-vis foreign powers to the detriment of their interests, is perhaps a good proof of its fairness.

The Japanese have often been charged with looseness of commercial morality. This charge is harder to answer than the last, for it cannot be denied that there have been many instances of dishonesty on the part of Japanese tradesmen or employees; but it is never a valid argument, but there are black sheep everywhere, and there were special reasons why foreigners should have come in contact with many such and eager to fight with the Japanese. In days before the Restoration, merchants and tradesmen were officially classed as the lowest of four classes, the samurai, the farmers, the artisans and the merchants; practically, however, rich merchants serving as bankers and employers of others were held in high esteem, even by the samurai. Yet it cannot be denied that the position of the last three was low compared with that of the samurai; their education was not so high, and although of course there was the same code of morality for them all, there was no such high standard of honour as was enjoined upon the samurai by the bushidō or "the way of samurai." Now, when foreign trade was first opened, it was naturally not firms with long-established credit and methods that first ventured upon the new field of business—some few that did fail owing to their want of experience—it was rather enterprising and adventurous spirits with little capital or credit who eagerly flocked to the newly opened ports to try their fortune. It was not to be expected that all or most of those should be very scrupulous in their dealings with the foreigners; the majority of those adventurers failed, while a few of the ablest men, generally those who believed in and practised honesty as the best policy, succeeded and came to occupy an honourable position as business men. It is also asserted that foreigners, or at least some of them, did not scruple to take unfair advantage of the want of experience on the part of their Japanese customers to impose upon them methods which they would not have followed except in the East; it may be that such methods were necessary or were deemed so in dealing with those adventurers, but it is a fact that it afterwards took a long time and great effort on the part of Japanese traders to break through some usages and customs which were established in earlier days and which they deemed derogatory to their credit or injurious to their interests. Infringement of patent rights and fraudulent imitation of trade-marks have with some truth also been charged against the Japanese; about this it is to be remarked that although the principles of morality cannot change, their applications may vary; new patents and trade-marks are, their own notions of property in Japan, and it takes time to teach that their infringement should be regarded with the same moral censure as stealing.

The government has done everything to prevent such practices by enacting and enforcing laws against them, and nowadays they are not so common. Be that as it may, such a state of affairs as that mentioned above is now passing away almost entirely; commerce and trade are now regarded as highly honourable professions, merchants and business men occupy the highest social positions, several of them having been lately raised to the peerage, and are as honourable a set of men as can be met anywhere. It is however to be regretted that in introducing Western business methods, it has not been quite possible to exclude some of their evils, such as promotion of swindling companies, tampering with members of legislation, and so forth.

The Japanese have also been considered in some quarters to be a bellicose nation. No sooner was the war with Russia over than they were said to be ready and eager to roll back the United States. This is another misrepresentation arising from want of proper knowledge of Japanese character and feelings. Although it is true that within the quarter of a century preceding 1900 Japan was engaged in two sanguinary wars, not to mention the Boxer affair, in which owing to her proximity to the scene of the disturbances she had to take a prominent part, yet neither of these was of her own seeking; in both cases she had to fight or else submit to become a mere cipher in the world, if indeed she could have preserved her existence as an independent state. The Japanese, far from being a bellicose people, deliberately cut off all intercourse with the outside world in order to avoid international troubles, and remained absolutely secluded from the world and at profound peace within their own territory for two centuries and a half. Besides, the Japanese have always regarded the Americans with a special goodwill, due no doubt to the steady liberal attitude of the American government and
people towards Japan and Japanese, and they "look upon the idea of war between Japan and the United States as ridiculous.

Restrictions upon Japanese emigrants to the United States and to Australia are irritating to the Japanese, because it is a discrimination against them as belonging to the "yellow" race, whereas it has been their ambition to raise themselves above the level of the Eastern nations to an equality with the Western nations, although they cannot change the colour of their skin. When a Japanese even of the highest rank and standing has to obtain a permit from an American Immigrant officer before he can enter American territory, is it not natural that he and his countrymen should resent this discrimination as an indignity? But they have too much good sense to think or even dream of going to war upon such a matter; on the contrary, the Japanese government agreed in 1908 to limit the number of emigrants in order to avoid complications.

It may be repeated that it has ever been the ambition of the Japanese people to take rank with the Great Powers of the world, and to have a voice in the council of nations; they demand that they shall not be discriminated against because of the colour of their skin, but that they shall rather be judged by their deeds. With this aim, they have made great efforts: where charges brought against them have any foundation in fact, they have endeavoured to make reforms where they are false or due to misunderstandings they have tried to have them taken, trusting to time for their vindication. They are willing to be judged by the intelligent and impartial world: a fair field and no favour is what they claim, and think they have a right to claim, from the world.

BIBLIOGRAPHY.—The latest edition of von Wemckstern's *Bibliography of the Japanese Empire* contains the names of all important books and publications relating to Japan, which have now become numerous. Reference must suffice here to Captain F. Brinkley's *Japan* (2 vols., 1904); the works of B. H. Chamberlain, *Things Japanese* (5th ed., 1905, &c.); W. G. Aston, *Hist. of Jap. Literature*, &c., and Lachlaido, *Hearn, Japan: an Interpretation* (1904), &c., as the European authors with intimate knowledge of the country who have done most to give accurate and illuminating expression to its development. See also *Fifty Years of New Japan*, an encyclopaedic account of the national development in all its aspects, compiled by Count Shigenobu Okuma (2 vols., 1907, 1908; Eng. ed. by Marcus B. Huish, 1909).

**JAPANNING,** the art of coating surfaces of metal, wood, &c., with a variety of varnishes, which are dried and hardened on in stoves or hot chambers. These drying processes constitute the main distinguishing features of the art. The trade owes its name to the fact that it is an imitation of the famous lacquering of Japan (see *Japan: Art*), which, however, is prepared with entirely different materials and processes, and is in all respects much more brilliant, durable and beautiful than any ordinary Japan work. Japanning is done in clear transparent varnishes, in black and in body colours; but black Japan is the most characteristic and common style of work. The varnish for black Japan consists essentially of pure natural asphaltum with a proportion of gum anise dissolved in linseed oil and thinned with turpentine. In thin layers such a Japan has a rich dark brown colour; it only shows a brilliant black in thicker coatings. For fine work, which has to be smoothed and polished, several coats of black are applied in succession, each being separately dried in the stove at a heat which may rise to about 300° F. Body colours consist of a basis of transparent varnish mixed with the special mineral paints of the desired colours or with bronze powders. The transparent varnish used by japanners is a copal varnish which contains less drying oil and more turpentine than is contained in ordinary oil varnish. Japanning produces a brilliant polished surface which is much more durable and less easily affected by heat, moisture or other influences than any ordinary painted and varnished work. It may be regarded as a process intermediate between ordinary painting and enamelling. It is very extensively applied in the finishing of ordinary ironmongery goods and domestic iron-work, deed boxes, clock dials and papier-mâché articles. The process is also applied to blocks of slate for making imitation of black and other marbles for chymiepieces, &c., and in a modified form is employed for preparing enamelled, Japan or patent leather.

**JAPETH (נֶפֶת, Japheth),** in the Bible, the youngest son of Noah according to the Priestly Code (c. 450 B.C.); but in the earlier traditions the second son, also the "father" of one of the three groups into which the nations of the world are divided. In Gen. ix. 27, Noah pronounces the following blessing on Japeth—

"God enlarge (Heb. יָפָה) Japheth (Heb. יָפֶה), and let him dwell in the tents of Shem; and let Canaan be his servant."

This is probably an ancient oracle independent alike of the flood story and the genealogical scheme in Gen. x. Shem is probably Israel; Canaan, of course, the Canaanites; by analogy, Japeth should be some third element of the population of Palestine—the Philistines or the Phoenicians have been suggested. The sense of the second line is doubtful, it may be "let God dwell" or "let Japheth dwell"; on the latter view Japeth appears to be in friendly alliance with Shem. The words might mean that Japeth was an intruding invader, but this is not consonant with the tone of the oracle. Possibly Japeth is only present in Gen. ix. 20-27 through corruption of the text, Japeth may be an accidential repetition of yaph "may he enlarge," misread as a proper name.

In Gen. x. Japeth is the northern and western division of the nations; being perhaps used as a convenient title under which to group the more remote peoples who were not thought of as standing in ethnic or political connexion with Israel or Egypt. Thus of his descendants, Gomer, Magog, Tubal, Meshech, Ashkenaz, Riphath and Togarach are peoples who are located with more or less certainty in N.E. Asia Minor, Armenia and the lands to the N.E. of the Black Sea; Javan is the Ionians, used loosely for the seafaring peoples of the West, including Tarshish (Tarsus in Spain), Kittim (Cyprus), Rodanim (Rhodes). There is no certain identification of Tiras and Elisheh.

The similarity of the name Japeth to the Titan Iapetos of Greek mythology is probably a mere accident. A place Japeth is mentioned in Iudith ii. 25, but it is quite unknown.

In addition to commentaries and dictionary articles, see E. Meyer, *Die Israeliten und ihre Nachbarstämme*, pp. 219 sqq. (W. H. Be.)

**JAR,** a vessel of simple form, made of earthenware, glass, &c., with a spoutless mouth, and usually without handles. The word came into English through Fr. jarre or Span. jarra, from Arab. jarrah, the earthenware vessel of Eastern countries, used to contain water, oil, wine, &c. The simple electrical condenser known as a Leyden Jar (q.v.) was so called because of the early experiments made in the science of electricity at Leiden. In the sense of a harsh vibrating sound, a sudden shock or vibrating movement, hence dissension, quarrel or petty strife, "jar" is onomatopoeic in origin; it is also seen in the name of the bird night-jar (also known as the goat-sucker). In the expression "on the jar" or "ajar," of a door or window partly open, the word is another form of char or char, meaning turn or turning, which survives in charwoman, one who works at a turn, a job and chare, a job, spell of work.

**JARGON,** in its earliest use a term applied to the chirping and twittering of birds, but since the 15th century mainly confined to any language, spoken or written, which is either unintelligible to the user or to the hearer. It is particularly applied by uninstructed hearers or readers to the language full of technical terminology used by scientific, philosophic and other writers. The word is O. Fr., and Cotgrave defines it as "gribbide (gibberish), fustin language." It is cognate with Span. garrosa, and Ital. gergo, gergone, and probably related to the onomatopoeic O. Fr. jargouiller, to chatter. The root is probably seen in Lat. garrire, to chatter.

1 Gen. v. 32, vi. 10, vii. 13, x. 1; cf. 1 Chron. i. 4.
2 Gen. ix. 27, x. 2, J. c. 870-750 B.C. In ix. 18 Ham is an editorial addition.
3 Gen. x. 1-5; cf. 1 Chron. i. 5-7. For the significance of the genealogies in Gen. x. see Ham.
4 See Gomer, Gog.
5 So we should read with 1 Chron. i. 7 (LXX.) for Dodanim.
JARGOON, or JARGON (occasionally in old writings jargonce and jacunc), a name applied by modern mineralogists to those zircons which are fine enough to be cut as gem-stones, but are not of the red colour which characterizes the hyacinth or jacinth. The word is related to Arab zarow (zircon). Some of the finest jargons are green, others brown and yellow, whilst some are colourless. The colourless jargon may be obtained by heating certain coloured stones. When zircon is heated it sometimes changes in colour, or altogether loses it, and at the same time usually increases in density and brilliancy. The so-called Matura diamonds, formerly sent from Mataara (or Matura), in Ceylon, were decolorized zircons. The zircon has strong refractive power, and its lustre is almost adamantine, but it lacks the fire of the diamond. The specific gravity of zircon is subject to considerable variation in different varieties; thus Sir A. H. Church found the sp. gr. of a fine leaf-green jargon to be as low as 3.082, and that of a pure white jargon as high as 4.705. Jargon and tourmaline, when cut as gems, are sometimes mistaken for each other, but the sp. gr. is distinctive, since that of tourmaline is only 3.03-3.2. Moreover, in tourmaline the dichroism is strongly marked, whereas in jargon it is remarkably feeble. The refractive indices of jargon are much higher than those of tourmaline (see ZIRCON).

(F. W. R.)

JARIR IBN A'TIYYA UL-KHATIFI (d. 728), Arabian poet, was born in the reign of the caliph 'Ali, was a member of the tribe Kulaibi, a part of the Tamim, and lived in Iraq. Of his early life little is known, but he succeeded in winning the favour of the caliph, and was preferred to the great poet, al-Kindi. He was known as the 'father of Arabic poetry', and his works were preserved and enjoyed by the great courtiers of the Umayyads. His most famous work is the 'Khalili', in which he describes the beauty of the Parthian women. His works are characterized by a great wealth of imagery and a mastery of the Arabic language.

(W. G. T.)

JARKENT, a town of Russian Central Asia, in the province of Semirechensk, 70 m. W.N.W. of Kulja and near to the Ili river. Pop. (1897), 16,372.

JARNAC, a town of western France in the department of Charente, on the right bank of the river Charente, and on the railway 23 m. W. of Angoulême, between that city and cognac. Pop. (1906), 4,403. The town is well built; and an avenue, planted with poplar trees, leads to a handsome suspension bridge. The church contains an interesting ogival crypt. There are communal colleges for both sexes. Grandy, wine and wine-casks are made in the town. Jarnac was in 1569 the scene of a battle in which the Catholics defeated the Protestants. A pyramid marks the spot where Louis, Prince de Condé, one of the Protestant generals, was slain. Jarnac gave its name to an old French family, of which the best known member is G. Chabot, comte de Jarnac (d. 1575), whose lucky backstroke in his famous duel with Châteaignerie gave rise to the proverbial phrase coup de jarnac, signifying an unexpected blow.

JARO, a town of the province of Iloilo, Panay, Philippine Islands, on the Jaro river, 2 m. N.W. of the town of Iloilo, the capital. Pop. (1901), 10,681. It lies on a plain in the midst of a rich agricultural district, has several fine residences, a cathedral, a curious three-tiered tower, a semi-weekly paper and a monthly periodical. Jaro was founded by the Spanish in 1584. From 1903 until February 1908 it was part of the town or municipality of Iloilo.

JAROSITE, a rare mineral species consisting of hydrous potassium and aluminium sulphate, and belonging to the group of isomorphous rhombohedral minerals enumerated below:—

<table>
<thead>
<tr>
<th>Mineral</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alunite</td>
<td>$K_2[Al(OH)_4]SO_4$</td>
</tr>
<tr>
<td>Jarsite</td>
<td>$K_2[Fe(AlO_2)SO_4]$</td>
</tr>
<tr>
<td>Natrojarosite</td>
<td>$Na_2[Fe(AlO_2)SO_4]$</td>
</tr>
<tr>
<td>Plumbjarsite</td>
<td>$Pb[Fe(AlO_2)SO_4]$</td>
</tr>
</tbody>
</table>

Jarsite usually occurs as drusy incrustations of minute indistinct crystals with a yellowish-brown colour and brilliant lustre. Hardness 3; sp. gr. 3.15. The best specimens, consisting of crystalline crusts on limonite, are from the Jarosite ravine in the Sierra Almagrera, province of Almeria, Spain, from which locality the mineral receives its name. It has been also found, often in association with iron ores, at a few other localities. A variety occurring as concretionary or bulbar-like forms, known as moronite (from Gr. μορον, “mulberry,” and ἄθος, “stone”), is found at Monroe in Orange county, New York. The recently discovered species natrojarosite and plumbjarsite occur as yellowish-brown glistening powders consisting wholly of minute crystals, and are from Nevada and New Mexico respectively.

(L. J. S.)

JARRAH WOOD (an adaptation of the native name Jerrybal), the product of a large tree (Eucalyptus marginata) found in south-western Australia, where it is said to cover an area of 14,000 sq. m. The trees grow straight in the stem to a great size, and yield squared timber up to 40 ft. length and 24 in. diameter. The wood is very hard, heavy (sp. gr. 1.010) and close-grained, with a mahogany-red colour, and sometimes sufficient “figure” to render it suitable for cabinet-makers’ use. The timber possesses several useful characteristics; and great expectations were at first formed as to its value for shipbuilding and general constructive purposes. These expectations have not, however, been realized, and the exclusive possession of the tree has not proved that source of wealth to western Australia which was at one time expected. Its greatest merit for shipbuilding and other purposes is due to the fact that it resists, better than any other timber, the attacks of the Teredo navalis and other marine borers, and on land it is equally exempt, in tropical countries, from the ravages of white ants. When felled with the sap at its lowest point and well seasoned, the wood stands exposure in the air, earth or sea remarkably well, on which account it is in request for railway sleepers, Telegraph poles and piles in the British colonies and India. The wood, however, frequently shows longitudinal blisters, or lacunae, filled with resin, the same as may be observed in spruce fir timber; and it is deficient in fibre, breaking with a short fracture under comparatively moderate pressure. It has been classed at Lloyds for ship-building purposes in line three, table A, of the registry rules.

JARROW, a port and municipal borough in the Jarrow parliamentary division of Durham, England, on the right bank of the Tyne, 63 m. below Newcastle, and on a branch of the North-Eastern railway. Pop. (1901), 34,295. The parish church of St Paul was founded in 685, and retains portions of pre-Norman work. The central tower is Norman, and there are good decorated and perpendicular details in the body of the church. Close by are the scattered ruins of the monastery begun by the pious Bishop in 681, and consecrated with the church by Ceolfrid in 685. Within the walls of this monastery the Venerable Bede spent his life from childhood; and his body was at first buried within the church, whither, until it was removed under Edward the Confessor to Durham, it attracted many pilgrims. The town is wholly industrial, devoted to ship-building, chemical works, paper mills and the neighbouring collieries. It owes its development from a mere pit village largely to the enterprise of Sir Charles Mark Palmer (q.v.). Jarrow Slake, a river, 1 m. long by ½ m. broad, contains the Tyne docks of the North-Eastern railway company. A great quantity of coal is shipped. Jarrow was incorporated in 1875, and the corporation consists of a mayor, 6 aldermen and 18 councillors. Area, 783 acres.

JARRY, NICOLAS, one of the best-known 17th century French calligraphers. He was born at Paris about 1620, and was officially employed by Louis XIV. His most famous work is the Guirlandes de Julie (1641). He died some time before 1670.

JARVIS, JOHN WESLEY (1780-1840), American artist, nephew of the great John Wesley, was born at South Shields, England, and was taken to the United States at the age of five. He was one of the earliest American painters to give
JASHAR, BOOK OF—JASMINE

JASMIN, JACQUES (1708–1854), Provençal poet, was born at Agen on the 6th of March 1708, his family name being Boé. His father, who was a tailor, had a certain facility for making doggerel verses, which he sang or recited at fairs and such-like popular gatherings; and Jacques, who used generally to accompany him, was thus early familiarized with the part which he afterwards so successfully filled himself. When sixteen years of age he found employment at a hairdresser's shop, and subsequently started a similar business of his own on the Gravier at Agen. In 1825 he published his first volume of Papillotos (“Curl Papers”), containing poems in French (a language he used with a certain sense of restraint), and in the familiar Agen patois—the popular speech of the working classes—in which he was to achieve all his literary triumphs. Jasmin was the most famous forerunner in Provençal literature (q.v.) of Mistral and the Pélérin. His influence in rehabilitating, for literary purposes, his native dialect, was particularly exercised in the public recitals of his poems to which he devoted himself. His poetic gift, and his flexible voice and action, fitted him admirably for this double rôle of troubadour and jongleur. In 1835 he recited his “Blind Girl of Castel-Cuillé” at Bordeaux, in 1836 at Toulouse; and was received with an enthusiastic reception in both those important cities. Most of his public recitations were given for benevolent purposes, the proceeds being contributed by him to the restoration of the church of Vergt and other good works. Four successive volumes of Papillotos were published during his lifetime, and contained amongst others the following remarkable poems, quoted in order: “The Charivarri,” “My Recollections” (supplemented after an interval of many years), “The Blind Girl,” “Françouenout,” “Martha the Simple,” and “The Twin Brothers.” With the exception of “The Charivarri,” these are all touching pictures of humble life—in most cases real episodes—carefully elaborated by the poet till the graphic descriptions, full of light and colour, and the admirably varied and melodious verse, seem too spontaneous and easy to have cost an effort. Jasmin was not a prolific writer, and, in spite of his impetuous nature, would work a long time at one poem, striving to realize every feeling he wished to describe, and give it its most lucid and natural expression. A verse from his spirited poem, “The Third of May,” written in honour of Henry IV., and published in the first volume of Papillotos, is engraved on the base of the statue erected to that king at Nérac. In 1852 Jasmin’s works were crowned by the Académie Française, and a pension was awarded him. The medal struck on the occasion bore the inscription: Au poète moral et populaire. His title of “Maître es Jeux” is a distinction only conferred by the academy of Toulouse on illustrious writers. Pius IX. sent him the insignia of a knight of St Gregory the Great, and he was made chevalier of the Legion of Honour. He spent the latter years of his life on a small estate which he had bought near Agen and named “Papillotos,” and which he describes in Ma Bigno (“My Vine”). Though invited to represent his native city, he refused to do so, preferring the pleasures and leisure of a country life, and wisely judging that he was no really eligible candidate for electoral honours. He died on the 4th of October 1864. In his last poem, an answer to Renan, was placed between his folded hands in his coffin. 

JASMINE, or JESSAMINE, botanically Jasminum, a genus of shrubs or climbers constituting the principal part of the tribe Jasminoideae of the natural order Oleaceae, and comprising about 150 species, of which 40 or more occur in the gardens of Britain. The plants of the genus are mostly natives of the warmer regions of the Old World; there is one South American species. The leaves are pinnate or ternate, or sometimes apparently simple, consisting of one leaflet, articulated to the petiole. The flowers, usually white or yellow, are arranged in terminal or axillary panicles, and have a tubular 5- or 8-cleft calyx, a cylindrical corolla-tube, with a spreading limb, two included stamens and a two-celled ovary. The name is derived from the Persian yasmin. Linnaeus obtained a fancied etymology from fa, violet, and bēyμ, smell, but the odor of its flowers bears no resemblance to that of the violet. The common white jasmine, Jasminum officinale, one
of the best known and most highly esteemed of British hardy
ligneous climbers, is a native of northern India and Persia, intro-
duced about the middle of the 16th century. In the centre and
south of Europe it is thoroughly acclimatized. Although it
grows to the height of 12 and sometimes 20 ft., its stem is feeble
and requires support; its leaves are opposite, pinnate and dark
green, the leaflets are in three pairs, with an odd one, and are
pointed, the terminal one larger and with a tapering point. The
fragrant white flowers bloom from June to October; and, as they
are found chiefly on the young shoots, the plant should only be
pruned in the autumn. Varieties with golden and silver-edged
leaves and one with double flowers are known.

The zambok or Arabian jasmine, J. Sambac, is an evergreen white-
flowered climber, 6 or 8 ft. high, introduced into Britain in the latter
part of the 17th century. Two varieties introduced somewhat later
are respectively 3-leaved and double-flowered, and these, as well as
that with normal flowers, bloom throughout the greater part of the
year. On account of their exquisite fragrance the flowers are
highly esteemed in the East, and are frequently referred to by the
Persian and Arabians poets. An oil obtained by boiling the leaves
is used to anoint the head for complaints of the eye, and an oil obtained
from the roots is used medially to arrest the secretion of milk.
The flowers of one of the double varieties are held sacred to Vishnu,
and used as votive offerings in Hindu religious ceremonies. The
Spanish, or Catalanian jasmine, J. grandiflorum, a native of the
north-west Himalaya, and cultivated both in the old and new
world, is very like J. officinale, but differs in the size of the leaflets
the branches are shorter and stouter, and the flowers very much
larger, and reddish underneath. By grafting it on two-year-old
plants of J. officinale, an erect bush about 3 ft. high is obtained,
requiring no supports. In this way it is very extensively cultivated
at Cannes and Grasse, in the south of France; the plants are set in
rows, fully exposed to the sun; they come into full bearing the second
year after grafting; the blossoms, which are very large and intensely
fragrant, are gathered from July till the end of October, but those of
August and September are the most odoriferous.

The aroma is extracted by the process known as enfleurage,
I.e. absorption by a fatty body, such as purified lard or olive oil.
Square glass trays framed with wood about 3 in. deep are spread
over with grease about half an inch thick, in which ridges are made
to facilitate absorption, and sprinkled with freshly gathered flowers,
which are renewed every morning during the whole time the plant
remains in blossom; the trays are piled up in stacks to prevent the
evaporation of the aroma; and finally the pomade is scraped off the
JASON

Jasminum officinale; flower, natural size.

glass, melted at as low a temperature as possible, and strained.
When oil is employed as the absorbant, coarse cotton cloths previ-
ously saturated with the finest olive oil are laid on wire-gauze
frames, and repeatedly covered in the same manner with fresh
flowers, and then the whole is packed, and enclosed in a loosely
formed buste antique au jasmin. Three pounds of flowers will perfume 1 lb
of grease—this is exhausted by maceration in 1 pt. of rectified spirit
to form the "extract." An essential oil is distilled from jasmine in
Turkestan and Algeria, but its high price prevents its being used to any
extent. The East Indian oil of jasmine is a compound largely
contaminated with sandalwood-oil.

The distinguishing characters of J. odoratissimum, a native of the
Catalonian and Madeirian evergreen shrub, of which the alternate,
obtuse, ternate pinnate leaves, the 3-flowered terminal peduncles
and the 5-cleft yellow corolla with obtuse segments. The flowers
have the advantage of retaining when dry their natural perfume,
and of being of a nature to blossom in the winter, resembling
jasmine, in China J. paniculatum is cultivated as an erect shrub,
known as sieu kin-giu-sup; it is valued for its flowers, which are used
with those of J. Sambac, in the proportion of 10 lb. of the former to
30 lb. of the latter, for scenting tea—40 lb. of the mixture being re-
quired for 100 lb. of tea. J. angustifolium is a beautiful evergreen
theimer 10 to 12 ft. high, found in the Coromandel forests, and intro-
duced into Britain during the present century. Its leaves are of a
bright shining green; its large terminal flowers are white with a
faint tinge of red, fragrant and blooming throughout the year.
In Cochin China a decoction of the leaves and branches of
J. nervosum is taken as a blood-purifier; and the bitter leaves of
J. floribundum (called in Abyssinia habbes-selin) mixed with kousso
is considered a powerful and specific choleretic, especially for febrile
attacks; the leaves and branches are added to some fermented liquors to increase
their intoxicating quality. In Catalonia and in Turkey the wood of
the jasmine is made into long, slender pipe-stems, highly prized by the
Arabs and Turks. In southern France this shrub is used like a
jar, alternate layers of the flowers and sugar, covering the whole
with wet cloths and standing it in a cool place; the perfume is absorbed
by the sugar, which is converted into a very palatable syrup.
The important medicinal plant known in America as the "Carolina
jasmine" is not a true jasmine (see GELSEMIUM).

Other hardy species commonly cultivated in gardens are the low
Italian yellow-flowered jasmine, J. humile, an East Indian species
introduced into Europe, and the south-west Mediterranean
shrub 3 or 4 ft. high, with angular branches, alternate and mostly
ternate leaves, blossoming in June to September; the common
yellow jasmine, J. fruticans, a native of southern Europe and the
Mediterranean region, a hardy evergreen shrub, 3 to 4 ft. high,
with weak, slender stems requiring support, and bearing yellow,
odourless flowers from spring to autumn; and J. nudiflorum (China),
which bears its bright yellow flowers in winter before the leaves
appear. It thrives in almost any situation and grows rapidly.

JASON (Greek Jason), in Greek legend, son of Aeson, king of Iolcus
in Thessaly. He was the leader of the Argonautic expedition
(see ARGONAUTS). After he returned from it he lived at Corinth
with his wife Meade (q.e.) for many years. At last he put away
Medea, in order to marry Glauce (or Creusa), daughter of the
C Corinthian king Creon. To avenge herself, Medea presented
the new bride with a robe and head-dress, by whose magic pro-
erties the wearer was burnt to death, and slew her children by
Jason with her own hand. A later story represents Jason as
reconciled to Medea (Justin, xlii. 2). His death was said to have
been due to suicide through grief, caused by Medea's vengeance
(Diod. Sic. iv. 6); or he was crushed by the fall of the popo
ship "Argo," under which, on the advice of Medea, he had
laid himself down to sleep (argument of Euripides' Medea).
The name (more correctly Jason) means "healer," and Jason is
possibly a local hero of Iolcus to whom healing powers were
attributed. The ancients regarded him as the oldest navigator,
and the patron of navigation. By the moderns he has been
variously explained as a solar deity; a god of summer; a god of
storm; a god of rain, who carries off the rain-giving cloud (the
golden fleece) to refresh the earth after a long period of drought.
Some regard the legend as a chthonian myth, Aeō (Colchis)
being the underworld in the Aeolic religious system from which
Jason liberates himself and his betrothed; others, in view of
several resemblances between the story of Jason and that of
Cain (the ploughing of the field, the sowing of the dragon's
tooth, and the fight with the Nemean Lion) associate both
with Demeter the corn-goddess, and refer certain episodes to
practices in use at country festivals, e.g. the stone throwing,
which, like the palaestra at the Eleusinia and the koubalia at

JASON OF CYRENE—JATAKA

Troezen (Pausanias ii, 30, 4 with Frazer’s note) was probably intended to secure a good harvest by driving away the evil spirits of unfruitfulness.

See articles by C. Seeliger in Roscher’s Lexikon der Mythologie and by W. F. F. Schuch in Daremberg and Saglio’s Dictionnaire des antiquités; H. D. Müller, Mythologie der griechischen Stämme (1861) ii. 328, who explains the name Jason as “wanderer”; W. Mannhardt, Mythologische Forschungen (1884), pp. 75, 130; O. Crusius, Beiträge zur griechischen Mythologie und Religionsgeschichte (Leipzig, 1886).

Later Versions of the Legend.—Les faits et procédés du noble et vaillant chevalier Jason was composed in the middle of the 15th century by Raoul Lefèvre on the basis of Benoît’s Roman de Troie, and presented to Philip of Burgundy, founder of the order of the Golden Fleece. The manners and sentiments of the 15th century are made to harmonize with the classical legends after the fashion of the Italian pre-Raphaelite painters, who equipped Jewish warriors with knightly lance and armour. The story is well told; the digressions are few; and there are many touches of domestic life and natural sympathy. The first edition is believed to have been printed at Bruges in 1474.

Caxton translated the book under the title of A Boke of the boole Lyf of Jason, at the command of the duchess of Burgundy. A Flemish translation appeared at Haarlem in 1495. The Benedictine Guillaume Fillastre (1400-1475), wrote an historical compilation dealing with the hero exploits of the trois chrétiens maitres de France, Burgundy and Flanders.

JASON OF CYRENE, a Hellenistic Jew, who lived about 100 B.C. and wrote a history of the times of the Maccabees down to the victory over Nicander (175-161 B.C.). This work is said to have been in five books and formed the basis of the present 2 Macc. (see ch. ii. 19-32).

JASPER, an opaque compact variety of quartz, variously coloured and often containing argillaceous matter. The colours are usually red, brown, yellow or green, and are due to admixture with compounds of iron, either oxides or silicates. Although the term jasper is now restricted to opaque quartz it is certain that the ancient jasip or larnas was a stone of considerable translucency. The jasper of antiquity was in many cases distinctly green, for it is often compared with the emerald and other green objects. Jasper is referred to in the Niebelungenlied as being clear and green. Probably the jasper of the ancients included stones which would now be classed as chalcedony, and the emerald-like jasper may have been akin to our chrysoprase. The Hebrew word yosefheh may have designated a green jasper (cf. Assyrian yashpā). Professor Flinders Petrie has suggested that the odem, the first stone on the High Priest’s breastplate, translated “sard,” was a red jasper, whilst tarshish, the tenth stone, may have been a yellow jasper (Hastings’s Dict. Bible, 1902).

Many varieties of jasper are recognized. Ribbed jasper is a form in which the colours are disposed in bands, as in the well-known ornamental stone from Siberia, which shows a regular alternation of dark red and green stripes. Egyptian jasper is a brown jasper, occurring as nodules in the Libyan desert and in the Nile valley, and characterized by a zonal arrangement of light and dark shades of colour. Agate-jasper is a variety intermediate between the two. Jas, and chalcedony. Basanite, lydite, or Lydian stone, is a violet-black flinty jasper, used as a touchstone for testing the purity of precious metals by their streak. Porcelain jasper is a clay indurated by natural calcination.

(J. W. R.)

JASSY (laizit), also written JASIZ, JASCHI and YASSY, the capital of the department of Jassy, Rumania; situated on the left bank of the river Bahlui, an affluent of the Jijia, about 10 m. W. of the Pruth and the Russian frontier. In Pop. (1900), 35,607. Jassy communicates by rail with Galatz on the Danube, Kishinew in Bessarabia, and Czernowitz in Bukowina. The surrounding country is one of uplands and woods, among which rise the monasteries of Cetățuia, Frumoasa, and Galata with its mineral springs, the water-cure establishment of Rapide and the great seminary of Socola. Jassy itself stands pleasantly amid vineyards and gardens, partly on two hills, partly in the hollow between. Its primitive houses of timber and plaster were mostly swept away after 1860, when brick or stone came into general use, and good streets were cut among the network of narrow, insanitary lanes. Jassy is the seat of the metropolitan of Moldavia, and of a Roman Catholic archbishop. Synagogues and churches abound. The two oldest churches date from the reign of Stephen the Great (1458-1504); perhaps the finest, however, are the 17th-century metochi of St Spiridon and Trei Erachi, the later a curious example of Byzantine art erected in 1639 or 1640 by Basil the Wolf, and adorned with countless gilt carvings on its outer walls and twin towers. The St Spiridon Foundation (due to the liberality of Prince Gregory Ghika in 1727, and available for the sick of all countries and creeds) has an annual income of over £80,000, and maintains hospitals and churches in several towns of Moldavia, besides the baths at Slanic in Walachia. The main hospital in Jassy is a large building, and possesses a maternity institution, a midwifery school, a chemical institute, an inoculating establishment, &c. A society of physicians and naturalists has existed in Jassy since the early part of the 19th century, and a number of periodicals are published. Besides the university, founded by Prince Cuza in 1864, with faculties of literature, philosophy, law, science and medicine, there are a military academy and schools of art, music and commerce; a museum, a fine hall and a theatre; the state library, where the chief records of Rumanian history are preserved; an appeal court, a chamber of commerce and several banks. The city is the headquarters of the 4th army corps. It has an active trade in petroleum, salt, metals, timber, cereals, fruit, wine, spirits, preserved meat, textiles, clothing, leather, cardboard and cigarette paper.

The inscription by which the existence of a Jassiorum municipium in the time of the Roman Empire is sought to be proved, lies open to grave suspicion; but the city is mentioned as early as the 14th century, and probably does derive its name from the Jassians, or Jazygians, who accompanied the Cumanian invaders. It was often visited by the Moldavian court. About 1564, Prince Alexander Lapusneanu, after whom one of the chief streets is named, chose Jassy for the Moldavian capital, instead of Sucsea (now Suczawa, in Bukowina). It was already famous as a centre of culture. Between 1561 and 1563 an excellent school and a Lutheran church were founded by the Greek adventurer, Jacob Basiliscus (see RUMANIA: History). In 1643 the first printed book published in Moldavia was issued from a press established by Basil the Wolf. He also founded a school, the first in which the mother-tongue took the place of Greek. Jassy was burned by the Tatars in 1513, by the Turks in 1538, and by the Russians in 1668. By the Peace of Jassy the second Russo-Turkish War was brought to a close in 1792. A Greek insurrection under Ypsilanti in 1821 led to the burning of the city by the Turks in 1822. In 1844 there was a severe conflagration. For the loss caused to the city in 1861 by the removal of the government to Bucharest the constituent assembly voted £4,815, to be paid in ten annual instalments, but no payment was ever made.

JATAKA, the technical name, in Buddhist literature, for a story of one or other of the previous births of the Buddha. The word is also used for the name of a collection of 547 such stories included, by a most fortunate conjunction of circumstances, in the Buddhist canon. This is the most ancient and the most complete collection of folk-lore now extant in any literature in the world. As it was made at latest in the 3rd century B.C., it can be trusted not to give any of that modern or European colouring which renders suspect much of the folk-lore collected by modern travellers.

Already in the oldest documents, drawn up by the disciples soon after the Buddha’s death, he is identified with certain ancient sages of India. That a religious teacher should claim to be successor of the prophets of old is not uncommon in the history of religions. But the current belief in metempsychosis led, or enabled, the early Buddhists to make a much wider claim. It was not very long before they gradually identified their master with the hero of each of the popular fables and stories of which
they were so fond. The process must have been complete by the middle of the 3rd century A.C.; for we find at that date illustrations of the Jātaka in the bas-reliefs on the railing round the Bharatnath tope with the titles of the Jātaka stories inscribed above them in the characters of that period. 1 The hero of each story is made into a Bodhisattva; that is, a being who is destined, after a number of subsequent births, to become a Buddha. This rapid development of the Bodhisattva theory is the distinguishing feature in the early history of Buddhism, and was both cause and effect of the simultaneous growth of the Jātaka book. In adopting the folk-lore and fables already current in India, the Buddhists did not change them very much. The stories as preserved to us, are for the most part Indian rather than Buddhist. The ethics they inculcate or suggest are milk for babes; very simple in character and referring almost exclusively to matters common to all schools of thought in India, and indeed elsewhere. Kindness, purity, honesty, generosity, worldly wisdom, perseverance, are the usual virtues praised; the higher ethics of the Path are scarcely mentioned. These stories, popular with all, were especially appreciated by that school of Buddhists that laid stress on the Bodhisattva-theory—a school that obtained its chief support, and probably its origin, in the extreme north-west of India and in the highest regions of Central Asia. That school adopted, from the early centuries of our era, the use of Sanskrit, instead of Pali, as the means of literal expression. It is impossible, therefore, that they would have carried the canonical Pali book, voluminous as it is, into Central Asia. Shorter collections of the original stories, written in Sanskrit, were in vogue among them. One such collection, the Jātaka-mālā by Ārya Sūra (6th century), is still extant. Of the existence of another collection, though the Sanskrit original has not yet been found, we have curious evidence. In the 6th century a book of Sanskrit fables was translated into Pahlavi, that is, old Persian (see BIDPĀ). In successive centuries this work was retranslated into Arabic and Hebrew, thence into Latin and Greek and all the modern languages of Europe. The book bears a close resemblance to the earlier chapters of a late Sanskrit fable book called, by its having five chapters, the Pancha tatāra, or Pentateuch.

The introduction to the old Jātaka book gives the life of the historical Buddha. That introduction must also have reached Persia by the same route. For in the 8th century St. John of Damascus put the story into Greek under the title of Baroβaαm and Josaphat. This story became very popular in the West. It was translated into Latin, into seven European languages, and even into Icelandic and the dialect of the Philippine Islands. Its hero, that is the Buddha, was canonized as a Christian saint; and the 27th of November was officially fixed as the date for his adoration as such.

The book popularly known in Europe as Aesop’s Fables was not written by Aesop. It was put together in the 14th century at Constantinople by a monk named Flavüde, and he drew largely for his stories upon those in the Jātaka book that had reached Europe along various channels. The fables of Fabrius and Phaeus written respectively in the 1st century before, and in the 1st century after, the Christian era, also contain Jātaka stories known in India in the 7th century. A great deal has been written on this curious question of the migration of fables. But we are not very far from being able to trace the complete history of each story in the Jātaka book, or in any of the one later collections. For India itself is the repository of these stories. We have the original Jātaka book in text and translation. The history of the text of the Pancha tatāra, about a thousand years later, has been fairly well traced out. But for the intervening centuries scarcely anything has been done. The same is true of the 3rd century b.c. of Jātakas not contained in the Jātaka book. Another collection, the Cariyā piṭaka, of about the same date, has been edited, but not translated. Other collections both in Pali and Sanskrit are known to us in part, and a large number of Jātaka stories, not included in any formal collection, are mentioned, or told in full, in other works.

JATH, a native state of India in the Deccan division of Bombay, ranking as one of the southern Maharrata jagirs. With the small state of Daphlapur, which is an integral part of it, it forms the Bijapur Agency, under the collective title of Bijapur district. Area, including Daphlapur, 980 sq. m. Pop. (1901), 68,665; showing a decline of 14% in the decade. Estimated revenue £24,000; tribute £700. Agriculture and cattle-breeding are carried on; there are no important manufactures. The chief, whose title is deshmukh, is a Maharrata of the Daphle family. The town of JATH is 92 m. S.E. of Satara. Pop. (1901), 5404.

JĀTIVA (formerly written NAXITA), or SA NELPE DE JĀTIVA, a town of eastern Spain, in the province of Valencia, on the right bank of the river Albañi, a tributary of the Júcar, and at the junction of the Valencia-Murcia and Valencia-Albacete railways. Pop. (1900), 12,600. Jātiva is built on the margin of a fertile and beautiful plain, and on the southern slopes of the Monte Rebollosa, on a hill with two peaks, each surrounded by a castle. With its numerous fountains, and spacious avenues shaded with elms or cypresses, the town has a clean and attractive appearance. Its collegiate church, dating from 1414, but rebuilt about a century later in the Renaissance style, was formerly a cathedral, and is the chief among many churches and convents. The town-hall and a church on the castle hill are partly constructed of inscribed Roman masonry, and several houses date from the Moorish occupation. There is a brisk local trade in grain, fruit, wine, oil and rice.

Jātiva was the Roman Saintibus, afterwards Vallesia Augusta, of Carthaginian or Iberian origin. Pliny (23–79) and Martial (c. 40–102) mention the excellence of its linen cloth. Under the Visigoths (c. 485–711) it became an episcopal see; but early in the 8th century it was captured by the Moors, under whom it attained great prosperity, and received its present name. It was reconquered by James I. of Aragon (1213–1276). During the 15th and 16th centuries, Jātiva was the home of many members of the princely house of Borgia or Borja, who migrated hither from the town of Borja in the province of Saragossa. Alphonso Borgia, afterwards Pope Calixtus III., and Rodrigo Borgia, afterwards Pope Alexander VI., were natives of Jātiva, born respectively in 1378 and 1431. The painter Jusepe Ribera was also born here in 1598. Owing to its gallant defence against the troops of the Archduke Charles in the war of the Spanish succession, Jātiva received the additional name of San Felices from Philip V. (1700–1746).

JATS, or JUTS, a people of north-western India, who numbered altogether more than 7 millions in 1901. They form a considerable proportion of the population in the Punjab, Rājputana and the adjoining districts of the United Provinces, and are also widely scattered through Sind and Baluchistan. Some writers have identified the Jats with the ancient Getae, and there is strong reason to believe them a degraded tribe of Rājputs, whose Scythic origin has also been maintained. Hindu legends point to a prehistoric occupation of the Indus valley by this people, and at the time of the Mahommedan conquest of Sind (712) they, with a cognate tribe called Meds, constituted the bulk of the population. They enlisted under the banner of Mahommed bin Kāsim, but at a later date offered a vigorous resistance to the Arab invaders. In 836 they were overthrown by Amran, who imposed upon them a tribute of dogs, and used their arms to vanquish the Meds. In 1025, however, they had gathered audacity, not only to invade Munsura, and compel the abjuration of the Musulman amir, but to attack the victorious army of Mahmūd, laden with the spoil of Somnath. Chasteisment duly ensued: a formidable flotilla, collected at Mūltān, scattered in thousands the comparatively defenceless Jat boats on the Indus, and annihilated their national pretensions. It is not until the decay of the Mogul Empire that the Jats again appear in history. One branch of them, settled
south of Agra, mainly by bold plundering raids founded two
dynasties which still exist at Bharatpur (q.v.) and Dholpur (q.v.).
Another branch, settled north-west of Delhi, who adopted the Sikh
religion, ultimately made themselves dominant throughout the
Punjab (q.v.) under Ranjit Singh, and are now represented in their
original home by the Phulkian houses of Patiala (q.v.), Jind (q.v.)
and Nabha (q.v.). It is from this latter branch that the Sikh
regiments of the Indian army are recruited. The Jats are mainly
agriculturists and cattle breeders. In their settlements on the
Ganges and Jumna, extending as far east as Bareilly, they are
divided into two great clans, the Dhe and the Hele; while in the
Punjab there are said to be one hundred different sections.
Their religion varies with locality. In the Punjab they have
largely embraced Sikh tenets, while in Sind and Baluchistan
they are Mahomedans. In appearance they are not ill-favoured
though extremely dark; they have good teeth, and large beards,
sometimes stained with indigo. Their inferiority of social
position, however, to the Hindu Brahman is entirely in their aspect,
and tends to be perpetuated by their intellectual apathy.

Jaubert, Pierre Amédée Émilien Probe (1779–
1847), French Orientalist, was born at Aix in Provence on the
3rd of June 1779. He was one of the most distinguished
pupils of Silvestre de Sacy, whose funeral Discours he
pronounced in 1838. Jaubert acted as interpreter to Napoleon
in Egypt in 1798–1799, and on his return to Paris held various posts
under government. In 1802 he accompanied Sebastiani on his
Eastern mission; and in 1804 he was at Constantinople. Next
year he was despatched to Persia to arrange an alliance with
the shah; but on the way he was seized and imprisoned in a
dry cistern for four months by the pasha of Bayazid. The pasha's
death freed Jaubert, who successfully accomplished his mission,
and rejoined Napoleon at Warsaw in 1807. On the eve of
Napoleon's downfall he was appointed chargé d'affaires at
Constantinople. The restoration ended his diplomatic career
but in 1818 he undertook a journey with government aid to
Tibet, whence he succeeded in introducing into France 400
Kashmir goats. The rest of his life Jaubert spent in study,
writing and in teaching. He became professor of Persian in
the collège de France, and director of the École des langues
orientales, and in 1839 was elected member of the Académie
des Inscriptions. In 1841 he was made a peer of France and
counselor of state. He died in Paris on the 28th of January,
1847.

Besides articles in the Journal asiatique, he published Voyage en
Arménie et en Perse (1821; the edition of 1860 has a notice of Jaubert,
by M. Sédillot) and Éléments de la grammaire turque (1823–1834).
See also Literatur, Jan. 1847, and the Journal des
débats, Jan. 30, 1847.

Jaucourt, Arnauld François, Marquis de (1757–1852),
French politician, was born on the 14th of November 1757 at
Tournon (Seine-et-Loire), and entered the service of the
Prince de Condé, whose regiment he entered. He adopted
revolutionary ideas and became colonel of his regiment. In
the Assembly, to which he was returned in 1791 by the
department of Seine-et-Marne, he voted generally with the
minority, and his views being obviously too moderate for his colleagues
he resigned in 1792 and was soon after arrested on suspicion of
being a reactionary. Mme de Staël procured his release from
P. L. Manuel just before the September massacres. He accom-
panied Talleyrand on his mission to England, returning to
France after the execution of Louis XVI. He lived in retirement
until the establishment of the Consulate, when he entered the
tribunate, of which he was for some time president. In 1803
he entered the senate, and next year became attached to the house-
hold of Joseph Bonaparte. Presently his imperialist views
cooled, and at the Restoration he became minister of state and a
peer of France. At the second Restoration he was a brief
period premier. The house, but held no further office. He
devoted himself to the support of the Protestant interest in
France. A member of the upper house throughout the reign of
Louis Philippe, he was driven into private life by the establish-
ment of the Second Republic, but lived to see the Coup d'État and
to rally to the government of Louis Napoleon, dying in Paris
on the 5th of February 1872.

Jauer, a town of Germany, in the Prussian province of
Silesia, 13 m. by rail S. of Leignitz, on the Wüthende Neisse.
Pop. (1900), 13,024. St Martin's (Roman Catholic) church
dates from 1267–1290, and the Evangelical church from 1655.
A new town-hall was erected in 1857–1858. Jauer
manufactures leather, carpets, cigars, carryages and gloves, and
is specially famous for its sausages. The town was first mentioned
in 1242, and was formerly the capital of a principality
embracing about 1200 sq. m., now occupied by the circles of
Jauer, Bunzlau, Löweberg, Hirschberg and Schénau. From
1392 to 1741 it belonged to the kings of Bohemia, being
taken from Maria Theresa by Frederick the Great. Jauer
was formerly the prosperous seat of the Silesian linen trade,
but the troubles of the Thirty Years' War, in the course of
which it was burned down three times, permanently injured
this.

See Schönau, Die alte Färstentumschafthauptstadt Jauer (Jauer, 1903).

Jauhari (Abu Násr Ismā'il ibn Ḥammad Ul-Jauhari)
(d. 1002 or 1010), Arabian lexicographer, was born at Fārāb
on the river Tār, and after his travels to Baghdad and
Bagdad, and later among the Arabs of the desert. He then
settled in Damghan and afterwards in Nishāpur, where he died
by a fall from the roof of a house. His great work is the Kitāb
al-Sukhāj fi-l-Lugha, an Arabic dictionary, in which the words
are arranged alphabetically according to the last letter of
the root. He himself had only partially finished the last recension,
but the work was completed by his pupil, Abū Ishaq Ibrāhim ibn
Ṣāliḥ al-Warrāq.

An edition was begun by E. Scheidius with a Latin translation,
but one part only appeared at Harderwijk (1776). The whole has
been published at Tébirs (1854) and at Cairo (1865), and many
abridgments and Persian translations have appeared: e.g. C. Brockel
mann, Geschichte der arabischen Literature (Weimar, 1868), i. 126 seq.

(J. W. T.)

Jaundice (Fr. jaunisse, from jaune, yellow), or icterus,
from its resemblance to the colour of the golden oriel, of
which Pliny relates that if a jaundiced person looks upon it he
recovers but the bird dies, a term in medicine applied to a yellow
colouration of the skin and other parts of the body, depending in most
instances on some derangement affecting the liver. This yellow
colour is due to the presence in the blood of bile or of some of the
elements of that secretion. Jaundice, however, must be regarded
more as a symptom of some morbid condition previously existing than
as a disease per se.

Cases with jaundice may be divided into three groups:

1. Obstructive Jaundice.—Any obstruction of the passage of bile from
the liver into the intestinal canal is sooner or later followed by the appearance of jaundice, which in such
circumstances is due to the absorption of bile into the blood.
The obstruction is due to one of the following causes: (1) Obstruction by foreign bodies within the bile duct, e.g., gallstones
or parasites; (2) inflammation of the duodenum or the lining
membrane of the duct; (3) stricture or obliteration of the duct;
(4) a tumour growing from the duct; (5) pressure on the duct
from without, from the liver or other organ, or tumours arising
from them. Obstructions from these causes may be partial
or complete, and the degree of jaundice will vary accordingly,
but it is to be noted that extensive organic disease of the liver
may exist without the evidence of obstructive jaundice.

The effect upon the liver of impediments to the outflow of bile
such as those above indicated is in the first place an increase
in its size, the whole biliary passages and the liver cells being
distended with retained bile. This enlargement, however,
specifically subsides when the obstruction is removed, but should it
become the liver ultimately shrinks and undergoes atrophy in its
whole texture. The bile thus retained is absorbed into the
system, and shows itself by the yellow staining seen to a greater
or less extent in all the tissues and many of the fluids of the
body. The kidneys, which in such circumstances act in some
measure vicariously to the liver and excrete a portion of the
JAUNPUR

retained bile, are apt to become affected in their structure by the long continuance of jaundice.

The symptoms of obstructive jaundice necessarily vary according to the nature of the exciting cause, but there generally exists evidence of some morbid condition before the yellow coloration appears. Thus, if the obstruction be due to an impacted gallstone in the common or hepatic duct, there will probably be the symptoms of intense suffering characterizing hepatic colic (see Colic). In the cases most frequently seen—those, namely, arising from simple catarrh of the bile ducts due to gastro-duodenal irritation spreading through the common duct—the first sign to attract attention is the yellow appearance of the white of the eye, which is speedily followed by a similar colour on the skin over the body generally. The yellow tinge is most distinct where the skin is thin, as on the forehead, breast, elbows, &c. It may be also well seen in the roof of the mouth, but in the lips and gums the colour is not observed till the blood is first pressed from them. The tint varies, being in the milder cases faint, in the more severe a deep saffron yellow, while in extreme degrees of obstruction it may be of dark brown or greenish hue. The colour can scarcely, if at all, be observed in artificial light.

The urine exhibits well marked and characteristic changes in jaundice which exist even before any evidence can be detected on the skin or elsewhere. It is always of dark brown colour resembling porter, but after standing in the air it acquires a greenish tint. Its froth is greenish-yellow, and it stains with this colour any white substance. It contains not only the bile colouring matter but also the bile acids. The former is detected by the play of colours yielded on the addition of nitric acid, the latter by the purple colour, produced by placing a piece of lump sugar in the urine tested, and adding thereto a few drops of strong sulphuric acid.

The contents of the bowels also undergo changes, being characterized chiefly by their pale clay colour, which is in proportion to the amount of bile admixture, and to their consequent want of admixture with bile. For the same reason they contain a large amount of unabsorbed fatty matter, and have an extremely offensive odour.

Constitutional symptoms always attend jaundice with obstruction. The patient becomes languid, drowsy and irritable, and has generally a slow pulse. The appetite is usually but not always diminished, a bitter taste in the mouth is complained of, while flatulent eructations arise from the stomach. Intolerable itching of the skin is a common accompaniment of jaundice, and cutaneous eruptions or boils are occasionally seen. Yellow vision appears to be present in some very rare cases. Should the jaundice depend on advancing organic disease of the liver, such as cancer, the tinge becomes gradually deeper, and the emaciation and debility more marked towards the fatal termination, which in such cases is seldom long postponed. Apart from this, however, jaundice from obstruction may exist for many years, as in those instances where the walls of the bile ducts are thickenened from chronic catarrh, but where they are only partially occluded. In the common cases of acute catarrhal jaundice recovery usually takes place in two or three weeks.

The treatment of this form of jaundice bears reference to the cause giving rise to the obstruction. In the ordinary cases of simple catarrhal jaundice, or that following the passing of gallstones, a light nutritious diet (milk, soups, &c., avoiding saccharine and farinaceous substances and alcoholic stimulants), along with counter-irritation applied over the right side and the use of laxatives and cholagogues, will be found to be advantageous. Diaphoretics and diuretics are employed to promote the action of the skin and kidneys are useful in jaundice. In the more chronic forms, besides the remedies above named, the waters of Carlsbad are of special efficacy. In cases other than acute catarrhal, operative interference is often called for, to remove the gallstones or, &c., causing the obstruction.

3. Toxicemic Jaundice is observed to occur as a symptom in certain fevers, e.g. yellow fever,ague, and in pyaemia also as the effect of certain poisons, such as phosphorus, and the venom of snake-bites. Jaundice of this kind is almost always slight, and neither the urine nor the discharges from the bowels exhibit changes in appearance to such a degree as in the obstructive variety. Grave constitutional symptoms are often present, but they are less to be ascribed to the jaundice than to the disease with which it is associated.

3. Hereditary Jaundice.—Under this group there are the jaundice of new-born infants, which varies enormously in severity; the cases in which a slight form of jaundice obtains in several members of the same family, without other symptoms, and which may persist for years; and lastly the group of cases with hypertrophic cirrhosis.

The name malignant jaundice is sometimes applied to that very fatal form of disease otherwise termed acute yellow atrophy of the liver (see Atrophy).

JAUNPUR, a city and district of British India, in the Benares division of the United Provinces. The city is on the left bank of the river Gumi, 34 m. N.W. from Benares by rail. Pop. (1901), 42,771. Jaunpur is a very ancient city, the former capital of a Mahommedean kingdom which once extended from Budaun and Etawah to Behar. It abounds in splendid architectural monuments, most of which belong to the period when the rulers of Jaunpur were independent of Delhi. The fort of Feroz Shah is in great part completely ruined, but there remain a fine gateway of the 16th century, a mosque dating from 1376, and the hamams or baths of Ibrahim Shah. Among other buildings may be mentioned the Atala Masjid (1408) and the ruined Jinni Masjid, mosques built by Ibrahim, the first of which has a great cloistered court and a magnificent façade; the Dariba mosque constructed by two of Ibrahim's governors; the Lal Darwaza erected by the queen of Mahmud; the Jama Masjid (1438-1478) or great mosque of Husain, with court and cloisters, standing on a raised terrace, and in part restored in modern times; and finally the splendid bridge over the Gumi, erected by Munim Khan, Mogul governor in 1560-1573. During the Mutiny of 1857 Jaunpur formed a centre of dissatisfaction. The city has now lost its importance, the only industries remaining being the manufacture of perfumes and papier-maché articles.

The District of Jaunpur has an area of 1,551 square m. It forms part of the wide Gangetic plain, and its surface is accordingly composed of a thick alluvial deposit. The whole country is closely tilled, and no waste lands break the continuous prospect of cultivated fields. It is divided into two unequal parts by the sinuous channel of the Gumi, a tributary of the Ganges, which flows past the city of Jaunpur. Its total course within the district is about 90 m., and it is nowhere fordable. It is crossed by two bridges, one at Jaunpur and the other 2 m. lower down. The Gumi is liable to sudden inundations during the rainy season, owing to the high banks it has piled up at its entrance into the Ganges, which act as dams to prevent the prompt outflow of its flooded waters. These inundations extend to its tributary the Sai. Much damage was thus effected in 1774; but the greatest flood took place in September 1871, when 4000 houses in the city were destroyed, and besides to great damage in villages along its banks. The other rivers are the Sai, Barna, Pili and Basohi. Lakes are numerous in the north and south; the largest has a length of 8 m. Pop. (1901), 1,202,920, showing a decrease of 5% in the decade. Sugar-refining is the principal industry. The district is served by the line of the Oudh & Rohilkhand railway from Benares to Fyzabad, and by branches of this and of the Bengal & North-Western systems.

In prehistoric times Jaunpur seems to have formed a portion of the Ajodhya principality, and when it first makes an appearance in authentic history it was subject to the rulers of Benares. With the rest of their dominions it fell under the yoke of the Musulman invaders in 1194. From that time the district appears to have been ruled by a prince of the Kanauj dynasty, as a tributary of the Mahommedan suzerain. In 1388 Malik Sarwar Khwaja was sent by Mahmmed Tughlak to govern the eastern province. He fixed his residence at Jaunpur, made himself independent of the Delhi court, and assumed the title of Sultan-us-Shark, or "eastern emperor." For nearly a century
the Sharti dynasty ruled at Jaunpur, and proved formidable rivals to the sovereigns of Delhi. The last of the dynasty was Sultan Husain, who passed his life in a fierce and chequered struggle for supremacy with Bahol Lod, then actual emperor at Delhi. At length, in 1478, Bahol succeeded in defeating his rival in a series of decisive engagements. He took the city of Jaunpur, but permitted the conquered Husain to reside there, and to complete the building of his great mosque, the Jama Masjid, which now forms the chief ornament of the town. Many other architectural works in the district still bear witness to its greatness under its independent Mussulman rulers. In 1775 the district was made over to the British by the Treaty of Lucknow. From that time nothing occurred which calls for notice till the Mutiny. On the 5th of June 1857, when the news of the Benares revolt reached Jaunpur, the sepoys mutinied. The district continued in a state of complete anarchy till the arrival of the Gurkha force from Azamgarh in September. In November the surrounding country was lost again, and it was not till May 1858 that the last smouldering embers of disaffection were stifled by the repulse of the insurgent leader at the hands of the people themselves.

**JAUNTING-CAR**—A light two-wheeled carriage for a single horse, in its commonest form with seats for four persons placed back to back, with the foot-boards projecting over the wheels. It is the typical conveyance for persons in Ireland (see Car). The first part of the word is generally taken to be identical with the verb “to jaunt,” now only used in the sense of to go on a short pleasure excursion, but in its earliest uses means to make a horse carcase or prance, hence to jolt or bump up and down. It would apparently be a variant of “jaunce,” of the same meaning, which is supposed to be taken from O. Fr. *jauncer*. Skeat takes the origin of jaunt and jaunce to be Scandinavian, and connects them with the Swedish dialect word *genta*, to romp; and he finds cognate bases in such words as “jump,” “shake,” “thrill,” and “jangle,” all of which plainly show an essential of the thing done with an easy nonchalant air, is a corruption of “janty,” due to confusion with “jaunt.” “Janty,” often spelt in the 17th and 18th centuries “jantè” or “jante,” represents the English pronunciation of Fr. *gentil*, well-bred, neat, spruce.

**JAUREGUI, JUAN** (1562–1582), a Biscayan by birth, was in 1582 in the service of a Spanish merchant, Gaspar d’Anastro, who was resident at Antwerp. Tempted by the reward of 80,000 ducats offered by Philip II. of Spain for the assassination of William the Silent, prince of Orange, but being himself without courage to undertake the task, d’Anastro, with the help of his cashier Venero, persuaded Jauregu to attempt the murder for the sum of 2877 crowns. On Sunday the 18th of March 1582, as the prince came out of his dining-room Jauregu offered him a petition, and William had no sooner taken it into his hand than Jauregu fired a pistol at his head. The ball pierced the neck from the right ear and passed out at the left jaw-bone; but William ultimately recovered. The assassin was killed on the spot.

**JAUREGUIBERRY, JEAN BERNARD** (1815–1887), French admiral, was born at Bayonne on the 26th of August 1815. He entered the navy in 1831, was made a lieutenant in 1845, commander in 1856, and captain in 1860. After serving in the Crimean and in China, and being governor of Senegal, he was promoted to rear-admiral in 1869. He served on land during the second part of the Franco-German War of 1870–71, in the rank of auxiliary general of division. He was present at Coulmiers, Villépion and Loigny-Poupy, in command of a division, and in Chanzy’s retreat upon Le Mans and the battle at that place in command of a corps. He was the most distinguished of the many naval officers who did good service in the military operations. On the 9th of December he had been made vice-admiral, and in 1871 he commanded the fleet at Toulon; in 1875 he was a member of the council of admiralty; and in October 1876 he was appointed to command the executive squadron in the Mediterranean. In February 1879 he became minister of the navy in the Waddington cabinet, and on the 27th of May following was elected a senator for life. He was again minister of the navy in the Freycinet cabinet in 1880. A fine example of the fighting French seaman of his time, Jaureguiberry died at Paris on the 21st of October 1887.

**JAUREGUI Y AGUILAR, JUAN MARTÍNEZ DE** (1582–1641), Spanish poet, was baptized at Seville on the 24th of November 1583. In due course he studied at Rome, returning to Spain shortly before 1610 with a double reputation as a painter and a poet. A reference in the preface to the Novelas ejemplares has been taken to mean that he painted the portrait of Cervantes, who, in the second part of Don Quijote, praises the translation of Tasso’s Aminta published at Rome in 1607. Jauregui’s Rimas (1618), a collection of graceful lyrics, is preceded by a controversial preface which attracted much attention on account of its outspoken declaration against culturismo. Through the influence of Olives, he was appointed grooms of the chamber to Philip IV., and gave an elaborate exposition of his artistic doctrines in the Discurso político contra el hablar culto y escuro (1624), a skillful attack on the new theories, which procured for its author the order of Calatrava. It is plain, however, that the shock of controversy had shaken Jauregui’s convictions, and his poem Orfeo (1624) is visibly influenced by Gonzaga. Jauregui died at Madrid on the 11th of January 1641, leaving behind him a translation of the Pharsalia which was not published till 1684. This rendering reveals Jauregui as a complete convert to the new school, and it has been argued that, exaggerating the affinities between Lucan and Gonzaga—both of Cordovan descent—he deliberately translated the thought of the earlier poet into the vocabulary of the later master. This is possible; but it is at least as likely that Jauregui unconsciously yielded to the current of popular taste, with no other intention than that of conciliating the public of his own day.

**JAURES, JEAN LÉON** (1859–1914), French Socialist leader, was born at Castres (Tarn) on the 3rd of September 1859. He was educated at the Collège de Saint-Georges and the lycée of Albi. In 1884, he was elected member of the Tarn town council, and two years later, re-elected for the Tarn department; and in 1887, he was re-elected to the legislative assembly for the Tarn. He took an active part in local municipal affairs, and in 1888, after unsuccessfully contesting Castres, he returned to his professional duties at Toulouse, where he took an active interest in municipal affairs, and helped to found the medical faculty of the university. He also prepared two theses for his doctorate in philosophy, *De primis socialisti germanici lineamentis apud Lutherum*, Kant, Fichte and Hegel (1881), and *De la réalité du monde sensible*. In 1902 he gave energetic support to the miners of Carmaux who went out on strike in consequence of the dismissal of a socialist workman, Calvignac; and in the next year he was re-elected to the chamber as deputy for Albi. Although he was defeated at the elections of 1898 and was for four years outside the chamber, his eloquent speeches made him a figure in politics as an intellectual champion of socialism. He edited the *Petite République*, and was one of the most energetic defenders of Captain Alfred Dreyfus. He approved of the inclusion of M. Millerand, the socialist, in the Waldeck-Rousseau ministry, though this led to a split with the more revolutionary section led by M. Guesde. In 1902 he again returned as deputy for Albi, and during the Combes administration his influence secured the coherence of the radical-socialist coalition known as the bloc. In 1904 he founded the socialist paper, *L’Humanité*. The French socialist groups held a congress at Rouen in March 1905, which resulted in a new consolidation; the new party, headed by M. Jaures and Guesde, ceased to co-operate with the radicals and radical-socialists, and became known as the unified socialists, pledged to advance a collectivist programme. At the general elections of 1906 M. Jaures was again elected for the Tarn. His ability and vigour were now generally recognized, but the strength of the socialist party, and the practical activity of its leader, still had to reckon with the equally practical and vigorous liberalism of M. Clemenceau. The latter was able to appeal to his countrymen (in a notable
speech in the spring of 1906) to rally to a radical programme which had no socialist Utopia in view; and the appearance in him of a strong and practical radical leader had the result of considerably diminishing the effect of the socialist propaganda. M. Jaurès, in addition to his daily journalistic activity, published *Les preuves; affaire Dreyfus* (1900); *Action socialiste* (1899); *Études socialistes* (1902), and, with other collaborators, *Histoire socialiste* (1901), &c.

**JAVA**, one of the larger islands of that portion of the Malay Archipelago which is distinguished as the Sunda Islands. It lies between 10° 12' 46" (St Nicholas Point) and 11° 35' 38" E. of the Cape Seloko and between 5° 52' 34" and 8° 40' 46" S. It has a total length of 622 m. from Pepper Bay in the west to Banyuwangi in the east, and an extreme breadth of 121 m. from Cape Bugel in Japara to the coast of Jokjakarta, narrowing towards the middle to about 53 m. Politically and commercially it is important as the seat of the colonial government of the Dutch East Indies, all other parts of the Dutch territory being distinguished as the Outer Possessions (*Buitenbezittingens*). According to the triangulation survey (report published in 1901) the area of Java proper is 48,004 sq. m.; of Madura, the large adjacent and associated island, 1,732; and of the smaller islands administratively included with Java and Madura 1,416, thus making a total of 50,970 sq. m. The more important of these islands are the following: Pulau Panaian or Princes Island (*Prinseneiland*), 47 sq. m., lies in the Sunda Strait, off the southwestern peninsula of the main island, from which it is separated by the Behouden Passage. The Thousand Islands are situated almost due N. of Batavia. Of these five were inhabited in 1906 by about 1280 seafarers from all parts and their descendants. The Karimon Java archipelago, to the north of Semarang, numbers twenty-seven islands with an area of 16 sq. m. and a population of about 500 (having one considerable village on the main island). Barian (Barian), 100 m. N. of Surabaya, is a ruined volcano with an area of 73 sq. m. and a population of about 44,000. About a third of the men are generally absent as traders or coolies. In Singapore and Sumatra they are known as Boyans. They are devout Mahomedans and many of them make the pilgrimage to Mecca. The Sapudi and Kangean archipelagoes are eastern continuations of Madura. The former, thirteen in all, with an area of 58 sq. m. and 53,000 inhabitants, export cattle, dried fish and trengpang; and many of the male population work as day labourers in Java or as lumbermen in Sumbawa, Flores, &c. The main island of the Kangeans has an area of 19 sq. m.; the whole group 23 sq. m. It is best known for its limestone caves and its buffaloes. Along the south coast the islands are few and small—Kalpper or Deli, Trouers or Tingal, Nusa Kembangan, Sempu and Nusa Barung.

From Sumatra on the W., Java is separated by the Sunda Strait, which at the narrowest is only 14 m. broad, but widens elsewhere to about 50 m. On the E., the strait of Bali, which parts it from the island of that name, is at the northern end not more than 11 m. across. Through the former strong currents run for the greater part of the day throughout the year, outwards from the Java Sea to the Indian Ocean. In the strait of Bali the currents are perhaps even stronger and are extremely irregular. Pilots with local knowledge are absolutely necessary for vessels attempting either passage. In spite of the strength of the currents the Sunda Strait is steadily being diminished in width, and the process if continued must result in a restoration of that junction of Sumatra and Java which according to some authorities formerly existed.\(^1\)

In general terms Java may be described as one of the breakwater islands of the Indian Ocean—part of the mountainous chain (continuous more or less completely with Sumatra) of the partially submerged plateau which lies between the ocean on the S. and the Chinese Sea on the N., and has the massive island of Borneo as its chief subaerial portion. While the waves and currents of the ocean sweep away most of the products of denudation along the south coast or throw a small percentage back in the shape of sandy downs, the Java Sea on the north—

---

\(^1\) It must be observed that Bavian, &c., are mere conventional appendices to Java.

\(^2\) H. B. Guppy (*R. S. G. Soc. Magazine*, 1889) holds that there is no sufficient proof of this connexion but gives interesting details of the present movement.

\(^3\) See G. F. Tijdemann's map of the depths of the sea in the eastern part of the Indian archipelago in *M. Weber's Siboga Expedition*, 1903. The details of the coast forms of the island have been studied by J. F. Smellemann and J. F. Niemeyer in a paper in the *Veth Festschrift*, utilizing *inter alia* Guppy's observations.
in the south nor the plains so continuous on the north. The water-shed culminating in Slamet lies almost midway between the ocean and Java, and there are somewhat extensive lowlands in the south. In that part of the Java which physically belongs to eastern Java, the coast-line is bounded by the Java Sea, and the coast is almost right across the island from Semarang in the north to Jokjakarta in the south. Eastern Java comprises Rembang, Madjium, Kediri, Surabaya, Pasuruan and Besuki, and has an area of about 17,500 sq. m. In this division, lowlands and highlands, often intersecting, forming an endless variety except along the south coast, where the watershed-forms a continuous breakwater from Jokjakarta to Besuki. The volcanic eminences, instead of rising in lines or groups, are isolated.

For its area Java is one of the most distinctly volcanic regions of the world. Volcanic forces made it, and volcanic forces have continued to devastate and fertilize it. According to R. D. M. Verbeek about 125 volcanic centres can be distinguished, a number which may be increased. They are negligible for land-soils and cultivation. It is usual to arrange the volcanoes in the following groups:—westernmost Java 11 (all extinct); Preanger 59 (5 active); Chironb 2 (both extinct); Slamet 2 (1 active); middle Java 16 (2 active); east Java 35 (21 active). The active volcanoes of the present time are Gede, Tangkuban, Prahu, Gutar, Papandayan, Galung-gung, Slamet, Sender, Merapi, Kalut (or Kluc), Bromo, Semeru, Lamongan, Raung, and many others. These are striking, consisting of slings of steam and smoke.

The plains differ in surface and fertility, according to their geological formation. Built up of alluvium and silivium, the plains of the north coast form the boundary of the belt of rice-land and the irrigated parts at its outer edge. The plains of the south coast, near the mouths of rivers and on the sea, are by no means marsh, and abounding in lakes and coral remains, but for the rest they are fertile and available for culture. The plains, too, along the south coast are generally lower, and are more subject to inundations by tides and monsoon, which are trilling, consisting of slings of steam and smoke.

The volcanic rocks of Java are of great importance and cover about 28% of the island. The eruptions began in the middle of the Tertiary period, but did not attain their maximum until Quaternary time. The following are the different formations of the volcanic rocks of Java:

1. The volcanic rocks of Java are of great importance and cover about 28% of the island. The eruptions began in the middle of the Tertiary period, but did not attain their maximum until Quaternary time. The following are the different formations of the volcanic rocks of Java:

Climate.—Our knowledge of the climate of Batavia, and thus of that of the lowlands of western Java, is almost perfect; but, rainfall excessive, our information as to the climate of Java as a whole is exact and incomplete. The country is exposed to the influence of equatorial and monsoon winds, and is affected by the monsoon rains of the summer, which are the most important, and by the rains of the winter monsoon, which are less frequent but of greater intensity. The climate is hot and humid, and the temperature varies little throughout the year. The mean annual temperature is 79°. The warmest months are May and October, registering 79.5° and 79.46° respectively; the coldest January and February with 77.63° and 77.77° respectively. The rainfall range is 10 to 15 inches; the highest is recorded at Gunung Sumbing, 2,312 ft. above sea-level, and the lowest at 127 ft. above sea-level; and among elevations it may be uncomfortably warm at night, with chilly mists and occasional frosts. The year is divided into two seasons by the pre-monsoon rains of the winter season, that of the west monsoon, lasting from November to March, and the dry season, that of the east monsoon, during the rest of the year; the transition from one monsoon to another—the "canning of the monsoons"—being marked by a sudden change in wind direction. The north coast of Java presents everywhere a low strand covered with nipa or mangrove, morasses and sheepy, sandy stretches and low dunes, shifting river-mouths and coast-lines, ports and roads, denuded of vegetation. The south coast is a different matter. The bays of Banyumas, Bagelen, and Jokkarta, ranged in three ridges, rising to 50 ft. high, and varying in breadth from 300 to over 1,600 ft., liable, moreover, to transformations from tides and the east monsoon, oppose everywhere, also in Preanger and Besuki, a barrier to the discharge of the rivers and the drainage of the coastal lands. They assist the formation of lagoons and morasses. At intervals in the dune coast, running in the south coast, forming a low bay between the parallel movements of land, showing neither ports nor bays, hollowed out by the sea, rising in perpendicular walls to a height of 150 ft. above sea-level. Some coastal strips project from right angles from the coast, forming a low bay between the parallel movements of land, showing neither ports nor bays, hollowed out by the sea, rising in perpendicular walls to a height of 150 ft. above sea-level. Such a formation occurs frequently along the coast of Besuki, presenting a very irregular coast-line. Of course the north coast is of great importance for coastal commerce. Thus the coast of Java is a great export centre, especially of sugar, and a great import centre.

Geology.—With the exception of a small patches of schist, supposed to be Cretaceous, the whole island, so far as is known, is covered by deposits of Tertiary and Quaternary age. The ancient "schist formation," which occurs in Sumatra, Borneo, &c., does not occur on Java. The oldest of the Tertiary deposits in Java is a coal-seam and limestone containing Nummulites, Alveolina and Orthophragnima; and these beds are as limited in extent as the Cretaceous schists themselves. Some sedimentary deposits of Upper Tertiary age are found, and the fossiliferous graptolite formation of Java, which is of Tertiary age, and is laid down parallel with the north coast, is a very important formation. This formation is followed by beds of Nummulites, which are for the most part Miocene but probably include a part of the Pliocene also. They were laid down beneath the sea, but the eastern part of Java has been raised. Fluvial deposits of late Pliocene age have been found in the east of Java, and it was in these that the well-known anthropoid ape or-like man, Pithecanthropus erectus of Dubois, was discovered. The Tertiary deposits are followed by the volcanic beds of the Tertiary beds. They are partly marine and partly fluviatile, the marine deposits reaching to a height of some 350 ft. above the sea and thus indicating a considerable elevation of the island in Tertiary times.

The volcanic rocks of Java are of great importance and cover about 28% of the island. The eruptions began in the middle of the Tertiary period, but did not attain their maximum until Quaternary time. The following are the different formations of the volcanic rocks of Java:

1. This Merapi must be carefully distinguished from Merapi the Fire Mountain of Sumatra.
3. On the 16th of November the sun rises at 5.32 and sets at 5.7; on the 16th of July it rises at 6.12 and sets at 5.57. The longest day is in December and the shortest in June, while on the other hand the year is in February and October and lowest in June and December.
irregularities. On the whole, the east monsoon blows steadily for a longer period than the west. The velocity of the wind is much less than in Europe—not more in the annual mean at Batavia than 3 ft. per second, against 12 to 18 ft. in Europe. The highest velocity ever known in Batavia was 27 ft. per second, fairly high, but hardly ever cyclonic. There are as a matter of course a large number of purely local winds, some of them of a very peculiar kind, but few of these have been scientifically dealt with. Thunder-storms are extremely frequent, and much less diminished by the fact that the palm-trees are excellent conductors. At night the air is almost invariably still. The average rainfall at Batavia is 72-26 in. per annum, of which 51-49 in. are contributed by the west monsoon. The amount varies considerably from year to year: in 1889, 1891 and 1897 there were about 47-24 in.; in 1868 and 1877 nearly 51-17, and in 1872 and 1882 no less than 94-8. There are no long tracts of unbroken rainfall and no long periods of continuous rainfall, but there are six or eight rains only for about one-seventh of the time. In order next come February, March, and December. August, the driest month, has from three to five days of rain, though the amount is usually less than 6 in. and not more than 2 in. What is more, the linear description of the rain falling not in drops but in streams was proved erroneous by J. Wiesener’s careful observations (see Kais. Akad. d. Wiss. Math. Natury. C. Bd. xiv., Vienna, 1895), which have been confirmed by Dr. H. H. W. Regenwaarnemingen in Nederlandsch Indië (1902).

There is a great deal of interest in the flora of Java, particularly among botanists. Many species of plants are found in the region, and their diversity is remarkable. One such species is the *Nipa fruiticans*, which is widely distributed in the lowlands of Java. The fruits of this plant are used for making palm wine, which is a popular beverage in the region.

As in other tropical-rain forest lands the variety and abundance of insects is amazing. At sundown the air becomes resonant for hours with their myriad voices. The *Cecropia* and the *Lepidoptera* form a1 the most conspicuous group of inhabitants. The moths, however, are subject to disastrous attacks of creeping and winged foes, many still unidentified (see especially Snellen van Hollenhoven, *Essays d'une faune entomologique de l'Archipel Indo-néerlandais.*). Of butterflies proper five hundred species are known. Of the beetles one of the largest and handsomest is *Chalcosoma atlas.* Among the spiders (a numerously represented order) the most notable is a bird-killing species, *Zelenscobia javanaensis.* In many parts of the island is prominent the *Anax parthenope* and sometimes the *A. viridescens.* Crops of apples are subject to disastrous attacks of creeping and winged foes, many still unidentified. Of butterflies proper five hundred species are known. Of the beetles one of the largest and handsomest is *Chalcosoma atlas.* Among the spiders (a numerously represented order) the most notable is a bird-killing species, *Zelenscobia javanaensis.* In many parts of the island is prominent the *Anax parthenope* and sometimes the *A. viridescens.* Crops of apples are subject to disastrous attacks of creeping and winged foes, many still unidentified.

The shell of the *Tridacna gigas* is the largest anywhere known. The Indians find it a natural paradise, affording him the means of studying the effects of moisture and heat, of air-currents and altitude, without the interference of succulent arctic conditions. The botanic gardens of Buitenzorg have long been famous for the wealth of material, and they, with their treasures have been accumulated and displayed, their value in connexion with the economic development of the island and the extensive scientific literature published by their directors. There is a botanic garden at Buitenzorg, and several others, which will be referred to for the investigation on the spot of the conditions of the primate forest. Planted in this area is a variety of *Acanthus,* which is a valuable species for the protection of soil. When grown in the open, it is often used as a hedge for providing protection against wind and sun. The plants are drought-resistant and can withstand extremes of temperature, making them ideal for use in coastal and desert areas.

In the primate forest the trees are often clad with ferns and mosses, creating a lush and green environment. Many species of epiphytes and orchids are also found in this region. Orchids are particularly diverse and can be found in a wide range of habitats, from high-altitude mountains to lowland forests. Many species are also found in the vicinity of water bodies, such as lakes and rivers. The forests of Java are home to a rich diversity of plant life, with over 10,000 species of vascular plants documented in the region. The forests are also home to a wide range of animal life, including many species of birds, reptiles, and mammals. The forests of Java are an important part of the Indonesian biodiversity, supporting many species that are found nowhere else in the world.
of all the trees in the island is the rasamala or liquid-ambar (Altingia excelsa), which, rising with a straight clean trunk, sometimes 6 ft. in diameter at the base, to a height of 100 to 130 ft., spreads out into a magnificent crown of branches and foliage. When by chance a climax plant—such as a shady tree—partially obscures the top of a palisade, the blossoms at the top is one of the finest colour effects of the forest. The rasamala, however, occurs only in the Preanger and in the neighboring parts of Bantam and Buitenzorg. Of the other trees that grow in the wild, to the timber-spots and parts of the primeval forests, the majesty and the blackish-yellowish-brown wood of the calophyllum species makes a noble companionship; and the evergreen decision of the other marked forest-trees. It grows best in middle and eastern Java, preferring the comparatively dry and hot climate of the plains and lower hills to a height of about 2000 ft. above sea, and thriving best in more or less calciferous soils. In June it sheds its leaves and begins to bud again in October. Full-grown trees reach a height of 100 to 150 ft. In 1895 (with a very limited quantity of leaves) the tree reached the value of about 40,000 rupiah; in 1904 the corresponding figure was 40,000 rupiah.

That an island which has for so long maintained a dense and growing population in its more cultivable regions should have such extensive tracts of forestal or quasi-primaveral forest as have been above described, should be remarked as a decided advantage to one who did not consider the simplicity of the life of the Javanese. They require little fuel; and both their dwellings and their furniture are mostly constructed of bamboo supplemented with a palm or two. They use the leaves of this palm for roofing the poorer and more temporary huts for their cattle. In doing this, however, they are often extremely restless and wasteful; and if it had not been for the unusual humidity of the climate their annual fires would have resulted in widespread conflagrations. As it is, many monsoon woods are now bare which within historic times were forested to the top; but the Dutch government has proved fully alive to the danger of denudation. The state has control of all the woods and forests of the island, and the issuing of licenses for clearing or any other destruction of the forests is by the government; it is only the simple expedient of protecting the territory he had to deal with from all encroachments by natives.

Population.—The population of Java (including Madura, &c.) was 30,068,008 in 1905. In 1900 it was 28,746,688; in 1890, 23,912,564; and in 1880, 19,794,505. The natives consist of the Javanese proper, the Sundanese and the Madurese. All three belong to the Malay stock. Between Javanese and Sundanese the distinction is mainly due to the influence of the Hindoos on the former and the absence of this on the latter. Between Javanese and Madurese the distinction is rather to be ascribed to difference of natural environment. The Sundanese have best retained the Malay type, both in physique and fashion of life. They occupy a larger area, besides the island of Madura and neighbouring islands, including the eastern part of Java itself. The residencies of Tegal, Pekalongan, Banyumas, Bagelen, Kedu, Semonang, Japara, Surakarta, Jogjakarta, Rembang, Madiun, Kediri and Surabaya have an almost purely Javanese population. The Javanese are the most numerous and civilized of the three peoples.

The colour of the skin in all three cases presents various shades of yellowish-brown; and it is observed that, owing perhaps to the Hindoos strain, the Javanese are generally darker than the Sundanese. The eyes are always brown or black, the hair of the head black, long, lank and coarse. Neither breast nor limbs are provided with hair, and there is hardly even the suggestion of a beard. In stature the Sundanese is less than the Javanese proper, being little over 5 ft. in average height, whereas the Javanese is nearly 5½ ft.; at the same time the Sundanese is more stoutly built. The Madurese is as tall as the Javanese and as stout as the Sundanese. The eye is usually set straight in the head in the Javanese and Madurese; among the Sundanese it is often oblique. The nose is generally flat and small, with wide nostrils, although among the Javanese it does not infrequently becomes aquiline. The lips are thick, yet well formed; the teeth are naturally white, but often filed and stained. The cheek-bones are well developed, more particularly with the Madurese. In the expressiveness of countenance the Javanese and Madurese are far in advance of the Sundanese. The women are not so well made as the men, and among the lower classes especially soon grow absolutely ugly. In the eyes of the Javanese a golden yellow complexion is the perfection of female beauty. To judge by their early history, the Javanese must have been a warlike and vigorous people, but now they are peaceable, docile, sober, simple and industrious.

One million only out of the twenty-six millions of natives are concentrated in towns, a fact readily explained by their sources of livelihood. The great bulk of the population is distributed over the country in small groups, sometimes consisting only of a few or a dozen persons, from the Low Javanese word dééd (High Javanese dusun). Every dessa, however small (and those containing from 100 to 1000 families are exceptionally large), forms an independent community; and no sooner does it attain to any considerable size than it sends off a score of families or so to form a new dessa. Each lies in the midst of its own area of cultivation. The general enceinte is formed by an impervious hedge of bamboos 40 to 70 ft. high. Within this lie the houses, each with its own enclosure, which, even when the fields are the communal property, belongs to the individual householder. The capital of a district is only a larger dessa, and that of a regency has the same general type, but includes several kampongs or villages. The bamboo houses in the strictly Javanese districts are always built on the ground; in the Sunda lands they are raised on piles. Some of the well-to-do, however, have stone houses. The principal article of food is rice; a considerable quantity of fish is eaten, as is little meat. Family life is usually well ordered. The upper class practise polygamy, but among the common people a man has generally only one wife. The Javanese are nominally Mahomedans, as in former times they were Buddhists and Brahmins; but in reality, not only such exceptional groups as the Kalangs of Surakarta and Jogjakarta and the Baduwis or nomad tribes of Bantam, but the great mass of the people must be considered as believers rather in the primitive animism of their ancestors, for their belief in Islam is overlaid with superstition. As we ascend in the social scale, however, we find the name of Mahomedan more and more applicable; and consequently in spite of the paganism of the populace the influence of the Mahomedan "priests" (this is their official title in Dutch) is widespread and real. Great prestige attaches to the pilgrimage to Mecca, which was made by 5068 persons from Java in 1900. In every considerable town there is a mosque. Christian missionary work is not very widely spread.

Languages.—In spite of Sundanese, Madurese and the intrusive Malay of Bantam and the Malay islands of Banyumas, northern Cheribon, Krawang and north Bantam, as the form the language assumed under the Javanese-Mahapat court influence; while New Javanese is the language as it has developed in the island of Java. The Javanese is a literary language long after it had become arcadian. It contains more Sanskrit than any other language of the archipelago. New Javanese breaks up into two great varieties, so different that sometimes they are regarded as two distinct languages. The nobility use one form, Krâmâ; the common people another, Ngoko, the "touing" language (cf. Fr. touyant, Ger. dutsend); but each class understands the language of the other class. The aristocrat speaks

---

1 It is interesting to compare this with the natural "reforization" of Krakatoa. See Pennzeg, Ann. Jard. de Buitenzorg, vol. viii. (1902); and W. Botting in Nature (1903).
to the commonality in the language of the commoner; the commoner speaks to the aristocracy in the language of the aristocrat; and, according to clearly recognized etiquette, every Javanese plays the part of aristocrat or commoner towards those whom he addresses. To speak in a different language, or in another manner of speech, is a mark of respect. In this way Dipa Negara showed his contempt for the Dutch General de Kock. The ordinary Javanese thinks in Ngoko; the children use it to each other, and so on. Between one set of naughts, the two words are being used completely different and sometimes differing only in the termination, the beginning or the middle. Thus every Javanese uses, as it were, both Ngoko and Ngoko another, the two words being sometor equal or inferior is a mark of respect. In this way Dipa Negara showed his contempt for the Dutch General de Kock. The ordinary Javanese thinks in Ngoko; the children use it to each other, and so on. Between one set of naughts, the two words are being used completely different and sometimes differing only in the termination, the beginning or the middle. Thus every Javanese uses, as it were, both Ngoko and Ngoko another, the two words being sometimes.

Literature—Though a considerable body of Kavi literature is still extant, nothing like a history of it is possible. The date and authorship of most of the works are totally unknown. The first place may be assigned to the Brata Yuda (Sansk. Bhārata Yudha, the conflict of the Bharatas), an epic poem dealing with the struggle between the two houses of Bharata and Dushala, which is mentioned in the Mahābhārata in parvams 5-10. The Mahābhārata. To the conception, however, of the modern Javanese it is a purely native poem; its kings and heroes find their place in the native history and serve as ancestors to the Javanese. The religious and sentimental character of the work is of Chr. Dr. The Dutch, however, have been more successful in the translation of modern Javanese; there exists a great variety of so-called balads or chronicles. It is sufficient to mention the "history" of Barôn Saksó, which appears to give an account—often and he has a clear grasp of the settlement of Europeans in Java (Cohen Stuart published text and translation, Batavia, 1851). J. Veith gives an analysis of the contents), and the Babad Tanah Djiwi (the Haghe), 1874, 1877, giving the history of the island to 1647 of the Javanese era. Even more numerous are the tales or puppet-plays that usually take their subjects from the Hindu legends or from those relating to the kingdoms of Majapahit and Pañjaram (see e.g. H. C. Humme, Abhid, een Javansche ilmeestuk, the Haghe, 1878). In these more than the others, the Javanese poet is a first-rate performer, who recites the appropriate speeches and, as occasion demands, plays the part of chorus.

Several Javanese specimens are also known of the best-fable and song-writing. The best is the Sanskrit literature (W. Palmer, van den Broek, Javansche Vertellingen, bevatende de lotgevallen of een kindje, een reekh, &c., the Haghe, 1878). To the Hindu-Javanese literature there naturally succeeded a Mahomedan- Buddhist literature. The medieval Javanese literature reflects the life of Arabic originals; it comprises religious romances, moral exhortations and mystical treatises in great variety.

Arts—The arts of the Javanese are in advance of the other peoples of the archipelago. Of the different crafts practiced among them, the most important are those of the blacksmith or cutler, the carpenter, the kris-sheath maker, the coppersmith, the goldsmith and the potter. Their skill in the working of the metals is the more noteworthy as they have to import the raw materials. The most esteemed product of the blacksmith's skill is the kris; every man and boy above the age of fourteen wears one at least as part of his ordinary attire. The mystic and ceremonial nature of the present-day Indonesian is reflected in the art of the Javanese; the sculptures, and the silver and gold work of the Javanese is of a high order. The typical Javanese art is the batik. For the Javanese, it is a beautiful place well known to sportsmen for its proximity to the Ranca Ekek swamp, where great snipe-shooting matches are
JAVAs known throughout the island and the success of its enterprise is evident in the style of their houses. A good trade is also carried on in cattle, kapok, copra, pottery and all sorts of small wares. The mosque in the old town has increasing remains of Majapahit origin, and there is a fine mosque in the town of Semarang. In 1818 Daendels transferred its resident to Pati. Ungaran, 1,026 ft. above the sea, was a place of importance as early as the 17th century, and in modern times has become known as a Javanese town. Between the years 1895 and 1896, the Javanese town of Surakarta, the residence of the Sultan, has grown rapidly to have a population of 29,552 with 210 Europeans. Very similar to each other are Surakarta and Solo, and Jokjakarta, the chief towns of the quasi-independent states of Solo and Central Java. In the city of Semarang (1913) contains the palace (Kraton, locally called the Bata bumi) of the susuhunan (which the Dutch translated as emperor), the dalem of the Prince Mangku Negara, the residences of the Solo nobles, a small Dutch fort (Vastenburg), a great mosque, an old Dutch town, and the Kraton, the most important of all Java, especially for jewelry. The total population is 72,235 with 1,424 Europeans. To the south-east lies Pasir Gede, a former capital of Mataram, with tombs of the ancient princes of the Mataram kingdom. The town is surrounded by extensive kamponds (Balapulang, Bebeks), the sugar factories and the sugar factory that provides abundant employment to the inhabitants. The harbour has been the object of various improvements since 1871. The whole district is densely populated (3100 to 4000 to the square mile), and the town is surrounded by extensive kamponds (Balapulang, Bebeks). It is entirely surrounded by the sugar factory that provides abundant employment to the inhabitants. The total population is 72,235 with 1,424 Europeans. To the south-east lies Pasir Gede, a former capital of Mataram, with tombs of the ancient princes of the Mataram kingdom. natives for their own culture and use amounts to about 9,625,000 acres. In western Java the prevailing crop is rice, less prominently cultivated in middle Java, while in eastern Java and Madura other articles of food take the first rank. The Javanese tell strange legends concerning the introduction of rice, and observe various ceremonies in connection with its planting, paying more regard to them than to the proper cultivation of the cereal. The agricultural produce grown on the lands of the government and private proprietors, comprising rice, sugar, coffee, tobacco, tea, indigo, &c., the Javanese possess buffaloes, ordinary cattle, horses, dogs and cats. The buffalo was probably introduced by the Hindus. As in agricultural products, so also in cattle-rearing, western Java is distinguished from the east and north. In 1827 it was estimated that the whole country has 106 per 1000 inhabitants, but it varies considerably in different districts, being greatest in western Java. The fact that rice is the prevailing culture in the west, while in eastern Java other plantations and agricultural pursuits are prevalent, is owing, in part, to the discovery of cinchona, which is the chief source of wealth in Java, and is found in western Java, these animals being more in requisition in the culture of rice. The ordinary cattle are of mixed race; the Indian zebu having been crossed with the banting and with European cattle of miscellaneous origin. The horses, though small, are of excellent character, and their masters, according to their own ideas, are extremely particular in regard to purity of race. Riding comes naturally to the Javanese; horse-races and tournaments have been in vogue among them from earliest times.

Coffee is an alien in Java. Specimens brought in 1696 from Cannanore on the Malabar coast perished in an earthquake and floods in 1699; the effective introduction of the precious shrub was due to a young officer, Lieutenant van de Velde, who, during the siege of Banten, discovered coffee berries in a vessel which had been captured by the Dutch. Introduced into Java proper about 1710, the plant was cultivated generally in 1711-12, but it was not till after 1721 that the yearly exports reached any considerable amount. The aggregate quantity sold in the home market from 1711 to 1791 was 2,036,437 piculs, or on an average about 53,000 piculs a year. The exports, especially to the West Indies, were proportionately very large, being 1,101,835 piculs in 1812, and 1,064,935 piculs in 1813. The produce of Java is mainly for the coffee-shops of the whole production of the island. By the beginning of the 19th century the annual production was almost 7134 tons and after the introduction of the Van den Bosch system of forced culture a further augmentation of the crop was to be expected. Unfortunately Java, however, of little importance. Official reports show that from 1840 to 1873 the amount varied from 5226 tons to 7354. During the ten years 1869 to 1878 the average crop of the plantations was about 6400 tons. More of the beans are sold for the making of coffee than for the sake of the green bean, which is used for medicinal purposes, and the coffee is sold in the market for sugar. The quantity has been increasing steadily. In 1905, 1906, and 1907 the production of coffee amounted to 13,000,000, 13,500,000, and 14,000,000 pounds, respectively. The cultivation of coffee has been extensively carried on in the districts of Bantam, Semarang, and Pajang; and the principal foreign purchasers are English biscuit manufacturers. The kaka is a tree from tropical America which, growing freely in any soil, is extensively cultivated in Java for its bark, which is used for making paper. The kapok, a tree of the Bombacaceae, yields a fiber which is almost exclusively Java. Among other products which are of some importance as articles of export may be mentioned nutmegs, mace, pepper, hides, arrack and copra. The cultivation of coffee was started in the latter part of the 19th century, and in 1860 where government control and the assurance of a large market operated to encourage the cultivation of coffee, the results were not at once as satisfactory as had been expected. The cultivation of the plantations was almost exclusively in Java. Among other products which are of some importance as articles of export may be mentioned nutmegs, mace, pepper, hides, arrack and copra.

The cultivation of sugar has been long carried on in Java, and since the decline of the coffee plantations it has developed into the leading industry of the island. There are experimental stations at Pasuruan, Pekalongan and elsewhere, where attempts are made to introduce and experiment with other crops, so as to increase the diversity of the crops. The mills are equipped with high-class machinery and produce sugar of excellent colour and grain. In 1853-1857 the average crop was 66,304 tons; in 1869-1873, 70,531, and in 1875-1880, 204,678. By 1891-1895 this had increased to 404,935 tons. The crops for 1904 and 1905 were respectively 1,064,935 and 1,028,357 tons. Prices fluctuate, but the value of the harvest of 1905 was estimated at about £1,750,000.

The cultivation system of indigo shows a strong vitality. The dyeing of the Nederlandsch Handel Maatschappij, which introduced not only fresh stock, but expert growers from China in 1832-1853. The tea-planters (often taking possession of the abandoned coffee-plantations) have greatly improved the quality of their products. Assam tea was introduced in 1878, and this has rapidly extended its area. The exports increased from 12,110,724 lb in 1898 to 25,772,564 in 1905. More than half the total goes to the Netherlands; the United Kingdom ranks next, and, far behind both, Russia.
of salt is a government monopoly and confined to the districts of Sumenep, Paneekaan and Sampang in Madura, where from 3000 to 4000 people are hereditarily engaged in extracting salt from sea water, delivering it to the government at the rate of 10 fl. (near 17s.) per box. The quantity of salt produced, of ungrained, greyish and highly hygroscopic) is extremely unsatisfactory. The waste was so great that in 1901 the government paid a price of about 235 (20,000 fl.) to Karl Boltz von Bolzberg for an improved method of extraction. In another year the total quantity delivered was 71,405 tons; in the next five years it rose to 89,932; and between 1898 and 1902 sank again to 88,860. The evil effects of this monopoly have been investigated by J. E. de Meyer, Zout als meer, (from the perspective of the scarcity of salt) which has led to a great importation of salted fish from Siam (upwards of 6600 tons in 1902).

Communications.—Roads and railways for the most part follow the banks of rivers and along the coast and between the volcanic areas. The principal railways are the Semarang-Jokjakarta and Batavia-Buitenzorg lines of the Netherlands-Indian railway company, and the Surabaya-Pasmurun, Bangil-Mulang, Sidoarjo-Panam, Kertosono-T Hunter Agung, Buitenzorg-Chianjar, Surakarta-Madiun, Pasuruan-Probolinggo, Jokjakarta-Chialachap and other lines of the government. The earliest lines, between Batavia and Buitenzorg and between Semarang and the capitals of the sultanes, were built about 1870 by a private company with a state guarantee. Since 1875, when Dr van Goltstein, then a cabinet minister and afterwards Dutch minister in London, had an act passed for the construction of state railways in Java, their progress has been rapid. In 1905 a capital sum of 210,000,000 fl. was voted to build light railways or tramways, such as that between Semarang and Joana, and the total length of all lines was 2460 in 1905. There are some 3500 miles of telegraph line, and cables connect Surakarta and Madura, and Madura and Australia. Material welfare was promoted by the establishment of lines of steamships between Java and the other islands, all belonging to a Royal Packet Company, established in 1888 under a special act with a monopoly on a monopoly on account of the government mail contracts.

Administration.—Each village (dessa) forms an independent community, a group of dessas forms a district, a group of districts a department and a group of departments a residency, of which there are seventeen. At the head of each residency is a resident, with an assistant resident and a controller, all Dutch officials. The officials of the different levels have a salary, which is determined by the government; those of the dessas are also natives, elected by the inhabitants and approved by the resident. In the two sultanates of Surakarta and Jokjakarta the native sultans govern under the supervision of the residents. (For the colonial administration of Netherlands India see MALAY ARCHIPELAGO.)

History.—The origin of the name Java is very doubtful. It is not improbable that it was first applied either to Sumatra or to what was known of the Indian Archipelago—the inauspicious name of the several parts not being at once recognized. Jawa is the name of a race of people in the south of the island, and Javanese is that of some of their dialects. Jawa, the term for the island, is a native name, still used, it is true, by the European colonists. It is impossible to extract a rational historical narrative from the earlier babads or native chronicles, and even the later are destitute of any satisfactory chronology. The first great era in the history is the ascendency of the Hindus, and that breaks up into three periods—a period of Buddhism, a period of aggressive Siamism, and a period of apparent compromise. Of the various Hindu states that were established in the island, that of Majapahit was the most widely dominant down to the end of the 15th century; its tributaries were many, and it even extended its sway into other parts of the archipelago. The second era of Javanese history is the invasion of Islam in the beginning of the 15th century; and the third is the establishment of European and more particularly of Dutch influence and authority in the island. About 1520 the Portuguese entered into commercial relationships with the natives, but at the close of the same century the Dutch began to establish themselves. At the time when the Dutch East India company began to fix its trading factories on the coast towns, the chief native state was Mataram, which had in the 16th century succeeded to the overlordship possessed by the house of Demak—one of the states that rose after the fall of Majapahit. The emperors of Java, as the princes of Mataram are called in the early accounts, had their capital at Kartasura, now an almost deserted place, 6 m. west of Surakarta. At first and for long the company had only a few and little fragments of territory at Jakarta (Batavia), &c.; but in 1705 it obtained definite possession of the Preanger by treaty with Mataram; and in 1745 its authority was extended over the whole north-east coast, from Cheribon to Banyuwangi. In 1755 the kingdom of Mataram was divided into the two states of Surakarta and Jokjakarta, which still retain a shadow of independence. The kingdom of Bantam was finally subjugated in 1808. By the English occupation of the island (1811–1818) the European ascendency was further strengthened; the great Java war (1846–1850), in which Dipé Negárá, the last Javanese prince, a clever, bold and unscrupulous leader, struggled to maintain his claim to the whole island, resulted in the complete success of the Dutch. To subdue him and his following, however, taxed all the resources of the Dutch Indian army for a period of five years, and cost it the loss of 15,000 officers and soldiers, besides millions of guineas. Nor did his great influence die with him when his adventurous career came to a close in 1855 at Macassar. Many Javanese, who dream of a restoration of their ancient empire, do not believe even yet that Dipé Negárá is dead. They are readily persuaded by fanatical hadjis that their hero will suddenly appear to drive away the Dutch and claim his rightful heritage. Several times there have been political troubles in the native states of central Java, in which Dipé Negárá's name was used, notably in 1853, when many rebellious chiefs were exiled. Similar attempts at revolt had been made before, mainly in 1865 and 1870, but none so serious perhaps as that in 1849, in which a son and a brother of Dipé Negárá were implicated, aiming to deliver and reinstate him. All such attempts proved as futile there as in different parts of Java, especially in Bantam, where the trouble of 1850 and 1888 had a religious origin, and in the end they directly contributed to the consolidation of Dutch sway. Being the principal Dutch colony in the Malay Archipelago, Java was the first to benefit from the material change which resulted from the introduction of the Grondwet or Fundamental Law of 1848 in Holland. The main changes were of an economical character, but the political developments were also important. Since 1850 Dutch authority has steadily advanced, principally at the expense of the semi-independent sultanates in central Java, which had been allowed to remain after the capture and exit of Dipé Negárá. The power of the sultans of Jokjakarta and Surakarta has diminished; in 1863 Dutch authority was strengthened in the neighbouring island of Madura, and Bantam has lost every vestige of independence. The strengthening of the Dutch power has largely resulted from a more statesmanlike and more generous treatment of the natives, who have been educated to regard the orang baidu, or white man, as their protector against the native rulers. Thus, in 1866, passports for natives travelling in Java were abolished by the then governor-general, Dr Sloet van de Beele, who also introduced many reforms, reducing the corvée in the government plantations to a minimum, and doing away with the monopoly of fisheries. Six years later a primary education system for the natives, and a penal code, whose liberal provisions seemed framed for Europeans, were introduced.

Antiquities.—Ordinary traces of early human occupation are few in Java. The native bamboo buildings speedily perish. Stone weapons are occasionally found. But remains of the temples and monastic buildings of the Hindu period are numerous and splendid, and of a remarkable character. The latter, which reached a high standard without the use of mortar, supporting columns or arches. Chindis (i.e. temples, though the word originally meant a deposit for the ashes of a saint) are not found in western Java. They exist in two great groups—one in the middle Java, one in eastern Java, each with its own distinguishing characteristics, both architectural and religious. The former begins in the Dyeng plateau, in the east of Banyumasan, and extends into the east of Banteng. Kedu and the neighbouring districts of Semarang, northern Jokjakarta, and the western corner of Surakarta. The latter lies mainly in Surabaya, Kediri and Pasuruan. A considerable number of
ruins also exist in Probolinggo. Farther east they grow scarce. There is none in Madura. The remains of Macham Puth in Banyuwangi are possibly of non-Hindu origin. In the regency of Kendal (Semarang), to the north of Kedu, the place-names show that temple sites were found—that is to say, fragments of temple foundation—but some are not agreed. None of the Buddhist buildings shows traces of the older Haryanaya form of the creed. The greatest of all is a perfect sculptural exposition of the Mahayanaya doctrine. As to the plan, on which the temple was erected, alone, there is some disagreement. Ijzerman assigns the central Java groups to between the 8th and the 10th centuries. The seven-storied vihara (monastery) mentioned in the famous Menang-Kabu inscription (Sunutra) as the temple of the Arjuna Buddha, a temple which, in the Sununbuddha, is supposed to be Boro-Budur. A copper plate of 840 refers to Dyeng (Dehyang) as one of the sacred mountains of Java. One thing seems certain, that the temples of the eastern zone are of later date than those of the west, and that they are not Indian in style. They are generally distinguished by the characteristics of a decadent and more voluptuous age, and show that the art of the time had become less Indian and more Javanese, with traces of influences derived from the more eastern East. At the same time it must be noted that even Boro-Budur there are non-Indian elements in the decoration, indicating that the Hindu architect employed native artists and to some extent left them a free hand.

In his standard work on Indian and Eastern Architecture (London, 1879) Ijzerman gives a description of the central Java style which, as far as the most ornamental works are concerned, is distinguished from the Chalukyan by the employment of a double column instead of the single column. By the Chalukyan style. But J. W. Ijzerman in an elaborate paper in the Allmum-Kern contends that the learned historian of architecture was misled by his opinion mainly on inaccurate drawings represented the Javanese architecture. The latter, on the other hand, excepting Chandi Bima in the Dyen, are Dravidian and not Chalukyan. The very temples quoted by Fergusson, when more carefully examined, disprove his statement: a fact not without its bearing on the fundamental theory of the Dravidian architecture. The wonderful scenery of the Dyen plateau was already, in all probability, an object of superstition aye to the aboriginal inhabitants of Java; and thus it would catch the attention of the earliest Hindu settlers. They were also attracted by the magnificent rise of the plateau, which is congenial to the Hindu religion and occupation; though, in spite of the tradition of the existence of a considerable town, no sepulchral relics of the inhabitants have been discovered. There still remain five groups of temples—some well preserved, others in ruins. Their materials prove their devotion their builders bore to Siva, his consort Durga, and Ganesha. The Arjuno group, in the middle of the plateau, consists of Chandi Arjuno (with its chapel or priests’ residence, Ch. Semar, Ch. Srikahdi, Ch. Pulandev and Ch. Sembado, each a simple square chamber with a pyramidal roof, and a little red brick temple adjoined), Daravati and Ch. Parakest, lies to the north-east. The third, now a ruined mound, lies to the east. The fourth, to the north-west, is a group of seven small temples of which Ch. Sanchaki is the most imposing. The fifth group consists of the temples of Ch. Puspara in the second circular storey. Of the fifth group, in the south, only one temple remains—the Chandi Bima—a small, beautiful and exceptionally interesting building, in the form of a pyramid, the ribs of which are curved and separated by vertical pilasters. The temple is characterized by lines of the niche-shaped ornaments which rest each on its lotus cushion." How this happens to be the one Chalukyan temple amid hundreds is a problem to be solved. The plateau lies 6000 ft. above the sea and the north-facing gates in the temple enclosure, lead up from the lowlands of Bagelen and Pakalongan. The stairway between Lake Menjur and Lake Chebon alone consisted of 4700 steps. The width of the roadway, however, is only some three or four feet and the subterranean tunnel still exists, which served to drain the plateau.

Of all the Hindu temples of Java the largest and most magnificent is Boro-Budur, which ranks among the architectural marvels of the world. The site of the temple of Kedur, a league to the north of the Progo, is a considerable stream flowing southward into the Indian Ocean. The place is best reached by taking the steam-tram from Magelang or Jokjakarta to the village of Muntian Passar, where a conveyance may be hired. Strictly speaking, Boro-Budur is not a temple but a place of pilgrimage. It is a temple of the Buddha, consisting of a series of terraces constructed of hewn lava-blocs and crowded with sculptures. The lowest terrace now above ground forms a square, each side 487 ft. long. About 50 ft. higher is another terrace of stone and with the other two stories this is repeated. The temple is the large structure, consisting of a series of terraces, surmounted by a quasi-stupal

1 See R. Verbeek, "Liget der oudehden Java," in Verhand. v. h. B. Gen., XLI, and his Outreid kundige koart van Java. R. Sewel's "Antiquarian notes in Java," in Journal of the Royal Asiatic Society (1906), give the best conspicuous available for English readers. W. B. Worsfold, A Visit to Java (London, 1893), has a good sketch of what was then known, revised by Professor W. Rhyds Davids; but whoever wishes full information must refer to Dutch authorities. These are numerous but difficult of access.
square of 45 to 46 ft. each side. The building fronts the west, and is constructed of an andesitic tuff of inferior quality and dark colour. Of distinctly Buddhist influence there is no trace. The makara (elephant-head fish) is notably absent. The sculptures which run round the base and along the front of the temple or terraces are of the most elaborate and varied description—kings on thrones, dwarfs, elephants, supernatural beings, diabolical and grotesque, tree-monsters, palaces, temples, courtyards, lakes, gardens, forests—all are represented. In places again, the sculpture is on the roof, or below, in a covered roofed pavilion; in another, a tall temple strangely split down the centre, with a flight of steps running up the facade. The inscriptions are in the Devanagari character. In the same neighbourhood are Ch. Singosari, Ch. Kidul, &c. Another of the most interesting temples is Janapura, which was finished in 1330. It is built of red brick; and its distinctly Javanese origin is suggested by the frequency of the snake-motif still characteristic of modern Javanese art. It may be added that a comparison of the supports of the buildings of the zone affords an interesting study in the development of the pilaster as a decorative rather than structural element.

At Panabaram, near Blitar, Kediri, is another group of stone temples and other buildings. The chief temple is famous for the richness of its sculptures, which are peculiarly delicate and spirited in their details. The decoration of the more robust of one of the free-standing stairway-gardians consists of scroll-work, interposed with birds and animals rendered in a non-Indian style, reminiscent of Chinese or Japanese work. It has been described as one of the most beautiful pieces of sculpture in all the East.

Sculptures from the temples are scattered far and wide throughout Java, and it is one of the greatest difficulties of the archaeologist to do justice to the value of many of these minor works. This, too, is often the case with those that have found their way to the museums of Java and Europe (Batavia, Leiden, Haarlem, Berlin, &c.). Minor relics of the past are to be found alike in the palaces of the nobility and the huts of the peasants; and cups of copper or bronze dating from the 12th or 13th century are in daily use among the Tenggerese. The musical instruments used by the musicians of the native courts are often prized on account of their age and rarity.

As many of the Chinese came from China centuries ago and have not ceased to hold intercourse with their native country, the houses of the wealthier men among them are often rich in ancient specimens of Chinese and European earthenware. Pottery, porcelain, and other enthusiasts showed how much of value in this matter might be brought together in spite of the reluctance of the owners to commit the sacrilege of exposing to public gaze the images of their divinities and superstitious relics. Moreover, there are images of Kwan-yin (the Chinese Virgin-Goddess), of Buddha, of the ghoulish god of literature, of Lie-tai-Peh (the Chinese poet who has gone to live in the planet Venus), &c., in illustration of his papers in *L'Art fascinant*: *Place des Arts*, pt. v. (1900), a translation of his monograph published at Batavia in 1892.

(J. H. W.; O. J. R. H.)

**JAVELIN**—*JAY, JOHN* (1745–1829). American statesman, the descendant of a Huguenot family, and son of Peter Jay, a successful New York merchant, was born in New York City on the 12th of December 1745. On graduating at King's College (Columbia University) in 1764, Jay entered the office of Benjamin Kissam, an eminent New York lawyer. In 1768 he was admitted to the bar, and rapidly acquired a lucrative practice. In 1774 he married Sarah, youngest daughter of William Livingston, and was thus brought into close relations with one of the most influential families in New York. Like many other able young lawyers, Jay took an active part in the proceedings that resulted in the independence of the United States, identifying himself with the conservative element in the Whig or patriot party. He was sent as a delegate from New York City to the Continental Congress at Philadelphia in September 1774, and though almost the youngest member, was entrusted with drawing up the address to the people of Great Britain. Of the second congress, also, which met at Philadelphia on the 10th of May 1775, Jay was a member; and on its behalf he prepared an address to the people of Canada and an address to the people of Jamaica and Ireland. In April 1776, while still retaining his seat in the Continental Congress, Jay was chosen as a member of the third provincial congress of New York; and his consequent absence from Philadelphia deprived him of the honour of affixing his signature to the Declaration of Independence. As a member of the fourth provincial congress he drafted a resolution by which the delegates of New York in the Continental Congress were authorized to sign the Declaration of Independence. In 1777 he was chairman of the committee of the convention which drafted the first New York state constitution. After acting for some time as one of the council of safety (which administered the state government until the new constitution came into effect), he was made chief justice of New York state, in September 1777. A clause in the state constitution prohibited any justice of the Supreme Court from holding any other post save that of delegate to Congress on a “special occasion.”
but in November, 1778, the legislature pronounced the secession of what is now the state of Vermont from the jurisdiction of New Hampshire and New York to be such an occasion and sent Jay to Congress charged with the duty of securing a settlement of the territorial claims of his state. He took his seat in Congress on the 7th of December, and on the 10th was chosen president in succession to Henry Laurens.

On the 27th of September 1779 Jay was appointed minister plenipotentiary to negotiate a treaty between Spain and the United States. He was instructed to endeavour to bring Spain into the treaty already existing between France and the United States by a guarantee that Spain should have the Floridas in case of a successful issue of the war against Great Britain, reserving, however, to the United States the free navigation of the Mississippi. He was also to solicit a subsidy in consideration of the guarantee, and a loan of five million dollars. His task was one of extreme difficulty. Although Spain had joined France in the war against Great Britain, she feared to imperil her own colonial interests by directly encouraging and aiding the former British colonies in their revolt against their mother country, and she had refused to recognize the United States as an independent power. Jay landed at Cadiz on the 22nd of January 1780, but was told that he could not be received in a formally diplomatic character. In May the king's minister, Count de Florida Blanca, intimated to him that the question was, whether a treaty was the question of the free navigation of the Mississippi, and for months following this interview the policy of the court was clearly one of delay. In February 1781 Congress instructed Jay that he might make concessions regarding the navigation of the Mississippi, if necessary, but further delays were interposed, the news of the surrender of Yorktown arrived, and Jay decided that any sacrifice to obtain a treaty was no longer advisable. His efforts to procure a loan were not much more successful, and he was seriously embarrassed by the action of Congress in drawing bills upon him for large sums. Although by importing the Spanish minister, and by pledging his personal responsibility, Jay was able to meet some of the bills, he was at last forced to protest others; and the credit of the United States was saved only by a timely subsidy from France.

In 1781 Jay was commissioned to act with Franklin, John Adams, Jefferson and Henry Laurens in negotiating a peace with Great Britain. He arrived in Paris on the 23rd of June 1782, and jointly with Franklin had proceeded far with the negotiations when Adams arrived late in October. The instructions of the American negotiators were as follows:—

"You are to make the most candid and confidential communications with the ministers of our generous ally, the king of France; to undertake nothing in the negotiations for peace or truce without their knowledge and concurrence; and ultimately to govern yourselves by their advice and opinion, endeavouring in your whole conduct to make them sensible how much we rely on his majesty's influence for effectual support in every thing that may be necessary to the present security, or future prosperity, of the United States of America."  

Jay, however, in a letter written to the president of Congress from Spain, had expressed in strong terms his disapproval of such dependence upon France, and, on arriving in Paris, he demanded that Great Britain should treat with his country on an equal footing by first recognizing its independence, although the French minister, Count de Vergennes, contended that an acknowledgment of independence as an effect of the treaty was as much as could reasonably be expected. Finally, owing largely to Jay, who suspected the good faith of France, the American negotiators decided to treat independently with Great Britain. The provisional articles, which were so favourable to the United States as to be a great surprise to the courts of France and Spain, were signed on the 30th of November 1782, and were accepted with no important change as the final treaty on the 30th of September 1783.

On the 24th of July 1784 Jay landed in New York, where he was presented with the freedom of the city and elected a delegate to Congress. On the 7th of May Congress had already chosen him to be secretary for foreign affairs, and in December Jay resigned his seat in Congress and accepted the secretari ship. He continued to act in this capacity until 1790, when Jefferson became secretary of state under the new constitution. In the question of this constitution Jay had taken a keen interest, and as an advocate of its ratification he wrote over the name "Publicius" five (Nos. 2, 3, 4, 5 and 64) of the famous series of papers known collectively as the Federalist (see Hamilton, Alexander). He published anonymously (though without succeeding in concealing the authorship) An Address to the People of New York, in vindication of the constitution; and in the state convention at Poughkeepsie he ably seconded Hamilton in securing its ratification by New York. In making his first appointments to federal offices President Washington asked Jay to take his choice; Jay chose that of chief justice of the Supreme Court, and held this position from September 1789 to June 1795. The most famous case that came before him was that of Chisolm v. Georgia, in which the question was, Can a state be sued by a citizen of another state? Georgia argued that it could not be so sued, on the ground that it was a sovereign state, but Jay decided against Georgia, on the ground that sovereignty in America resided with the people. This decision led to the adoption of the eleventh amendment to the federal constitution, which provides that no suit may be brought in the federal courts against any state by a citizen of another state or by a citizen of the United States in any other capacity. This decision also determined the governorship of New York State, but a partisan returning-board found the returns of three counties technically defective, and though Jay had received an actual majority of votes, his opponent, George Clinton, was declared elected. 

Ever since the War of Independence there had been friction between Great Britain and the United States. To the grievances of the United States, consisting principally of Great Britain's refusal to withdraw its troops from the forts on the north-western frontier, as was required by the peace treaty of 1783, her refusal to make compensation for negroes carried away by the British army at the close of the War of Independence, her restrictions on American commerce, and her refusal to enter into any commercial treaty with the United States, were added, after war broke out between France and Great Britain in 1793, the anti-neutral naval policy according to which British naval vessels were authorized to search American merchantmen and impress American seamen, provisions were treated as contraband of war, and American vessels were seized for no other reason than that they had on board goods which were the property of the enemy or were bound for a port which though not actually blockaded was declared to be blockaded. The anti-British feeling in the House of Representatives came to a head on the 19th of April 1794 a resolution was introduced to prohibit commercial intercourse between the United States and Great Britain until the north-western posts should be evacuated and Great Britain's anti-neutral naval policy should be abandoned. Thereupon Washington, fearing that war might result, appointed Jay minister extraordinary to Great Britain to negotiate a new treaty, and the Senate confirmed the appointment by a vote of 18 to 8, although the non-intercourse resolution which came from the house a few days later was defeated in the senate only by the casting vote of Vice-President John Adams. Jay landed at Falmouth in June 1794, signed a treaty with Lord Grenville on the 19th of November, and disembarked again at New York on the 28th of May 1795. The treaty, known in history as Jay's Treaty, provided that the north-western posts should be evacuated by the 1st of June 1796, that commissioners should be appointed to settle the north-east and the north-west boundaries, and that the British claims for British debts as well as the American claims for compensation for illegal seizures should be referred to commissioners. More than one-half of the clauses in the treaty related to commerce, and although they contained rather small concessions to the United States, they were about as much as could reasonably have been expected in the circumstances. One clause, the operation of which was limited to two years from the close of the existing war, provided that American vessels not exceeding 70 tons burden.
might trade with the West Indies, but should carry only American products there and take away to American ports only West Indian products; moreover, the United States was to export in American vessels no molasses, sugar, coffee, cocoa or cotton to any part of the world. Jay consented to this prohibition under the impression that the articles named were peculiarly the products of the West Indies, not being aware that cotton was rapidly becoming an important export from the southern states. The operation of the other commercial clauses was limited to twelve years. By them the United States was granted limited privileges of trade with the British East Indies; some provisions were made for reciprocal freedom of trade between the United States and the British dominions in Europe;ough some articles were specified under the head of "contraband of war"; it was agreed that whenever provisions were seized as contraband they should be paid for, and that in cases of the capture of a vessel carrying contraband goods such goods only and not the whole cargo should be seized; it was also agreed that no vessel should be seized merely because it was bound for a blockaded port, unless it attempted to enter the port after receiving notice of the blockade. The treaty was laid before the Senate on the 8th of June 1795, and, with the exception of the clause relating to trade with the West Indies, was ratified on the 24th by a vote of 20 to 10. As yet the public was ignorant of its contents, and although the Senate had enjoined secrecy on its members even after the treaty had been ratified, Senator Mason of Virginia gave out a copy for publication only a few days later. The Republican party, strongly sympathizing with France and strongly disliking Great Britain, had been opposed to Jay's mission, and had denounced Jay as a traitor and guilhotined him in effigy when they heard that he was actually negotiating. The publication of the treaty only added to their fury. They filled newspapers with articles denouncing it, wrote virulent pamphlets against it, and burned Jay in effigy. The British flag was insulted. Hamilton was stoned at a public meeting in New York while speaking in defence of the treaty, and Washington was grossly abused for signing it. In the House of Representatives the Republicans endeavoured to prevent the execution of the treaty by refusing the necessary appropriations, and a vote (29th of April, 1795) on a resolution that it ought to be carried into effect stood 49 to 49; but on the next day the opposition was defeated by a vote of 51 to 48. Once in operation, the treaty grew in favour. Two days before landing on his return from the English mission, Jay had been elected governor of New York state; notwithstanding his temporary unpopularity, he was re-elected in April 1798. With the close of this second term of office in 1801, he ended his public career. Although not yet fifty-seven years old, he refused all offers of office and retiring to his estate near Bedford in Westchester county, N.Y., spent the rest of his life in rarely interrupted seclusion. Politically he was throughout a strong believer in Conservatism, and after the rise of parties under the federal government he stood with Alexander Hamilton and John Adams as one of the foremost leaders of the Federalist party, as opposed to the Republicans or Democratic-Republicans. From 1821 until 1828 he was president of the American Bible Society. He died on the 17th of May 1829. The purity and integrity of his life are commemorated in a sentence by Daniel Webster: "When the spotless ermine of the judicial robe fell on John Jay, it touched nothing less spotless than itself."

See The Correspondence and Public Papers of John Jay (4 vols., New York, 1890-1893), edited by H. P. Johnston; William Jay, Life of John Jay, from his private Correspondence and other Manuscripts (2 vols., New York, 1833); William Whitecock, Life and Times of John Jay (New York, 1887); and George Pellew, John Jay (Boston, 1890), in the "American Statesmen Series."

John Jay's son, WILLIAM JAY (1780-1858), was born in New York City on the 16th of June 1780, graduated from Yale in 1807, and soon afterwards assumed the management of his father's large estate in Westchester county, N.Y. He was actively interested in peace, temperance and anti-slavery movements. He took a prominent part in 1816 in founding the

American Bible Society; was a judge of Westchester county from 1818 to 1843, when he was removed from office by the party in power in New York, which hoped, by sacrificing an anti-slavery judge, to gain additional strength in the southern states; joined the American anti-slavery society in 1834, and held several important offices in this organization. In 1840, however, when it began to advocate measures which he deemed too radical, he withdrew his membership, but with his pen he continued his labours on behalf of the slave, urging emancipation in the district of Columbia and the exclusion of slavery from the Territories, though deprecating any attempt to interfere with slavery in the states. He was a member of the American peace society and was its president for several years. His pamphlet, War and Peace: The Evils of the First with a Plan for Securing the Last, advocating international arbitration, was published by the English Peace Society in 1842, and is said to have contributed to the promulgation, by the powers signing the Treaty of Paris in 1856, of a protocol expressing the wish that nations, before resorting to arms, should have recourse to the good offices of a friendly power. Among William Jay's other writings, the most important are The Life of John Jay (2 vols., 1833) and a Review of the Causes and Consequences of the Mexican War (1849). He died at Bedford on the 14th of October 1858. See Bayard Tuckerman, William Jay and the Constitutional Movement for the Abolition of Slavery (New York, 1893).

WILLIAM JAY (1760-1853), English Nonconformist divine, was born at Tisbury in Wiltshire on the 6th of May 1760. He adopted his father's trade of stone-mason, but gave it up in 1785 in order to enter the Rev. Cornelius Winter's school at Marlborough. During the three years that Jay spent there, his preaching powers were rapidly developed. Before he was twenty-one he had preached nearly a thousand times, and in 1788 he had for a while occupied Rowland Hill's pulpit in London. Having to continue his studies he accepted the humble pastorate of Christian Malford, near Chippenham, where he remained about two years. After one year at Hope chapel, Clifton, he was called to the ministry of Argyle Independent chapel in Bath; and on the 30th of January 1791 he began the work of his life there, attracting hearers of every religious denomination and of every rank, and winning for himself a wide reputation as a brilliant pulpit orator, an earnest religious author, and a friendly counsellor. Sheridan declared him to be the most manly orator he had ever heard. A long and honourable connexion of sixty-two years came to an end in January 1853, and he died on the 27th of December following.

JAY (Fr. gaié), a well-known and very beautiful European bird, the Corvus glandarius of Linnaeus, the Garrulus glandarius of modern ornithologists. To this species are more or less closely allied numerous birds inhabiting the Palaearctic and Indian regions, as well as the greater part of America, but not occurring in the Antilles, in the southern portion of the Neotropical Region, or in the Ethiopian or Australian. All these birds are commonly called jays, and form a group of the crows or Coriææ, which may fairly be considered a sub-family, Garrulinae. Indeed there are, or have been, systematists who would elevate the jays to the rank of a family Garrulidae—a proceeding which seems unnecessary. Some of
them have an unquestionable resemblance to the pies, if the group now known by that name can be satisfactorily severed from the true Corsinæ. In structure the jays are not readily differentiated from the pies; but in habit they are much more arboreal, delighting in thick coverts, seldom appearing in the open, and seeking their food on or under trees. They seem also never to walk or run when on the ground, but always to hop. The body-feathers are commonly loose and soft; and, gaily coloured as are most of the species, in few of them has the plumage the metallic glossiness it generally presents in the pies, while the proverbial beauty of the "jay's wing" is due to the vivid tints of blue—turquoise and cobalt, heightened by bars of jet-black, an indication of the same style of ornament being observable in the greater number of the other forms of the group, and in some predominating over nearly the whole surface. The many genera that have been proposed by ornithologists, perhaps about nine may be deemed sufficiently well established.

The ordinary European jay, Garrulus glandarius (fig. 1), has suffered so much persecution in the British Islands as to have become in many districts a rare bird. In Ireland it seems now to be indigenous to the southern half of the island only; in England generally, it is far less numerous than formerly; and in Scotland its numbers have decreased with still greater rapidity. There is little doubt that it would have been exterminated but for its stock being supplied in autumn by immigration, and for its shy and wary behaviour, especially at the breeding-season, when it becomes almost wholly mute, and thereby often escapes detection. No truthful man, however much he may love the bird, will gainsay the depredations on fruit and eggs that it at times commits; but the gardeners and gamekeepers of Britain, instead of taking a few simple steps to guard their charge from injury, deliberately adopt methods of wholesale destruction—methods that in the case of this species are only too easy and too effectual—by proffering temptation to trespass which it is not in jay-nature to resist, and accordingly the bird runs great chance of total extirpation. Notwithstanding the war carried on against the jay, its varied cries and active gesticulations show it to be a slyly bird, and at a distance that renders its beauty-spots invisible, it is yet rendered conspicuous by its cinnamon-coloured tody and pure white tail-coverts, which contrast with the deep black and rich chestnut that otherwise mark its plumage, and even the young at once assume a dress closely resembling that of the adult. The nest, generally concealed in a leafy tree or bush, is carefully built, with a lining formed of fine roots neatly interwoven. Herein from four to seven eggs, of a greenish-white closely freckled, so as to seem suffused with light olive, are laid in March or April, and the young on quitting it accompany their parents for some weeks.

Though the common jay of Europe inhabits nearly the whole of this quarter of the globe south of 64° N. lat., its territory in the east of Russia is also occupied by G. brandti, a kindred form, which replaces it on the other side of the Ural, and ranges thence across Siberia to Japan; and again on the lower Danube and

trance to Constantinople the nearly allied G. krynicki (which alone is found in southern Russia, Caucasus and Asia Minor) shares its haunts with it. ¹ It also crosses the Mediterranean to Algeria and Morocco: but there, as in southern Spain, it is probably but a winter immigrant. The three forms just named have the widest range of any of the genus. Next to them come G. atricapillus, reaching from Syria to Baluchistan, G. japonicus, the ordinary jay of southern Japan, and G. sinensis, the Chinese bird. Other forms have a much more limited area, as G. cerivalis, the local and resident jay of Algeria, G. hyrcanus, found on the southern shores of the Caspian Sea, and G. taenaris, confined to the island of Formosa. The most aberrant of the true jays is G. lidithi, a very rare species, which seems to come from some part of Japan (vide Salvadori, Atti Accad. Torino, vii. 474), though its exact locality is not known.

Leaving the true jays of the genus Garrulus, it is expedient next to consider those of a group named, in 1851, Persireus by Prince C. L. Bonaparte (Saggio, &c., Anim. Vertebrati, p. 43) and Dysornithia by Swainson (F. B.-Americana, ii. 495).³ This group contains two species—one the Lanius infaustus of Linnaeus and the Siberian jay of English writers, which ranges throughout the pine-forests of the north of Europe and Asia, and the second the Coreus canadenisis of the same author, or Canada jay, occupying a similar station in America. The so-called Siberian jay is one of the most entertaining birds in the world. Its versatile cries and actions, as seen and heard by those who penetrate the solitude of the northern forests it inhabits, can never be forgotten by one who has had experience of them, any more than the pleasing sight of its rust-coloured tail, which an occasional gleam of sunshine will light up into a brilliancy quite unexpected by those who have only surveyed the bird's otherwise gloomy appearance in the glass-case of a museum. It seems scarcely to know fear, obtruding itself on the notice of any traveller who invades its haunts, and, should he halt, making itself at once a denizen of his bivouac. In confinement it speedily becomes friendly, but suitable food for it is not easily found. Linnaeus seems to have been under a misapprehension when he applied to it the trivial epithet it bears; for by none of his countrymen is it deemed an unlucky bird, but rather the reverse. In fact, no one can listen to the cheery sound of its ordinary calls with any but a hopeful feeling. The Canada jay, or "whisky-jack" (the corruption probably of a Cree name), seems to be of a similar nature, but it presents a still more sombre coloration, its nestling plumage,⁴ indeed, being thoroughly corvine in appearance and suggestive of its being a pristine form.

As though to make amends for the dull plumage of the species last mentioned, North America offers some of the most brilliantly

1 Further information will possibly show that these districts are not occupied at the same season of the year by the two forms.
2 Recent writers have preferred the former name, though it was only used subgenerically by its author, who assigned to it no characters, which the inventor of the latter was careful to do, regarding it at the same time as a genus.
3 In this it was described and figured (P. B. Americana, ii. 296, pl. 55) as a distinct species, G. brachyrhynchus.

FIG. 1—European Jay.

FIG. 2.—American Blue Jay.
coloured of the sub-family, and the common blue jay of Canada and the eastern states of the Union, Cyanus cristatus (fig. 2), is one of the most conspicuous birds of the Transatlantic woods. The account of its habits by Alexander Wilson is known to every student of ornithology, and Wilson's followers have had little to do but supplement his history with unimportant details. In this bird and its many allied forms, coloration, though almost confined to various tints of blue, seems to reach its climax, but want of space forbids more particular notice of them, or of the members of the other genera Cynocilla, Cyanocorax, Xanthurus, Psilorhinus, and more, which inhabit various parts of the Western continent. It remains, however, to mention the genus Cissa, including many beautiful forms belonging to the Indian region, and among them the C. speciosa and C. sinensis, so often represented in Oriental drawings, though doubts may be expressed whether these birds are not more nearly related to the pies than to the jays. (A. N.)

JEALOUSY (adapted from Fr. jalouise, formed from jalou, jealous, Low Lat. zelosus, Gr. ἀθάνατος, ardour, zeal, from the root seen in ἄνευ, to boil, ferment; cf. "yeast ") originally a condition of zealous emulation, and hence, in the usual modern sense, of resentment at being (or believing that one is or may be) supplanted or preferred in the love or affection of another, or in the enjoyment of some good regarded as properly one's own. Jealousy is really a form of envy, and implies a feeling of personal claim which in envy or covetousness is wanting. The jealousy of God, as in Exod. xx. 5, "For I, the Lord thy God, am a jealous God," has been defined by Pusey (Minor Prophets, 1860) as the attribute " whereby he does not endure the love of his creatures to be transferred from him. " " Jealous, " by etymology, is however, only another form of "zealous," and the identity is exemplified by such expressions as "I have been very jealous for the Lord God of Hosts" (1 Kings xx. 10). A kind of glass, thick, ribbed, and non-transparent, was formerly known as "jealous-glass," and this application is seen in the borrowed French word jalouse, a blind or shutter, made of slats of wood, which slope in such a way as to admit air and a certain amount of light, while excluding rain and sun and inspection from without.

JEAN D'ARRAS, a 15th-century trouvère, about whose personal history nothing is known, was the collaborator with Antoine du Val and Fouquart de Cambrai in the authorship of a collection of stories entitled Évangiles de guenouill. They purport to record the narratives of a group of ladies at their spinning, who relate the current theories on a great variety of subjects. The work dates from the middle of the 15th century and is of considerable value for the light it throws on medieval manners.

There were many editions of this book in the 15th and 16th centuries, one of which was printed by Wynkyn de Worde in English, as The Gospels of Dystases. A modern edition (Collection Jannet) has a preface by Anatole France.

Another trouvère, JEAN D'ARRAS who flourished in the second half of the 14th century, wrote, at the request of John, Duke of Berry, a long prose romance entitled Chronique de la princesse. It relates with many digressions the antecedents and life of the fairy Mélusine (q.v.).

JEAN DE MEUN, or DE MEUN (c. 1250-c. 1305), whose original name was Jean Clopinel or Chopinel, was born at Meun-sur-Loire. Tradition asserts that he studied at the University of Paris. At any rate he was, like his contemporary Rabelais, a hereditary monastic, a priest of Saint-Amour and a bitter critic of the mendicant orders. Most of his life seems to have been spent in Paris, where he possessed, in the Rue Saint-Jacques, a house with a tower, court and garden, which was described in 1305 as the house of the late Jean de Meung, and was then bestowed by a certain Adam d'Andely on the Dominicans. Jean de Meun says that in his youth he composed songs that were sung in every public place and school in France. In the enumeration of his own works he places first his continuation of the Roman de la rose of Guillaume de Lorris (q.v.). The date of this second part

1 The birds known as blue jays in India and Africa are rollers (q.v.).

is generally fixed between 1268 and 1285 by a reference in the poem to the death of Manfred and Conradin, executed (1268) by order of Charles of Anjou (d. 1285) who is described as the present king of Sicily. M. F. Guillou (Jean Clopinel, 1903), however, considering the poem primarily as a political satire, places it in the last five years of the 13th century. Jean de Meun doubtless edited the work of his predecessor, Guillaume de Lorris, before using it as the starting-point of his own vast poem, running to 15,000 lines. The continuation of Jean de Meun is a satire on the monastic orders, on celibacy, on the nobility, the papal see, the excessive pretensions of royalty, and especially on women and marriage. Guillaume had been the servant of love, and the exponent of the laws of "courtoise"; Jean de Meun added an "art of love," exposing with brutality the vices of women, their arts of deception, and the means by which men may outwit them. Jean de Meun embodied the mocking, sceptical spirit of the fabliaux. He did not share in current superstitions, he had no respect for established institutions, and he scorned the conventions of feudalism and romance. His poem shows in the highest degree, in spite of the looseness of its plan, the faculty of keen observation, of lucid reasoning and exposition, and it entitles him to be considered the greatest of French medieval poets.

He handled the French language with an ease and precision unknown to his predecessors, and the length of his poem was no bar to its popularity in the 13th and 14th centuries. Part of its vogue was no doubt due to the fact that the author, who had mastered practically all the scientific and literary knowledge of his contemporaries in France, had found room in his poem for a great amount of useful information and for numerous citations from classical authors. The book was attacked by Guillaume de Degulleville in his Pélérinage de la vie humaine (c. 1330), long a favourite work both in England and France; by John Gerson, and by Christine de Pisan in her Épître au dieu d'amour; but it also found energetic defenders.

Jean de Meun translated in 1384 the treatise, De re militari, of Vegetius into French as Le livre de Veguie de l'art de chevalerie (ed. Ulysse Robert, Soc. des anciens textes fr., 1897). He also produced a spirited version, the first in French, of the letters of Abelard and Héloïse. A 14th-century MS. of this translation in the Bibliothèque Nationale has annotations by Petrarch. His translation of the De consolatione philosophiae of Boëtius is preceded by a letter to Philip IV, in which he enumerates his earlier works, two of which are lost—De spirituali animae and De spirituali spiritu. 1 Certain editions of the Consolation de la sagesse, and this version is seen in the borrowed French word jalouse, a blind or shutter, made of slats of wood, which slope in such a way as to admit air and a certain amount of light, while excluding rain and sun and inspection from without.

JEANNE, a borough of Westmoreland county, Pennsylvania, U.S.A., about 27 m. E. by S. of Pittsburg. Pop. (1880), 3266; (1900), 5865 (1340 foreign-born); (1910), 8777. It is served by the Pennsylvania railroad, and is connected with Pittsburg and Uniontown by electric railway. It is supplied with natural gas and is primarily a manufacturing centre, its principal manufactures being glass, table-ware and rubber goods. Jeannette was founded in 1888, and was incorporated as a borough in 1886.

JEANNIN, PIERRE (1540-1622), French statesman, was born at Autun. A pupil of the great jurist Jacques Cujas at Bourges, he was an advocate at Dijon in 1569 and became councillor and then president of the parlement of Burgundy. He opposed in vain the marriage of St Bartholomew to his own daughter. As chancellor to the duke of Mayenne he fought to reconcile him with Henry IV. After the victory of Fontaine-Française (1595), Henry took Jeannin into his council and in 1602 named him intendant of finances. He took part in the principal events of the reign, negotiated the treaty of Lyons with the duke of Savoy

1 Jean de Meun's translation formed the basis of a rhymed version (1590) by Jean Priorat de Besançon, Li abreuyance de l'ordre de chevalerie.
JEJB, JOHN—JEDBURGH

(see Henry IV.), and the defensive alliance between France and the United Netherlands in 1608. As superintendent of finances under Louis XIII, he tried to establish harmony between the king and the queen-mother.

See Berger de Xivry, Lettres missives de Henri IV. (in the Collection littéraire de l'histoire de France), t. v. (1850); Peller S.(asuinassie), Elige sur la vie de Pierre Janin (Dijon, 1623); Sainte-Beuve, Causeries du lundi, t. x. (May 1854).

JEJB, JOHN (1736–1786), English divine, was educated at Cambridge, where he was elected fellow of Peterhouse in 1761, having previously been second wrangler. He was a man of independent judgment and warmly supported the movement of 1771 for abolishing university and clerical subscription to the Thirty-nine Articles. In his lectures on the Greek Testament he is said to have expressed Socinian views. In 1775 he resigned his Suffolk church livings, and two years afterwards graduated M.D. at St Andrews. He practised medicine in London and was elected F.R.S. in 1779.

Another John Jebb (1775–1833), bishop of Limerick, is best known as the author of Sacred Literature (London, 1820).

JEJB, SIR RICHARD CLAVERHOUSE (1841–1905), English classical scholar, was born at Dundee on the 28th of August 1841. His father was a well-known barrister, and his grandfather a judge. He was educated at Charterhouse and at Trinity College, Cambridge. He won the Porson and Craven scholarships, was senior classic in 1862, and became fellow and tutor of his college in 1863. From 1860 to 1875 he was public orator of the university; professor of Greek at Glasgow from 1875 to 1889, and at Cambridge from 1889 till his death on the 9th of December 1905. In 1891 he was elected member of parliament for Cambridge University; he was knighted in 1900. Jebb was acknowledged to be one of the most brilliant classical scholars of his time, a humanist in the best sense, and his powers of translation from and into the classical languages were unrivalled. A collected volume, Translations into Greek and Latin, appeared in 1873 (ed. 1906). He was the recipient of many honorary degrees from European and American universities, and in 1905 was made a member of the Order of Merit. He married in 1874 the widow of General A. J. Slmer, of the United States army, who survived him.

Jebb was the author of numerous publications, of which the following are the most important: The Characters of Theophrastus (1870), text, introduction, English translation and commentary (re-edited by J. E. Sandys, 1909); The Attic Orators from Anisthion to Isaeus (2nd ed., 1883), with comparative volume, Selections from Attic Orators (3rd ed., 1875); Rhetorica (1888); Selections of the seven plays, text, English translation and notes, the promised edition of the fragments being prevented by his death; Backvylades (1905), text, translation, and notes; Homer (3rd ed., 1888), a presentation to the New Testament Society: Modern Greece (1901); The Growth and Influence of Classical Greek Poetry (1893). His translation of the Rhetoric of Aristotle was published posthumously under the editorship of J. E. Sandys (1900). A selection from his Essays and Addresses, and a subsequent volume, Life and Letters, by Sir Richard Clavengerh Jebb [with critical introduction by A. W. Verrall] were published by his widow in 1907; see also an appreciative notice by J. E. Sandys, Hist. of Classical Scholarship, i. (1908).

JEJEEL (anc. Gebal-Byblos), a town of Syria pleasantly situated on a slight eminence near the sea, about 20 m. N. of Beirut. It is surrounded by a wall 13 m. in circumference, with square towers at the angles, and a castle at the south-east corner. Numerous broken granite columns in the gardens and vineyards that surround the town, with the number of ruined houses within the walls, testify to its former importance. The stele of Jehovah, king of Gebal, found here, is one of the most important of Phoenician monuments. The small port is almost choked up with 800 ft. wide. Sea.-The inhabitants of the Phoenician Gebal and Greek Byblos were renowned as stonecutters and ship-builders. Arrian (ii. 20.1) represents Enylus, king of Byblos, as joining Alexander with a fleet, after that monarch had captured the city. Philo of Byblos makes it the most ancient city of Phoenicia, founded by Cronus, i.e. the Moloch who appears from the stele of Jehovah to have been with Basalt the chief deity of the city. According to Plutarch (Mor. 357), the ark with the corpse of Osiris was cast ashore at Byblos, and there found by Isis. The orgies of Adonis in the temple of Baaltis (Aphrodite Byblica) are described by Lucian, De Deis Syriac. vi. The river Adonis is the Nahr el-Abraham, which flows near the town. The crusaders, after failing before it in 1099, captured "Giblet" in 1103, but lost it again to Saladin in 1180. Under Mahommedan rule it has gradually decayed. (D. G. H.)

JEBEL (plur. jibbl), also written Gebel with hard g (plur. gibbl), an Arabic word meaning a mountain or a mountain chain. It is frequently used in place-names. The French transliteration of the word is ajebel. Jabeli signifies a mountaineer. The pronunciation with a hard g sound is that used in the Egyptian dialect of Arabic.

JEDBURGH, a royal and a public burgh and county-town of Roxburghshire, Scotland. Pop. of police burgh (1901), 3136. It is situated on Jed Water, a tributary of the Teviot, 564 m. S.E. of Edinburgh by the North British railway, via Roxburgh and St Boswells (49 m. by road), and 10 m. from the border at Catcleugh, Shin, a peak of the Cheviots, 1742 ft. high. Of the name Jedburgh there have been many variants, the earliest being Gedwaerde (808), Jedwarth (1251), and Geddard (1386) while Jedburgh (1388) and Yedburgh (1407) were also used. The cathedral town is situated on the left bank of the Jed, the main streets running at right angles from each side of the central market-place. Of the renowned group of Border abbeys—Jedburgh, Melrose, Dryburgh and Kelso—that of Jedburgh is the stately. In 1118, according to tradition, but more probably as late as 1138, David, prince of Cumbria, here founded a priory for Augustinian monks from the abbey of St Quentin at Beauvais in France, and in 1147, after he had become king, erected it into an abbey dedicated to the Virgin. Repeatedly damaged in Border warfare, it was ruined in 1544–45 during the English invasion led by Sir Ralph Evers (or Ewe). The establishment was suppressed in 1559, the revenues being temporarily annexed to the Crown. After changing owners more than once, the lands were purchased in 1637 by the 3rd earl of Lothian. Latterly five of the bays at the west end had been utilized as the parish church, but in 1875–1875 the 9th marquess of Lothian built a church for the service of the parish, and presented it to the heritors in exchange for the ruined abbey in order to prevent the latter from being injured by modern additions and alterations.

The abbey was built of Old Red sandstone, and belongs mostly to the end of the 12th and the beginning of the 13th centuries. The architecture is mixed, and the abbey is a beautiful example of the Norman and Transition styles. The total length is 235 ft., the nave being 159 ft. wide. The west front contains a great Norman porch and a fine wheel window. The nave, on each side, has pointed arches in the basement storey, nine round arches in the triforium, and thirty-six pointed arches in the clerestory, through which an arcade is carried on both sides. The tower at the intersection of the nave and transepts, is of unusually massive proportions, being 30 ft. square and fully 100 ft. high; the network baluster round the top is modern. With the exception of the north piers and a small portion of the wall above, which are Norman, the tower dates from the end of the 15th century. The whole of the south transept has perished. The north transept, with early Decorated windows, has been covered in and walled off, and is the burial-ground of the Kerrs of Fernihirst, ancestors of the marquesses of Lothian. The tower of the nave of the latest is the recumbent effigy, by G. F. Watts, R.A., of the 8th marquess of Lothian (1832–1870). All that is left of the choir, which contains some very early Norman work, is two bays with three tiers on each side, corresponding to the design of the tower. It is supposed that the aisle, with Decorated window and groined roof, south of the chancel, formed the grammar school (removed from the Abbey in 1751) in which Samuel Rutherford (1600–1661), principal of St Mary's College, Edinburgh, and James Scougal, the author of The Seasons, were educated. The door leading from the south aisle into a herbaceous garden, formerly the cloister, is an exquisite copy of one which had become greatly decayed. It was designed by Sir Robert Adam, under whose superintendence restoration in the abbey was carried out.

The castle stood on high ground at the south end of the burgh, or "town-head." Erected by David I., it was one of the strongholds ceded to England in 1174, under the treaty of Falaise, for the ransom of William the Lion. It was, however, so often captured by the English that it became a menace rather than a protection, and the townsmen demolished it in 1409. It had
occasionally been used as a royal residence, and was the scene, in November 1286, of the revels held in celebration of the marriage (solemnized in the abbey) of Alexander III. to Jolota, or Yolande, daughter of the count of Dreux. The site was occupied in 1823 by the county prison, now known as the castle, a castellated structure which gradually fell into disuse and was acquired by the corporation in 1890. A house exists in Backgate in which Mary Queen of Scots, resided in 1566, and one in Castlegate which Prince Charles Edward occupied in 1745.

The public buildings include the grammar school (built in 1883 to replace the successor of the school in the abbey), founded by William Turnbull, bishop of Glasgow (d. 1454), the county buildings, the free library and the public hall, which succeeded to the corn exchange destroyed by fire in 1868, a loss that involved the museum and its contents, including the banners captured by the Jethart weavers at Bannockburn and Killiecrankie. The old market cross still exists, and there are two public parks. The chief industry is the manufacture of woollens (blankets, hosiers), but brewing, tanning and iron-founding are carried on, and fruit (especially pears) and garden produce are in repute.

Jedburgh was made a royal burgh in the reign of David I., and received a charter from Robert I. and another, in 1566, from Mary Queen of Scots. Sacked and burned time after time during the Border strife, it was inevitable that the townspeople should become keen fighters. Their cry of "Jethart's here!" was heard wherever the fray waxed most fiercely, and the Jethart axe of their invention—a steel axe on a 4-ft. pole—wrought havoc in their hands.

"Jethart or Jeddart justice," according to which a man was hanged first and tried afterwards, seems to have been a hasty generalization from a solitary fact—the summary execution in James VI.'s reign of a gang of rogues at the instance of Sir George Home, but has nevertheless passed into a proverb.

Old Jeddart, 4 m. S. of the present town, the first site of the burgh, is now marked by a few grassy mounds, and a fine Jedburgh forest, only the venerable oaks, the "Ca'pon Tree" and the "King of the Woods" remain. Dunon Hill (1005 ft.), about 2 m. south-west of Jedburgh, commands a fine view of the capital of the county.

JEEJEEBHOOY (JEEBHOOY), SIR JAMSETJEE (JAMSETJI), Bart. (1783–1859). Indian merchant and philanthropist, was born in Bombay in 1783, of poor but respectable parents, and was left an orphan in early life. At the age of sixteen, with a smattering of mercantile education and a bare Pittance, he commenced a series of business travels destined to lead him to fortune and fame. After a preliminary visit to Calcutta, he undertook a voyage to China, then fraught with so much difficulty and risk that it was regarded as a venture betokening considerable enterprise and courage; and he subsequently initiated a systematic trade with that country, being himself the carrier of his merchant wares on his passages to and fro between Bombay and Canton and Shanghai. His second return voyage from China was made in one of the East India Company's fleet, which, under the command of Sir Nathaniel Dance, defeated the French squadron under Admiral Linois (Feb. 15, 1804). On his fourth return voyage from China, the Indianman in which he sailed was forced to surrender to the French, by whom he was carried as a prisoner to the Cape of Good Hope, then a neutral Dutch possession; and it was only after much delay, and with great difficulty, that he made his way to Calcutta in a Danish ship. Nothing daunted, he undertook yet another voyage to China, which was more successful than any of the previous ones. By this time he had fairly established his reputation as a merchant possessed of the highest spirit of enterprise and considerable wealth, and thenceforward he settled down in Bombay, where he directed his commercial operations on a widely extended scale. By 1836 his firm was large enough to engross the energies of his three sons and other relatives; and he had amassed what at that period of Indian mercantile history was regarded as fabulous wealth. An essentially self-made man, having experienced in early life the miseries of poverty and want, in his days of affluence Jamsetjee Jeejeebhoy developed an active instinct of sympathy with his poorer countrymen, and commenced that career of private and public philanthropy which is his chief title to the admiration of mankind. His liberality was unbounded, and the absorbing occupation of his later life was the alleviation of human distress. To his own community he gave lavishly, but his benevolence was mainly cosmopolitan. Hospitals, schools, homes of charity, pension funds, were founded or endowed by him, while numerous public works in the shape of wells, reservoirs, bridges, causeways, and the like, not only in Bombay, but in other parts of India, were the creation of his bounty. The total of his known benefactions amounted at the time of his death, which took place in 1859, to over £230,000. It was not, however, the amount of his charities so much as the period and circumstances in which they were performed that made his benevolent career worthy of the fame he won. In the first half of the 19th century the various communities of India were much more isolated in their habits and their sympathies than they are now. Jamsetjee Jeejeebhoy's unsectarian philanthropy awakened a common understanding and created a bond between them which has proved not only of domestic value but has had a national and political significance. His services were recognized first in 1842 by the bestowal of a knighthood upon him, and in 1858 by that of a baronetcy. These were the very first distinctions of their kind conferred by Queen Victoria upon a British subject in India.

His title devolved in 1859 on his eldest son CURSETJEE, who, by a special Act of the Viceroy's Council in pursuance of a provision in the letters-patent, took the name of Sir Jamsetjee Jeejeebhoy as second baronet. At his death in 1877 his eldest son, MENORJEE, became Sir Jamsetjee Jeejeebhoy, the third baronet. Both had the advantage of a good English education, and continued his career of benevolent activity and devoted loyalty to British rule which had signalized the life-work of the founder of the family. They both visited England to do homage to their sovereign; and their public services were recognized by their nomination to the order of the Star of India, as well as by appointment to the Legislative Councils of Calcutta and Bombay.

On the death of the third baronet, the title devolved upon his brother, COWSAJEE (1853–1908), who became Sir Jamsetjee Jeejeebhoy, fourth baronet, and the recognized leader of the Parsee community all over the world. He was succeeded by his son RUSTOMJEE (b. 1878), who became Sir Jamsetjee Jeejeebhoy, fifth baronet.

Since their emigration from Persia, the Parsee community had never had a titular chief or head, its communal funds and affairs being managed by a public body, more or less democratic in its constitution, termed the Parsee panchayat. The first Sir Jamsetjee, by the hold that he established on the community, by his charities and public spirit, gradually came to be regarded in the light of its chief; and the recognition which he was the first in India to receive at the hands of the British sovereign finally fixed him and his successors in the baronetcy in the position of the head of the Parsee community. JEFFERIES, RICHARD (1842–1887). English naturalist and author, was born on the 6th of November 1842, at the farmhouse of Coate about 2½ m. from Swindon, on the road to Marlborough. He was sent to school, first at Sydenham and then at Swindon, till the age of fifteen or so, but his actual education was at the hands of his father, who gave him his love for Nature and taught him how to observe. For the faculty of observation, as Jefferies, Gilbert White, and H. D. Thoreau have remarked, several gifts are necessary, including the possession of long sight and quick sight, two things which do not always go together. To them must be joined trained sight and the knowledge of what to expect. The boy's father first showed him what there was to look for in the hedge, in the field, in the trees, and in the sky. This kind of training would in many cases be wasted: to one who can understand it, the book of Nature will by-and-by offer pages which are blurred and illegible to the city-bred lad, and even to the country lad the power of reading them must be maintained by constant practice. To live amid streets or in the working world destroys
JEFFERSON, J.—JEFFERSON, T.

301

it. The observer must live alone and always in the country; he must not worry himself about the ways of the world; he must be always, from day to day, watching the infinite changes and variations of Nature. Perhaps, even when the observer can actually read this book of Nature, his power of articulate speech may prove inadequate for the expression of what he sees. But Jefferies, as a boy, was more than an observer of the fields; he was bookish, and read all the books that he could borrow or buy. And presently, as is apt to be the fate of a bookish boy who cannot enter a learned profession, he became a journalist and obtained a post on the local paper. He developed literary ambitions, but for a long time to come was as one beating the air. He tried local history and novels; but his early novels, which were published at his own risk and expense, were, deservedly, failures. In 1872, however, he published a remarkable letter in The Times, on "The Wiltshire Labourer," full of original ideas and of facts new to most readers. This was in reality the turning-point in his career. In 1873, after more false starts, Jefferies returned to his true field of work, the life of the country, and began to write for Fraser's Magazine on "Farming and Farmers." He had now found himself. The rest of his history is that of continuous advance, from close observation becoming daily more and more close, to that intimate communion with Nature with which his later pages are filled. The developments of the later period are throughout touched with the melancholy that belongs to ill-health. For, though in his prose poem called "The Pageant of Summer" the writer seems absolutely revelling in the strength of manhood that belongs to that pageant, yet, in the Story of My Heart, written about the same time, we detect the mind that is continually turned to death. He died at Goring, worn out with many ailments, on the 14th of August 1887. The best-known books of Richard Jefferies are: The Gamekeeper at Home (1878); The Story of My Heart (1883); Life of the Fields (1884), containing the best paper he ever wrote, "The Pageant of Summer"; Amaranth at the Fair (1884), in which may be found the portraits of his own people; and The Open Air. He stands among the scantly company of men who address a small audience, for whom he read aloud these pages of Nature spoken of above, which only he, and the few like unto him, can decipher.

See Sir Walter Besant, Eulogy of Richard Jefferies (1888); H. S. Salt, Richard Jefferies: a Study (1894); Edward Thomas, Richard Jefferies, his Life and Work (1900).

JEFFERSON, JOSEPH (1829-1905). American actor, was born in Philadelphia on the 20th of February 1829. He was the third actor of this name in a family of actors and managers, and the most famous of all American comedians. At the age of three he appeared as the boy in Kotzebue's Fisaro, and throughout his youth he underwent all the hardships connected with theatrical touring in those early days. After a miscellaneous experience, partly as actor, partly as manager, he won his first pronounced success in 1858 as Asa Trenchard in Tom Taylor's Our American Cousin at Laura Keene's theatre in New York. This play was the turning-point of his career, as it was of Sothern's. The naturalness and spontaneity of humour with which he acted the love scenes revealed a spirit in comedy new to his contemporaries, long used to a more artificial convention; and the touch of pathos which the part required revealed no less to the actor an unexpected power in himself. Other early parts were Newman Noggs in Nicholas Nickleby, Caleb Plummer in The Cricket on the Heath, Dr Pangloss in The Heri at Law, Salem Scudder in The Octocon, and Bob Acres in The Rivals, the last being not so much an interpretation of the character as Sheridan sketched it as a creation of the actor's. In 1859 Jefferson made a dramatic version of the story of Rip Van Winkle on the basis of older plays, and acted it with success at Washington. The play was given its permanent form by Dion Boucicault in London, where (1865) it ran 170 nights, with Jefferson in the leading part. Jefferson continued to act with undiminished popularity in a limited number of parts in nearly every town in the United States, his Rip Van Winkle, Bob Acres, and Caleb Plummer being the most popular. He was one of the first to establish the travelling combinations which superseded the old system of local stock companies. With the exception of minor parts, such as the First Gravedigger in Hamlet, which he played in an "all star combination" headed by Edwin Booth, Jefferson created no new character after 1865; and the success of Rip Van Winkle was so pronounced that he has often been called a one-part actor. If this was a fault, it was the public's, who never wearied of his one masterpiece. Jefferson died on the 23rd of April 1905. No man in his profession was more honoured for his achievements or his character. He was the friend of many of the leading men in American politics, art and literature. He was an ardent fisherman and lover of nature, and devoted to painting. Jefferson was twice married: to an actress, Margaret Clements Lockyer (1832-1861), in 1850, and in 1867 to Sarah Warren, niece of William Warren the actor.

Jefferson's Autobiography (New York, 1889) is written with admirable spirit and humour, and judgments with regard to the art of the actor and of the playwright entitle it to a place beside Cibber's Apology. See William Winter, The Jefferisons (1881), and Life of Joseph Jefferson (1894); Mrs. E. P. Jefferson, Recollections of Joseph Jefferson (1895).

JEFFERSON, THOMAS (1743-1826), third president of the United States, and the most conspicuous apostle of democracy in America, was born on the 13th of April 1743, at Shadwell, Albemarle county, Virginia. His father, Peter Jefferson (1707-1757), of early Virginian yeoman stock, was a civil engineer and a man of remarkable energy, who became a justice of the peace, a county surveyor and a burgess, served the Crown in inter-colonial boundary surveys, and married into one of the most prominent colonial families, the Randolphs. Albemarle county was then in the frontier wilderness of the Blue Ridge, and was very different, socially, from the lowland counties where a few broad-aced families dominated an open-handed, somewhat luxurious and assertive aristocracy. Unlike his Randolph connections, Peter Jefferson was a whip and a thorough democrat; from him, and probably, too, from the Albemarle environment, his son came naturally by democratic inclinations.

Jefferson carried with him from the college of William and Mary at Williamsburg, in his twentieth year, a good knowledge of Latin, Greek and French (to which he soon added Spanish, Italian, and Portuguese-Saxon), and a familiarity with the higher mathematics and natural sciences only possessed, at his age, by men who have a rare natural taste and ability for those studies. He remained an ardent student throughout life, able to give and take in association with the many scholars, American and foreign, whom he numbered among his friends and correspondents. With a liberal Scotsman, Dr William Small, then of the faculty of William and Mary and later a friend of Erasmus Darwin, and George Wythe (1726-1806), a very accomplished scholar and leader of the Virginia bar, Jefferson was an habitual member, while still in college, of a partie carre at the table of Francis Fauquier (c. 1720-1768), the accomplished lieutenant-governor of Virginia. Jefferson was an expert violinist, a good singer and dancer, proficient in outdoor sports, and an excellent horseman. Thorough-bred horses always remained to him a necessary luxury. When it is added that Fauquier was a passionate gambler, and that the gentry who gathered every winter at Williamsburg, the seat of government of the province, were ruinously addicted to the same weakness, and that Jefferson had a taste for racing, it does credit to his early strength of character that of his social opportunities he took only the better. He never used tobacco, never played cards, never gambled, and was never party to a personal quarrel.

Soon after leaving college he entered Wythe's law office, and in 1767, after five years of close study, was admitted to the bar. His thorough preparation enabled him to compete from the first with the leading lawyers of the colony, and his success shows that the bar had no rewards that were not fairly within his reach. As an advocate, however, he did not shine; a weakness of voice made continued speaking impossible, and he had neither the ability nor the temperament for oratory. To his legal scholarship and collecting zeal Virginia owed the preservation of a large part of her early statutes. He seems to have lacked interest in liguineousness, which was extraordinarily developed in colonial

Jefferson, T.

Virginia; and he saw and wished to reform the law's abuses. It is probable that he turned, therefore, the more willingly to politics; at any rate, soon after entering public life he abandoned practice (1774).

The death of his father had left him an estate of 1000 acres, the income from which (about £400) gave him the position of an independent country gentleman; and while engaged in the law he had added to his farms along with the ambitious Virginia fashion, until, when he married in his thirtieth year, there were 3000 acres all paid for; and almost as much more came to him in 1773 on the death of his father-in-law. On the 1st of January 1772, Jefferson married Martha Wayles Skelton (1749-1782), a childless widow of twenty-three, very handsome, accomplished, and very fond of music. Their married life was exceedingly happy, and Jefferson never remarried after her early death. Of six children born from their union, two daughters alone survived infancy.

Jefferson was emotional and very affectionate in his home, and his generous and devoted relations with his children and grandchildren are among the finest features of his character.

Jefferson began his public service as a Justice of the peace and parish vestryman; he was chosen a member of the Virginia house of burgesses in 1769 and of every succeeding assembly and convention. He was an ardent believer and supporter of the American cause in 1775. His forceful, facile pen gave him great influence from the first; but though a foremost member of several great deliberative bodies, he could fairly be said never to have made a speech. He hated the "morbid rage of debate" because he believed that men were never convinced by argument, but only by reflection, through reading or unprovocative conversation; and this belief guided him through life. Moreover, it is very improbable that he could ever have shone as a public speaker, and to this fact unfriendly critics have attributed, at least in part, his abstention from debate. The house of burgesses of 1769, and its successors in 1773 and 1774, were dissolved by the governor (see Virginia) for their action on the subject of colonial grievances and intercolonial co-operation. Jefferson was prominent in all; was a signer of the Virginia agreement of non-importation and economy (1769); and was elected in 1774 to the first Virginia convention, called to consider the state of the colony and advance intercolonial union. Prevented by illness from attending, Jefferson sent to the convention elaborate resolutions, which he proposed as instructions to the Virginia delegates to the Continental Congress; which was also not well attended and supposed to have been put aside in embroilments in the direct language of reproach and advice, without any disingenuous loading of the Crown's policy upon its agents, these resolutions attacked the errors of the king, and maintained that the relation between Great Britain and these colonies was exactly the same as that of England and Scotland after the accession of James and the Union; and that our emigration to this country gave England no more rights over us than the emigration of the Danes and Saxons gave to the present authorities of their mother country over England. This was cutting at the common root of allegiance, emigration and colonization; but such radicalism was too thorough-going for the immediate end. The resolutions were published, however, as a pamphlet, entitled A Summary View of the Rights of America, which was widely circulated. In England, after receiving such modifications—attributed to Burke—as adapted to the purposes of the opposition, this pamphlet ran through many editions, and procured for its author, as he said, the honour of having his name inserted in a long list of proclamations enrolled in a bill of attainder commenced in one of the two houses of parliament and not passed by the hasty course of events. It placed Jefferson among the foremost leaders of revolution, and procured for him the honour of drafting, later, the Declaration of Independence, whose historical portions were, in large part, only a revised transcript of the Summary View. In June 1775 he took his seat in the Continental Congress, taking with him fresh credentials of radicalism in the shape of Virginia's answer, which he drew up for Lord North's conciliatory propositions. Jefferson, however, drafted the reply of Congress to the same propositions. Reappointed to the next Congress, he signalized his service by the authorship of the Declaration of Independence (q.v.). Again reappointed, he surrendered his seat, and after refusing a proffered election to serve as a commissioner with Benjamin Franklin and Silas Deane in France, he entered again, in October 1776, the Virginia legislature, where he considered his services most needed.

The local work to which Jefferson attributed such importance was a revision of Virginia's laws. Of the measures proposed to this end he says: "I considered four, passed or reported, as forming a system by which every trace would be eradicated of ancient or future aristocracy, and a foundation laid for a government truly republican"—the repeal of the laws of entail; the abolition of primogeniture and the unequal division of inheritances (Jefferson was himself an eldest son); the guarantee of freedom of conscience and relief of the people from supporting, by taxation, an established church; and a system of general education. The first object was embodied in a law of 1776, the second in 1785, the third in 1799, and the fourth in 1790-1801. These laws were the principal parts of a body of codified laws prepared (1776-1779) by Edmund Pendleton, George Wythe, and Jefferson, and principally by Jefferson. Not so fortunate were Jefferson's ambitious schemes of education. District, grammar and classical schools, a free state library and a state college, were all included in his plan. He was the first American statesman to make education by the state a fundamental article of democratic faith. His bill for elementary education he regarded as the most important part of the code, but Virginia had no strong middle class, and the planters would not assume the burden of educating the poor. At this time Jefferson championed the natural right of expatriation, and gradual emancipation of the slaves. His earliest legislative effort, in the five-day session of 1769, had been marked by an effort to secure to masters freedom to manumit their slaves without removing them from the state. It was unsuccessful, and the more radical measure he now favoured was even more impossible of attainment; but a bill he introduced to prohibit the importation of slaves was passed in 1775 as the only important change effected in the slave question in Virginia during the War of Independence. Finally, he endeavoured, though unsuccessfully, to secure the introduction of juries into the courts of chancery, and—a generation and more before the fruition of the labours of Romilly and his co-workers in England—aided in securing a humanitarian revision of the penal code, which, though lost by one vote in 1785, was sustained by public sentiment, and was adopted in 1796. Jefferson is of course not entitled to the sole credit for all these services: Wythe, George Mason and James Madison, in particular, were his devoted lieutenants, and—after his departure for France—the principals in the struggle; moreover, an approving public opinion must receive large credit. But Jefferson was throughout the chief inspirer and foremost worker.

In 1779, at about the beginning of the war in the southern states, Jefferson succeeded Patrick Henry as the governor of Virginia, being the second to hold that office after the organization of the state government. In his second term (1780-1781) the state was overrun by British expeditions, and Jefferson, a civilian, was blamed for the ineffectual resistance. Though he cannot be said to have been eminently fitted for the task that devolved upon him in such a crisis, most of the criticism of his performances was misleading and unfair. For this period, in his own words, "I was embroiled in the hasty course of events." He was to the last averse to the idea of war, and his pride of independence was to him more precious than life. He was, however, a soldier of fortune and a fervent nationalist, and his sympathy was with the democracies of the world; his spirit of self-interest was of the most generous kind, and he was in all things a patriotic and a devoted citizen. In his official capacity he was a brilliant and successful leader of the state, but he was too much a man of books and too little in touch with the ordinary business of government to make a formidable rival to Patrick Henry, whose statesmanship, however, was of a different kind and suited him better to the emergencies of the revolution. His later life was devoted to the cause of freedom and the rights of man. He was the foremost writer and orator of his day, and the leader of the democratic party in the United States. His political opinions were the most advanced of his time, and he was the embodiment of the American spirit. His influence was everywhere felt, and his work was done, for the overthrow of the British and the establishment of a republic in the New World. His long life was one of ceaseless activity and of incessant labor; his genius was of the highest order, and his mind was one of the most extraordinary in the history of mankind.

1 The first law of its kind in Christendom, although not the earliest practice of such liberty in America.

2 George Mason and Thomas L. Lee were members of the commission, but they were not lawyers, and did little actural work on the revision.

3 Capital punishment was confined to treason and murder; the latter was not to be attended by corruption of blood, drawing, or quartering; all other felonies were made punishable by confinement and hard labour, save a few to which was applied, a different principle of retaliation.
administration was undoubtedly grossly unjust. His conduct being attacked, he declared renunciation for the governorship, but was unanimously returned by Albermarle as a delegate to the state legislature; and on the day previously set for legislative inquiry on a resolution offered by an impulsive critic, he received, by unanimous vote of the house, a declaration of thanks and confidence. He wished however to retire permanently from public life, a wish strengthened by the illness and death of his wife. At this time he composed his Notes on Virginia, a semi-statistical work full of humanitarian liberalism. Congress twice offered him an appointment as one of the plenipotentiaries to negotiate peace with England, but, though he accepted the second offer, the business was so far advanced before he could sail that his appointment was recalled. During the following winter (1783) he was again in Congress, and headed the committee appointed to consider the treaty of peace. In the succeeding session his service was marked by a report, from which resulted the present monetary system of the United States (the fundamental idea of decimal basis being due, however, to Gouverneur Morris); and by the honour of reporting the first definitely formulated plan for the government of the western territories, that embodied in the ordinance of 1784. He was already particularly associated with the great territory north-west of the Ohio; for Virginia had tendered to Congress in 1781, while Jefferson was governor, a cession of her claims to it, and now in 1784 formally transferred the territory by act of Jefferson and his fellow delegates in congress: a consummation for which he had laboured from the beginning. His anti-slavery opinions grew in strength with years (though he was somewhat inconsistent in his attitude on the Missouri question in 1820-1821). Not only justice but patriotism as well pleased with him the cause of the negroes, for he foresaw the certainty that the race must some day, in some way, be freed, and the dire political dangers involved in the institution of slavery; and could any feasible plan of emancipation, he suggested he would have regarded its cost as a mere bagatelle.

From 1784 to 1789 Jefferson was in France, first under an appointment to assist Benjamin Franklin and John Adams in negotiating treaties of commerce with European states, and then as Franklin's successor (1785-1786) as minister to France. In these years he travelled widely in western Europe. Though the commercial principles of the United States were far too liberal for acceptance, as such, by powers holding colonies in America, Jefferson won some specific concessions to American trade. He was exceedingly popular as a minister. The criticism is even to-day current with the uninformed that Jefferson took his manners, morals, "irreligion" and political philosophy from his French residence; and it cannot be wholly ignored. It may therefore be said that there is nothing except unsubstantiated scandal to contradict the conclusion, which various evidence supports, that Jefferson's morals were pure. His religious views and political beliefs will be discussed later. His theories had a deep and broad basis in English whiggism; and though he may well have found at least confirmation of his own ideas in French writers—and notably in Condorcet—he did not read sympathetically the writers commonly named, Rousseau and Montesquieu; besides, his democracy was seasoned, and he was rather a teacher than a student of revolutionary politics when he went to Paris. The Notes on Virginia were widely read in Paris, and undoubtedly had some influence in forwarding the dissolution of the doctrines of divine rights and passive obedience among the cultivated classes of France. Jefferson was deeply interested in all the events leading up to the French Revolution, and all his ideas were coloured by his experience of the five seething years passed in Paris. On the 3rd of June 1786 he proposed to the leaders of the third estate a compromise between the king and the nation. In July he received the extraordinary honour of being invited to assist in the deliberations of the committee appointed to forward the compromise. This honour his official position compelled him, of course, to decline; for he sedulously observed official proprieties, and in no way gave offence to the government to which he was accredited.

When Jefferson left France it was with the intention of soon returning; but President Washington tendered him the secretaryship of state in the new federal government, and Jefferson reluctantly accepted. His only essential objection to the constitution—the absence of a bill of rights—was soon met, at least partially, by amendments. Alexander Hamilton (q.v.) was secretary of the treasury. These two men, antipodal in temperament and political belief, clashed in irreconcilable hostility, and in the conflict of public sentiment, first on the financial measures of Hamilton, and then on the questions with regard to France and Great Britain, Jefferson's sympathies being predominantly with Hamilton. But on the other hand, for Hamilton's with the latter, they formed about themselves the two great parties of Democrats and Federalists. The schools of thought for which they stood have since contended for mastery in American politics: Hamilton's gradually strengthened by the necessities of stronger administration, as time gave widening amplitude and increasing weight to the specific powers—and so to Hamilton's great doctrine of the "implied powers"—of the general government of a growing country; Jefferson's rooted in colonial life, and buttressed by the hopes and convictions of democracy.

The most perplexing questions treated by Jefferson as secretary of state arose out of the policy of neutrality adopted by the United States toward France, to whom she was bound by treaties and by a heavy debt of gratitude. Separation from European politics—the doctrine of "America for Americans" that was embodied later in the Monroe declaration—was a tenet cherished by Jefferson as by other leaders (not, however, Hamilton) and by the democratically minded firmly, loyally nature he was politiculation. This honour his official position compelled him, of course, to decline; for he sedulously observed official proprieties, and in no way gave offence to the government to which he was accredited.

Jefferson, T. 303

**Supports:**
His religious views and political beliefs will be discussed later. His theories had a deep and broad basis in English whiggism; and though he may well have found at least confirmation of his own ideas in French writers—and notably in Condorcet—he did not read sympathetically the writers commonly named, Rousseau and Montesquieu; besides, his democracy was seasoned, and he was rather a teacher than a student of revolutionary politics when he went to Paris. The Notes on Virginia were widely read in Paris, and undoubtedly had some influence in forwarding the dissolution of the doctrines of divine rights and passive obedience among the cultivated classes of France. Jefferson was deeply interested in all the events leading up to the French Revolution, and all his ideas were coloured by his experience of the five seething years passed in Paris. On the 3rd of June 1786 he proposed to the leaders of the third estate a compromise between the king and the nation. In July he received the extraordinary honour of being invited to assist in the deliberations of the committee appointed to forward the compromise. This honour his official position compelled him, of course, to decline; for he sedulously observed official proprieties, and in no way gave offence to the government to which he was accredited.

When Jefferson left France it was with the intention of soon returning; but President Washington tendered him the secretaryship of state in the new federal government, and Jefferson reluctantly accepted. His only essential objection to the constitution—the absence of a bill of rights—was soon met, at least partially, by amendments. Alexander Hamilton (q.v.) was secretary of the treasury. These two men, antipodal in temperament and political belief, clashed in irreconcilable hostility, and in the conflict of public sentiment, first on the financial measures of Hamilton, and then on the questions with regard to France and Great Britain, Jefferson's sympathies being predominantly with Hamilton. But on the other hand, for Hamilton's with the latter, they formed about themselves the two great parties of Democrats and Federalists. The schools of thought for which they stood have since contended for mastery in American politics: Hamilton's gradually strengthened by the necessities of stronger administration, as time gave widening amplitude and increasing weight to the specific powers—and so to Hamilton's great doctrine of the "implied powers"—of the general government of a growing country; Jefferson's rooted in colonial life, and buttressed by the hopes and convictions of democracy.

The most perplexing questions treated by Jefferson as secretary of state arose out of the policy of neutrality adopted by the United States toward France, to whom she was bound by treaties and by a heavy debt of gratitude. Separation from European politics—the doctrine of "America for Americans" that was embodied later in the Monroe declaration—was a tenet cherished by Jefferson as by other leaders (not, however, Hamilton) and by the democratically minded firmly, loyally nature he was politiculation. This honour his official position compel.
of monarchy; nor did he regard Bonaparte's coup d'état as revealing the weakness of republics, but rather as a clearing of the dung of standing armies. For he did not look on the war or the conditions against France as one of mere powers, but as one between forms of government; and though the immediate fruits of the Revolution belied his hopes, as did those of ardent humanitarians the world over, he saw the broad trend of history, which vindicated his faith that a successful reformation of government in France would insure "a general reformation through Europe, and the resurrection to a new life of their people." Each of these statements could be reversed as regards Hamilton. It is the key to an understanding of the times to remember that the War of Independence had disjointed society; and democracy—which Jefferson had proclaimed in the Declaration of Independence, and enthroned in Virginia—after strengthening its rights by the sword, had run to excesses, particularly in the Shays' rebellion, that produced a conservative reaction. To this reaction Hamilton explicitly appealed in the convention of 1787; and of this reaction various features of the constitution, and Hamiltonian federalism generally, were direct fruits. Moreover, independently of special incentives to the alarmist and the man of property, the opinions of many Americans turned and hardened in war, and hence for a while from the war, he made his peace, and helped England, as naturally as American commerce returned to English ports. Jefferson, however, far from America in these years and unexposed to reactionary influences, came back with undiminished fervor of democracy, and the talk he heard of praise for England, and fearful recoil before even the beginning of the revolution in France, disheartened him, and filled him with suspicion. 1 Hating as he did feudal class institutions and Tudor-Stuart traditions of arbitrary rule, 2 his attitude can be imagined toward Hamilton's oft-avowed partialities—and Jefferson assumed, his intrigues—for British class-government with its eighteenth-century measure of corruption. In short, Hamilton took from recent years the lesson of the evils of a law government; whereas Jefferson clung to the other lesson, which crumbling colonial governments had illustrated, that governments derived their strength (and the Declaration had proclaimed that they derived their just rights) from the will of the governed. Each built his system accordingly: the one on the basis of order, the other on individualism—which led Jefferson to liberty alike in man and government. For he did not look on the war as an evil to be avoided or the will of every citizen as a mere "reconcile," for example, to the use of his calculus about his farms, and seems to have been remarkably apt in the practical application of mechanical principles.

In the presidential election of 1796 John Adams, the Federalist candidate, received the largest number of electoral votes, and Jefferson, the Republican candidate, the next largest number, and under the law as it then existed the former became president and the latter vice-president. Jefferson re-entered public life with reluctance, though doubtless with keen enough interest and resolution. He had rightly measured the strength of his followers, and was waiting for the government to "drift into unison" with the republican sense of its constituents, predicting that President Adams would be "overborne" thereby. This prediction was speedily fulfilled. At first the reign of terror and the X. Y. Z. disclosures strengthened the Federalists, until these, mistaking the popular resentment against France for a reaction against democracy—an equivalence in their own minds—passed the alien and sedition laws. In answer to those odious measures Jefferson and Madison prepared and procured the passage of the Kentucky and Virginia resolutions. These were extraordinary and pernicious in the historical elaboration of the states'-rights doctrine. It is, however, unquestionably true, that as a startling protest against measures "to silence," in Jefferson's words, "by force and not by reason the complaints or criticisms, just or unjust, of our citizens against the conduct of our agents," they served, in this respect, a useful purpose; and as a counterblast against Hamiltonian principles of centralization they were probably, at that moment, very salutary; while even as pieces of constitutional interpretation it is to be remembered that they did not contemplate nullification by any single state, and, moreover, are not to be judged by constitutional principles established later by courts and war. The Federalist party had ruined itself, and it lost the presidential election of 1800. The Republican candidates, Jefferson and Aaron Burr (q.v.), receiving equal votes, it devolved upon the House of Representatives, in accordance with the system which then obtained, to make one of the two president, the other vice-president. Party feeling in America has probably never been more dangerously impassioned than in the three years preceding

1 It was at this period of his life that Jefferson gave expression to some of the opinions for which he has been most severely criticized and abused. For he did not look on the war as an evil to be avoided or the will of every citizen as a mere "reconcile," for example, to the use of his calculus about his farms, and seems to have been remarkably apt in the practical application of mechanical principles.

2 Hamilton wrote for the papers himself; Jefferson never did. A talented clerk in his department, however, Philip Freneau, set up in business for himself, and made a sensation paper. He was accused of sedition, and the Federalist party added his name to the list of various and other officers, and he was disabused of his misgivings by the hour. Freneau, as he himself—since he thought himself was doing good, desirable for him—to make.

3 Contrary to the general belief that Hamilton dominated Washington in the cabinet, there is the President's explicit statement that "there were as many instances of his deciding against as in favour of the secretary of the treasury."
JEFFERSON, T.

Proceedings: 305

His election; discount as one will the contrary obsessions of men like Fisher Ames, Hamilton and Jefferson, the time was fateful. Unable to induce Burr to avow Federalist principles, influential Federalists, in defiance of the constitution, contemplated the desperate alternative of preventing an election, and appointing an extra-constitutional (Federalist) president—pro tempore. Better counsels, however, prevailed; Hamilton used his influence in favour of Jefferson as against Burr, and Jefferson became president, entering upon his duties on the 4th of March 1801. Republicans who had affiliated with the Federalists at the time of the X.Y.Z. disclosures returned; very many of the Federalists themselves Jefferson placated and drew over. "Believing," he wrote, "that (excepting the ardent monarchists) all our officers are against the violence of the principle, and that if it were expressed in, in "republican forms"—"I thought it advisable to define and declare them, and let them see the ground on which we can rally." This he did in his inaugural, which, though somewhat rhetorical, is a splendid and famous statement of democracy.1 His conciliatory policy produced a mild schism in his own party, but proved eminently wise, and the state elections of 1801 fulfilled his prophecy of 1791 that the policy of the Federalists would leave them "all head and no body." In 1804 he was re-elected by 162 out of 176 votes.

Jefferson's administrations were distinguished by the simplicity that marked his conduct in private life. He eschewed the pomp and ceremonies, natural inheritances from English origins, that had characterized his predecessors. The only conspicuous exception was the dress of his intimates, the gentlemen of his cabinet. His dress was of "plain cloth" on the day of his inauguration. Instead of driving to the Capitol in a coach and six, he walked without a guard or servant from his lodgings—or, as a rival tradition has it, he rode, and hitched his horse to a neighbouring fence—attended by a crowd of citizens. Instead of opening Congress with a speech to which a formal reply was expected, he sent in a written message by a private hand. He discontinued the practice of sending ministers abroad in public vessels. Between himself and the governors of states he recognized no difference in rank. He would not have his birthday celebrated by state balls. The weekly levee was practically abandoned. Even such titles as "Excellency," "Honourable," "Mr." were distasteful to him. It was formally agreed in cabinet meeting that "when brought together in society, all are perfectly equal, whether foreign or domestic, titled or untitled, in or out of office." Thus diplomatic grades were ignored in social precedence and foreign relations were seriously compromised by dinner-table complications. One minister who appeared in gold lace and dress sword for his first, and regularly appointed, official call on the president, was received—as he insisted with studied purpose—by Jefferson in negligent undress and slippers down at the heel. This was in part premised that—a part of Jefferson's purpose to republicanize the government and public opinion, which was the distinguishing feature of his administration; but it was also simply the nature of the man. In the company he chose by preference, honesty and knowledge were his only tests. He knew absolutely no social distinctions in his willingness to perform services for the deserving. He held up to his daughter as an especial model the family of a poor but gifted mechanic as one wherein she would see "the best examples of rational living." "If it be possible," he said, "to be certainly conscious of anything, I am conscious of feeling no difference between writing to the highest and lowest being on earth."2

Jefferson's first administration was marked by a reduction of the army, navy, diplomatic establishment and, to the uttermost, of governmental expenses; some reduction of the civil service, accompanied by a large shifting of offices to Republicans; and, above all, by the Louisiana Purchase (q.v.), following which Meriwether Lewis and William Clark, sent by Jefferson, con-

1 See also Jefferson to E. Gerry, 26th of January 1799 (Writings, vii. 385), and to Du Pont de Neufour (X. 83). Cf. also note to J. Dayton, 1799 (Works, x. 329). 2 In 1786 he suggested to James Monroe that the society of friends he hoped to gather in Albemarle might, in unpunctual matters, "set a good example" to a country (i.e. Virginia) that "needed it."
to establish a precedent deemed by him to be of great importance under a democratic government. His influence seemed scarcely lessened in his retirement. Madison and Monroe, his immediate successors as neighbours and devoted friends, whom he had advised in their early education and led in their maturity years—consulted him on all great questions, and there was no break of principles in the twenty-four years of the "Jeffersonian system." Jefferson was one of the greatest political managers his country has known. He had a quick eye for character, was genuinely amiable, uncontentious, tactful, masterful; and it may be assumed from his success that he was wary or shrewd to a degree. It is true, moreover, that, unless tested by a few unchanging principles, his acts were often strikingly inconsistent; and even when so tested, not infrequently remain so in appearance. Full explanations do not remove from some important transactions in his political life an impression of indirectness. But reasonable judgment must find very unjust the stigma of duplicity put upon him by the Federalists. Measured by the records of other men equally successful as political leaders, there seems little of this nature to criticize severely. Jefferson had the full courage of his convictions. Expressions of principle, his mind unclouded in addition to them and his independence of expression were quite as extreme. There were philosophical and philanthropic elements in his political faith which will always lead some to class him as a visionary and fanatic; but although he certainly indulged at times in dreams at which one may still smile, he was not, properly speaking, a visionary; nor can he with justice be stigmatized as a fanatic. He felt fervently, was not afraid to risk all on the conclusions to which his heart and his mind led him, declared himself with openness and energy; and he spoke and often wrote his conclusions, however bold or abstract, without troubling to detail his reasoning or clip his off-hand speculations. Certain it is that there is much in his utterances for a less robust democracy than his own to cavil at.\footnote{1}

Soar, however, as he might, he was essentially not a doctrinaire, but an empiricist; his mind was objective. Though he remained, to the end, firm in his belief that there had been an active monarchist party,\footnote{2} this obession did not carry him out of touch with the realities of human nature and of his time. He built with surety on the colonial past, and had a better reasoned view of the actual future than had any of his contemporaries.

Events soon appraised the ultra-Federalist judgment of American democracy, so tersely expressed by Fisher Ames as "like death... only the dismal passport to a more dismal hereafter"; and, with it, appraised Jefferson's word in his first inaugural for those who, "in the full tide of successful experiment," were ready to abandon a government that had so far kept them "free and firm, on the visionary fear that it might by possibility lack energy to preserve itself." Time soon tested, too, his principle that that government must prove the strongest on earth "where every man... would meet invasions of the public order as his own personal concern." He summed up as follows the difference between himself and the Hamiltonian group: "One feared most the ignorance of the people; the other the selfishness of rulers independent of them." Jefferson, in short, had unlimited faith in the honesty of the people; a large faith in their common sense; believed that all is to be won by appealing to the reason of voters; that by education their ignorance can be eliminated; that human nature is infinitely perfectible; that majorities rule, therefore, not only by virtue of force (which was Locke's ultimate justification of them), but of right.\footnote{3} His importance as a maker of modern America can scarcely be overstated, for the ideas he advocated have become the very foundations of American republicanism. His administration ended the possibility, probability or certainty—measure it as one will—of the development of Federalism in the direction of class government; and the party he formed, inspired by the creed he gave it, fixed the democratic future of the nation. And by his own labours he had vindicated his faith in the experiment of self-government.

Jefferson's last years were devoted to the establishment of the university of Virginia at Charlottesville, near his home. He planned the buildings, gathered its faculty—mainly from abroad—and shaped its organization. Practically all the great ideas of aim, administration and curriculum that dominated American universities at the end of the 19th century were anticipated by him. He hoped that the university might be a domestic example in the new world for the one in the old. His educational plans had been matured in his mind since 1766. His financial affairs in these last years gave him grave concern. His fine library of over 10,000 volumes was purchased at a low price by Congress in 1815, and a national contribution ($16,500) just before his death enabled him to die in peace. Though not personally extravagant, his salary, and the small income from his large estates, never sufficed to meet his generous maintenance of his representative position; and after his retirement from public life the numerous visitors to Monticello consumed the remnants of his property. He died on the 4th of July 1826, the fiftieth anniversary of the Declaration of Independence, on the same day as John Adams. He chose for his tomb the epitaph: "Here was buried Thomas Jefferson, author of the Declaration of American Independence, of the statute of Virginia for religious freedom, and father of the university of Virginia."

Jefferson was about 6 ft. in height, large-boned, slim, erect and sinewy. He had angular features, a very ruddy complexion, sandy hair, and hazel-hecked, grey eyes. Age lessened the unattractive- ness of his exterior. In later years he was neglibent in dress and loose in bearing. There was grace, nevertheless, in his manners; and his frank and earnest address, his quick sympathy (yet he seemed cold to strangers), his vivacious, desultory, informing talk. His imagination was vivid. He was a good adversary in argument, and could argue to the verge of passion and engender with as much enthusiasm as with repugnance. Beneath a quiet surface his voracity for learning, and his capacity to engage with intense convictions and a very emotional temperament. Yet he seems to have acted habitually, in great and little things, on system. His mind, no less trenchant and subtle than Hamilton's, was always in action, and never idle. It viewed America and the world with the historian's perspective, and his philosophy was a blend of the utilitarianism of the голвер, the philosophical idealism of the Stewarts, and the romanticism of the byronic. The range of his interests is remarkable. For many years he was president of the American philosophical society.

Jefferson was of medium height, with a head of medium size, and a face of oval form. His countenance was that of the typical American. He was free from the dandyishness and vanity of the European types. His manners were those of a plain gentleman, with the assurance of a man of the people. He was not a scholar, but he was well versed in the classics and in the ancient and modern languages. He had a good knowledge of mathematics and physics, and was well versed in the sciences of his time. He was a good mathematician, and had a good knowledge of mechanics.

Jefferson's health was, in general, good. He was not a very active man, but he was strong and hardy. He was a good swimmer and a good horseman. He was a good shot, and was well versed in the art of hunting. He was a good judge of horses, and was well versed in the art of breeding them. He was a good gardener, and was well versed in the art of gardening.

Jefferson had a good knowledge of the classics, and was well versed in the literature of his time. He was a good reader, and was well versed in the English literature of his time. He was a good writer, and was well versed in the art of writing. He was a good speaker, and was well versed in the art of speaking. He was a good judge of art, and was well versed in the art of judging art. He was a good judge of music, and was well versed in the art of judging music.

Jefferson was a good judge of men, and was well versed in the art of judging men. He was a good judge of character, and was well versed in the art of judging character. He was a good judge of virtue, and was well versed in the art of judging virtue. He was a good judge of vice, and was well versed in the art of judging vice. He was a good judge of truth, and was well versed in the art of judging truth. He was a good judge of falsehood, and was well versed in the art of judging falsehood.

Jefferson was a good judge of the future, and was well versed in the art of judging the future. He was a good judge of the past, and was well versed in the art of judging the past. He was a good judge of the present, and was well versed in the art of judging the present. He was a good judge of the world, and was well versed in the art of judging the world.

Jefferson was a good judge of himself, and was well versed in the art of judging himself. He was a good judge of his own mind, and was well versed in the art of judging his own mind. He was a good judge of his own heart, and was well versed in the art of judging his own heart. He was a good judge of his own spirit, and was well versed in the art of judging his own spirit.

Jefferson was a good judge of the world, and was well versed in the art of judging the world. He was a good judge of the past, and was well versed in the art of judging the past. He was a good judge of the present, and was well versed in the art of judging the present. He was a good judge of the future, and was well versed in the art of judging the future.

Jefferson was a good judge of the universe, and was well versed in the art of judging the universe. He was a good judge of the infinite, and was well versed in the art of judging the infinite. He was a good judge of the eternal, and was well versed in the art of judging the eternal. He was a good judge of the absolute, and was well versed in the art of judging the absolute.

Jefferson was a good judge of the infinite, and was well versed in the art of judging the infinite. He was a good judge of the eternal, and was well versed in the art of judging the eternal. He was a good judge of the absolute, and was well versed in the art of judging the absolute.

Leicester Ford (10 vols., New York, 1822-1890); letters in Massachu-
setts Historical Society, Collections, series 7, vol. 1.; S. E. Forman, The Letters and Writings of Thomas Jefferson, including all His Important Utterances on Public Questions (1900); J. P. Foley, The Jefferson Cyclopedia (New York, 1900), biographies by T. J. Randolph (4 vols., Charlottesville, Va., 1820); biographies by James Schouler ("Makers of America," New York, 1893); John T. Morse ("American Statesmen Series," Boston, 1883), George B. W. Clark, History of the City of Jeffersonville, Indiana (1900), and especially that by Henry S. Randall (3 vols., New York, 1853), a monumental work, although marred by some special pleading, and sharing Jefferson's implacable opinions of the "Mon-
archical principle," and his contempt for "the Whig writers, &c., in vol. 1-4 (New York, 1889-1890); Herbert B. Adams, Thomas Jefferson and the University of Virginia (U. S. bureau of education, Washington, 1888); Sarah N. Randolph, Domestic Life of Thomas Jefferson (1902); and更何况 W. P. Trent, in his Southern Statesmen of the Old Regime (New York, 1897); that by John Fiske, Essays, Historical and Literary, vol. i. (New York, 1902), has slighter merits.

Jefferson City (legally and officially the City of Jefferson), the capital of Missouri, U.S.A., and the county-seat of Cole county, on the Missouri river, near the geographical centre of the state, about 125 m. W. of St. Louis. Pop. (1890), 624; (1900), 9666, of whom 786 were foreign-born and 1822 were negroes; (1910 census), 11,820. It is served by the Missouri Pacific, the Chicago & Alton, and the Missouri, Kansas & Texas railways. Its site is partly in the bottom-lands of the river and partly on the steep banks at an elevation of about 600 ft. above the sea. A steel bridge spans the river. The state capitol, an imposing structure built on a bluff above the river, was built in 1838-1842 and enlarged in 1887-1888; it was first occupied in 1840 by the legislature, which previously had met (after 1837) in the county court house. Other prominent buildings are the United States court house and post office, the state supreme court house, the county court house, the state penitentiary, the state armory and the executive mansion. The penitentiary is to a large extent self-supporting; in 1903-1904 the earnings were $3403.80 in excess of the costs, but in 1904-1906 the costs exceeded the earnings by $904. Employment is furnished for the convicts on the poto and in the various companies. The state law library here is one of the best of the kind in the country, and the city has a public library. In the city is Lincoln Institute, a school for negroes, founded in 1866 by two regiments of negro infantry upon their discharge from the United States army, opened in 1868, taken over by the state in 1879, and having sub-normal, normal, college, industrial and agricultural courses. Coal and limestone are found near the city. In 1905 the total value of the factory product was $3926,632, an increase of 28-2% since 1900. The original constitution of Missouri prescribed that the capital should be on the Missouri river within 40 m. of the mouth of the Osage, and a commission selected in 1821 the site of Jefferson City, on which a town was laid out in 1822, the name being adopted in honour of Thomas Jefferson. The legislature first met here in 1826; Jefferson City became the county-seat in 1828, and in 1839 was first chartered as a city. The constitu-
tion of 1845 gave the corporation powers of 1845 and 1855, and at which issued the call for the National Liberal Republican conven-
tion at Cincinnati in 1872, met here, and so for some of its sessions did the state convention of 1861-1863. In June 1861 Jefferson City was occupied by Union forces, and in September-October 1864 it was threatened by Confederate troops under General Sterling Price.

Jeffersonville, a city and the county-seat of Clark county, Indiana, U.S.A., situated on the N. bank of the Ohio river, opposite Louisville, Kentucky, with which it is connected by several bridges. Pop. (1800), 10,666; (1900), 10,771, of whom 1815 were of negro descent and 615 were foreign-born; (1910 census), 10,412. It is served by the Baltimore & Ohio South-western, the Cleveland, Cincinnati, Chicago & St Louis, and the Pittsburg, Cincinnati, Chicago & St Louis railways, and by three inter-urban electric lines. It is attractively situated on bluffs above the river, which at this point has a descent (known as the falls of the Ohio) of 26 ft. in 2 m. This furnishes good water power for manufacturing purposes both at Jefferson-
ville and at Louisville. The total value of the factory product in 1905 was $4,26,633, an increase of 20% since 1900. The Indiana reformatory (formerly the Southern Indiana penitenti-
ary) and a large supply depot of the United States army are at Jeffersonville. General George Rogers Clark started (June 24, 1778) on his expedition against Kaskaskia and Vincennes from Corn Island (now completely washed away) opposite what is now Jeffersonville. In 1786 the United States government established Fort Finney (built by Captain Walter Finney), afterwards re-named Fort Steuben, on the site of the present city; but the fort was abandoned in 1791, and the actual beginning of Jeffersonville was in 1802, when a part of the Clark grant (the site of the present city) was transferred by its original owner, Lieut. Isaac Bowman, to three trustees, under whose direction a town was laid out. Jeffersonville was incorporated as a town in 1815, and was chartered as a city in 1830.

Jeffrey, Francis Jeffrey, Lord (1773-1830), Scottish judge and literary critic, son of a depute-clerk in the Court of Session, was born at Edinburgh on the 23rd of October 1773. After attending the high school for six years, he studied at the university of Glasgow from 1787 to May 1789, and at Queen's College, Oxford, from September 1791 to June 1792. He had begun the study of law at Edinburgh before going to Oxford, and now resumed his studies there. He became a member of the speculative society, where he measured himself in debate with Scott, Brougham, Francis Horner, the marquess of Lans-
downe, Lord Kinnaird and others. He was admitted to the Scotch bar in December 1794, but, having abandoned the Tory principles in which he had been educated, he found that his Whig politics seriously prejudiced his legal prospects. In conse-
quence of his lack of success at the bar he went to London in 1798 to try his fortune as a journalist, but without success; he also made more than one vain attempt to obtain an office which would have secured him the advantage of a small but fixed salary. His marriage with Catherine Wilson in 1801 made the question of a settled income even more pressing. A project for a new review was brought forward by Sydney Smith in Jeffrey's flat in the presence of H. P. Brougham (afterwards Lord Brougham), Francis Horner and others; and the scheme resulted in the appearance on the 10th of October 1802 of the first number of the Edinburgh Review. At the outset the Review was not under the charge of any special editor. The first three numbers were, however, practically edited by Sydney Smith, and on his leaving for England the work devolved chiefly on Jeffrey, who, by an arrangement with Constable, the publisher, was eventually appointed editor at a fixed salary. Most of those associated in the undertaking were Whigs; but, although the general bias of the Review was towards social and political reforms, it was at first so little of a party organ that for a time it numbered Sir Walter Scott among its contributors; and no distinct emphasis was given to its political leanings until the publication in 1808 of an article by Jeffrey himself on the work of Don Pedro Calderon on the Puerto Spain (review). This article expressed disapprobation of the successions of the British arms in Spain, which at once withdrew his subscription, the Quarterly being soon afterwards in opposition. According to Lord Cockburn the effect of the first number of the Edinburgh Review was "electrical." The English reviews were at that time practically publishers' organs, the articles in which were written by hack-writers instructed to praise or blame according to the publishers' interests. Few men of any standing consented to write for them. The Edinburgh Review, on the other hand, enlisted a brilliant and independent staff of contributors, guided by the editor, not the publisher. They received sixteen guineas a sheet (sixteen printed pages), increased subsequently to twenty-
five guineas in many cases, instead of the two guineas which formed the ordinary London reviewer's fee. Further, the review was not limited to literary criticism. It constituted itself the accredited organ of moderate Whig public opinion. The partic-
ular work which provided the starting-point of an article was in many cases merely the occasion for the exposition, always
brilliant and incisive, of the author's views on politics, social subjects, ethics or literature. These general principles and the novelty of the method ensured the success of the undertaking, even after the original circle of exceptionally able men who founded it had been dispersed. It had a circulation, great for those days, of 12,000 copies. The period of Jeffrey's editorship extended to about twenty-six years, ceasing with the ninety-eighth number, published in June 1830, when he resigned in favour of Macvey Napier.

Jeffrey's own contributions, according to a list which has the sanction of his authority, numbered two hundred, all except six being written before his resignation of the editorship. Jeffrey wrote with great rapidity, at odd moments of leisure and with little special preparation. Great fluency and ease of diction, considerable warmth of imagination and moral sentiment, and a sharp eye to discover any oddity of style or violation of the accepted canons of good taste, made his criticisms pungent and effective. But the essential narrowness and timidity of his general outlook prevented him from detecting and estimating latent forces, either in politics or in matters strictly intellectual and moral; and this lack of understanding and sympathy accounts for the distrust with which the past generations of Shelvards and Keateards regard his praise of the half-hearted and elegant romanticism of Rogers and Campbell. (For his treatment of the lake poets see Wordsworth, William.)

A criticism in the fifteenth number of the Review on the morality of Moore's poems led in 1806 to a duel between the two authors at Chalk Farm. The proceedings were stopped by the police, and Jeffrey's pistol was found to contain no bullet. The affair led to a warm friendship, however, and Moore contributed to the Review, while Jeffrey made ample amends in a later article on Lalla Rookh (1817).

Jeffrey's wife had died in 1805, and in 1810 he became acquainted with Charlotte, daughter of Charles Wilkes of New York, and great-niece of John Wilkes. When she returned to America, Jeffrey followed her, and they were married in 1813. Before returning to England they visited several of the chief American cities, and his experience strengthened Jeffrey in the conciliatory policy he had before advocated towards the States. Notwithstanding the increasing success of the Review, Jeffrey always continued to look to the bar as the chief field of his ambition. As a matter of fact, his literary reputation helped his professional advancement. His practice extended rapidly in the civil and criminal courts, and he regularly appeared before the general assembly of the Church of Scotland, where his work, though not financially profitable, increased his reputation. As an advocate his sharpness and rapidity of insight gave him a formidable advantage in the detection of the weaknesses of a witness and the vulnerable points of his opponent's case, while he grouped his own arguments with an admirable eye to effect, especially excelling in eloquent closing appeals to a jury. Jeffrey was twice, in 1820 and 1822, elected lord rector of the university of Glasgow. In 1829 he was chosen dean of the faculty of advocates. On the return of the Whigs to power in 1830 he became lord advocate, and entered parliament as member for the Perth burghs. He was unseated, and afterwards returned for Malton, a borough in the interest of Lord Fitzwilliam. After the passing of the Scottish Reform Bill, which he introduced in parliament, he was returned for Edinburgh in December 1832. His parliamentary career, which, though not brilliantly successful, had won him high general esteem, was terminated by his elevation to the judicial bench as Lord Jeffrey in May 1834. In 1842 he was moved to the first division of the Court of Session. On the disruption of the Scottish Church he took the side of the seceders, giving a judicial opinion in their favour, afterwards reversed by the house of lords. He died at Edinburgh on the 26th of January 1850.

Some of his contributions to the Edinburgh Review appeared in four volumes in 1844 and 1845. This selection includes the essay on "Beauty" contributed to the Ency. Brit. The Life of Lord Jeffrey, with a Selection from his Correspondence, by Lord Cockburn, appeared in 1852 in 2 vols. See also the Selected Correspondence of Macvey Napier (1877); the sketch of Jeffrey in Carlyle's Reminiscences, vol. ii. (1881); and an essay by Lewis E. Gates in Three Studies in Literature (New York, 1899).

JEFFREYS, GEORGE JEFFREYS, 1ST BARON (1668-1868), lord chancellor of England, son of John Jeffreys, a Welsh country gentleman, was born at Acton Park, his father's seat in Denbighshire, in 1668. His family, though not wealthy, was of good social standing and repute in Wales; his mother, a daughter of Sir Thomas Ireland of Bewsey, Lancashire, was "a very pious good woman." He was educated at Shrewsbury, St Paul's and Westminster schools, at the last of which he was a pupil of Busby, and at Trinity College, Cambridge; but he left the university without taking a degree, and entered the Inner Temple as a student in May 1683. From his childhood Jeffreys displayed exceptional talent, but on coming to London he occupied himself more with the pleasures of conviviality than with serious study of the law. Though he never appears to have fallen into the licentious impropriety prevalent at that period, he early became addicted to hard drinking and boisterous company. But as the records of his early years, and indeed of his whole life, are derived almost exclusively from vehemently hostile sources, the numerous anecdotes that have remained of his depravity cannot be accepted without a large measure of scepticism; his extremely handsome, witty and attractive boon-companion, and in the taverns of the city he made friends among attorneys with practice in the criminal courts. Thus assisted he rose so rapidly in his profession that within three years of his call to the bar in 1668, he was elected common serjeant of the city of London. Such advancement, however, was not to be attained even in the reign of Charles II. solely by the aid of disreputable friendships. Jeffreys had remarkable aptitude for the profession of an advocate—quick intelligence, caustic humour, copious eloquence. His powers of cross-examination were masterly; and if he was insufficiently grounded in legal principles to become a profound lawyer, nothing but greater application was needed in the opinion of so hostile a critic as Lord Campbell, to have made him the rival of Nottingham and Hale. Jeffreys could count on the influence of respectable men of position in the city, such as Sir Robert Clayton and his own namesake Alderman Jeffreys; and he also enjoyed the personal friendship of the virtuous Sir Matthew Hale, whose acquaintance had been formed in circumstances which, if improvident, were creditable to his generosity and sense of honour; and his domestic life, so far as is known, was free from the scandal common among his contemporaries. While holding the judicial office of common serjeant, he pursued his practice at the bar. With a view to further preferment he now sought to ingratiate himself with the court party, to which he obtained an introduction possibly through William Chiffinch, the notorious keeper of the king's closet. He at once attached himself to the king's mistress, the duchess of Portsmouth; and as early as 1672 he was employed in confidential business by the court. His influence in the city of London, where opposition to the government of Charles II. was now becoming pronounced, enabled Jeffreys to make himself useful to Danby. In September 1677 he received a knighthood, and his growing favour with the court was further marked by his appointment as solicitor-general to James, duke of York; while this duty showed its continued confidence in him by electing him to the peers' recorder in October 1678.

In the previous month Titus Oates had made his first revelations of the alleged popish plot, and from this time forward Jeffreys was prominently identified, either as advocate or judge, with the memorable state trials by which the political conflict between the Crown and the people was waged during the remainder of the 17th century. The popish plot, followed by the growing agitation for the exclusion of the duke of York from the succession, widened the breach between the city and the court. Jeffreys threw in his lot with the latter, displaying his zeal by initiating the movement of the "abhorrers" (q.t.) against the "petitioners" who were giving voice to the popular demand for the summoning of parliament. He was rewarded with the coveted office of chief justice of Chester on the 30th
of April 1682; but when parliament met in October the House of Commons passed a hostile resolution which induced him to resign his libeship, a piece of pusillanimity that drew from the king the remark that Jeffreys was "not parliament-proof." Jeffreys nevertheless received from the city aldermen a substantial token of appreciation for his past services. In 1681 he was created a baronet. In June 1683 the first of the Rye House conspirators were brought to trial. Jeffreys was briefed for the crown in the prosecution of Lord William Howard; and, having been raised to the bench as lord chief justice of the king's bench in September, he presided at the trials of Algernon Sidney in November 1683 and of Sir Thomas Armstrong in the following June. In the autumn of 1684 Jeffreys, who had been active in procuring the surrender of municipal charters to the crown, was called to the cabinet, having previously been sworn of the privy council. In May 1685 he had the satisfaction of passing sentence on Titus Oates for perjury in the plot trials; and about the same time James II. rewarded his zeal with a peerage as Baron Jeffreys of Wem, an honour never before conferred on a chief justice during his tenure of office. Jeffreys had for some time been suffering from stone, which aggravated the irritability of his naturally violent temper; and the malady probably was in some degree the cause of the unmeasured fury he displayed at the trial of Richard Baxter (q.v.) for seditious libel— if the unofficial ex parte report of the trial, which alone exists, is to be accepted as trustworthy.

In August 1685 Jeffreys opened at Winchester the commission known in history as the "bloody assizes," his conduct of which has branded his name with indelible infamy. The number of persons sentenced to death at these assizes for complicity in the duke of Monmouth's insurrection is uncertain. The official return of those actually executed was 320; many hundreds more were transported and sold into slavery in the West Indies. In all probability the great majority of those condemned were in the case of Wm. Wij in the minority, but the trials as a whole were a mockery of the administration of justice. Numbers were cajoled into pleading guilty; the case for the prisoners seldom obtained a hearing. The merciless severity of the chief justice did not however exceed the wishes of James II.; for on his return to London Jeffreys received from the king the great seal with the title of lord chancellor. For the next two years he was a strenuous upholder of prerogative, though he was less abjectly pliant than has sometimes been represented. There is no reason to doubt the sincerity of his attachment to the Church of England; for although the king's favour was capricious, Jeffreys never took the easy and certain path to secure that it lay through apostasy; and he even withstood James on occasion, when the latter pushed his Catholic zeal to extremes. Though it is true that he accepted the presidency of the ecclesiastical commission, Burnet's statement that it was Jeffreys who suggested that institution to James is probably incorrect; and he was so far from having instigated the prosecution of the seven bishops in 1688, as has been frequently alleged, that he disapproved of the proceedings and rejoiced secretly at the acquittal. But while he watched with misgiving the king's preferment of Roman Catholics, he made himself the masterful instrument of unconstitutional prerogative in coercing the authorities of Cambridge University, who in 1687 refused to confer degrees on a Benedictine monk, and the fellows of Magdalen College, Oxford, who declined to elect as their president a disreputable nominee of the king.

Being thus conspicuously identified with the most tyrannical measures of James II., Jeffreys found himself in a desperate plight when on the 11th of December 1688 the king fled to the country on the approach to London of William of Orange. The lord chancellor attempted to escape like his master; but in spite of his disguise as a common seaman he was recognized in a tavern at Wapping—possibly, as Roger North relates, by an attorney whom Jeffreys had terrified on some occasion in the court of chancery—and was arrested and conveyed to the Tower. The malady from which he had long suffered had recently made fatal progress, and he died in the Tower on the 18th of April 1689. He was succeeded in the peerage by his son, John (2nd Baron Jeffreys of Wem), who died without male issue in 1702, when the title became extinct.

It is impossible to determine precisely with what justice tradition has made the name of "Judge Jeffreys" a byword of infamy. The Revolution, which brought about his fall, handed over his reputation at the same time to the mercy of his bitterest enemies. They alone have recorded his actions and appraised his motives and character. Even the adherents of the deposed dynasty had no interest in finding excuse for one who served as a convenient scapegoat for the offences of his master. For at least half a century after his death no apology for Lord Jeffreys would have obtained a hearing; and none was attempted. With the exception therefore of what is to be gathered from the reports of the state trials, all knowledge of his conduct rests on testimony tainted by undisguised hostility. Innumerable scurrilous lampoons have filled the hated instrument of James's tyranny, but with little pretence of historical accuracy. His country at the Revolution; and these, while they fanned the undiscriminating hatred of contemporaries who remembered the judge's severities, and perpetuated that hatred in tradition, have not been sufficiently discounted even by modern historians like Macaulay and Lord Campbell. The name of Jeffreys has therefore been handed down as that of a coarse, ignorant, dissolve, foul-mouthed, inhuman bully, who prostituted the seat of justice. That there was sufficient ground for the execration in which his memory was long held is not to be gainsaid. But the portrait has nevertheless been blackened overmuch. An occasional significant admission in his favour may be gleaned even from the writings of his enemies. Thus Roger North declares that "in matters indifferent," i.e. where politics were not concerned, Jeffreys became the seat of justice better than any other that author had seen in his place. Sir J. Jekyll, master of the rolls, told Speaker Onslow that Jeffreys "had great parts among mankind" and was "a judicious and candid man. In mere private matters he was thought an able and upright judge wherever he sat." His keen sense of humour, allied with a spirit of inveterate mockery and an exuberant command of pungent eloquence, led him to rail and storm at prisoners and witnesses in grossly unseemly fashion. But in this he did not greatly surpass most of his contemporaries on the judicial bench, and it was a falling from which even the dignified and virtuous Hale was not altogether exempt. The intemperance of Jeffreys which shocked North, certainly did not exceed that of Saunders; in violence he was rivalled by Scroggs; though accused of political apostasy, he was not a shameless renegade like Williams; and there is no evidence that in pecuniary matters he was personally venal, or that in licentiousness he followed the example set by Charles II. and most of his courtiers. Some of his actions that have incurred the severest reprobation of posterity were otherwise estimated by the best of his contemporaries. His trial of Algernon Sidney, described by Macaulay and Lord Campbell as one of the most heinous of his iniquities, was warmly commended by Dr. William Lloyd, who was soon afterwards to become a popular idol as one of the illustrious seven bishops (see letter from the bishop of St Asaph in H. B. Irving's Life of Judge Jeffreys, p. 184). Nor was the habitual illegality of his procedure on the bench so unquestionable as many writers have assumed. Sir James Stephen inclined to the opinion that no actual abuse of law tainted the trials of the Rye House conspirators, or that of Alice Lisle, the most prominent victim of the "bloody assizes." The conduct of the judges in Russell's trial was, he thinks, "moderate and fair in general"; and the trial of Sidney "much resembled that of Russell." The same high authority pronounces that the trial of Lord Delamere in the House of Lords was conducted by Jeffreys "with propriety and dignity." And if Jeffreys judged political offences with cruel severity, he also crushed some glaring abuses; conspicuous examples of which were the frauds of attorneys who infested Westminster Hall, and the systematic kidnapping practised by the municipal authorities of Bristol. Moreover, if any value is to be attached to the evidence of physiognomy, the
hapes the advance troops despatched by the Babylonian king; the power of Egypt was broken and the whole land came into the hands of Nebuchadnezzar. Pahuel, the close of Jehoiakim's reign, occurred on the 25th of the second month of the fourth year of the reign of Necho (i.e., 604 B.C.). The chronicler's tradition (2 Chron. xxxvi. 6) may be contrasted with the account of the prophet Jeremiah (Jer. xxxvi. 1-7), which has been adopted by modern scholars, who believe that Jeremiah lived at the gate of Jerusalem, and that he himself "slept with his fathers" as his young son was destined to see the first captivity of the land of Judah (597 B.C.). (See JEHOIAHIN.)

Which "three years" (2 Kings xxiv. 1) are intended is disputed; it is uncertain whether Judah suffered in 605 B.C. (Berosus in Jos. c. Ap. i. 19) or was left unharmed (Jos. Ant. x. 6. 1): perhaps Nebuchadrezzar made his first inroad against Judah in 602 B.C. because of its intrigue with Egypt. (H. Winckler, Kedinschrift, u. die aleph segel, 1906, seq.), a hypothesis rejected by P. Schürer (ii. 599). The "three years of allegiance" (2 Kings xxiv. 1) was undoubtedly an extension of the "three years" (2 Chron. xxxvi. 5-8) speaks of Jehoiakim's captivity, apparently confusing him with Jehoiachin. The Septuagint, however, still preserves the record of his peaceful death, in agreement with the earlier source in 2 Kings, but against the prophecy of Jeremiah (xxii. 18 seq., xxxvi. 30), which is accepted by Jos. Ant. x. 6. 3. The different traditions can scarcely be reconciled.

Nothing certain is known of the marauding bands sent against Jehoiakim; for Syrians (Arabs) one would expect Edomites (Edom), but see Jer. xxxvi. 11: some recensions of the Septuagint even include the "Samaritans!" (For further references to this reign see especially Jeremiah; see also JEWS: History, § 17.) (S.A.C.)

JEHOIAHIN—JEHORAM

JEHOIAHIN (Heb. "Yah[weh] establisheth"), in the Bible, son of Jehoiakim and king of Judah (2 Kings xxiv. 8 seq.; 2 Chron., xxxvi. 9 seq.). He came to the throne at the age of eighteen in the midst of the Chaldean invasion of Judah, and is said to have reigned three months. He was compelled to surrender to Nebuchadrezzar and was carried off to Babylon (597 B.C.). He was thirty-two years of age when he died (one of the exiles) dates his prophecies. Eight thousand people of the better class (including artisans, &c.) were removed, the Temple was partially despoiled (see Jer. xxvii. 18-20; xxviii. v. 3 seq.), and Jehoiakim's uncle Mattaniah (son of Josiah) was appointed king. Jehoiachin's fate is outlined in Jer. xxii. 20-30 (cf. xxvii. 20). Nearly forty years later, Nebuchadrezzar II. died (562 B.C.) and Evil-Merodach (Amlil-Marduk) his successor released the unfortunate captive and gave him precedence over the other subjugated kings who were kept prisoners in Babylon. With this gleam of hope for the unhappy Judeans both the book of Kings and the prophecies of Jeremiah conclude (2 Kings xxv. 27-30; Jer. lii. 31-34).

See, further, JEREMIAH (especially chaps. xxiv., xxvii. seq.), and JEWS, § 17.

JEHOIAKIM (Heb. "Yah[weh] raiseth up"), in the Bible, son of Josiah (q.v.) and king of Judah (2 Kings xxv. 34-xxvi. 6). On the death of Josiah at Megiddo his younger brother Jehohaz (or Shallum) was chosen by the Judeans, but the Egyptian conqueror Necho summoned him to his headquarters at Riblah (south of Lake Tiberias). Jehoahaz was thereupon deposed and anointing in his stead Eliakim, whose name ("El[God] raiseth up") was changed to its better-known synonym, Jehoiakim. For a time Jehoiakim remained under the protection of Necho and paid heavy tribute; but with the rise of the new Chaldean Empire under Nebuchadrezzar II., and the overthrow of Egypt at the battle of Carchemish (605 B.C.) a vital change occurred. After three years of allegiance the king revolted. Invasions followed by Chaldeans, Syrians, Moabites and Ammonites, per-
JEHOASHAPHAT—JEHOVAH

(2 Kings viii. 25-29), and the incident—with the wording of the Israelite king in or about the critical year 842 B.C.—finds a noteworthy parallel in the time of Jehoshaphat and Ahab (1 Kings xxii. 29-35) at the events of the equally momentous events in 854 (see Ahab). See further Jehu.

2. The son of Jehoshaphat and king of Judah. He married Athaliah the daughter of Ahab, and thus was brother-in-law of 1. above, and contemporary with him (2 Kings i. 17). In his days Edom revolted, and this with the mention of Libnah's revolt (2 Kings viii. 20 seq.) suggests some common action on the part of Philistines and Edomites. The chronicler's account of his life (2 Chron. xxi.-xxii. 1) presupposes this, but adds many remarkable details: he began his reign by massacring his brethren—(cf. Jehu son of Jehoshaphat, and his bloodshed, 2 Kings ix. seq.); for his wickedness he received a communication from Elijah foretelling his death from disease (cf. Elijah and Ahaziah of Israel, 2 Kings i.); in a great invasion of Philistines and Arabians this his loss, all his possessions and family, and only Jehoshaphat (i.e. Ahaziah) was saved.1 His son Ahaziah reigned only for a year (cf. his namesake of Israel); he is condemned for his Israelite sympathies, and met his end in the general butchery which attended the accession of Jeshurun (2 Kings viii. 25 seq.; 2 Chron. xxiii. 3 seq.; 7; with 2 Kings ix. 27 seq., note the variant tradition in 2 Chron. xxiii. 8 seq., and the details which the LXX. (Lucian) appends to 2 Kings x.). (S. A. C.)

JEHOASHAPHAT (Heb. "Yahweh judges"), in the Bible, son of Asa, and king of Judah, in the 6th century B.C. During his period close relations subsisted between Israel and Judah; the two royal houses were connected by marriage (see Athaliah; Jehoram, 2), and undertook joint enterprise in war and commerce. Jehoshaphat aided Ahab in the battle against Benhadad at Ramoth-Gilead in which Ahab was slain (1 Kings xxii.; 2 Chron. xxi.); cf. the parallel incident in 2 Kings vii. 23-29, and trading journeys of Ophir were undertaken by his fleet in conjunction; no record was Ahab as well as with his son Ahaziah (2 Chron. xx. 33 seq.; 1 Kings xxii. 47 seq.). The chronicler's account of his war against Moab, Ammon and Edomite tribes (2 Chron. xx.), must rest ultimately upon a tradition which is presupposed in the earlier source (1 Kings xxii. 47), and the disaster to the ships at Ezion-Geber at the head of the Gulf of Akaba preceded, if it was not the introduction to, the great revolt in the days of Jehoshaphat's son Jehoram, where, again, the details in 2 Chron. xxi. must rely in the first instance upon an old source. Apart from what is said of Jehoshaphat's legislative measures (2 Chron. xix. 4 seq.; cf. the meaning of his name above), an account is preserved of his alliance with Jehoram of Israel against Moab (2 Kings iii.), on which see Jehoram; Moab. The "valley of Jehoshaphat" (Joel iii. 12) has been identified by tradition (as old as Eusebius) with the valley between Jerusalem and the mount of Olives. (S. A. C.)

JEHOVAH (Yahweh), in the Bible, the God of Israel, "Jehovah" is a modern mispronunciation of the Hebrew name, resulting from combining the consonants of that name, Jhvh, with the vowels of the word adonay, "Lord," the Jews substituted for the proper name in reading the scriptures. In such cases of substitution the vowels of the word which is to be read are written in the Hebrew text with the consonants of the word which is not to be read. The consonants of the word to be substituted are ordinarily written in the margin; but inasmuch as Adonay was regularly read instead of the ineffable name Jhvh, it was deemed unnecessary to note the fact at every occurrence. When Christian scholars began to study the Old Testament in Hebrew, if they were ignorant of this general rule or regarded the substitution as a piece of Jewish superstition, reading what actually stood in the text, they would invariably pronounce the name Jehová. It is an unprofitable inquiry who first made this blunder; probably many fell into it independently. The statement still commonly repeated that it originated with Petrus Galatinus (1518) is erroneous; Jehovah occurs in manuscripts at least as early as the 14th century.

The form Jehovah was used in the 16th century by many authors, both Catholic and Protestant, and in the 17th was zealously defended by Fuller, Gataker, Leusden and others, against the criticisms of such scholars as Drusius, Cappellus and the elder Buxtorf. It appeared in the English Bible in Tyndale's translation of the Pentateuch (1530), and is found in all English Protestant versions of the 16th century except that of Coverdale (1535). In the Authorized Version of 1611 it occurs in Exod. vi. 3; Ps. lxxiii. 18; Isa. xii. 2; xxvi. 4, beside the compound names Jehovah-jireh, Jehovah-nissi, Jehovah-shalom; elsewhere, in accordance with the usage of the ancient versions, Jhvh is represented by Lord (distinguished by capitals from the title "Lorp," Heb. adonay). In the Revised Version of 1885 Jehovah is retained in the places in which it stood in the A. V., and is introduced also in Exod. vi. 2, 6, 7, 8; Ps. lxviii. 20; Isa. xlix. 14; Jer. xii. 11; Heb. iii. 19. An American committee which co-operated in the revision desired to employ the name Jehovah wherever Jhvh occurs in the original, and editions embodying their preferences are printed accordingly.

Several centuries before the Christian era the name Jhvh had ceased to be commonly used by the Jews. Some of the later writers in the Old Testament employ the appellative Elohim, God, prevalingly or exclusively: a collection of Psalms (Ps. lxxiii.-lxxxii.) was revised by an editor who changed the Jhvh of the authors into Elohim (see e.g. xiv. 7; xvii. 10; l. 7; li. 14); observe also the frequency of "the Most High," "the God of Heaven," "King of Heaven," in Daniel, and of "Heaven" in First Maccabees. The oldest Greek versions (Septuagint), from the third century B.C., consistently use Kyrios, "Lord," where the Hebrew has Jhvh, corresponding to the substitution of Adonay for Jhvh in reading the original; in books written in Greek in this period (e.g. Wisdom, 2 and 3 Maccabees), as in the New Testament, Kyrios and the cognates, Josephus, who as a priest knew the pronunciation of the name, declares that religion forbids him to divulge it; Philo calls it ineffable, and says that it is lawful for those only whose ears and tongues are purified by wisdom to hear and utter it in a holy place (that is, for priests in the Temple); and in another passage, commenting on Lev. xxiv. 15 seq.: "If any one, I do not say should blaspheme against the Lord of men and gods, but should even dare to utter his name unseasonably, let him expect the penalty of death."3 Various motives may have conurred to bring about the suppression of the name. An instinctive feeling that a proper name for God implicitly recognizes the existence of other gods may have had some influence; reverence and the fear lest the holy name should be profaned among the heathen were potent reasons; but probably the most cogent motive was the desire to prevent the abuse of the name in magic. If so, the secrecy had the opposite effect; the name of the god of the Jews was one of the great names in magic, heathen as well as Jewish, and miraculous efficacy was attributed to the mere utterance of it. In the liturgy of the Temple the name was pronounced in the priestly benediction (Num. vi. 27) after the regular daily sacrifice (in the synagogues a substitute—probably Adonay—was employed);4 on the Day of Atonement the High Priest uttered the name ten times in his prayers and benediction. In the last generations before the fall of Jerusalem, however, it was pronounced in a low tone so that the sounds were lost in the chant of the priests.5

1 See Josephus, Ant. ii. 12, 4; Philo, Vita Mosis, iii. 11 (ii. 114, ed. Cohn and Wendland); ib. iii. 27 (ii. § 206). The Palestinian authorities more correctly interpreted Lev. xxiv. 15 seq., not of the utterance of the name, but of the use of the name of God in blaspheming God.

2 Siphere, Num. §§ 39, 43; M. Sotah, iii. 7; Sotah, 38a.

3 These details are scarcely the invention of the chronicler; see Chronicles, and Expositor, Aug. 1906, p. 191.

4 This form, Yahweh, as the correct one, is generally used in the separate articles throughout this work.
After the destruction of the Temple (A.D. 70) the liturgical use of the name ceased, but the tradition was perpetuated in the schools of the rabbis. It was certainly known in Babylonia in the latter part of the 4th century, and not improbably much later. Nor was the knowledge confined to these pious circles; the name continued to be employed by healers, exorcists and magicians, and has been preserved in many places in magical papyri. The veneration with which the utterance of the name is denounced in the Mishna—"He who pronounces the Name with its own letters has no part in the world to come!"—suggests that this misuse of the name was not uncommon among Jews.

The Samaritans, who otherwise shared the scruples of the Jews about the utterance of the name, seem to have used it in judicial oaths to the scandal of the rabbis. The early Christian scholars, who inquired what was the true name of the God of the Old Testament, had therefore no great difficulty in getting the information they sought. Clement of Alexandria (d. c. 212) says that it was pronounced Ιαω. Epiphanius (d. 404), who was born in Palestine and spent a considerable part of his life there, gives Ιάβε (one cod. Ιαωε). Theodoret (d. c. 457), born in Antioc, writes that the Samaritans pronounced the name Ιαβε (in another passage, Ιαβαω), the Jews Ιαβα. The latter is probably not Jhvh but Ehvy (Exod. iii. 14), which the Jews counted among the names of God; there is no reason whatever to imagine that the Samaritans pronounced the name Jhvh differently from the Jews. This direct testimony is supplemented by that of the magical texts, in which Ιαβε Ἰαβω (Jahve Sebaōth), as well as Ιαβαω, occurs frequently. In an Egyptian list of magical names of Jesus, purporting to have been taught by him to his disciples, Ιαβαω is found. Finally, there is evidence from more than one source that the modern Samaritan priests pronounce the name Yahweh or Jehovah.

There is no reason to impugn the soundness of this substantially consentient testimony to the pronunciation Yahweh or Jehovah, coming as it does through several independent channels. It is confirmed by grammatical considerations. The name Jhvh enters into the composition of many proper names of persons in the Old Testament, either as the initial element, in the form Jeho- or Jo- (as in Jehoram, Joram), or as the final element, in the form -jahu or -jah (as in Adonijah, Adonijah). These various forms are perfectly regular if the divine name was Yahweh, and, taken altogether, they cannot be explained on any other hypothesis. Recent scholars, accordingly, with but few exceptions, are agreed that the ancient pronunciation of the name was Yahweh (the final sound at the end of the syllable). This view has been the first to suggest the pronunciation Jahweh, but it was not until the 19th century that it became generally accepted.

Jehovah or Yahweh is apparently an example of a common type of Hebrew proper names which have the form of the 3rd pers. sing. of the verb, e.g. Jehab (name of a city), Jābīn, Jamēl, Jīptāh (Jepthah), &c. Most of these really are verbs, the suppressed or implicit subject being 'el, "numen, god," or the name of a god; cf. Jāben and Jābnēl, Jīptāh and Jīptāh-ēl. The ancient explanations of the name proceed from Exod. iii. 14, 15, where "Yahweh hath sent me" in v. 15 corresponds to "Ehvy hath sent me" in v. 14, thus seeming to connect the name Yahweh with the Hebrew verb ḫāwāth, to become, to be.

The Palestinian interpreters found in this the promise that

God would be with his people (cf. v. 12) in future oppressions as he was in the present distress, or the assertion of his eternity, or eternal constancy; the Alexandrian translation Ἐγώ εἰμι ἀνάμι αἰώνια, understands it in the more metaphysical sense of God's absolute being. Both interpretations, "He (who) is (always) the same," and "He (who) is (absolutely, the truly existing)," import into the name all that they profess to find in it; the one, the religious faith in God's unchanging fidelity to his people, the other, a philosophical conception of absolute being which is foreign both to the meaning of the Hebrew verb and to the force of the tense employed. Modern scholars have sometimes found in the name the expression of the asertion of God; sometimes of his reality, in contrast to the imaginary gods of the heathen. Another explanation, which appears first in Jewish authors of the middle ages and has found wide acceptance in recent times, derives the name from the causative of the verb; He (who) causes things to be, gives them being; or calls events into existence, brings them to pass; with many individual modifications of interpretation—creator, life-giver, fuller of promises. A serious objection to this theory in every form is that the verb ḫāwāth, "to be," has no causative stem in Hebrew; to express the ideas which these scholars find in the name Yahweh the language employs altogether different verbs.

This assumption that Yahweh is derived from the verb "to be," as seems to be implied in Exod. iii. 14 seqq., is, however, free from difficulty. "To be" in the Hebrew of the Old Testament is not ḫāwāth, as the derivation would require, but ḫāḏāth; and we are thus driven to the further assumption that ḫāḏāth belongs to an earlier stage of the language, or to some older speech of the founders of the Israelites. This hypothesis is not intrinsically improbable—and in Aramaic, a language closely related to Hebrew, "to be" actually is hāḏāth—but it should be noted that in adopting it we admit that, using the name Hebrew in the historical sense, Yahweh is not a Hebrew name. And, inasmuch as nowhere in the Old Testament, outside of Exod. iii., is there the slightest indication that the Israelites connected the name of their God with the idea of "being" in any sense, it may fairly be questioned whether, if the author of Exod. iii. 14 seqq., intended to give an etymological interpretation of the name Yahweh, his etymology is any better than many other paronomastic explanations of proper names in the Old Testament, or than, say, the connexion of the name Ἀνδρόλυς with ἄνδρολος, ἂνδρολος in Plato's Cretica, or the popular derivation from ἄνδρολαμα.

A root ḫāwāth is represented in Hebrew by the nouns ḫāwāth (Ezek., Isa. xlvi. 11) and ḫāwāth (Ps., Prov., Job) "disaster," "sorrows," "distress.

The primary meaning is probably "sink, fall," in which sense—common in Arabic—the verb appears in Job xxxvii. 6 (of snow falling to earth). A Catholic commentator of the 16th century, Hieronymus ab Oleastro, seems to have been the first to connect the name "Jehova" with ḫāwāth interpreting it contrito, sive perniciosis (destruction of the Egyptians and Canaanites); Daumer, adopting the same etymology, took it in a more general sense: Yahweh, as well as Shaddai, meant "Destroyer," and fitly expressed the nature of the terrible god whom he identified with Moloch.

The derivation of Yahweh from ḫāwāth is formally unimpeachable, and is adopted by many recent scholars, who proceed, however, from the primary sense of the root rather than from the specific meaning of the names. The name is accordingly interpreted, He (who) falls (baetyl, πτώτος, meteorite); or causes (rain or lightning) to fall (storm god); or casts down (his foes by his thunderbolts). It is obvious that if the derivation be correct, the significance of the name, which in itself denotes only "He falls" or "He fells," must be learned, if at all, from early Israelitish conceptions of the nature of Yahweh rather than from etymology.

A se-īthas, a scholastic Latin expression for the quality of existing by oneself.

15. The critical difficulties of these verses need not be discussed here. See W. R. Arnold, "The Divine Name in Exodus iii. 14." Journal of Biblical Literature, XXV. (1905), 107-165.
16. Cf. also hāwāth, "desire," Mic. vii. 3; Prov. x. 3.
A more fundamental question is whether the name Yahweh originated among the Israelites or was adopted by them from some other people and speech.¹ The biblical author of the history of the sacred institutions (P) expressly declares that the name Yahweh was unknown to the patriarchs (Exod. vi. 3), and the much older Israelite historian (E) records the first revelation of the name to Moses (Exod. iii. 13-15), apparently following a tradition according to which the Israelites had not been worshippers of Yahweh before the time of Moses, or, as he conceived it, had not worshipped the god of their fathers under that name. The revelation of the name to Moses was made at a mountain sacred to Yahweh (the mountain of God) far to the south of Palestine, in a region where the forefathers of the Israelites had never roamed, and in the territory of other tribes; and long after the settlement in Canaan this region continued to be regarded as the abode of Yahweh (Judg. v. 4; Deut. xxxii. 2 sqq.; 1 Kings xix. 8 sqq. &c.). Moses is closely connected with the tribes in the vicinity of the holy mountain; according to one account, he married a daughter of the priest of Midian (Exod. ii. 16 sqq.; iii. 1); to this mountain he led the Israelites after their deliverance from Egypt; there, his revelations to Israel speedily spread as “greater than all the gods,” offered (in his capacity as priest of the place?) sacrifices, at which the chief men of the Israelites were his guests; there the religion of Yahweh was revealed through Moses, and the Israelites pledged themselves to serve God according to its prescriptions. It appears, therefore, that in the tradition followed by the Israelite historian the tribes within whose pasture lands the mountain of God stood were worshippers of Yahweh before the time of Moses; and the surmise that the name Yahweh belongs to their speech, rather than to that of Israel, has considerable probability. One of these tribes was Midian, in whose land the mountain of God lay. The Kenites also, with whom another tradition connects Moses, seem to have been worshippers of Yahweh. It is probable that Yahweh was at one time worshipped by various tribes south of Palestine, and that several places in that wide territory (Horeb, Sinai, Kadesh, &c.) were sacred to him; the oldest and most famous of these, the mountain of God, seems to have lain in Arabia, east of the Red Sea. From some of these peoples and at one of these holy places, a group of Israelite tribes adopted the religion of Yahweh, the God who, by the land of Moses, had delivered them from Egypt.²

The tribes of this region probably belonged to some branch of the great Arab stock, and the name Yahweh has, accordingly, been connected with the Arabic kawā, “the void” (between heaven and earth), “the atmosphere,” or with the verb kawā, cognate with Heb. hashōw, “sink, glide down” (through space); hashōw “blow” (wind). “He rides through the air, He blows” (Wellhausen), would be a fit name for a god of wind and storm. There is, however, no certain evidence that the Israelites in historical times had any consciousness of the primitive significance of the name.

The attempts to connect the name Yahweh with that of an Indo-European deity (Jehovah-Jove, &c.), or to derive it from Egyptian or Chinese, may be passed over. But one theory which has had considerable currency requires notice, namely, that Yahweh, or Yahu, Yahah,³ is the name of a god worshipped throughout the whole, or a great part, of the area occupied by the Western Semites. In its earlier form this opinion rested chiefly on certain misinterpreted testimonies in Greek authors about a god Ιαωλ, and was conclusively refuted by Baudissin; recent adherents of the theory build more largely on the occurrence in various parts of this territory of proper names of persons and places which they explain as compounds of Yahu or Yah.⁴ The explanation is in most cases simply an assumption of the point at issue; some of the names have been misread; others are undoubtedly the names of Jews. There remain, however, some cases in which it is highly probable that names of non-Israelites are really compounded with Yahweh. The most conspicuous of these is the king of Hamath who in the inscriptions of Sargon (722-705 B.C.) is called Yau-bi and Ilubii (compare Jehoiakim-Eliakim). Azriyau of Jaud, also, in inscriptions of Tiglath-Pileser (745-728 B.C.), who was formerly supposed to be Azariah (Uzziah) of Judah, is probably a king of the country in northern Syria known to us from the Zenjirli inscriptions as Ja’di.

Friedrich Delitzsch brought into notice three tablets, of the age of the first dynasty of Babylon, in which he reads the names of Ya‘a-‘ile-lu, Ya‘a-ile-lu, and Ya‘a-um-lu (“Yahweh is God”),⁵ and which he regarded as conclusive proof that Yahweh was known in Babylonia before 2000 B.C.; he was a god of the Semitic invaders in the second wave of migration, who were, according to Winckler and Delitzsch, of North Semitic stock (Conf. Delitzsch’s linguistic sense).⁶ We should thus have in the tablets evidence of the worship of Yahweh among the Western Semites at a time long before the rise of Israel. The reading of the names is, however, extremely uncertain, not to say improbable, and the far-reaching inferences drawn from them carry no conviction. In a tablet attributed to the 14th century B.C. which Sellin found in the course of his excavations at Tell Ta‘annu’k (the Taanach of the O.T.) a name occurs which may be read Aji-Yawi (equivalent to Hebrew Ahijah);⁷ if the reading be correct, this would show that Yahweh was worshipped in Central Palestine before the Israelite conquest. The reading is, however, one of several possibilities. The fact that the full form Yahweh appears, whereas in Hebrew proper names only the shorter Yahu and Yahu occur, weighs somewhat against the interpretation, as does against Delitzsch’s reading of his tablets.

It would not be at all surprising if, in the great movements of populations and shifting of ascendency which lie beyond our historical horizon, the worship of Yahweh should have been established in regions remote from those which it occupied in historical times; but nothing which we now know warrants the opinion that his worship was ever general among the Western Semites.

Many attempts have been made to trace the West Semitic Yahu back to Babylonia. Thus Delitzsch formerly derived the name from an Akkadian god, I or Ia; or from the Semitic nominative ending, Yau;⁸ but this deity has since disappeared from the pantheon of Assyriologists. The combination of Yah with Ea, one of the great Babylonian gods, seems to have a peculiar fascination for amateurs, by whom it is periodically “discovered.” Scholars are now agreed that, so far as Yahu or Yah occurs in Babylonian texts, it is as the name of a foreign god.

Assuming that Yahweh was a primitive nature god, scholars in the 19th century discussed the question over what sphere of nature he originally presided. According to some he was the god of consuming fire; others saw in him the bright sky, or the heavens. Still others recognized in him a storm god, a theory with which the derivation of the name from Heb. hashōw or Arab. kawā well accords. The association of Yahweh with storm and fire is frequent in the Old Testament; the thunder is the voice of Yahweh, the lightning his arrows, the rainbow his bow. The revelation at Sinai is amid the awe-inspiring phenomena of tempest. Yahweh leads Israel through the desert in a pillar of cloud and fire; he kindles Elijah’s altar by lightning, and translates the prophet in a chariot of fire. See also Judg. v. 4 seq.;¹⁰

¹ See Hebrew Religion.
² The divergent Judaism tradition, according to which the forefathers had worshipped Yahweh from time immemorial, may indicate that the kindred clans had in fact been worshippers of Yahweh before the time of Moses.
³ The form Yahu, or Yahu, occurs not only in composition, but by itself; see Aramaic Papyri discovered at Assuan, B 4, 6, 11; E 14; J. 6. This is doubtless the original of Ιαωλ, frequently found in Greek authors and in magical texts as the name of the God of the Jews.
⁴ See a collection and critical estimate of this evidence by Zimmermann, Die Keilschriften und das Alte Testament, 465 sqq.¹⁵
⁵ Babel and Bibel, 1902. The enormous, and for the most part ephemeral, literature provoked by Delitzsch’s lecture cannot be cited here.

JEHU—

Deut. xxxiii. 1; Ps. xviii. 7-15; Hab. iii. 3-6. The cherub upon which he rides when he flies on the wings of the wind (Ps. xviii. 10) is not improbably an ancient mythological personification of the storm cloud, the genius of tempest (cf. Ps. civ. 3). In Ezekiel the throne of Yahweh is borne up on Cherubim, the noise of whose wings is like thunder. Though we may recognize in this poetical imagery the survival of ancient and, if we please, mythical notions, we should err if we inferred that Yahweh was originally a departmental god, presiding specifically over meteorological phenomena, and that this conception of him persisted among the Israelites till very late times. Rather, as the god—or the chief god—of a region and a people, the most sublime and impressive phenomena, the control of the mightiest forces of nature are attributed to him. As the God of Israel Yahweh becomes its leader and champion in war; he is a warrior, mighty in battle; but he is not a god of war in the specific sense.

In the inquiry concerning the nature of Yahweh the name Yahweh Sebaoth (E.V., The Lord of Hosts) has had an important place. The hosts have by some been interpreted of the armies of Israel; by others, of the people in general; and lastly, in the Books of Samuel, where it first appears, with the ark, or with war; by others, of the heavenly hosts, the stars conceived as living beings, later, perhaps, the angels as the court of Yahweh and the instruments of his will in nature and history (Ps. xxxix.); or of the forces of the world in general which do his bidding, cf. the common Greek renderings, ΚΥΡΙΟΣ των δυνάμεων και Κ. παντοκράτωρ, Universal Ruler. It is likely that the name was differently understood in different periods and circles; but in the prophets the hosts are clearly superhuman powers. In many passages the name seems to be only a more solemn substitute for the simple Yahweh, and as such it has probably often been inserted by scribes. Finally, Sebaoth came to be treated as a proper name (cf. Ps. lxxv. 5, 8, 20), and as such is very common in magical texts.

JEHU, son of Jehoshaphat and grandson of Nimshi, in the Bible, a general of Ahab and Jehoram, and, later, king of Israel. Ahaziah son of Jehoram of Judah and Jehoram brother of Ahaziah of Israel had taken joint action against the Aramaeans of Damascus who were attacking Ramoth-Gilead under Hazael. Jehoram had returned wounded to his palace at Jezerel, whither Ahaziah had come down to visit him. Jehu, meanwhile, remained at the seat of war, and the prophet Elisha sent a messenger to anoint him king. The general at once acknowledged the call, "drove furiously". Jehu, and, having slain both king and king's sons to extinguish the whole of the royal family (2 Kings ix. x.). A similar fate befell the royal princes of Judah (see AHALAH), and thus, for a time at least, the new king must have had complete control over the two kingdoms (cf. 2 Chron. xxii. 9). Israelite historians viewed these events as a great religious revolution inspired by Elijah and initiated by Elisha, as the overthrow of the worship of Baal, and as a retribution for the cruel murder of Naboth the Jezeelrite (see JEZEBEL). A vivid description is given of the destruction of the prophets of Baal at the temple in Samariah (2 Kings x. 27; contrast ii. 2). While Jehu was supported by the Rechabites in his reforming zeal, a similar revolt against Baalism in Judah is ascribed to the priest Jehohadah (see JOSAIT). In the tragedies of the period it seems clear that Elisha's interest in both Jehu and the Syrian Hazael (2 Kings viii. 7 sqq.) had some political significance, and in opposition to the "Deuteronomist" the condemnation in 2 Kings x. 38 sqq., Hosea's denunciation (i. 4) indicates the judgment which was passed upon Jehu's bloodshed in other circles.

In the course of an expedition against Hazael in 842 Shalmanesar II of Assyria received tribute of silver and gold from Ya-a, son of Omri1 Tyrre and Sidon; another attack followed in 839. For some years after this Assyria was unable to interfere, and war broke out between Damascus and Israel. The Israelite story, which may perhaps be supplemented from Judaean sources (see JOSAIT), records a great loss of territory on the east of the Jordan (2 Kings x. 32 seq.). Under Jehu's successor Jehoahaz there was continual war with Hazael and his son Ben-hadad, but relief was obtained by his grandson Joash, and the land recovered complete independence under Jeroboam.

Jehu is also the name of a prophet of the time of Baasha and Jehoshaphat (1 Kings xvi.; 2 Chron. ix. xx.). (S. A. C.)

JEKYLL, SIR JOSEPH (1663—1738), English lawyer and master of the rolls, son of John Jekyll, was born in London, and after studying at the Middle Temple was called to the bar in 1687. He rapidly rose to be chief justice of Chester (1697), serjeant-at-law and king's serjeant (1709), and a knight. In 1717 he was made master of the rolls. A Whig in politics, he sat in parliament for various constituencies from 1697 to the end of his life, and took an active part in the discussion of constitutional questions. He was a man of deep learning, though, according to Lord Hervey (Memoirs, 1. 474), with little "approbation." He was censured by the House of Commons for accepting a brief for the defence of Lord Halifax in a prosecution ordered by the house. He was one of the managers of the impeachment of the Jacobite earl of Winton in 1715, and of Harley (Lord Oxford) in 1717. In later years he supported Walpole. He became very unpopular in 1736 for his introduction of the "gin act," taxing the retailing of spirituous liquors, and his house had to be protected from the mob. Pope has an illustration to "Jekyll or some odd Whig, Who never changed his principle or wig" (Epilogue to the Satires). Jekyll was also responsible for the Mortmain Act of 1736, which was not superseded till 1888. He died without issue in 1738.

His great-nephew Joseph Jekyll (d. 1837) was a lawyer, politician and wit, who excited a good deal of contemporary satire, and who wrote some jeux d'esprit which were well-known in his time. His Letters of the late Ignatius Sincho, an African, was published in 1782. In 1804 his correspondence was edited, with a memoir, by the Hon. Algernon Bourke.

JELLAICHICH, JOSEF, COUNT (1801—1859), Croatian statesman, was born on the 16th of October 1801 at Pétérvárad. He entered the Austrian army (1819), fought against the Bonnins in 1845, was made ban of Croatia, Slavonia and Dalmatia in 1848 on the petition of the Croats, and was simultaneously raised to the rank of lieutenant-general by the emperor. As ban, Jellachich's policy was directed to preserving the Slav kingdoms for the Habsburg monarchy by identifying himself with the nationalist opposition to Magyar ascendancy, while at the same time discouraging the extreme "Illyrism" advocated by Lodovik Gáj (1800—1872). Though his separatist measures at first brought him into disfavour at the imperial court, their true objective was soon recognized, and, with the triumph of the more violent elements of the Hungarian revolution, he was hailed as the most conspicuous champion of the unity of the empire, and was able to bring about that union of the imperial army with the southern Slavs by which the revolution in Vienna and Budapest was overthrown. See AUSTRIA—HUNGARY: History. He began the war of independence in September 1848 by crossing the Drave at the head of 40,000 Croats. After the bloody battle of Buda he concluded a three days' truce with the Hungarians to enable him to assist Prince Windischgrätz to reduce Vienna, and subsequently fought against the Magyars at Schwechat. During the winter campaign of 1848—49 he commanded, under Windischgrätz, the Austrian right wing, capturing Magyar-Ovar and Raab, and defeating the Magyars at Mör. After the recapture of Buda he was made commander-in-chief of the southern army.

1 I.e. either descendant of, or from the same district as, Omri (see Hogg, Ency. Bib. col. 2291). The Assyrian king's sculpture, depicting the embassy and its gifts, is the so-called "black obelisk" now in the British Museum (Nimrod Central Gallery, No. 98; Guide to Bab. and Ass. Antiq. 1900, p. 24 seq., pl. l.)
JELLINEK—JENA

At first he gained some successes against Bem (q.v.), but on the 14th of July 1849 was routed by the Hungarians at Hegyes and driven behind the Danube. He took no part in the remainder of the war, but returned to Agram to administer Croatia. In 1853 he was appointed commander-in-chief of the army sent against Montenegro, and in 1855 was created a count. He died on the 20th of May 1859. His Gedichte were published at Vienna in 1851.

See the anonymous The Croatian Revolution of the Year 1848 (Croat.), Agram, 1898. (R. N. B.)

JELLINEK, ADOLF (1821-1893), Jewish preacher and scholar, was born in Moravia. After filling clerical posts in Leipzig, he became Prediger (preacher) in Vienna in 1856. He was associated with the promoters of the New Learning within Judaism, and wrote on the history of the Kabballa. His bibliographies (each bearing the Hebrew title Qontres) were useful compilations. But his most important work lay in three other directions. (1) Midrashic. Jellinek published in the six parts of his Beth ha-Midrash (1853-1875) a large number of smaller Midrashi, ancient and medieval homilies and folk-lore records, which have been of much service in the recent revival of interest in Jewish apocalyptic literature. A translation of these collections of Jellinek into German was undertaken by A. Wunsche, under the general title Aus Israels Lehrhalte. (2) Psychological. Before the study of ethnic psychology had become a science, Jellinek directed attention to the subject. There is much keen analysis and original investigation in his two essays Der jüdische Stamm (1866) and Der jüdische Stamm in nicht-jüdischen Spruch-wörtern (1881-1882). It is to Jellinek that we owe the oft-repeated comparison of the Jewish temperament to that of women in its quickness of perception, versatility and sensibility. (3) Homiletic. Jellinek was probably the greatest synagogue orator of the 19th century. He published some 200 sermons, in most of which are displayed unabasing learning, fresh application of old sayings, and a high conception of Judaism and its claims. Jellinek was a powerful apologist and an accomplished homilist, at once profound and ingenious. His son, GEORGE JELLINEK, was appointed professor of international law at Heidelberg in 1891. Another son, MAX HERMANN JELLINEK, was made assistant professor of philosophy at Vienna in 1892. A brother of Adolf, HERMANN JELLINEK (b. 1823), was executed at the age of 36 on account of his association with the Hungarian national movement of 1848. One of Hermann Jellinek’s best-known works was Uriel Acosta. Another brother, MORITZ JELLINEK (1823-1883), was an accomplished economist, and contributed to the Academy of Sciences essays on the price of cereals and on the statistical organization of the country. He founded the Budapest tramway company (1864) and was also president of the corn exchange.

See Jewish Encyclopedia, vii. 92-94. For a character sketch of Adolf Jellinek see S. Singer. Lectures and Addresses (1908), pp. 88-93; Kohut, Berühmte israelitische Männer und Frauen. (I. A.)

JEMAPPES, a town in the province of Hainaut, Belgium, near Mons, famous as the scene of the battle at which Dumouriez, at the head of the French Revolutionary Army, defeated the Austrian army (which was greatly outnumbered) under the duke of Saxe-Teschen and Clerfayt on the 6th of November 1792 (see French Revolutionary Wars).

JENA, a university town of Germany, in the grand duchy of Saxe-Weimar, on the left bank of the Saale, 56 m. S.W. from Leipzig by the Grossgenen-Saalfeld and 12 m. S.E. of Weimar by the Weimar-Gera lines of railway. Pop. (1905), 26,355. Its situation in a broad valley enlivened by limestone hills is somewhat dreary. To the north lies the plateau, descending steeply to the valley, famous as the scene of the battle of Jena. The town is surrounded by promenades occupying the site of the old fortifications; it contains in addition to the medieval market square, many old-fashioned houses and quaint narrow streets. Besides the old university buildings, the most interesting edifices are the 15th-century church of St Michael, with a tower 318 ft. high, containing an altar, beneath which is a door-way leading to a vault, and a bronze statue of Luther, originally destined for his tomb; the university library, in which is preserved a curious figure of a dragon; and the bridge across the Saale, as long as the church steeple is high, the centre arch of which is surmounted by a stone carved head of a malefactor. Across the river is the “mountain,” or hill, whence a fine view is obtained of the town and surroundings, and hard by the Fuchs-Turm (Fox tower) celebrated for student orgies, while in the centre of the town is the house of an astronomer, Weigel, with a deep shaft through which the stars can be seen in the daytime. Thus the seven marvels of Jena are summed up in the Latin lines:

Arte, caput, Draco, mons, pons, sudpeula turris, Weigeliana domus, septem miracula Jenae.

There must also be mentioned the university church, the new university buildings, which occupy the site of the ducal palace (Schloss) where Goethe wrote his Hermann und Dorothea, the Schwarzer Bäur Hotel, where Luther spent the night after his flight from the Wartburg, and four towers and a gateway which now alone mark the position of the ancient walls. The town has of late years become a favourite residential resort and has greatly extended towards the west, where there is a colony of pleasant villas. Its chief prosperity centres, however, in the university. In 1547 the elector John Frederick the Magnanimous of Saxony, while a captive in the hands of the emperor Charles V., conceived the plan of founding a university at Jena, which was accordingly established by his three sons. After having obtained a charter from the emperor Ferdinand I., it was inaugurated on the 2nd of February 1558. It was most numerous attended about the middle of the 18th century; but the most brilliant professoriate was under the duke Charles Augustus, Goethe’s patron (1787-1806), when Fichte, Hegel, Schelling, Schlegel and Schiller were on its teaching staff. Founded as a home for the new religious opinions of the 16th century, it has ever been in the forefront of German universities in liberally accepting new ideas. It distances perhaps every other German university in the extent to which it carries out what are popularly regarded as the characteristics of German student-life—duelling and the passion for Freiheit. At the end of the 18th and the beginning of the 19th century, the opening of new universities, co-operating with the suspicions of the various German governments as to the democratic opinions which obtained at Jena, militated against the university, which has never regained its former prosperity. In 1905 it was attended by about 1100 students, and its teaching staff (including privatdozenten) numbered 112. Amongst its numerous auxiliaries may be mentioned the library, with 200,000 volumes, the observatory and meteorological station, the botanical garden, seminars of theology, philology and education, and well equipped clinical, anatomical and physical institutes. There are also veterinary and agricultural colleges in connexion with the university. The manufactures of Jena are not considerable. The book trade has of late years revived, and there are several printing establishments.

Jena appears to have possessed municipal rights in the 13th century. At the beginning of the 14th century it was in the possession of the margraves of Meissen, from whom it passed in 1423 to the elector of Saxony. Since 1485 it has remained in the Ernestine line of the house of Saxony. In 1662 it fell to Bernhard, youngest son of William duke of Weimar, and became the capital of a small separate duchy. Bernhard’s line having become extinct in 1666, Jena was united with Eisenach, and in 1741 reverted with that duchy to Weimar. In modern times Jena has been the scene of several military engagements. On the 14th of October 1806, by Napoleon upon the Prussian army under the prince of Hohenlohe (see Napoleon Campaigns).

E. A. Martin and O. Devrient (1888-1903).
JENATSCH, GEORG (1596-1639), Swiss political leader, one of the most striking figures in the troubled history of the Grisons in the 17th century, was born at Samaden (capital of the Upper Engadine). He studied at Zürich and Basel, and in 1617 became the Protestant pastor of Scharans (near Thusis). But almost at once he plunged into active politics, taking the side of the Venetian and Protestant party of the Salis family, as against the Spanish and Romanist policy supported by the rival family, that of Planta. He headed the “preachers” who in 1618 tortured to death the arch-priest Rusca, of Sondrio, and outlawed the Plantas. As reprisals, a number of Protestants were massacred at Tiranó (1620), in the Valtellina, a very fertile valley, of considerable strategical importance (for through it the Spaniards in Milan could communicate by the Umbrail Pass with the Austrians in Tirol), which then fell into the hands of the Spaniards. Jenatsch took part in the murder (1621) of Pompey Planta, the head of the rival party, but later with his friends was compelled to fly the country, giving up his position as a pastor, and henceforth acting solely as a soldier. He helped against the Austrians in the Prättigau (1622), and in the invasion of the Valtellina by a French army (1624), but the peace made (1626) between France and Spain left the Valtellina in the hands of the pope, and so destroyed Jenatsch's hopes. Having killed his colonel, Ruinelli, in a duel, Jenatsch had once more to leave his native land, and took service with the Venetians (1629-1630). In 1631 he went to Paris, and actively supported Richelieu's schemes for driving the Spaniards out of the Valtellina, which led to the successful campaign of Rohan (1635), one of whose foremost supporters was Jenatsch. But he soon saw that the French were as unwilling as the Spaniards to restore the Valtellina to the Grisons (which had seized it in 1512). So he became a Romanist (1635), and negotiated secretly with the Spaniards and Austrians. He was the leader of the conspiracy which broke out in 1637, and resulted in the expulsion of Rohan and the French from the Grisons. This treachery on Jenatsch's part did not, however, lead to the freeing of the Valtellina from the Spaniards, and once more he tried to get French support. But on the 24th of January 1639 he was assassinated at Coire by the Plantas; later in the same year the much coveted valley was restored by Spain to the Grisons, which held it till 1797. Jenatsch's career is of general historical importance by reason of the long conflict between France and Spain for the possession of the Valtellina, which forms one of the most bloody episodes in the Thirty Years' War. (W. A. B. C.)

See biography by E. Haafter (Davos, 1894).

JENGHIZ KHAN (1162-1227), Mongol emperor, was born in a tent on the banks of the river Onon. His father Yesukai was absent at the time of his birth, in a campaign against a Tatar chieftain named Temuchin. The fortune of war favoured Yesukai, who having slain his enemy returned to his encampment in triumph. Here he was met by the news that his wife Yulun had given birth to a son. On examining the child he observed in its clenched fist a drop of congealed blood like a red stone. In a superstitious Mongol this circumstance referred to his victory over the Tatar chieftain, and he therefore named the infant Temuchin. The death of Yesukai, which placed Temuchin at the age of thirteen on the Mongol throne, was the signal also for the dispersal of several tribes whose allegiance the old chieftain had retained by his iron rule. When remonstrated with by Temuchin, the rebels replied: “The deepest wells are sometimes dry, and the hardest stone is sometimes broken; why should we cling to thee?” But Yulun was by no means willing to see her son's power melt away; she led those retainers who remained faithful against the deserters, and succeeded in bringing back fully half to their allegiance. With this doubtful material, Temuchin succeeded in holding his ground against the plots and open hostilities of the neighbouring tribes, more especially of the Naimans, Keraitis and Merkits. With one or other of these he maintained an almost unceasing warfare until 1206, when he felt strong enough to proclaim himself the ruler of an empire. He therefore summoned the notables of his kingdom to an assembly on the banks of the Onon, and at their unanimous request adopted the name and title of Jenghiz Khan (Chinesë, Chêng-sze, or “perfect warrior”). At this time there remained to him but one open enemy on the Mongolian steppes, Polo the Naiman khan. Against this chief he now led his troops, and in one battle so completely shattered his forces that Cushlek, the successor of Polo, who was left dead upon the field, fled with his ally Toto, the Merkit khan, to the river Irtysh.

Jenghiz Khan now meditated an invasion of the empire of the Kin Tatars, who had wrested northern China from the Sung dynasty. As a first step he invaded western Hia, and, having captured several strongholds, retired in the summer of 1208 to Lung-tung to escape the great heat of the plains. While there news reached him that Toto and Cushlek were preparing for war. In a pitched battle on the river Irtysh he overthrew them completely. Toto was amongst the slain, and Cushlek fled for refuge to the Khitan Tatars. Satisfied with his victory, Jenghiz again directed his forces against Hia. After having defeated the Kin army under the leadership of a son of the sovereign, he captured the Wu-liang-hai Pass in the Great Wall, and penetrated as far as N'ing-sia Fu in Kansu. With unceasing vigour he pushed on his troops, and even established his sway over the province of Liao-tung. Several of the Kin commanders, seeing how persistently victory attended his banners, deserted to him, and garrisons surrendered at his bidding. Having thus secured a firm footing within the Great Wall, he despatched three armies in the autumn of 1213 to overrun the empire. The right wing, under his three sons, Juji, Jagatai and Ogota, marched towards the south; the left wing, under his brothers Hochar, Kwan-tsên Noven and Chow-tse-to-po-shi, advanced eastward towards the sea; while Jenghiz and his son Tule with the centre directed their course in a south-easterly direction. Complete success attended all three expeditions. The right wing advanced as far as Honan, and after having captured upwards of twenty-eight cities rejoined quarters by the great western road. Hochar made himself master of the country as far as Liao-si; and Jenghiz ceased his triumphal career only when he reached the cliffs of the Shan-tung promontory. But either because he was weary of the strife, or because it was necessary to revisit his Mongolian empire, he sent an envoy to the Kin emperor in the spring of the following year (1214), saying, “All your possessions in Shan-tung and the whole country north of the Yellow River are now mine with the solitary exception of Yenking (the modern Peking). By the decree of heaven you are now as weak as I am strong, but I am willing to retire from my conquests; as a condition of my doing so, however, it will be necessary that you distribute largess to my officers and men to appease their fierce hostility.” These terms of safety the Kin emperor eagerly accepted, and as a peace offering he presented Jenghiz with a daughter of the late emperor, another princess of the imperial house, 500 youths and maidens, and 3000 horses. No sooner, however, had Jenghiz passed beyond the border of the Kin, than the Kin emperor, fearing to lose the last remnants of his power, furthered the court to K'ai-fêng Fu in Honan. This transfer of capital appearing to Jenghiz to indicate a hostile attitude, he once more marched his troops into the doomed empire.

While Jenghiz was thus adding city to city and province to province in China, Kushlek, the fugitive Naiman chief, was not idle. With characteristic treachery he requested permission from his host, the Khitan khan, to collect the fragments of his army which had been scattered by Jenghiz at the battle on the Irtysh, and thus having collected a considerable force he led himself with Mahommed, the shah of Khwarizm, against the confiding khan. After a short but decisive campaign the allies remained masters of the position, and the khan was compelled to abdicate the throne in favour of the late guest.

With the power and prestige thus acquired, Kushlek prepared once again to measure swords with the Mongol chief. On receiving the news of his hostile preparations, Jenghiz at once took the field, and in the first battle routed the Naiman troops and made Kushlek a prisoner. His ill-gotten kingdom became
an apanage of the Mongol Empire. Jenghiz now held sway up to the Khwārizm frontier. Beyond this he had no immediate desire to go, and he therefore sent envoys to Mahommed, the shah, with presents, saying, "I send thee greeting; I know thy power and the vast extent of thine empire; I regard thee as my most cherished son. On my part thou must know that I have conquered China and all the Turkish nations north of it; thou knowest that my country is a magazine of warriors, a mine of silver, and that I have no need of other lands. I take it that we have an equal interest in encouraging trade between our subjects." This peaceful message was well received by the shah, and in all probability the Mongol armies would never have appeared in Europe but for an unfortunate occurrence. Shortly after the despatch of this first mission Jenghiz sent a party of traders into Transoxiana who were seized and put to death as spies by Inaljuk, the governor of Otrar. As satisfaction for this outrage Jenghiz demanded the extradition of the offending governor. Far from yielding to this summons, however, Mahommed beheaded the chief of the Mongol envoys, and sent the others back without their beards. This insult made war inevitable, and, in the spring of 1219 Jenghiz set out from Karakorum on a campaign which was destined to be as startling in its immediate results as its ulterior effects were far-reaching. The invading force was in the first instance divided into two armies: one commanded by Jenghiz's second son Jagatai was directed to march against the Kankanis, the northern defenders of the Khwārizm empire; and the other, led by Juji, his eldest son, advanced by way of Sighnak against Jand (Jend). Against this latter force Mahommed led an army of 400,000 men, who were completely routed, leaving it is said 100,000 dead upon the field. With the remnant of his host Mahommed fled to Samarkand. Meanwhile Jagatai marched down upon the Syr Daria (Jaxartes) by the pass of Taras and invested Otrar, the offending city. After a siege of five months the citadel was taken by assault, and Inaljuk and his followers were put to the sword. The conquerors levelled the walls with the ground, after having given the city over to pillage. At the same time a third army besieged and took Khöjent on the Jaxartes; and yet a fourth, led by Jenghiz and his youngest son Tule, advanced in the direction of Bokhara. Tashkent and Nur surrendered on their approach, and after a short siege Bokhara fell into their hands. On entering the town Jenghiz ascended the steps of the principal mosque, and shouted to his followers, "The hay is cut; give your horses fodder. No second invitation to plunder was needed; the city was sacked, and the inhabitants either escaped beyond the walls or were compelled to flee; to continue in the city was worse than death. As a final act of vengeance the town was fired, and before the last of the Mongols left the district, the great mosque and certain palaces were the only buildings left to mark the spot where the "centre of science" once stood. From the ruins of Bokhara Jenghiz advanced along the valley of the Sogd to Samarkand, which, weakened by treachery, surrendered to him, as did also Balkh. But in neither case did submission save either the inhabitants from slaughter or the city from pillage. Beyond this point Jenghiz went no farther westward, but sent Tule, at the head of 70,000 men, to ravage Khurasan, and two flying columns under Chepê and Sabutai Bahadar to pursue after Mahommed who had taken refuge in Nishapur. Defeated and almost alone, Mahommed fled before his pursuers to the village of Astara on the shore of the Caspian Sea, where he died of an attack of pleursisy, leaving his empire to his son Jeleddin (Jalal ud-din). Meanwhile Tule carried his arms into the fertile province of Khurasan, and after having captured Nessa by assault appeared before Merv. By an act of atrocious treachery the Mongols gained possession of the town, and, after their manner, sacked and burnt the town. From Merv Tule marched upon Nishapur, where he met with a most determined resistance. For four days the garrison fought desperately on the walls and in the streets, but at length they were overpowered, and, with the exception of 400 artisans who were sent into Mongolia, every man, woman and child was slain. Herat escaped the fate which had overtaken Merv and Nishapur by opening its gates to the Mongols. At this point of his victorious career Tule received an order to join Jenghiz before Talikhan in Badakhshan, where that chieftain was preparing to renew his pursuit of Jeleddin, after a check he had sustained in an engagement fought before Ghazni. As soon as sufficient reinforcements arrived Jenghiz advanced against Jeleddin, who had taken up a position on the banks of the Indus. Here the Turks, though far outnumbered, defended their ground with undaunted courage, until, beaten at all points, they fled in confusion. Jeleddin, seeing that all was lost, mounted a fresh horse and jumped into the river, which flowed 20 ft. below. With admiring gaze Jenghiz watched the desperate venture of his enemy, and even saw without regret the dripping horseman mount the opposite bank. From the Indus Jenghiz sent in pursuit of Jeleddin, who fled to Delhi, but failing to capture the fugitive the Mongols returned to Ghazni after having ravaged the provinces of Labore, Peshawar and Melikpur. At this moment news reached Jenghiz that the inhabitants of Herat had deposed the governor whom Tule had appointed over the city, and had placed one of their own choice in his room. To punish this act of rebellion Jenghiz sent an army of 80,000 men against the offending city, which after a siege of six months was taken by assault. For a whole week the Mongols ceased not to kill, burn and destroy, and 1,500,000 persons are said to have been massacred within the walls. Having consummated this act of vengeance, Jenghiz returned to Mongolia by way of Balkh, Bokhara and Samarkand. Meanwhile Chepe and Sabutai marched through Azerbaijan, and in the spring of 1222 advanced into Georgia. Here they defeated a combined force of Lesghians, Circassians and Kipchaks, and after taking Astrakan followed the retreating Kipchaks to the Don. The news of the approach of the mysterious enemy of whose name even they were ignorant was received by the Russian princes at Kiev with dismay. At the instigation, however, of Mitišlaf, prince of Galicia, they assembled an opposing force on the Dnieper. Here they received envoys from the Mongol camp, whom they barbarously put to death. "You have killed our envoys," was the answer made by the Mongols; "well, as you wish for war you shall have it. We have done you no harm. God is impartial; He will decide our quarrel." In the first battle, on the river Kaleza, the Russians were utterly routed, and fled before the invaders, who, after ravaging Great Bulgaria retired, gorged with booty, through the country of Sakain, along the river Aktuba, on their way to Mongolia. In China the same strain of fate attended the invasion as in western Asia. The whole of the country north of the Yellow river, with the exception of one or two cities, was added to the Mongol rule, and, on the death of the Kin emperor Šün Tsung in 1223, the Kin empire virtually ceased to be, and Jenghiz's frontiers thus became conterminous with those of the Sung emperors who held sway over the whole of central and southern China. After his return from Central Asia, Jenghiz once more took the field in western China. While on this campaign the five planets appeared in a certain conjunction, which to the superstitiously minded Mongol chief foretold that evil was awaiting him. With this presentiment strongly impressed upon him he turned his face homewards, and had advanced no farther than the Si-Kiang river in Kansu when he was seized with an illness of which he died a short time afterwards (1227) at his travelling palace at Hu-lao-tu, on the banks of the river Sale in Mongolia. By the terms of his will Ogotai was appointed his successor, but so essential was it considered to be that his death should remain a secret until Ogotai was proclaimed that, as the funeral procession moved northwards to the great ordo on the banks of the Kerulen, the escort killed every one they met. The body of Jenghiz was then carried successively to the ordo of his several wives, and was finally laid to rest in the valley of Killen.

Thus ended the career of one of the greatest conquerors the world has ever seen. Born and nurtured as the chief of a petty Mongolian tribe, he lived to see his armies victorious from the China Sea to the banks of the Dnieper; and, though the empire
which he created ultimately dwindled away under the hands of his degenerate descendants, leaving not a wrack behind; we have, in the presence of the Turks in Europe a consequence of one of the events, since it was the advance of his armies which drove their Osmanli ancestors from their original home in northern Asia, and thus led to their invasion of Bithynia under Othman, and finally their advance into Europe under Amurath I.

(J. R. D.)

JENKIN, HENRY CHARLES FLEEMING (1833–1885), British engineer, was born near Dungeness on the 25th of March 1833, his father (d. 1885) being a naval commander, and his mother (d. 1895) a novelist of some literary repute, her best books perhaps being Cousin Stella (1859) and Who breaks, pays (1861). Fleeming Jenkin was educated at first in Scotland, but in 1846 the family went to live abroad, owing to financial straits, and he studied at Genoa University, where he took a first-class degree in physical science. In 1841 he began his engineering career as an apprentice in an establishment at Manchester, and subsequently he entered Newall's submarine cable works at Birkenhead. In 1859 he began, in concert with Sir William Thomson (afterwards Lord Kelvin), to work on problems respecting the making and use of cables, and the importance of his researches on the resistance of gutta-percha was at once recognized. From this time he was in constant request in connexion with submarine Telegraphs, and he is known as an inventor. In partnership with Thomson, he made a large income as a consulting telegraph engineer. In 1865 he was elected F.R.S., and was appointed professor of engineering at University College, London. In 1868 he obtained the same professorship at Edinburgh University, and in 1873 he published a textbook of Magnetism and Electricity, full of original work. He was author of the article "Bridges" in the ninth edition of this encyclopaedia. His influence among the Edinburgh students was pronounced, and R. L. Stevenson's well-known Memoir is a sympathetic tribute to his ability and character. The meteoric charm of his conversation is well described in Stevenson's essay on "Talk and Talkers," under the name of Cockshot. Jenkin's interests were by no means confined to engineering, but extended to the arts and literature; his miscellaneous papers, showing his critical and unconventional views, were issued posthumously in two volumes (1887). In 1882 Jenkin invented an automatic method of electric transport for goods—"telephage"—but the completion of its details was prevented by his death on the 12th of June 1885. A telephage line on his system was subsequently erected at Glynde, near Sussex. He was well known as a sanitary reformer, and during the last ten years of his life he did much useful work in inculcating more enlightened ideas on the subject both in Edinburgh and other places.

JENKIN, SIR LEOLINE (1623–1685), English lawyer and diplomatist, was the son of a Welsh country gentleman. He was born in 1623 and was educated at Jesus College, Oxford, of which he was elected a fellow at the Restoration in 1660, having been an ardent royalist during the civil war and commonwealth; and in 1661 he became head of the college. In the same year he was made registrar of the consistory court of Westminster; in 1664 deputy judge of the court of arches; about a year later judge of the admiralty court; in 1669 judge of the prerogative court of Canterbury. In these offices Jenkins did enduring work in elucidating and establishing legal principles, especially in relation to international law and admiralty jurisdiction. He was selected to draw up the claim of Charles II. to succeed to the property of his mother, Henrietta Maria, on her death in August 1666, and while in Paris for this purpose he succeeded in defeating the rival claim of the duke of Orleans, being rewarded by a knighthood on his return. In 1673, on being elected member for Hythe, Jenkins resigned the headship of Jesus College. He was one of the English representatives at the congress of Cologne in 1673, and at the more important congress of Nijmegen in 1676–1679. He was made a privy councillor in February 1680 and became secretary of state in April of the same year, in which office he was the official leader of the opposition to the Exclusion Bill, though he was by no means a pliant tool in the hands of the court. He resigned office in 1684, and died on the 1st of September 1685. He left most of his property to Jesus College, Oxford, including his books, which he bequeathed to the college library, built by himself; and he left some important manuscripts to All Souls College, where they are preserved. Jenkins left his impress on the law of England in the Statute of Frauds, and the Statute of Distributions, of which he was the principal author, and of which the former profoundly affected the mercantile law of the country, while the latter regulated the inheritance of the personal property of intestates. He was never married.

JENKINS, ROBERT (fl. 1733–1745), English master mariner, is known as the protagonist of the "Jenkins's ear" incident, which, magnified in England by the press and the opposition, became a contributory cause of the war between England and Spain (1739). Bringing home the brig "Rebecca" from the West Indies in 1731, Jenkins was boarded by a Spanish guarda-costa, whose commander riled the holds and cut off one of his ears. On arriving in England Jenkins stated his grievance to the king, and a report was furnished by the commander-in-chief in the West Indies confirming his account. At first the case created no great stir, but in 1738 he repeated his story with dramatic detail before a committee of the House of Commons, producing what purported to be the ear that had been cut off. Afterwards it was suggested that he might have lost the ear in the pillory.

Jenkins was subsequently given the command of a ship in the East India Company's service, and later became supervisor of the company's affairs at St Helena. In 1747 he was sent to that island to investigate charges of corruption brought against the acting governor, and from May 1747 until March 1748 he administered the affairs of the island. Thereafter he resumed his naval career, is stated in an action with a pirate vessel to have preserved his own vessel and three others under his care (see T. H. Brooke, History of the Island of St Helena (London, 2nd ed., 1824), and H. R. Janisch, Extracts from the St Helena Records, 1885).

JENKS, JEREMIAH WHIPPLE (1856– ), American economist, was born in St Clair, Michigan, on the 2nd of September 1856. He graduated at the university of Michigan in 1878; taught Greek, Latin and German in Mt. Morris College, Illinois; studied in Germany, receiving the degree of Ph.D. from the University of Heidelberg; taught political science and English literature at Knox College, Galesburg, Ill., in 1886–1889; was professor of political economy and social science at Indiana State University in 1889–1891; and was successively professor of political, municipal, and social institutions (1891–1892), professor of political economy and civil and social institutions (1892–1901), and after 1901 professor of political economy and politics at Cornell University. In 1896–1901 he served as an expert agent of the United States industrial commission on investigation of trusts and industrial combinations in the United States and Europe, and contributed to vols. i., viii., and xiii. of this commission's report (1900 and 1901), vol. viii. being a report, written wholly by him, on industrial combinations in Europe. In 1901–1902 he was special commissioner of the United States war department on colonial administration, and wrote a Report on Certain Economic Questions in the English and Dutch Colonies in the Orient, published (1902) by the bureau of insular affairs; and in 1903 he was adviser to the Mexican ministry of finance on projected currency changes. In 1903–1904 he was a member of the United States commission on international exchange, in special charge of the reform of currency in China; in 1905 he was special representative of the United States in the imperial Chinese special mission visiting the United States. In 1905 he became a member of the United States immigration commission. Best known as an expert on "trusts," he has written besides on elections, ballot reform, proportional representation, on education (especially as a training for citizenship), on legislation regarding highways. &c.
his principal published works are Henry C. Carey als Nationalökonom (Halle a. S., 1885); The Trust Problem (1900; revised 1903); Great Fortunes (1906); Citizenship and the Schools (1906); and Principles of Politics (1906).

JENNÉ, a city of West Africa, formerly the capital of the Songhoi empire, now included in the French colony of Upper Senegal and Niger. Jenné is situated on a marigot or natural canal connecting the Niger and its affluent the Bani or Mahel Balei, and is within a few miles of the latter stream. It lies 230 m. S.W. of Timbuktu in a straight line. The city is surrounded by channels connected with the Bani but in the dry season it ceases to be an island. On the north-west, the oldest part of the city, stood the citadel, converted by the French since 1803 into a modern fort. The market-place is midway between the fort and the commercial harbour. The old mosque, partially destroyed in 1830, covered a large area in the south-west portion of the city. It was built on the site of the ancient palace of the Songhoi kings. The architecture of many of the buildings bears a resemblance to Egyptian, the façades of the houses being adorned with great buttresses of pyramidal form. There is little trace of the influence of Moorish or Arabian art. The buildings are mostly constructed of clay made into flat long bricks. Massive clay walls surround the city. The inhabitants are great traders and the principal merchants have representatives at Timbuktu and all the chief places on the Niger. The boats built at Jenné are famous throughout the western Sudan.

Jenné is believed to have been founded by the Songhoi in the 5th century, and though it has long been under the dominion of many races it has never been destroyed. Jenné seems to have been at the height of its power from the 12th to the 16th century, when its merchandise was found at every port along the west coast of Africa. From this circumstance it is conjectured that Jenné (Guinea) gave its name to the whole coast (see Guinea). Subsequently, under the control of Moorish, Tuareg and Fula invaders, the importance of the city greatly declined. With the advent of the French, commerce again began to flourish.

See F. Dubois, Tombouctou la mystérieuse (Paris, 1897), in which several chapters are devoted to Jenné; also Songhó; Timbuktu; and Senegal.

JENNER, EDWARD (1749-1823), English physician and discoverer of vaccination, was born at Berkeley, Gloucestershire, on the 17th of May 1749. His father, the Rev. Stephen Jenner, rector of Rockhampton and vicar of Berkeley, came of a family that had been long established in that county, and was possessed of considerable landed property; he died when Edwards was only six years old, but his eldest son, the Rev. Stephen Jenner, brought his brother up with paternal care and tenacity. Edward received his early education at Wotton-under-Edge and Cirencester, where he already showed a strong taste for natural history. The medical profession having been selected for him, he began his studies under Daniel Ludlow, a surgeon of Sudbury near Bristol; but in his twenty-first year he proceeded to London, where he became a favourite pupil of John Hunter, in whose house he resided for two years. During this period he was employed by Sir Joseph Banks to arrange and prepare the valuable zoological specimens which he had brought back from Captain Cook's first voyage in 1771. He must have acquired himself satisfactorily in this task, since he was offered the post of naturalist in the second expedition, but declined it as well as other advantageous offers, preferring rather to practise his profession in his native place, and near his eldest brother, to whom he was much attached. He was the principal founder of a local medical society, to which he contributed several papers of marked ability, in one of which he apparently anticipated later discoveries concerning rheumatic inflammations of the heart. He maintained a correspondence with John Hunter, under whose direction he investigated various points in biology, particularly the hibernation of hedgehogs and habits of the cuckoo; his paper on the latter subject was laid by Hunter before the Royal Society, and appeared in the Phil. Trans. for 1788. He also devoted considerable attention to the varied geological character of the district in which he lived, and constructed the first balloon seen in those parts. He was a great favourite in general society, from his agreeable and instructive conversation, and the many accomplishments he possessed. Thus he was a fair musician, both as a part singer and as a performer on the violin and flute, and a very successful writer, after the fashion of that time, of fugitive pieces of verse. In 1778 he married Catherine Kingscote, and in 1792 he obtained the degree of doctor of medicine from St Andrews.

Meanwhile the discovery that is associated with his name has been slowly maturing in his mind. When only an apprentice at Sudbury, his attention had been directed to the relations between cow-pox and small-pox in connexion with a popular belief which he found current in Gloucestershire, as to the antagonism between these two diseases. During his stay in London he appears to have mentioned the thing repeatedly to Hunter, who, being engrossed by other important publications, did not so strongly persuade. Jenner was of its possible importance, yet spoke of it to his friends and in his lectures. After he began practice in Berkeley, Jenner was always accustomed to inquire what his professional brethren thought of it; but he found that, when medical men had noticed the popular report at all, they supposed it to be based on imperfect induction. His first careful investigation of the subject dated from about 1775, and five years elapsed before he had succeeded in clearing away the most perplexing difficulties by which it was surrounded. He first satisfied himself that two different forms of disease had been hitherto confounded under the term cow-pox, only one of which protected against small-pox, and that many of the cases of failure were to be thus accounted for; and his next step was to ascertain that the true cow-pox itself only protects when communicated at a particular stage of the disease. At the same time he came to the conclusion that "the goose" or horses is the same disease as cow-pox and small-pox, each being modified by the organism in which it was developed. For many years, cow-pox being scarce in his county, he had no opportunity of inoculating the disease, and so putting his discovery to the test, but he did all he could in the way of collecting information and communicating what he had ascertained. Thus in 1788 he carried a drawing of the cow-pox, as seen on the hands of a milkmaid, to London, and showed it to Sir E. Home and others, who agreed that it was "an interesting and curious subject." At length, on the 14th of May 1798, he was able to inoculate James Phipps, a boy about eight years old, with matter from cow-pox vesicles on the hand of Sarah Nelmes. On the 1st of the following July the boy was carefully inoculated with variolous matter, but (as Jenner had predicted) no small-pox followed. The discovery was now complete, but Jenner was unable to repeat his experiment until 1788, owing to the disappearance of cow-pox from the dairies. He then repeated his inoculations with the utmost care, and prepared a pamphlet (Inquiry into the Cause and Effects of the Variolae Vaccinae) which should announce his discovery to the world. Before publishing it, however, he thought it well to visit London, so as to demonstrate the truth of his assertions to his friends; but he remained in London nearly three years, without being able to find any person who would submit to be vaccinated. Soon after he had returned home, however, Henry Cline, surgeon of St Thomas's Hospital, inoculated some vaccine matter obtained from him over the diseased hip-joint of a child, thinking the counter-irritation might be useful, and found the patient afterwards incapable of acquiring small-pox. In the autumn of the same year, Jenner met with the first opposition to vaccination; and this was the more formidable because it proceeded from J. Ingenhouz, a celebrated physician and man of science in Paris, while Cline's advocacy of vaccination brought it much more decided than before the medical profession, of whom the majority were prudent enough to suspend their judgment until they had more ample information. But besides these there were two noisy and troublesome factions, one of which opposed vaccination as a useless and dangerous practice, while the other endangered its success much more by rash and self-seeking advocacy. At the head of the latter was George Pearson,
who in November 1798 published a pamphlet speculating upon the subject, before even seeing a case of cow-pox, and afterwards endeavoured, by lecturing on the subject and supplying the virus, to put himself forward as the chief agent in the cause. The matter which he distributed, which had been derived from cows that were found to be infected in London, was found frequently to produce, not the slight disease described by Jenner, but more or less severe eruptions resembling small-pox. Jenner concluded at once that this was due to an accidental contamination of the vaccine with variolous matter, and a visit to London in the spring of 1799 convinced him that this was the case. In the course of this year the practice of vaccination spread over England, being urged principally by non-professional persons of position; and towards its close attempts were made to found institutions for gratuitous vaccination and for supplying lymph to all who might apply for it. Pearson proposed to establish one of these in London, without Jenner's knowledge, in which he offered him the post of honorary corresponding physician. On learning of this scheme to supplant him, and to carry on an institution for public vaccination on principles which he knew to be partly erroneous, Jenner once more visited London early in 1800, when he hoped it would be enough to secure the adoption of the scheme. He was afterwards presented to the king, the queen and the prince of Wales, whose encouragement materially aided the spread of vaccination in England. Meanwhile it had made rapid progress in the United States, where it was introduced by Benjamin Waterhouse, then professor of physic at Harvard, and on the continent of Europe, where it was at first diffused by De Carro of Vienna. In consequence of the war between England and France, the discovery was later in reaching Paris; but, its importance once realized, it spread rapidly over France, Spain and Italy.

A few of the incidents connected with its extension may be mentioned. Perhaps the most striking is the expedition which was sent out by the court of Spain in 1803, for the purpose of diffusing cow-pox through all the Spanish possessions in the Old and New Worlds, and which returned in three years, having circumnavigated the globe, and succeeded beyond its utmost expectations. Clergymen in Geneva and Holland urged vaccination upon their parishioners from the pulpits; in Sicily, South America and Naples, religious processions were formed for the purpose of receiving it; the anniversary of Jenner's birthday, or of the successful vaccination of James Phipps, was for many years celebrated as a feast in Germany; and the empress of Russia caused the first child operated upon to receive the name of Vaccinov, and to be educated at the public expense. About the close of the year 1801 Jenner's friends in Gloucestershire presented him with a small service of plate as a testimonial of the esteem in which they held his discovery. This was intended merely as a preliminary to the presenting of a petition to parliament for a grant. The petition was presented in 1802, and was referred to a committee, of which the investigations resulted in a report in favour of the grant, and ultimately in a vote of £10,000.

Towards the end of 1802 steps were taken to form a society for the proper spread of vaccination in London, and the Royal Jennerian Society was finally established, Jenner returning to town to preside at the first meeting. This institution began very prosaically. More than twelve thousand persons having been inoculated in the first eighteen months, and with such effect that the deaths from small-pox, which for the latter half of the 18th century had averaged 2018 annually, fell in 1804 to 622. Unfortunately the chief resident inoculator soon set himself up as an authority opposed to Jenner, and this led to such dissensions as caused the society to die out in 1808.

Jenner was led, by the language of the chancellor of the exchequer when his grant was proposed, to attempt practice in London, but after a year's trial he returned to Berkeley. His grant was not paid until 1804, and then, after the deduction of about £1000 for fees, it did little more than pay the expenses attendant upon his discovery. For he was so thoroughly known everywhere as the discoverer of vaccination that, as he himself said, he was "the vaccine clerk of the whole world." At the same time he continued to vaccinate gratuitously all the poor who applied to him on certain days, so that he sometimes had as many as three hundred persons waiting at his door. Meanwhile honours began to shower upon him from abroad; he was elected a member of almost all the chief scientific societies on the continent of Europe, the first being that of Göttingen, where he was proposed by J. F. Blumenbach. But perhaps the most flattering proof of his influence was derived from France. On one occasion, when he was endeavouring to obtain the release of some of the unfortunate Englishmen who had been detained in France on the sudden termination of the Peace of Amiens, Napoleon was about to reject the petition, when Josephine uttered the name of Jenner. The emperor paused and exclaimed: "Ah, we can refuse nothing to that name." Somewhat later he did the same service to Englishmen confined in Mexico and in Austria; and during the latter part of the great war persons before leaving England would sometimes obtain certificates signed by him which served as passports. In his own country his merits were less recognized. His applications on behalf of French prisoners in England were less successful; he never shared in any of the patronage at the disposal of the government, and was even unable to obtain a living for his nephew George.

In 1806 Lord Henry Petty (afterwards the marquess of Lansdowne) became chancellor of the exchequer, and was so convinced of the inadequacy of the former parliamentary grant that he proposed an address to the Crown, praying that the college of physicians should be directed to report upon the success of vaccination. Their report being strongly in its favour, the then chancellor of the exchequer (Spencer Perceval) proposed that a sum of £10,000 without any deductions should be paid to Jenner. The anti-vaccinationists found but one advocate in the House of Commons; and finally the sum was raised to £20,000. Jenner, however, at the same time had the mortification of learning that government did not intend to take any steps towards checking small-pox inoculation, which so persistently kept up that disease. About the same time a subscription for his benefit was begun in India, where his discovery had been gratefully received, but the full amount of this (£738) only reached him in 1812. The Royal Jennerian Society having failed, the national vaccine establishment was founded, for the extension of vaccination, in 1809. Jenner spent five months in London for the purpose of organizing it, but was then obliged, by the dangerous illness of one of his sons, to return to Berkeley. He had been appointed director of the institution; but he had no sooner left London than Sir Lucas Pepsy, president of the college of physicians, neglected his recommendations, and formed the board out of the officials of that college and the college of surgeons. Jenner once resigned his post as director, though he continued to give the benefit of his advice whenever it was needed, and this resignation was a bitter mortification to him. In 1810 his eldest son died, and Jenner's grief at his loss, and his incessant labours, materially affected his health. In 1813 the university of Oxford conferred on him the degree of M.D. It was believed that this would lead to his election into the college of physicians, but that learned body decided that he could not be admitted until he had undergone an examination in classics. This Jenner at once refused; to brush up his classics would, he said, "be irksome beyond measure. I would not do it for a diadem. That indeed would be a bauble; I would not do it for John Hunter's museum."

He visited London for the last time in 1814, when he was presented to the Allied Sovereigns and to most of the principal personages who accompanied them. In the next year his wife's death was the signal for him to retire from public life: he never left Berkeley again, except for a day or two, as long as he lived. He found sufficient occupation for the remainder of his life in collecting further evidence on some points connected with his great discovery, and in his engagements as a physician, a naturalist and a magistrate. In 1818 a severe epidemic of small-pox prevailed, and fresh doubts were thrown on the
Efficacy of vaccination, in part apparently owing to the bad quality of the vaccine lymph employed. This caused Jenner much annoyance, which was relieved by an able defence of the practice, written by Sir Gilbert Blane. But this led him, in 1821, to send a circular letter to most of the medical men in the kingdom inquiring into the effect of other skin diseases in modifying the progress of cow-pox. A year later he published his last work, On the Influence of Artificial Eruptions in Certain Diseases; and in 1823 he presented his last paper—"On the Migration of Birds"—to the Royal Society. On the 24th of January 1823 he retired to rest apparently as well as usual, and next morning rose and came down to his library, where he was found insensible on the floor, in a state of apoplexy, and with the right side paralysed. He never rallied, and died on the following morning.

A public subscription was set on foot, shortly after his death, by the medical men of his county, for the purpose of erecting some memorial in his honour, and while much difficulty was raised to enable a statue to be placed in Gloucester Cathedral. In 1830 another attempt was made to set up a monument to him; this appears to have failed, but at length, in 1858, a statue of him was erected by public subscription in London.

Jenner's life was written by the intimate friend of his later years, Dr John Baron of Gloucester (2 vols., 1827, 1838). See also Vaccination.

Jenner, Sir William, Bart. (1752-1823), English physician, was born at Chatham on the 30th of January 1752, and educated at University College, London. He became M.R.C.S. in 1773, and F.R.C.P. in 1782, and in 1784 took the London M.D. In 1787 he began at the London fever hospital investigations into cases of "continued fever which enabled him finally to make the distinction between typhus and syphoid on which his reputation as a pathologist principally rests. In 1848 he was appointed professor of pathological anatomy at University College, and also assistant physician to University College Hospital, where he afterwards became physician (1854-1876) and consulting physician (1879), besides holding similar appointments at other hospitals. He was also successively Holme professor of clinical medicine and professor of the principles and practice of medicine at University College. He was president of the college of physicians (1851-1853); he was elected F.R.S. in 1864, and received honorary degrees from Oxford, Cambridge and Edinburgh. In 1861 he was appointed physician extraordinary, and in 1862 physician in ordinary, to Queen Victoria, and in 1863 physician in ordinary to the prince of Wales; he attended both the prince consort and the prince of Wales in their attacks of typhoid fever. In 1868 he was created a baronet. As a consultant Sir William Jenner had a great reputation, and he left a large fortune when he died, at Bishop's Waltham, Hants, on the 11th of December 1868, having then retired from practice for eight years owing to failing health.

Jennet, a small Spanish horse; the word is sometimes applied in English to a mule, the offspring of a she-ass and a stallion. Jennet comes, through Fr. génet, from Span. jinete, a light horseman who rides à la jineta, explained as "with his legs tucked up." The name is taken to be a corruption of the Arabic Zenata, a Berber tribe famed for its cavalry. English and French transferred the word from the rider to his horse, a meaning which the word has only acquired in Spain in modern times.

Jenolan Caves, a series of remarkable caverns in Roxburgh county, New South Wales, Australia; 113 m. W. by N. of Sydney, and 36 m. from Tarana, which is served by railways. They are the most celebrated of several similar groups in the limestone of the country; they have not yielded fossils of great interest, but the stalactitic formations, sometimes pure white, are of extraordinary beauty. The caves have been rendered easily accessible to visitors and lighted by electricity.

Jensen, Wilhelm (1807-1837), German author, was born at Heiligenfahen in Holstein on the 15th of February 1807, the son of a local Danish magistrate, who came of old patrician Frisian stock. After attending the classical schools at Kiel and Lübeck, Jensen studied medicine at the universities of Kiel, Würzburg and Breslau. He, however, abandoned the medical profession for that of letters, and after engaging for some years in individual private study proceeded to Munich, where he associated with men of letters. After a residence in Stuttgart (1816-1869), where for a short time he conducted the Schwäbische Volks-Zeitung, he became editor in Flensburg of the Norddeutsche Zeitung. In 1872 he again returned to Kiel, lived from 1876 to 1888 in Freiburg im Breisgau, and since 1888 has been resident in Munich.

Jenyns is perhaps the most fertile of modern German writers of fiction, more than one hundred works having proceeded from his pen. Though his books are not of high literary quality, his public taste; such are the novels, Karin von Schweden (Berlin, 1878); Die braune Erica (Berlin, 1868); and the tale, Die Pfeifer von Dunsebalmen, Eine Geschichte aus dem Elsass (1884). Among others may be mentioned: Barthenia (Berlin, 1877); Gits and Giol (Berlin, 1886); Heimkunft (Dresden, 1894); Aus See und Sand (Dresden, 1897); Luz und Lee (Berlin, 1897); and the narratives, Aus den Tagen der Hansa (Leipzig, 1885); Aus stille Zeit (Berlin, 1881-1885); and Heimath (1901). Jenyns also published some tragedies, among which Dido (Berlin, 1870) and Der Kampf fürs Recht (Freiburg im Br., 1934) may be mentioned.

Jenyns, Soams (1704-1787), English author, was born in London on the 1st of January 1704, and was educated at St John's College, Cambridge. In 1742 he was chosen M.P. for Cambridgeshire, in which his property lay, and he afterwards sat for the borough of Dunwich and the town of Cambridge. From 1755 to 1780 he was one of the commissioners of the board of trade. He died on the 18th of December 1787.

For the measure of literary repute which he enjoyed during his life Jenyns was indebted as much to his wealth and social standing as to his accomplishments and talents, though both were considerable. His poetical works, the Art of Dunci (1747) and Miscellanies (1770), contain many passages graceful and lively though occasionally rather coarse. The first of his prose works was his Free Inquiry into the Nature and Origin of Evil (1756). This essay was severely criticized on its appearance, especially by Samuel Johnson in the Literary Magazine. Johnson, in a slashing review—the best paper of the kind he ever wrote—condemned the book as a slight and shallow attempt to solve one of the most difficult of moral problems. Jenyns, a gentle and amiable man in the main, was extremely irritated by his failure. He put forth a second edition of his work, prefaced by a vindication, and tried to take vengeance on Johnson after his death by a sarcastic epitaph. In 1776 Jenyns published his View of the Internal Evidence of the Christian Religion. Though at one period of his life he had affected a kind of deistic scepticism, he had now returned to orthodoxy, and there seems no reason to doubt his sincerity, questioned at the time, in defending Christianity on the ground of its total variance with the principles of human reason. The work was deservedly praised in its day for its literary merits, but is so plainly the production of an amateur in theology that as a scientific treatise it is valueless.

A collected edition of the works of Jenyns appeared in 1790, with a biography by Charles Nelson Cole. There are several references to him in Boswell's Johnson.

Jeopardy, a term meaning risk or danger of death, loss or other injury. The word, in Med. Eng. jeuparti, jeupartie, &c., was adapted from O. Fr. ju, later jeu, and parti, even game, in medieval Latin jocus partitius. This term was originally used of a problem in chess or of a stage in any other game at which the chances of success or failure are evenly divided between the players. It was thus early transformed to any state of uncertainty.

Jefferson, Robert (1736-1803), British dramatist, was born in Ireland. After serving for some years in the British army, he retired with the rank of captain, and lived in England, where he was the friend of Garrick, Reynolds, Goldsmith, Johnson, Burke, Burney and Charles Townshend. His appointment as master of the horse to the lord-lieutenant of Ireland

1 Two lines will suffice:—

Boswell and Thrale, retailers of his wit,
Will tell you how he wrote, and talk'd, and cou'd, and sp't.
took him back to Dublin. He published, in the *Mercury* newspaper a series of articles in defence of the lord-lieutenant's administration which were afterwards collected and issued in book form under the title of *The Bachelor, or Speculations of Jeffray Wagstaffe*. A pension of £500, afterwards doubled, was granted him, and he held his appointment under twelve succeeding viceroys. From 1775 he was engaged in the writing of plays. Among others, his tragedy *Brogamo* was successfully performed at Drury Lane in 1775, *Conspiracy* in 1796, *The Law of Lombardy* in 1779, and *The Count of Narbonne* at Covent Garden in 1781. In 1794 he published an heroic poem *Roman Portraits*, and *The Confessions of Jacques Baptiste Coulouet*, a satire on the excesses of the French Revolution. He died at Blackrock, near Dublin, on the 31st of May 1803.

**JEPHTAH**, one of the judges of Israel, in the Bible, was an illegitimate son of Gilead, and, being expelled from his father's house by his lawful brethren, took refuge in the Syrian land of Tob, where he gathered around him a powerful band of homeless men. The Ammonites pressing hard on his countrymen, the elders of Gilead called for his help, which he consented to give on condition that the event of victory should be made his head (Judg. xi. 1-xii. 7). His name is best known in history and literature in connexion with his vow, which led to the sacrifice of his daughter on his successful return. The reluctance shown by many writers in accepting the plain sense of the narrative on this point proceeds to a large extent on unwarranted assumptions as to the stage of ethical development which had been reached in Israel in the period of the judges, or at the time when the narrative took shape. The annual lamentation of the women for her death suggests a mythical origin (see *Adonis*). Attached to the narrative is an account of a quarrel between Jephthah and the Ephraimites. The latter were defeated, and their retreat was cut off by the Gileadites, who had seized the fords of the Jordan. As the fugitives attempted to cross the river on their “dry foot” or “ear of corn”), and those who said “sibboleth” (the Ephraimites apparently being unused to *sthr*), were at once put to death. In this way 42,000 of the tribe were killed.1

The loose connexion between this and the main narrative, as also the lengthy speech to the children of Ammon (xi. 14-27), which really relates to Moab, has led some writers to infer that two distinct historical traditions have been combined. See further the commentaries on the *Book of Judges* (g.v.), and Cheyne, *Ency. Bib.*, art. "Jephthah." (S. C. A.)

**JERAHMEEL**, (Heb. " *May God pity *"), in the Bible, a clan which with Caleb, the Kenites and others, occupied the southern steppes of Palestine, probably in the district around Arad, about 17 m. S. of Hebron. It was on friendly terms with David during his residence at Ziklag (1 Sam. xxx. 29), and it was apparently in his reign that the various elements of the south were united and were reckoned to Israel. This is expressed in the chronicler's genealogies which make Jerahmeel and Caleb the descendants of Judah.

On the moves in 1 Chron. ii. see S. A. Cook, *Ency. Bib.*, col. 2363 seq. Pelech (r. 33) may be the origin of the Pelethites (2 Sam. viii. 18; xv. 18; xx. 7), and since the name occurs in the revolt of Korah (Num. xvi. 1), it is possible that Jerahmeel, like Caleb and the Kenites, was a remnant of the northern tribes who wandered to the East. The name of Jerahmeel is given to a district in Moab (1 Sam. i. 1; Septuagint), and the consecutive Jerahmeelite names Nathan and Zabad (1 Chron. ii. 36) have been associated with the prophet and officer (Zabud, 1 Kings iv. 5) of the time of Solomon and the Old Testament writers appear to have confused Samu and Nathan with this clan. If correct, it is a further illustration of the importance of the south for the growth of biblical history (see *Kenites and Rechabites*). The *Chronicles of Jerahmeel* (M. Caster, *Oriental Translation Fund*, 1899) is a late production containing a number of apocryphal Jewish legends of no critical value.

1 Similarly a Syrian story tells how the Druses came to slay Ibrahim Pasha's troops, and desiring to spare the Syrians ordered the men to say *gamal* (camel). As the Syrians pronounce the *g* soft, and the Egyptians the *g* hard, the former were easily identified. Other examples from the East will be found in H. C. Kay, *Yemen*, p. 36, and in S. Lane-Poole, *History of Egypt in the Middle Ages*, p. 300. Also, at the Sicilian Vespers (March 13, 1282) the French were made to betray themselves by their pronunciation of *rect* and *risset* (Fr. *le*).
finches, the proportionate length of the thigh-bone or femur to the tibia and foot (metatarsus and toes) is constant, being 2½; in animals, on the other hand, such as hares, horses and frogs, which use all four feet, the corresponding length is less. This resemblance between the hind legs and the bird's skeleton is owing to adaptation to a similar mode of existence. In the young jerboa the proportion of the femur to the rest of the leg is the same as in ordinary running animals. Further, at an early stage of development the fibula is complete and separate bone, while the three metatarsals, which subsequently fuse together to form the cannon-bone, are likewise separate. In addition to their long hind and short fore limbs, jerboas are mostly characterized by their silky coats—of a fawn colour to harmonize with their desert surroundings—their large eyes, and long tails and ears. As is always the case with large-eared animals, the tympanic bullae of the skull are of unusually large size; the size varying in the different genera according to that of the ears. (For the characteristics of the family and of its more important generic representatives, see Rodentia.)

In the Egyptian jerboa the length of the body is 8 in., and that of the tail, which is long, cylindrical and covered with short hair terminated by a tuft, 10 in. The five-toed front limbs are extremely short, while the hind pairs are times almost as long as the body. It is this jerboa rather than its body by means of the hinder extremities, and supports itself at the same time upon its tail, while the forefeet are so closely pressed to the breast as to be scarcely visible, which doubtless suggested the name Dipsus, or two-footed, when first seen by the Arabs, who, however, had not instantly seen itself, it makes another spring, and so on in such rapid succession as to appear as if rather than running. It is a gregarious animal, living in considerable colonies in burrows, which excavates with its nails and teeth in the sandy soil of Egypt and Arabia. In these it remains during great part of the day, emerging at night in search of the herbs on which it feeds. It is exceedingly shy, and this, together with its extraordinary agility, renders it difficult to capture. The Arabs, however, succeed in closing up all the exits from the burrows with a single exception, by which the rodents are forced to escape, and over which a net is placed for their capture. When confined, they will gnaw through the hardest wood in order to make their escape. The Persian jerboa (Umbaga indica) is also a nocturnal burrowing animal, feeding chiefly on grain, which it stores up in underground reservoirs, closing these when full, and only drawing upon them when the supply of food above ground is exhausted (see also Jumping Mice.

(R.L.*)

JERDA, WILLIAM (1782-1860), Scottish journalist, was born on the 16th of April 1782, at Kelso, Scotland. During the years between 1790 and 1806 he spent short periods in a country lawyer's office, a London merchant's counting-house, an Edinburgh solicitor's chambers, and held the position of surgeon's mate on board H.M. guardship "Gladiator" in Portsmouth Harbour, under his uncle, who was surgeon. He went to London in 1806, and became a newspaper reporter. He was in the lobby of the House of Commons on the 11th of May 1812 when Spencer Perceval was shot, and was the first to seize the assassin. By 1812 he had become editor of The Sun, a semi-official Tory paper; he occasionally inserted literary articles, then quite an unusual proceeding; but a quarrel with the chief proprietor brought that engagement to a close in 1817. He passed next to the editor's chair of the Literary Gazette, which he conducted with success for thirty-four years. Jordan's position as editor brought him into contact with many distinguished writers. An account of his friends, among whom Canning was a special intimate, is to be found in his Men I have Known (1866). When Jordan retired in 1850 from the editorship of the Literary Gazette his pecuniary affairs were far from satisfactory. A testimonial of £300 was subscribed by his friends; and in 1853 a government pension of 100 guineas was conferred on him by Lord Aberdeen. He published his Autobiography in 1855 and died on the 11th of July 1856.

JERUSALEM, the ancient capital of the Bible, the last pre-exilic prophet (1 Kings iv. 6-8; 1 Kings v. 2-5), successor of Hilkiah. Early Days of Jeremiah.—There must anciently have existed one or more prose works on Jeremiah and his times, written partly to do honour to the prophet, partly to propagate those views respecting Israel's past with which the name of Jeremiah was associated. Some fragments of this work (or these works) have come down to us; they greatly add to the popularity of the Book of Jeremiah. Strict historical truth we must not ask of them, but they do give us what was believed concerning Jeremiah in the following age, and we must believe that the personality so honoured was an extraordinary one. We have also a number of genuine prophecies which admit us into Jeremiah's inner nature. These are our best authorities, but they are deficient in concrete facts. By birth Jeremiah was a countryman; he came of a priestly family whose estate lay at Anathoth "in the land of Benjamin" (xxxiii. 3; cf. i. 1). He came forward as a prophet in the thirteenth year of Josiah (626 B.C.), still young but irresistibly impelled. Unfortunately the account of the call and of the object of the divine caller come to us from a later hand (ch. i.), but we can well believe that the concrete fact which the prophetic call illuminated was an impending blow to the state (i. 13-16; cf. ch. iv.). What the blow exactly was is disputed, but it is certain that Jeremiah saw the gathering storm and anticipated its result, while the statesmen were still wrapt in a false security. Five years later came the reform movement produced by the "finding" of the "book of the law" in the Temple in 621 B.C. (2 Kings xxii. 8), and some critics have gathered from Jer. xi. 1-8 that Jeremiah joined the ranks of those who publicly supported this book in Jerusalem and elsewhere. To others this view appears in itself improbable. How can a man like Jeremiah have advocated any such reform as that was? It was a great, not a small, reform, but to be a preacher of Deuteronomy required a certain temper, which a prophet of the school of Isaiah could not possess. Besides, there is a famous passage (viii. 8, see R.V.) in which Jeremiah delivers a veihement attack upon the "scribes" (or as we might render, "bookmen") and their "false pen." If, as Wellhausen and Duhm suppose, this refers to Deuteronomy (i.e. the original Deuteronomy), the incorrectness of the theory referred to is proved. Even if we think that the phraseology of viii. 8 applies rather to a body of writings than to a single book, yet there is no good ground (xi. 1-8 and xxxiv. 12 being of doubtful origin) for supposing that Jeremiah would have excepted Deuteronomy from his condemnation.

Stages of his Development.—At first our prophet was not altogether a pessimist. He aspired to convince the better minds that the only hope for Israelites, as well as for Israel, lay in "returning" to the true Yahweh, a deity who was no mere national god, and was not to be cajoled by the punctual offering of costly sacrifices. When Jeremiah wrote iv. 1-4 he evidently considered that the judgment could even then be averted. Afterwards he became less hopeful, and it was perhaps a closer view of the manners of the capital that served to disillusion him. He began his work at Anathoth, but v. 1-7 (as Duhm points out) seems to come from one who has just now for the first time "run to and fro in the streets of Jerusalem," observing and observed. And what is the result of his expedition? That he cannot find a single just and honest man; that high and low, rich and poor, are all ignorant of the true method of worshipping God ("the way of Yahweh," v. 4). It would seem as if Anathoth was then not more corrupt than the capital, the moral state of which so shocked Jeremiah. And yet he does not really go beyond the great city-prophet Isaiah who calls the men of Jerusalem "a people of Gomorrah" (i. 10). With all reverence, an historical student has to deduct something from both these statements. It is true that commercial prosperity had put a severe strain on the old morality, and that contact with other

1 Davidson (Hast., D.B., ii. 570) mentions two views. (1) The foe might be a creation of his moral preconception and assigned northward, for which more usual view is that the Scythians (see Herod. i. 16, 103-106; iv. 1) are meant. Neither of these views is satisfactory. The passage v. 15-17 is too definite for (1), and as for (2), the idea of a threatened Scythian invasion lacks a sufficient basis. Those who hold (2) have to suppose that original references to the Scythians were retouched under the impression of Chaldean invasions. Hence Cheyne's theory of a north Arabian invasion from the land of Zaphon = Zebon (Gen. xxxvi. 2, 14), i.e. Ishmael. Cf. N. Schmidt, Ency. Bibl., Zebon; Scythians, § 8; Cheyne, Critica Biblica, part i. (Isaiah and Jeremiah).
peoples, as well as the course of political history, had appeared to lower the position of the God of Israel in relation to other gods. Still, some adherents of the old Israelitish moral and religious standards must have survived, only they were not to be found in the chief places of concourse, but as a rule in coteries which handed on the traditions of Amos and Isaiah in sorrowful retirement.

Danger of Book Religion.—Probably, too, even in the highest class there were some who had a moral sympathy with Jeremiah; otherwise we can hardly account for the contents of Deuteronomy, at least if the book "found" in the Temple at all resembled the central portion of our Deuteronomy. And the assumption seems to be confirmed by the respectful attitude of certain "elders of the land" in xxvi. 17 sqq., and of the "princes" in xxxvi. 19, 25, towards Jeremiah, which may, at any rate in part, have been due to the recent reform movement. If therefore Jeremiah almost without emotion that this revered language of Isaiah, he went too far. History shows that book religion has special dangers of its own.1 Nevertheless the same incorruptible adviser also shows that book religion may be necessary as an educational instrument, and a compromise between the two types of religion is without historical precedent.

Reaction: Opposition to Jeremiah.—This, however, could not as yet be recognized by the friends of prophecy, even though it seemed for a time as if the claims of book religion were rebuffed by facts. The death of the pious king Josiah at Megiddo in 608 B.C. dashed the high hopes of the "book-men," but meant no victory for Jeremiah. Its only result for the majority was a falling back on the earlier popular cultus of the Baal, and on the heathen customs introduced, or reintroduced, by Josiah's grandfather, Manasseh. Would that we possessed the section of the prophet's biography which described his attitude immediately after the news of the battle of Megiddo! Let us however, be thankful for what remains, notably for the detailed narratives in chs. xxvi. and xxxvi. The former is dated in the beginning of the reign of Jehoiakim, though Wellhausen suspects that the date is a mistake, and that the real occasion was the death of Josiah. The one clear-sighted patriot saw the full meaning of the tragedy of Megiddo, and for "prophesying against this city"—secured, as men thought, by the Temple (vii. 4)—he was accused by "the priests, the prophets, and all the people" of high treason. But the divinity which hedged a prophet saved him. The "princes," supported by certain "elders" and by "the people" (quick to change their leaders), succeeded in quashing the accusation and setting the prophet free. No king, be it observed, is mentioned. The latter narrative is still more exciting. In the fourth year of Jehoiakim (= the first of Nebuchadrezzar, xxv. 1) Jeremiah was bidden to write down "all the warnings that Yahweh had spoken to him against Jerusalem (so LXX, Vulg., and Syriac), and the LXX adds this vision: "N. Schmidt, Enzy. Bib. "Jeremiah (Book)," § 8, who, however, accepts the negative part of Cheyne's arguments.

Fall of the State.—Under Zedekiah the prophet was less fortunate. Such was the tension of feeling that the "princes," who were formerly friendly to Jeremiah, now took up an attitude of decided hostility to him. At last they had him consigned to a miry dungeon, and it was the king who (at the instance of the Cushite Ebed-melech) intervened for his relief, though he remained a prisoner in other quarters till the fall of Jerusalem (868 B.C.). Nebuchadrezzar, who is assumed to have heard of Jeremiah's constant recommendations of submission, gave him the choice either of going to Babylon or of remaining in the country (chs. xxxviii. seq.). He chose the latter and resided with Gedaliah, the native governor, at Mizpah. On the murder of Gedaliah he was carried to Mizraim or Egypt, or perhaps to the land of Mizrim in north Arabia—against his will (chs. xl.-xlii.). How far all this is correct we know not. The graphic style of a narrative is no sufficient proof of its truth. Conceivably enough the story of Jeremiah's journey to Egypt (or Mizrim) may have been imagined to supply a background for the artificial prophecies ascribed to Jeremiah in chs. xlvii.-l. A legend in the poetical passages has states that he was stoned to death at Daphnae, but the biography, though not averse from horrors, does not mention this.

A Patriot?—Was Jeremiah really a patriot? The question has been variously answered. He was not a Phocion, for he never became the tool of a foreign power. To say with Winckler that he was "a decided adherent of the Chaldean party" is to go beyond the evidence. He did indeed counsel submission, but only because his detachment from party gave him a clearness of vision (cf. xxxviii. 17, 18) which the politicians lacked. How he suffered in his upill history he has told himself (xxv. 10-21). In after ages the oppressed people saw in his love for Israel and his patient resignation their own realized ideal. "And Olnas said, This is the lover of the brethren, he who prayeth much for the people and the holy city, Jeremiah the prophet of God." (2 Macc. xiv. 14). And in proportion as the popular belief in Jeremiah rose, fresh prophecies were added to the book (notably in the section dealing with the fall of Jerusalem after seventy years) to justify it. Professor N. Schmidt has gone further into the character of this sympathetic prophet, Enzy. Bib. "Jeremiah," § 5.

Jeremiah's Prophecies.—It has been said above that our best authorities are Jeremiah's own prophecies. Which may these be? Before answering we must again point out (see also Isaiah) that the reception of the prophecies by the people is not an infallible test of their genuineness, and that the form and manner of their transmission is important. For example, it is certain that the form of the prophecies found in the Hebrew Bible to which we are accustomed bears little resemblance to the form in which they were originally uttered. The first step towards the form in which we have them is the oral traditions, which were written down at a very early period. It is true that the writing of the prophecies was not confined to the prophet himself, but was the work of some of his disciples and also of some of thescribes. The former, however, do not appear to have been very numerous, and the latter were probably not very numerous, and the latter were probably not the only ones who were at all familiar with the prophecies. The latter were probably not the only ones who were at all familiar with the prophecies.

2 Cheyne, Ency. Brit. (9th ed.), "Jeremiah," suggests after Grätz that the roll simply contained chs. xxvi., omitting the most obvious interpolations. For this view see N. Schmidt, Ency. Bib. "Jeremiah (Book)," § 8, who, however, accepts the negative part of Cheyne's arguments.
3 Driver, Introd. to the Lit. of the O.T. (6). p. 249.
Let us now listen to Duhm, who analyses the book into six groups of passages. These are (a) i.-xxv., the "words of Jeremiah." (i. 1); (b) xxvi.-xxxix. from Baruch's biography of Jeremiah; (c) xxx.-xxx., the book of the future of Israel and Judah; (d) xxxi.-xxxii., the "catastrophes of the nations"; (e) liii., historical appendix. Upon examining these groups we find that besides a prose letter (ch. xxxii.), about sixty poetic pieces may be Jeremiah's. A. Anthoth passages before the date specified in (a): i. 2; ii. 1; iii. 16; 2: 2-28; 3: 15; 4: 10; 6: 10-14; 9: 4-13; 10: 6-9; 12: 2-4; 13: 17-22; 14: 8; 15: 2-31; 16: 17, 20; 22: 6-26a; 27-30; 28: 7; 29: 11; 3: 4; 7: 4-7a; 8: 9, 13; 14-17; viii. 18-23; ix. 1-9 (short song); 10: 12; 16: 18-19; 21: 19, 20; 22: reign of Josiah, strong personal element. (e) xxi. 10 (Jehoahaz). xxiii. 13; probably too xii. 16; xlii. 7-12 (Jehoiakim). xlv. 18; lv. 6-8; lxv. 1-4; xlix. 12-13; 16: 13; 17; 18, 19; 20, 21a, 22-25a, 26, 27 (later, Jehoiakim). xliii. 24; xlix. 28 (Jehoachin). (f) Later poems, vi. 2-10; xv. 9-5; xvi. 5-7; xvii. 13-17; xlix. 10; xlv. 15; xliii. 20-21; xliii. 25; xlii. 19, 20, 21; xlii. 14, 16, 16; xliii. 1, 14-18; xlix. 17, 18; xlv. 1-3; xlix. 24; assigned to the close of Zedekiah's time.

Two Recensions of the Text.-It has often been said that we have virtually two recensions of the text, that represented by the Septuagint and the Massoretic text, and critics have taken different sides, for one and some for the other. "Recension," however, is a bad term; it implies that the two texts which undeniably exist were the result of a deliberate and distinct attempt at distinguishing principles. Such, however, is not the case. It is true that "there are (in the LXX.) many omissions of words, sentences, verses and whole passages, in fact, that altogether about 2700 words are wanting, or their equivalents, and these omissions have been so scattered as to show that the translators were not guided in their omissions by any fixed rules. It is admitted that the scribes who produced the Hebrew basis of the Septuagint version, conscious of the unsettled state of the text, did not shrink from what they considered a justifiable simplification. But there are other passages of the Greek text which show that the Hebrew text proceeds allowed themselves to fill up and to repeat without any sufficient warrant. In each case in which there is a genuine difference of reading between the two texts, it is for the critical text to decide which is the more reliable. That the Greek translator has, however, read the Hebrew text proceeds allowed themselves to fill up and to repeat without any sufficient warrant. In each case in which there is a genuine difference of reading between the two texts, it is for the critical text to decide which is the more reliable. That the Greek translator has carried out this principle, to the extent that he has carried out the principle of simplification, is shown everywhere in the text. In the case of the LXX., the simplicity of the text is so far gone that it is difficult to believe that it was written by a people who had a knowledge of the text. In the case of the Massoretic text, the simplicity of the text is so far gone that it is difficult to believe that it was written by a people who had a knowledge of the text.

The writer was a Jew, who was that he should be the greater, to the extent of being able to understand the text by the date of the Babylonian exile. The fact that Jeremiah (xxxi. 1 sq.) was known to have written a letter of this nature, naturally suggested to a Jew, possibly of the 13th century, i.e., or earlier, the idea of a second epistolary undertaking, and other passages of Jeremiah's prophecy (x. 1-12; xxi. 4-23) may have determined also its general character and contents.

The writer warned the exiles that they were to remain in captivity for seven generations; that they would there see the worship paid to idols, from all participation in which they were to hold aloof; for that idols were nothing save the work of men's hands, without the powers of speech, hearing or self-preservation. They could not bless their worshippers even in the smallest concerns of life; they were indifferent to moral qualities, and were of less value than the commonest household objects, and finally, "with rare irony, the author compared an idol to a scarecrow (v. 70), impotent to protect, but deluding to the imagination." (MARSHALL.)

The date of the epistle is uncertain. It is believed by some scholars to have been written in 2 Macc. ii. 2, which says that Jeremiah charged the exiles "not to forget the statutes of the Lord, neither

1. i. 59-64a, however, is a specimen of imaginative "Midrashic" history. See Giesebrecht's monograph.

JEREMIAH—JERICHO 325

JERÉZ DE LA FRONTERA, (formerly XERES), a town of southern Spain, in the province of Cadiz, about the bank of the river Guadalete, near the Seville-Cadiz railroad, about 20 m. from the Atlantic coast. (Pop. 1901, 63,473.) Jeréz is built in the midst of an undulating plain of great fertility. Its whitewashed houses, clean, broad streets, and squares planted with trees extend far beyond the limits formerly enclosed by the Moorish walls, almost entirely demolished. The principal buildings are the 15th-century church of San Miguel, the 17th-century collegiate church with its lofty bell-tower, the 16th-century town-hall, superseded, for official purposes, by a modern edifice, the bull-ring, and many hospitals, charitable institutions and schools, including academies of law, medicine and commerce. But the most characteristic features of Jeréz are the huge bodegas, or wine-lodges, for the manufacture and storage of sherry, and the vineyards, covering more than 20,000 acres, which surround it on all sides. The town is an important market for grain, fruit and livestock, but its staple trade is in wine. Sherry is also produced in other districts, but takes its name, formerly written in English as sherris or xeres, from Jeréz. The demand for sherry diminished very greatly during the last quarter of the 19th century, especially in England, which had been the chief consumer. In 1872 the sherry shipped from Cadiz to Great Britain alone was valued at £2,500,000; in 1902 the total export hardly amounted to one-fifth of this sum. The wine trade, however, still brings a considerable profit, and few towns of southern Spain display greater commercial activity than Jeréz. In the earlier part of the 18th century Jeréz was occasionally used as a market for yellow fever, but it was rendered comparatively healthy when in 1860 an aqueduct was opened to supply pure water. Strikes and revolutionary disturbances have frequently retarded business in more recent years.

Jeréz has been variously identified with the Roman Municipium Sisceria; with Asido, perhaps the original of the Moorish Sheriff; and with Hasta Regia, a name which may survive in the designation of La Mesa de Asta, a neighbouring hill. Jeréz was taken from the Moors by Ferdinand III. of Castile (1217-1252); but it was twice recaptured before Alphonso X. finally occupied it in 1264. Towards the close of the 14th century it received the title de la Frontera, i.e. "of the frontier," common to several towns on the Moorish border.

JÉRÉZ DE LOS CABALLEROS, a town of south-western Spain, in the province of Badajoz, picturesquely situated on a height overlooking the river Arda, a tributary of the Guadiana, 32 m. E. of the Portuguese frontier. (Pop. 1900, 10,271.) The old town is surrounded by a Moorish wall with six gates; the newer portion is well and regularly built, and planted with numerous orange and other fruit trees. Owing to the lack of railway communication Jeréz is of little commercial importance; its staple trade is in agricultural produce, especially in ham and bacon from the large herds of swine which are reared in the surrounding oak forests. The town is said to have been founded by Alphonso IX. of Leon in 1229; in 1323 it was extended by his son St Ferdinand, who gave it to the knights templar. Hence the name Jeréz de los Caballeros, "Jeréz of the knights."

JERICHÓ (תַּיִּק, יִרְיחֹא), a word of disputed meaning, whether "fragrant" or "moon [god] city"); an important town in the Jordan valley some 5 m. N. of the Dead Sea. The references to it in the Pentateuch are confined to a few geographical indications of the latitude of the trans-Jordanic camp of the Israelites in Moab before their crossing of the river. This was the first Canaanite city to be attcked and reduced by the victorious Israelites. The story of its conquest is
His Sundays were spent in the catacombs in discovering graves of the martyrs and deciphering inscriptions. Pope Liberius baptized him in 360; three years later the news of the death of the emperor Julian came to Rome, and Christians felt relieved from a great dread.

When his student days were over Jerome returned to Strido, but did not stay there long. His character was formed. He was a scholar, with a scholar's tastes and cravings for knowledge, easily excited, bent on scholarly discoveries. From Strido he went to Aquileia, where he formed some friendships among the monks of the large monastery, notably with Rufinus, with whom he was destined to quarrel bitterly over the question of Origen's orthodoxy and worth as a commentator; for Jerome was 'a man who always sacrificed a friend to an opinion, and when he changed sides in a controversy expected his acquaintances to follow him. From Aquileia he went to Gaul (365-370), visiting in turn the principal places in that country, from Narbonne and Toulouse in the south to Treves on the north-east frontier. He stayed some time at Treves studying and observing, and it was there that he first began to think seriously upon sacred things. From Treves he returned to Strido, and from Strido to Aquileia, where, together with Aquila, he translated the 70th Psalm and composed there his first original tract, \textit{De muliere septies percussa}, in the form of a letter to his friend Innocentius. Some dispute caused him to leave Aquileia suddenly; and with a few companions, Innocentius, Evagrius, and Heliodorus being among them, he started for a long tour in the East. The epistle to Rufinus (3rd in Vallarsi's enumeration) tells us the route. They went through Thrace, visiting Athens, Bithynia, Galatia, Pontus, Cappadocia and Cilicia, to Antioch, Jerome observing and making notes as they went. He was interested in the theological disputes and schisms in Galatia, in the two languages spoken in Cilicia, &c. At Antioch the party remained some time. Innocentius died of a fever, and Jerome was dangerously ill. This illness induced a spiritual change, and he resolved to renounce whatever kept him back from God. His greatest temptation was the study of the literature of pagan Rome. In a dream Christ reproached him with caring more to be a Ciceronian than a Christian. He disliked the uncouth style of the Scriptures. "O Lord," he prayed, "thou knowest that I have been an eloquent one of Thy MSS, I desire to be a resolve henceforth to devote his scholarship to the Holy Scripture. "David was to be henceforth his Simonides, Pindar and Alcaeus, his Flaccus, Catullus and Severus." Fortified by these resolves he betook himself to a hermit life in the wastes of Chalcis, S.E. from Antioch (373-379). Chalcis was the Thebaid of Syria. Great numbers of monks, each in solitary cell, spent lonely lives, scorched by the sun, ill-clad and scantily fed, pondering on portions of Scripture or copying MSS. to serve as objects of meditation. Jerome at once set himself to such scholarly work as the place afforded. He discovered and copied MSS., and began to study Hebrew. There also he wrote the life of St Paul of Thebes, probably an imaginary tale embodying the facts of the monkish life around him. Just then the Meletian schism, which arose over the relation of the orthodox to Arian bishops and to those baptized by Arians, disturbed the church at Antioch (see \textit{MELETUS OF ANTIOCH}), and Jerome as usual eagerly joined the fray. Here as elsewhere he had but one rule to guide him in matters of doctrine and discipline—the practice of Rome and the West. For he is in some sense a hermit who is daringly original in points of scholarly criticism, as a ruthless partisan in all other matters; and, having discovered what was the Western practice, he set tongue and pen to work with his usual bitterness (\textit{Alleratio luciferian et orthodoxi}).

At Antioch in 379 he was ordained presbyter. From there he went to Constantinople, where he met with the great Eastern scholar and theologian Gregory of Nazianzus, and with his aid tried to perfect himself in Greek. The result of his studies there was the translation of the \textit{Chronicon} of Eusebius, with a continuation 1 of twenty-eight homilies of Origen on Jeremiah and Ezekiel, and of nine homilies of Origen on the visions of Isaiah.

In 381 Meletius died, and Pope Damasus interfered in the dispute at Antioch, hoping to end it. Jerome was called to Rome in 382 to give help in the matter, and was made secretary during the investigation. His work brought him into intercourse with this great pontiff, who soon saw what he could best do, and how his vast scholarship might be made use to the church. Damasus suggested to him to revise the "Old Latin" translation of the Bible; and to this task he henceforth devoted his great abilities. At Rome were published the Gospels (with a dedication to Pope Damasus, an explanatory introduction, and the canons of Eusebius), the rest of the New Testament and the version of the Psalms from the Septuagint known as the \textit{Psalterium romanum}, which was followed (c. 388) by the \textit{Psalterium gallicanum}, based on the Hexaplar Greek text. These scholarly labours, however, did not take up his whole time, and it was almost impossible for Jerome to be long anywhere without getting into a dispute. He was a zealous defender of that monastic life which was beginning to take such a large place in the church of the 4th century, and he found enthusiastic disciples among the Roman ladies. A number of widows and maiden sisters formed the house of Maire, and brought the Scriptures with him; he taught them Hebrew, and preached the virtues of the celibate life. His arguments and exhortations may be gathered from many of his epistles and from his tract \textit{Adversus Helvidium}, in which he defends the perpetual virginity of Mary against Helvidius, who maintained that she bore children to Joseph. His influence over these ladies alarmed their relatives and excited the suspicions of the regular priesthood and of the populace, but while Pope Damasus lived Jerome remained secure. Damasus died, however, in 384, and was succeeded by Siricius, who did not show much friendship for Jerome. He found it expedient to leave Rome, and set out for the East in 385. His letters (especially Ep. 45) are full of outcries against his enemies and of indignant protestations that he had done nothing unbecoming a Christian, that he had taken no money, nor gifts great nor small, that he had no delight in silken attire, sparkling gems or gold ornaments, that no matron moved him unless by penitence and fasting, &c. His route is given in the third book \textit{In Rufinum}; he went by Rhegium and Cyprus, where he was entertained by Bishop Ephremus, the future Bishop of Antioch. There he was joined by two wealthy Roman ladies, Paula, a widow, and Eustochium, her daughter, one of Jerome's Hebrew students. They came accompanied by a band of Roman maidens vowed to live a celibate life in a nunnery in Palestine. Accompanied by these ladies Jerome made the tour of Palestine, carefully noting with a scholar's keenness the various places mentioned in Holy Scripture. The results of this journey may be traced in his translation with emendations of the book of Eusebius on the situation and names of Hebrew places, written probably three years afterwards, when he had settled down at Bethlehem. From Palestine Jerome and his companions went to Egypt, remaining some time in Alexandria, and they visited the convents of the Nitrian desert. Jerome's mind was evidently full of anxiety about his translation of the Old Testament, for we find him in his letters recording the conversations he had with learned men about disputed readings and doubtful renderings; the blind Didymus of Alexandria, whom he heard interpreting Hosea, appears to have been most useful. When they returned to Palestine they all settled at Bethlehem, where Paula built four monasteries; the last in honor of Jerome. There he was at the head of the nunneries until her death in 404, when Eustochium succeeded her; Jerome presided over the fourth monastery. Here he did most of his literary work and, throwing aside his unfinished plan of a translation from Origen's Hexaplar text, translated the Old Testament directly from the Hebrew, with the aid of Jewish scholars. He mentions a rabbi from Lydda, a rabbi from Tiberias, and above all rabbi Ben Anina, who came to him by night secretly for fear of the Jews. Jerome was not familiar enough with Hebrew to be able to dispense with such assistance. and he makes the synagogue responsible for the

fully narrated in the first seven chapters of Joshua. There must be some little exaggeration in the statement that Jericho was totally destroyed, for the same large groups of ephraimites were left among the towns of Benjamin (Jos. xvii. 21) must have remained; but that it was small is shown by the fact that it was deemed a suitable place for David's ambassadors to retire to after the indignities put upon them by Hanun (2 Sam. x. 5; 1 Chron. xix. 5). Its refortification was due to a Bethelite named Hiel, who endeavoured to avert the curse of Joshua by offering his sons as sacrifices at certain stages of the work (1 Kings xvii. 34). After this event it grew again into importance and became the site of a college of prophets (2 Kings ii. 4 sqq.) for whom Elisha "healed" its poisonous waters. The principal spring in the neighbourhood of Jericho still bears (among the foreign residents) the name of Elisha; the natives call it, Ain es-Sultan, or "Sultan's spring." To Jericho the victorious Israelite marauders magnanimously returned their Judahite captives at the bidding of the prophet Oded (2 Chron. xxxiii. 15). Here was fought the last fight between the Babylonians and Zedes-kaiah, wherein the kingdom of Judah came to an end (2 Kings xxv. 5; Jer. xxxix. 5, 6 sqq.). In the New Testament Jericho is the site where Elisha restored the life of the Syrian officer Timaeus (Matt. xx. 29; Mark x. 46; Luke xviii. 33) and Zacchaeus (Luke xix. 1) and with the good Samaritan (Luke x. 30).

The extra-Biblical history of Jericho is as disastrous as are the records preserved in the Scriptures. Bucchides, the general of the Syrians, captured and fortified it (1 Macc. ix. 50), Aristobulus (Jos. Ant. XIV. i. 2) also took it, Pompey (ib. XIV. i. 4) encamped here on his way to Jerusalem. Before Herod its inhabitants ran away (ib. XV. xvi. 4) and before Vespasian (Wars, iv. viii. 2). The reason of this lack of warfare quality was not only the enervating effect of the great heat of the depression in which the city lies, which has the same effect on the handful of degraded humanity that still occupies the ancient site.

Few places in Palestine are more fertile. It was the city of palm trees of the ancient record of the Israelite invasion preserved in part in Judg. i. 16; and Josephus speaks of its fruitfulness with wonder (Wars IV. 8. 3). Even now with every possible hindrance in the way of cultivation it is an important centre of fruit-growing.

The modern er-Riha is a poor squall village of, it is estimated, about 300 inhabitants. It is not built exactly on the ancient site. Indeed, the site of Jericho has shifted several times. The mound of Tell es-Sultan, near "Elisha's Fountain," north of the modern village, no doubt covers the Canaanite town. There are two later sites of Roman or Herodian date, one north, the other west, of this. It was probably destroyed by each of these successors. An old tower attributed to them is to be seen in the village, and in the surrounding mountains are many remains of early monasticism. Aqueducts, ruined sugar-mills, and other remains of ancient industry abound. In the modern village is a small mosque, and the private property of the Turkish of Syria. In 1907-8 the Canaanite Jericho was excavated under the direction of Prof. Sellin of Vienna.

JERKIN, a short close-fitting jacket, made usually of leather, and without sleeves, the typical male upper garment of the 16th and 17th centuries. The origin of the word is unknown. The Dutch word jark, a child's frock, often taken as the source, is modern, and represents neither the sound nor the sense of the English word. In architecture the term "jerk-roofed," applied, probably with some obscure connexion with the garmen, is a particular form of gable end, the gable being cut off half way up the roof and sloping back like a "hipped roof" to the edge.

JEROBOAM (Heb. yārōb'ām, apparently "Am [the clan, here perhaps a divine name] contends"); LXX. υροβοάμ, the name of two kings in the Bible.

1. The first king of (north) Israel after the disruption (see Solomon). According to the traditions of his early life (1 Kings xi. 26 sqq. and LXX.), he was an Ephraimite who for his ability was placed over the force of Ephraim and Manasseh. Having subsequently incurred Solomon's suspicions he fled to Shishak, king of Egypt, and remained with him until Reho-boa'm's accession. When the latter came to be made king at Shechem, the old religious centre (see Abimelech), hopes were entertained that a more lenient policy would be introduced.

But Rehoboam refused to depart from Solomon's despotic rule, and was this much over Israel, a word of the people. He was stoned to death and Rehoboam realizing the temper of the people fled to Jerusalem and prepared for war. Jeroboam became the recognized leader of the northern tribes.1 Conflicts occurred (1 Kings xiv. 30), but no details are preserved except the late story of Rehoboam's son Abijah in 2 Chron. xiii. Jeroboam's chief achievement was the fortification of Shechem (his new capital) and of Penuel in east Jordan. To counteract the influence of Jerusalem he established golden calves at Dan and Bethel, an act which to later ages was as gross a piece of wickedness as his rebellion against the legitimate dynasty of Judah. No notice has survived of Shishak's invasion of Israel (see REHOBOAM), and after a reign of twenty-two years Jeroboam was succeeded by Nadab, whose violent death two years later brought the whole house of Jeroboam to an end.

The history of the separation of Judah and Israel in the 10th century B.C. was written from a strong religious standpoint at a date considerably later than the event itself. The visit of Abijah to Shiloh (xi. 29-30), to announce symbolically the rending of the kingdom, replaces some account of a rebellion in which Jeroboam "lifted up his hand" (v. 27) against Solomon. To such an account, not to the incident of Abijah at the cloak, his flight (v. 40) is the narrative allusion.

The sepulchre of Jeroboam near Jerusalem (ch. xiv.). is not in the original LXX., but another version of the same narrative appears at xii. 24 (LXX.), in which there is no reference to a previous promise to Jeroboam through Abijah, but the prophet was an actual name (cp. 1 Kings xiv. 21). But Jeroboam's flight of Jeroboam's failure to overcome north Israel. (See W. R. Smith, Old Test. in Jewish Church (2nd ed.), 117 sqq.; Winckler, Alte Test. Untersuch. 12 sqq., and J. Skinner, Century Bible: Kings, pp. 443 sqq.)

2. JEROBOAM, son of Joash (2) a contemporary of Azariah king of Judah. He was one of the greatest of the kings of Israel. He succeeded in breaking the power of Damascus, which had long been devastating his land, and extended his kingdom from Hamath on the Orontes to the Dead Sea. The brief summary of his achievements preserved in 2 Kings xiv. 23 sqq. may be supplemented by the original writings of Amos and Hosea.2 There appears to be an allusion in Amos vi. 13 to the recovery of Ashteroth-Karnaim and Lodebar in E. Jordan, and the conquest of Moab (Isa. xxi. 7 seq.) is often interpreted as referring to this reign. After a period of prosperity, internal disturbances broke out and the northern kingdom hastened to its fall. Jeroboam was succeeded by his son Zechariah, who after six months was killed at Ibilem (so read in 2 Kings xv. 10; cp. ix. 27, murder of Ahaziah) by Shallum the son of Jabesh—i.e. possibly of Jabesh-Gilead—who a month later fell to Menahem (g.v.).

(S. A. C.)

See, further, JWS §§ 7, 9 and §§ 12, 13.

JEROME, ST (Hieronymus, in full Eusebius Sophronius Hieronymus) (c. 340-420), was born at Strido (modern Strigov?), a town on the border of Dalmatia fronting Pannonia, destroyed by the Goths in a.D. 377. What is known of Jerome has mostly been recovered from his own writings. He appears to have been born about 340; his parents were Christians, orthodox though living among people mostly Arians and wealthy. He was at first educated at home, Bonosus, a life-long friend, sharing his youthful studies, and was afterwards sent to Rome. Donatus taught him grammar and explained the Latin poets. He added learning to literature, and listened to the Roman advocates pleading in the Forum. He went to the schools of philosophy, and heard lectures on Plato, Diogenes, Clitomachus and Carneades; the conjunction of names show how philosophy had become a dead tradition.

1 On the variant traditions in the Hebrew text and the Septuagint, see the commentaries on Kings.

2 See also JONAH. In 2 Kings xiv. 28, "Hamath, which had belonged to Judah" (R.V.) is incorrect; Winckler (Kritisches u. archäologisches, 2nd ed., 1912) suspects a reference to Israel's overlords, possibly Judah; Burney (Heb. Text of Kings) reads: "how he fought with Damascus and how he turned away the wrath of Yahweh from Israel"; see also Ency. Bibl. col. 2406 n. 4, and the commentaries.
accuracy of his version: "Let him who would challenge aught in this translation," he says, "ask the Jews." The result of all this labour was the Latin translation of the Scriptures which, in spite of much opposition from the more conservative party in the church, afterwards became the Vulgate or authorized version; but the Vulgate as we have it now is not exactly Jerome's Vulgate, for it suffered a good deal from changes made under the influence of the older translations; the text became very corrupt during the middle ages, and in particular all the Apocrypha, except Tobit and Judith, which Jerome translated from the Chaldee, were added from the older versions. (See BIBLE: O.T. Versions.)

Notwithstanding the labour involved in translating the Scriptures, Jerome found time to do a great deal of literary work, and also to indulge in violent controversy. Earlier in life he had a great admiration for Origen, and translated many of his works, and this lasted after he had settled at Bethlehem, for in 389 he translated Origen's homilies on Luke; but he came to change his opinion and wrote violently against two admirers of the great Alexandrian scholar, John, bishop of Jerusalem, and his own former friend Rufinus.

At Bethlehem he also found time to finish Didymi de spiritu sancto liber, a translation begun at Rome at the request of Pope Damasus, to denounce the revival of Gnostic heresies by Jovinianus and Vigilantius (Adv. Jovinianum lib. II. and Contra Vigilantianum liber), and to repeat his admiration of the hermit life in his Vita S. Hilarios eremitae, in his Vita Machi monachi captivi, in his translations of the Rule of St Pachomius (the Benedict of Egypt), and in his S. Pachomii et S. Theodorici epistolae et serba mystica. He also wrote at Bethlehem De viris illustribus sive de scriptoribus ecclesiasticis, a church history in biographies, ending with the life of the author; De nominibus Hebraicis, compiled from Philo and Origen; and De situ et nominatibus locorum Hebraicorum. At the same place, too, he wrote Quaestiones Hebraicae on Genesis, and a series of commentaries on Isaiah, Jeremiah, Ezekiel, Daniel, the Twelve Minor Prophets, Matthew and the Epistles of St Paul. About 394 Jerome came to know Augustine, for whom he held a high regard. He engaged in the Pelagian controversy with more than even his usual bitterness (Dialogi contra pelagianos); and it is said that the violence of his invective so provoked his opponents that an armed mob attacked the monastery, and that Jerome was forced to flee and to remain in concealment for nearly two years. He returned to Bethlehem in 418, and after a lingering illness died on the 30th of September 420.

Jerome "is one of the few Fathers to whom the title of Saint appears to have been given in recognition of services rendered to the Church rather than for eminent sanctity. He is the great Christian scholar of his age, rather than the profound theologian or the wise guide of souls." His great work was the Vulgate, but his achievements in other fields would have sufficed to distinguish him. His commentaries are valuable because of his knowledge of Greek and Hebrew, his varied interests, and his comparative freedom from allegory. To him we owe the distinction between canonical and apocryphal writings; in the Prologus Galeatus prefixed to his version of Samuel and Kings, he says that the church reads the Apocrypha 1 for the edification of the people, not for confirming the authority of ecclesiastical doctrines. He was a pioneer in the fields of patrology and of biblical archaeology. In controversy he was too fond of mingling personal abuse with legitimate argument, and this weakness mars his letters, which were held in high admiration in the middle ages, and are valuable for their history of the man and his times. Luther in his Table Talk condemns them as dealing only with fasting, meats, virginity, &c. "If he only had insisted upon the works of faith and performed them! But he teaches nothing either about faith, or love, or hope, or the works of faith." 2

Additional literature is cited in Hauck-Herzog's Realencyk. für prot. Theol. viii. 42.

1 Compare the critical edition of these two works in Lagarde's Onomastica sacra (Götting, 1879).

2 See Lagarde's edition appended to his Genesis Grace (Leipzig, 1868).
before the ecclesiastical authorities. He was accused of spreading Wycliffe's doctrines, and his general conduct at Oxford, Paris, Cologne, Prague and Osen was censured. Jerome vowed that he would not leave Vienna till he had cleared himself from the accusation of heresy. Shortly afterwards he secretly left Vienna, declaring that this promise had been forced on him. He went first to Vöslau in Moravia, and then to Prague. In 1412 the representatives of Pope Gregory XII, publicly offered indulgences for sale at Prague, wishing to raise money for the pope's campaign against King Ladislaus of Naples, an adherent of the antipope of Avignon. Contrary to the wishes of the archbishop of Prague a meeting of the members of the university took place, at which both Hus and Jerome spoke strongly against the sale of indulgences. The fiery eloquence of Jerome, which is noted by all contemporary writers, obtained for him greater success even than that of Hus, particularly among the younger students, who conducted him to triumph in his dwelling-place. Shortly afterwards Jerome proceeded to the Papal Legation of King Wladislaus. His courteous manners and his eloquence here also caused him to become very popular, but he again met with strong opposition from the Roman Church. While traveling with the grand-duke Lithold of Lithuania Jerome took part in the religious services of the Greek Orthodox Church.

During his stay in northern Europe Jerome received the news that Hus had been summoned to appear before the council of Constance. He wrote to his friend advising him to do so and adding that he would also proceed there to afford him assistance. Contrary to the advice of Hus he arrived at Constance on the 4th of April 1415. Advised to fly immediately to Bohemia, he succeeded in reaching Hirschau, only 25 m. from the Bohemian frontier. He was there arrested and brought back to chains to Constance, where he was examined by judges appointed by the council. His courage failed him in prison and, to regain his freedom, he renounced the doctrines of Wycliffe and Hus. He declared that he had been justly accused. A letter was addressed on the 12th of August 1415 to Lacey, lord of Kravat—

the only literary document of Jerome that has been preserved—

that “the dead man (Hus) had written many false and harmful things.” Full confidence was not placed in Jerome's recantation. He claimed to be heard at a general meeting of the council, and this was granted to him. He now again maintained all the theorems which he had formerly advocated, and, after a trial that lasted only one day, he was condemned to be burnt as a heretic. The sentence was immediately carried out on the 30th of May 1416, and he met his death with fortitude. As Poggio Bracciolini writes, “none of the Stoics with so constant and brave a soul endured death, which he (Jerome) seemed rather to long for.” The eloquence of the Italian humanist has bestowed a not entirely merited aureole on the memory of Jerome of Prague.

See all works dealing with Hus; and indeed all histories of Bohemia contain ample pounts of the life of Jerome. The Life of John Wycliffe, Lord Cobham, John Huss, Jerome of Prague and 16th to 18th by William Gilpin (London, 1765) still has a certain value. (L.)

JERROLD, DOUGLAS WILLIAM (1823-1857), English dramatist and man of letters, was born in London on the 3rd of January 1803. His father, Samuel Jerrold, actor, was at that time lessee of the little theatre of Wilby near Cranbrook in Kent, but in 1807 he removed to Sheerness. There, among the blue-jackets who swarmed in the port during the war with France, Douglas grew into boyhood. He occasionally took a child's part on the stage, but his father's profession had little attraction for the boy. In December 1813 he joined the guardship "Namur," where he had Jane Austen's brother as captain, and he served as a midshipman until the peace of 1815. He saw nothing of the war save a number of wounded soldiers from Waterloo; but till his dying day there lingered traces of his early passion for the sea. The peace of 1815 ruined Samuel Jerrold; there was no more prize money. On the 1st of January 1816 he removed with his family to London, where the ex-midshipman began the world again as a printer's apprentice, and in 1819 became a compositor in the printing-office of the Sunday Monitor. Several short papers and copies of verses by him had already appeared in the sixpenny magazines, and one evening he dropped into the editor's box a criticism of the opera Der Freischiitz. Next morning he received his own copy to set up, together with a flattering note from the editor, requesting further contributions from the anonymous author. Thenceforward Jerrold was engaged in journalism. In 1821 a comedy that he had composed in his fifteenth year was brought out at Sadler's Wells theatre, under the title More Frightened than Hurt. Other pieces followed, and in 1825 he was engaged for a few pounds weekly to produce dramas and farces to the order of David of the Coburg theatre. In the autumn of 1824 the "little Shake speare in a camlet cloak," as he was called, married Mary Swann; and, while he was engaged with the drama at night, he was steadily pushing his way as a journalist. For a short while he was part proprietor of a small Sunday newspaper. In 1829, through a quarrel with the exacting David, Jerrold left the Coburg; and his three-act melodrama, Black-eyed Susan; or, All for Don Juan was brought out by R. W. Elliston at the Surrey theatre. The success of the piece was enormous. With its free gallant sea-flavour, it took the town by storm, and "all London went over the water to see it." Elliston made a fortune by the piece; T. P. Cooke, who played William, made his reputation; Jerrold received about £60 and was engaged as dramatic author at five pounds a week. But his fame as a dramatist was achieved. In 1830 it was proposed that he should adapt something from the French for Drury Lane. "No," was his reply, "I shall come into this theatre as an original dramatist or not at all." The Bride of Ludgate (December 8, 1831) was the first of a number of his plays produced at Drury Lane. The other patent houses threw their doors open to him also (the Adelphi had already done so); and in 1836 Jerrold became co-manager of the Strand theatre with W. J. Hammond, his brother-in-law. The venture was not successful, and the partnership was dissolved. While it lasted Jerrold wrote his only tragedy, The Passion of Ghastlig (1838), with some success; but it did not bring him out any very marked success. He continued to write sparkling comedies till 1854, the date of his last piece, The Heart of Gold.

Meanwhile he had won his way to the pages of numerous periodicals—before 1830 of the second-rate magazines only, but after that to those of more importance. He was a contributor to the Monthly Magazine, Blackwood's, the New Monthly, and the Athenaeum. To Punch, the publication which of all others is associated with his name, he contributed from its second number in 1841 till within a few days of his death. He founded and edited for some time, though with indifferent success, the Illuminated Magazine, Jerrold's Shilling Magazine, and Douglas Jerrold's Weekly Newspaper; and under his editorship Lloyd's Weekly Newspaper rose from almost nonentity to a circulation of 120,000. The history of his later years is little more than a catalogue of his literary productions, interrupted now and again by brief visits to the Continent or to the country. Douglas Jerrold died at his house, Kilburn Priory, in London, on the 8th of June 1857.

Jerrold's figure was small and spare, and in later years bowed almost to deformity. His features were strongly marked and expressive from the thin humorous lips to the keen blue eyes gleaming from beneath the shaggy eyebrows. He was brisk and active, with the careless bluntness of a sailor. Open and sincere, he concealed neither his anger nor his pleasure; to his simple frankness all polite duplicity was distasteful. The cynical side of his nature he kept for his writings; in private life his hand was always open. In politics Jerrold was a Liberal, and he gave eager sympathy to Kossuth, Mazzini and Louis Blanc. In social politics especially he took an eager part; he never tired of denouncing the horrors of war, the luxury of bishops, and the iniquity of capital punishment.

Douglas Jerrold is now perhaps better known from his reputation as a brilliant wit in conversation than from his writings. As a dramatist he was very popular, though his plays have not kept the stage. He dealt with rather humber forms of social life than had commonly been represented on the boards. He was one of the first and certainly one of the most successful of those
JERRY—

who in defence of the native English drama endeavoured to stem the tide of translation from the French, which threatened in the 19th century altogether to drown original native talent. His skill in construction and his mastery of epigram and brilliant dialogue are well exemplified in his comedy, Time Works Wonders (Haymarket, April 26, 1845). The tales and sketches which form the bulk of Jerrold's collected works vary much in skill and interest; but, although there are evident traces of their having been composed from week to week, they are always marked by keen satirical observation and pungent wit.

Among the best known of his numerous works are: Men of Character (1838), including "Job Pippin: The man who couldn't help it," a collection of the same kind; Cakes and Ale (2 vols., 1842), a collection of short papers and whimsical stories; some more serious novels—The Story of a Feather (1844), The Chronicles of Clynoovron (1846), A Man made of Money (1849), and St Giles and St James (1851); and various Series of papers reprinted from Punch, Punch's Letters to his Son (1843), Punch's Complete Letter-sitter (1815), and the famous Mrs Caudle's Curtain Lectures (1846).

See W. B. Jerrold, Life and Remains of Douglas Jerrold (1880).

A collected edition of his writings appeared in 1851-1854, and The Works of Douglas Jerrold, with a memoir by his son, W. B. Jerrold, in 1863-1864; but neither is complete. Among the numerous selections from his tales and witicisms are two edited by his grandson, Walter Jerrold, Bow's Mots of Charles Dickens and Douglas Jerrold (ed. 1904), and The Essays of Douglas Jerrold (1903), illustrated by H. M. Broek. See also The Wit and Opinions of Douglas Jerrold (1858), edited by W. B. Jerrold.

His eldest son, William Blanchard Jerrold (1826-1884), English journalist and author, was born in London on the 23rd of December 1826, and abandoning the artistic career for which he was educated, began newspaper work at an early age there. He was appointed Crystal Palace commissioner to Sweden in 1833, and wrote A Brage-Beaker with the Swedes (1854) on his return. In 1855 he was sent to the Paris exhibition as correspondent for several London papers, and from that time he lived much in Paris. In 1857 he succeeded his father as editor of Lloyd's Weekly Newspaper, a post which he held for twenty-six years. During the Civil War in America he strongly supported the Union, and in 1862 was appointed assistant in the United States Navy. Three of his leading articles were reprinted and placarded in New York by the federal government. He was the founder and president of the English branch of the international literary association for the assimilation of copyright laws. Four of his plays were successfully produced on the London stage, the popular farce Cool as a Cucumber (Lyceum 1851) being the best known. His French experiences resulted in a number of books, most important of which is his Life of Napoleon III. (1874). He was occupied in writing the biography of Gustave Doré, who had illustrated several of his books, when he died on the 10th of March 1884.

Among his books are A Story of Social Distinction (1848), Life and Remains of Douglas Jerrold (1859), Up and Down in the World (1863), The Children of Latentia (1864), Cent per Cent (1871), At Home in Paris (1872), The Best of all Good Company (1871-1873), and The Life of George Cruikshank (1882).

JERRY, a short form of the name Jeremiah, applied to various common objects, and more particularly to a machine for finishing cloth. The expression "jerry-built" is applied to houses built badly and of inferior materials, and run up by a speculative builder. There seems to be no foundation for the assertion that this expression was occasioned by the work of a firm of Liverpool builders named Jerry.

JERSEY, EARLS OF. Sir Edward Villiers (c. 1656-1711), son of Sir Edward Villiers (1620-1629), of Richford, Surrey, was created Baron Villiers and Viscount Villiers in 1691 and earl of Jersey in 1697. His grandfather, Sir Edward Villiers (c. 1585-1626), master of the mint and president of Munster, was half-brother of George Villiers, 1st duke of Buckingham, and of Christopher Villiers, 1st earl of Anglesey; his sister was Elizabeth Villiers, the mistress of William III., and afterwards countess of Orkney. Villiers was knight-marshal of the royal household in succession to his father; master of the horse to Queen Mary; and lord chamberlain to William III. and Queen Anne. In 1690 he represented his country at the congress of Ryswick; he was ambassador at the Hague, and after becoming an earl was ambassador in Paris. In 1699 he was made secretary of state for the southern department, and on three occasions he was one of the lords justices of England. In 1704 he was dismissed from office by Anne, and after this event he was concerned in some of the Jacobite schemes. He died on the 25th of August 1711. The 2nd earl was his son William (c. 1682-1721), an adherent of the exiled house of Stuart, and the 3rd earl was the latter's son William (d. 1760), who succeeded his kinsman John Fitzgerald (c. 1692-1766) as 6th Viscount Grandison. The 3rd earl's son, George Bussy, the 4th earl (1735-1803), held several positions at the court of George III., and on account of his courteous manners was called the "prince of Maccaronies." The 4th earl's son, George, 5th earl of Jersey (1773-1859), one of the most celebrated fox-hunters of his time and a successful owner of racehorses, married Sarah Sophia (1785-1867), daughter of John Fane, 10th earl of Westmorland, and granddaughter of Robert Child, the banker. She inherited her grandfather's great wealth, including his interest in Child's bank, and with her husband took the name of Child-Villiers. Since this time the connexions of the earls of Jersey with Child's bank has been maintained. Victor Albert George Child-Villiers (b. 1843) succeeded his father George Augustus (1808-1859), 6th earl, who had only held the title for three weeks, as 7th earl of Jersey in 1859. This nobleman was governor of New South Wales from 1850 to 1853.

JERSEY, the largest of the Channel Islands, belonging to Great Britain. Its chief town, St. Helier, on the south coast of the island, is in 49° 12' N., 2° 7' W., 105 m. S. by E. of Portland Bill on the English coast, and 24 m. from the French coast to the east. Jersey is the southernmost of the more important islands of the group. It is of oblong form with a length of 10 m. from east to west and an extreme breadth of 61 m. The area is 28,717 acres, or 45 sq. m. Pop. (1901), 52,576.

The island reaches its greatest elevation (nearly 500 ft.) in the north, the land rising sharply from the north coast, and displaying bold and picturesque cliffs towards the sea. The east, south and west coasts consist of a succession of large open bays, shallow and rocky, with marshy or sandy shores separated by rocky headlands. The principal bays are Grève au Laçons, Grève de Lecq, St. John's and Bouley Bays on the north coast; St. Catherine's and Grouville Bays on the east; St. Clement's, St. Aubin's and St. Brelade's Bays on the south; and St. Ouen's Bay, the wide sweep of which occupies nearly the whole of the west coast. The sea in many places has encroached greatly on the land, and sand drifts have been found troublesome, especially on the west coast. The surface of the country is broken by winding valleys having a general direction from north to south, and they approach the south uniting so as to form small plains. The lofty hedges which bound the small enclosures into which Jersey is divided, the trees and shrubberies which line the roads and cluster round the uplands and in almost every nook of the valleys unutilized for pasturage or tillage, give the island a luxuriant appearance, emphasizing the effect of the few sandy plains and sand-covered hills. Fruits and flowers abound in warm climates grow freely in the open air. The land, under careful cultivation, is rich and productive, the soil being generally a deep loam, especially in the valleys, but in the west shallow, light and sandy. The subsoil is usually gravel, but in some parts an unfertile clay. Some two-thirds of the total area is under cultivation, great numbers of cattle being pastured, and much market gardening practised. The potato crop is very large. The peasants take advantage of every bit of wall and every isolated nook of ground for growing fruit trees. Grapes are ripened under glass; oranges can be grown in sheltered situations, but the most common fruits are apples, which are used for cider, and pears. A manure of burnt sea-weed (seaweed) is generally used. The pasturage is very rich, and is much improved by the application of this manure to the surface. The breed of cattle is kept pure by stringent laws against the importation of foreign animals. The milk is used almost exclusively to manufacture butter. The cattle are always housed in winter, but remain out...
at night from May till October. There was formerly a small black breed of horses peculiar to the island, but horses are now chiefly imported from France or England. Pigs are kept principally for local consumption, and only a few sheep are reared. Fish are not so plentiful as round the shores of Guernsey, but mackerel, turbot, cod, mullet and especially the conger eel are abundant at the Minquiers. There is a large oyster bed between Jersey and France, but partly on account of over-dredging the supply is not so abundant as formerly. There is a great variety of other shell fish. The fisheries, ship-building and boat-building employ many of the inhabitants. Kelp and iodine are manufactured from sea-weed. The principal exports are granite, fruit and vegetables (especially potatoes), butter and cattle; and the chief imports coal and articles of human consumption. Communications with England are maintained principally from Southampton and Weymouth, and there are regular steamship services from Granville and St Malo on the French coast. The Jersey railway runs west from St Helier round St Aubin's Bay to St Aubin, and continues to Corbière on the southwestern extremity of the island; and the Jersey eastern railway follows the southern and eastern coasts to Gorey. The island is intersected by a small network of roads.

Jersey is under a distinct and in several respects different form of administrative government from Guernsey and the smaller islands included in the bailiwick of Guernsey. For its particular constitution, system of justice, ecclesiastical arrangements and finance, see CHANNEL ISLANDS. There are twelve parishes, namely St Helier, Grouville, St Brelade, St Clement, St John, St Laurence, St Martin, St Mary, St Ouen, St Peter, St Saviour and Trinity. The population of the island nearly doubled between 1821 and 1901, but decreased from 54,518 to 52,576 between 1891 and 1901.

The history of Jersey is treated under CHANNEL ISLANDS. Among objects of antiquarian interest, a comeluch near Mont Orgueil is the finest of several examples. St Brelade's church, probably the oldest in the island, dates from the 12th century; among the later churches St Helier's, of the 14th century, may be mentioned. There are also some very early chapels, considered to date from the 10th century or earlier; among these may be noted the Chapelle des Poêleurs at St Brelade's, and the picturesque chapel in the grounds of the manor of Rozel. The castle of Mont Orgueil, of which there are considerable remains, is believed to have been founded upon the site of a Roman stronghold, and a "Caesar's fort" still forms a part of it.

JERSEY CITY, a city and the county-seat of Hudson county, New Jersey, U.S.A., on a peninsula between the Hudson and Hackensack rivers at the N. and between New York and Newark bays at the S., opposite lower Manhattan Island. Pop. (1800), 163,005; (1900), 266,433, of whom 58,424 were foreign-born (10,314 Irish, 17,375 German, 4642 English, 3832 Italian, 1604 Russian, 1690 Scottish, 1643 Russian Poles, 1445 Austrian) and 3704 were negroes; (1910 census) 267,779. It is the eastern terminus of the Pennsylvania, the Lehigh Valley, the West Shore, the Central of New Jersey, the Baltimore & Ohio, the Northern of New Jersey (operated by the Erie), the Erie, the New York, Susquehanna & Western, and the New Jersey & New York (controlled by the Erie) railways, the first three using the Pennsylvania station; and of the Hudson & Manhattan railroad. Jersey City is served by several inter-urban electric railways and by the tunnels of the Hudson & Manhattan railroad company to Dey St. and to 33rd St. and 6th Ave., New York City, and it also has docks of several lines of Transatlantic and coast steamers. The city occupies a land area of 14.3 sq. m., and has a water-front of about 12 m. Bergen Hill, a southerly extension of the Palisades, extends longitudinally through it from north to south. At the north end this hill rises on the east side precipitously to a height of nearly 200 ft.; on the west and south sides the slope is gradual. On the crest of the hill is the fine Hudson County Boulevard, about 19 m. long and 100 ft. wide, extending through the city and county from north to south and passing through West Side Park, a splendid county park containing lakes and a 70-acre playground. The water-front, especially on the east side, is given up to manufacturing and shipping establishments. In the hill section can be found many better residences, most of which are wooden and detached.

The principal buildings are the city hall and the court house. There are nine small city parks with an aggregate area of 39.1 acres. The city has a public library, containing (1917) 107,600 volumes and an historical museum. At the corner of Bergen Ave. and Forrest St. is the People's Palace, given in 1904 by Joseph Millbank to the First Congregational church and containing a library and reading-room, a gymnasium, bowling alleys, a billiard-room, a rifle-range, a roof-garden, and an auditorium and theatre; kindergarten classes are held and an employment bureau is maintained. Among the institutions are an institute of homœopathic medicine, a Free school, Hasbrouck institute, St Aloysius academy (Roman Catholic) and St Peter's college (Roman Catholic); and there are good public schools. Grain is shipped to and from Jersey City in large quantities, and in general the city is an important shipping port; being included, however, in the port of New York, no separate statistics are available. There are large slaughtering establishments, and factories for the refining of sugar and for the manufacture of tobacco goods, groceries, pharmaceuticals, iron, marble, cars, chemical works, rubber goods, silk goods, dressed lumber, and malt liquors. The value of the city's manufactured products increased from $7,376,622 in 1890 to $77,225,116 in 1900, or 106.6%: in percentage of the value of the produce of the state increased from only 39.9% over the factory product in 1890, this small rate of increase being due largely to a decline in the value of the products of the sugar and molasses refining industry. The value of the wholesale and manufacturing goods shipped in and received from New York and Philadelphia passed through what is now the city, and direct ferry communication began with New York. Early in the War of Independence Paulus Hook was fortified by the Americans, but soon after the battle of Long Island they abandoned it, and on the 23rd of September 1776 it was occupied by the British. On the morning of the 19th of August 1779 the British garrison was surprised by Major Henry Lee ("Light Horse Harry"), who with about 500 men took 159 prisoners and lost only 2 killed and 3 wounded, one of the most brilliant exploits during the War of Independence. In 1804 Paulus Hook, containing 117 acres and having about 15 inhabitants, passed into the possession of three enterprising New York lawyers, who laid it out as a town and formed an association for its government, which was incorporated as the "associates of the Jersey company." In 1830 the town was incorporated as the City of Jersey, but it remained a part of the township of Bergen until 1838, when it was re-incorporated as a distinct municipality. In 1851 the town of Jersey City was incorporated, and in 1884 Jersey City was annexed to the city of Jersey City. In 1866 the county of Bergen was subdivided into three towns, and in 1872, Jersey City was annexed to the new towns. The town of Jersey City, having been separated from the township of North Bergen in 1852 and incorporated as a city in 1855. The town of Greenville, to the south, was annexed in 1873.

JERUSALEM (Heb. יְרוּשָׁלָיִם, pronounced as a dual), the chief city of Palestine. Letters found at Tell el-Amarna in Egypt, written by an early ruler of Jerusalem, show that the name existed under the form Urushalim, i.e. "City of Salim" or "City of Peace," many years before the Israelites under Joshua entered Canaan. The emperor Hadrian, when he rebuilt the city, changed the name to Aelia Capitolina. The Arabs usually designate Jerusalem by names expressive of
holiness, such as Beit el Maḵdis and El Maḵaadī or briefly El Kuds, i.e. the Sanctuary.

Natural Topography.—Jerusalem is situated in 31° 47′ N. and 35° 13′ E., in the northern part of the hill country of southern Palestine, close to the watershed, at an average altitude of 2500 ft. above the Mediterranean, and 3800 ft. above the level of the Dead Sea. The city stands on a rocky plateau, which projects southwards from the main line of hills. On the eastern side a sharp ridge of Kidron, with its northern continuation, the ridge of the Mount of Olives, which is 100 to 200 ft. higher, while the Wadi El Rababi borders Jerusalem on the west and south, meeting the Valley of Kidron near the lower pool of Siloam. Both valleys fall rapidly as they approach the city, and on the south, especially, it falls off at such an angle that the ground is never more than 600 ft. below the general valley of the plateau. The latter, which covers an area of about 1000 acres, has at the present time a fairly uniform surface and slopes gradually from the north to the south. Originally, however, it was probably different, as it was intersected by a deep valley, called Tyropoeon by Josephus, which, starting from a point N.W. of the Damascus gate, followed a course first south-east and then west of south, and joined the two main valleys of Kidron and Er Rababi at Siloam. Another shorter valley began near the present Jaffa, which, taking an easterly direction, joined the Tyropoeon; while a third ravine passed across what is now the northern part of the Haram enclosure and fell into the valley of the Kidron. The exact form of these valleys, as well as the northern continuation, which parallels the construction and history of the city, is still imperfectly known, as they are to a great extent obliterated by vast accumulations of rubbish, which has filled them up in some places to a depth of more than fifty feet. The ancient art of earth-moving was at this period, however, far more advanced than it is now, and it is clear that operations made during the latter years of the 19th century. The limited knowledge which we possess of the original features of the ground within the area of the city makes a reconstruction of the topographical account given by Josephus a matter of guesswork, and it is only by piecemeal information that the region so far as this has been identified by modern exploration. But the progress of exploration and excavation may render this subject to further modification.

The geological formation of the plateau consists of thin beds of hard silicious chalk, locally called misse, which overlie a thick bed of soft white limestone, known by the name of meleke. Both descriptions of rock yielded good material for building; while in the soft meleke tanks, underground chambers, tombs, &c., were easily excavated. In ancient times a brook flowed down the valley of the Kidron, and it is possible that a stream flowed also through the Tyropoeon valley. The only known spring existing at present within or very near the city is the spring which is the western side of the Kidron valley, but there may have been others which are now concealed by the accumulations of rubbish. Cisterns were also used for the storage of rain water, and aqueducts, of which there still exist fragments of the Roman time, to carry the water constructed for the conveyance of water from a distance. Speaking generally, it is probable that the water supply of Jerusalem in ancient times was better than it is at present.

History.—The early history of Jerusalem is very obscure. The Tell el-Amarna letters show that, long before the invasion by Joshua, it was occupied by the Egyptians, and was probably a stronghold of considerable importance, as it formed a good strategical position in the hill country of southern Palestine. We do not know how the Egyptians were forced to abandon Jerusalem; but, at the time of the Israelite conquest, it was probably occupied by one of the tribes of the Transjordan, and of the country. The exact position of the Jebusite city is unknown; some authorities locate it on the western hill, now known as Zion; some on the eastern hill, afterwards occupied by the Temple and the city of David; while others consider it was a double settlement, one part being on the western, and the other on the eastern hill, separated from one another by the Tyropoeon valley. The latter view appears to be the most probable, as, according to the Biblical accounts, Jerusalem was partly in Judah and partly in Benjamin, the line of demarcation between the two tribes passing through the city. According to his theory, the part of Jerusalem known as Jebus was situated on the western hill, and the outlying fort of Zion on the eastern hill. The men of Judah and Benjamin did not succeed in getting full possession of the place, and the Jebusites still held it when David became king of Israel. Some years after his accession David succeeded after some difficulty in taking Jerusalem. He established his royal city on the eastern hill close to the site of the Jebusite Zion, while Jebus, the town on the western side of the Tyropoeon valley, became the city of David, which Joab, David's leading general, was appointed governor. David surrounded the royal city with a wall and built a citadel, probably on the site of the Jebusite fort of Zion, while Joab fortified the western town. North of the city of David, the king, acting under divine guidance, chose a site for the Temple of Jehovah, which was erected with great magnificence by Solomon. The actual site occupied by this has given rise to much controversy, though all authorities agree that it must have stood on some part of the area now known as the Haram. James Ferguson was of opinion that the Temple stood near the south-western corner. As, however, it was proved by the explorations of Sir Charles Warren in 1860-1870 that the Tyropoeon valley passed under this corner, and that the foundations must have been of enormous depth, Ferguson's theory must be regarded as untenable (see also SEPULCHRE, HOLY). On the whole it is most likely that the Temple was erected by Solomon on the same spot as is now occupied by the Dome of the Rock, commonly known as the Masjid al-Aqsa (47° 39′ 43″ N.; 35° 13′ 51″ E.), and, regarding being had to the levels of the ground, it is possible that the Holy of Holies, the most sacred chamber of the Temple, stood over the rock which is still regarded with veneration by the Mahomedans. Solomon greatly strengthened the fortifications of Jerusalem, and was probably the builder of the line of defence, called by Josephus the first or old wall, which united the cities on the eastern and western hills. The kingdom reached its highest point of importance during the reign of Solomon, but, shortly after his death, it was broken up by the rebellion of Jeroboam, who founded the separate kingdom of Israel with its capital at Shechem. Two tribes only, Judah and Benjamin, with the descendants of Levi, remained faithful to Rehoboam, the son of Solomon. Jerusalem thus lost much of its importance, especially after it was forced to surrender to Shishak, king of Egypt, who carried off a great part of the riches which had been accumulated by Solomon. The history of Jerusalem during the succeeding three centuries consists for the most part of a succession of wars against the kingdom of Israel, the Moabites and the Syrians. Joash, king of Israel, captured the city from Amaziah, king of Judah, and destroyed part of the fortifications, but these were rebuilt by Uzziah, the son of Amaziah, who did much to restore the city to its original prosperity. In the reign of Hezekiah, the kingdom of Judah became tributary to the Assyrians, who attempted the capture of Jerusalem. Hezekiah improved the defences and arranged for a good water supply, preparatory to the siege of Sennacherib, the Assyrian general. The siege failed and the Assyrians retired. Some years later Syria was again invaded by the Egyptians, who forced Judah to the position of a tributary state. In the reign of Zedekiah, the last of the line of kings, Jerusalem was captured by Nebuchadrezzar, king of Babylon, who pillaged the city, destroyed the Temple, and ruined the fortifications (see JEW, § 17). A number of the principal inhabitants were carried captive to Babylon, and Jerusalem was reduced to the position of an insignificant town. Nebuchadrezzar placed in the city a large number of the inhabitants of the western and part of the eastern hill, while the eastern hill on which were the Temple and the city of David was left more or less desolate. We have no information regarding Jerusalem during the period of the captivity, but fortunately Nehemiah, who was permitted to return and rebuild the defences about 445 B.C., has given a fairly clear description of the wall which the wall which allows us to obtain a good idea of the extent of the city at this period. The Temple had already been partially rebuilt by Zedekiah and his companions, but on a scale far inferior to the magnificent building of King Solomon, and Nehemiah devoted his attention to the reconstruction of the walls. Before beginning the work, he made a preliminary reconnaissance of the fortifications on the south of the town from the Valley Gate, which was near the S.E. corner, to the pool of Siloam and valley of the Kidron. He then allotted the reconstruction of wall and gates to different parties of workmen, and
JERUSALEM

in the time of the Kings and Nehemiah

JERUSALEM

at the time of the Siege by Titus
his narrative describes the portion of wall upon which each of these was employed. It is clear from his account that the lines of fortifications included both the eastern and western hills. North of the Temple enclosure there was a gate, known as the Sheep Gate, which must have opened into the third valley mentioned above, and stood somewhere near what is now the middle of the broad thoroughfare that runs south of the present north wall of the latter. To the west of the Sheep Gate there were two important towers in the wall, called respectively Meah and Hananeel. The tower Hananeel is specially worthy of notice, as it was the site of the Temple and probably formed the basis of the citadel built by Simon Maccabaeus, which again was succeeded by the fortress of Antonia, constructed by Herod the Great, and one of the most important positions at the time of the siege by Titus. Over Hananeel was the tower named F. Epiphanes, on the east side of the Tyropoeon valley, and then again westward, crossing the valley at a point probably near the remarkable construction known as Wilson's arch. A gate in the wall, known as the Fish Gate, was opened on a road which, leading from the north, went down the Tyropoeon valley to the southern part of the city. Westward of this gate the wall followed the south side of the valley which joined the Tyropoeon from the west as far as the north-western corner of the city at the site of the present Jaffa Gate, the so-called tower of David. In this part of the wall there were apparently two gates facing north, i.e. the Old Gate and the Gate of Ephraim, 400 cubits from the corner. At the corner stood the residence of the king, which Josephus describes as an enclosure, built southwards by his predecessor Phasaelus in 169–167 B.C. From the valley Gate the wall took an easterly course for a distance of 1000 cubits to the Dung Gate, near which on the east was the Fountain Gate, not far from the lower pool of Siloam. Herod, on the death of his father, with the northern gate and, hence to the north followed the west side of the valley of the Kidron, enclosing the city of David and the Temple enclosure, and finally turning west at some point near the site of the Golden Gate joined the wall to the top of the Mount of Olives, or the so-called Sheep Gate. Nehemiah, on the other hand, stood on a number of places on the eastern hill, including the tomb of David, the positions of which cannot with our present knowledge be fixed with any certainty.

After the restoration of the walls of Jerusalem by Nehemiah, a considerable number of Jews returned to the city, but we know practically nothing of its history for more than a century until, in 332 B.C., Alexander the Great conquered Syria. The gates of Jerusalem were opened to him, and he left the Jews in the occupation. But his successors did not act with similar leniency, when the city was captured by Ptolemy I, king of Egypt, twelve years later, the fortifications were partially demolished and apparently not again restored until the period of the high priest Simon II., who repaired the defences and also the Temple buildings. In 168 B.C. Antiochus Epiphanes captured Jerusalem, destroyed the walls, and devastated the Temple, reducing the city to a worse position than it had occupied since the time of the captivity. He built a citadel called the Acra to dominate the town and placed in it a strong garrison of Greeks. The position of the Acra is doubtful, but it appears most probable that it stood on the eastern hill between the Temple and the city of David, both of which it commanded. Some writers place it north of the Temple on the site afterwards occupied by the fortress of Antonia, but such a position is not in accord with the descriptions either in Josephus or in the books of the Maccabees, which are quite consistent with each other. Other writers again have placed the Acra on the eastern side of the hill upon which the church of the Holy Sepulchre now stands, but as this point was probably quite outside the city at the time of Antiochus Epiphanes, and is at too great a distance from the Temple, it can hardly be accepted. But the site which has been already indicated at the N.E. corner of the present Mosque el Aksa meets the accounts of the ancient authorities better than any other.

At this point in the Haram enclosure there is an enormous underground cistern, known as the Great Sea, and this may possibly have been the source of water supply for the Greek garrison. The oppression of Antiochus led to a revolt of the Jews under the leadership of the Maccabees, and Judas Maccabaeus succeeded in capturing Jerusalem after severe fighting, but could not get possession of the Acra, which caused much trouble to the Jews, who erected a wall between it and the Temple, and another wall to cut it off from the city. The Greeks held out for a considerable time, but had finally to surrender, probably from want of food, to Simon Maccabaeus, who demolished the Acra and cut down the hill upon which it stood so that it might no longer be higher than the Temple, and that there should be no separation between the latter and the city. Simon then constructed a new citadel, north of the Temple, to take the place of the Acra, and established in Judaea the Asmonean dynasty, which lasted for nearly a century, when the Roman republic began to make its influence felt in Syria. In 65 B.C. Jerusalem was captured by Pompey after a difficult siege. The Asmonean dynasty lasted a few years longer, but finally came to an end when Herod the Great, with the aid of the Romans, took possession of Jerusalem and became the first king of the Edomite dynasty. Herod again raised the city to the position of an important capital, restoring the fortifications, and rebuilding the Temple from its foundations. He also built the great fortress of Antonia, N.W. of the Temple, on the site of the citadel of the Asmoneans, and constructed a magnificent palace for himself on the western hill, defended by three great towers, which he named Mariamne, Hippicus and Phasaelus. Some time between the time of the Maccabees and of Herod, a second or outer wall had been built outside and north of the first wall, but it is not possible to fix an accurate date to this line of defence, as the references to it in Josephus are obscure. Herod adorned the town with other buildings and constructed a theatre and gymnasium. He doubled the area of the enclosure round the Temple, and there can be little doubt that a great part of the walls of the Haram area date from the time of Herod, while probably the tower of David, which still exists near the Jaffa Gate, is on the same foundation as one of the towers adjoined his palace. Archelaus, Herod's successor, had far less authority than Herod, and the real power of government at Jerusalem was assumed by the Roman procurators, in the time of one of whom, Pontius Pilate, Jesus Christ was condemned to death and crucified outside Jerusalem. The places of his execution and burial are not certainly known (see SEPULCHRE, HOLY).

Herod Agrippa, who succeeded to the kingdom, built a third or outer wall on the north side of Jerusalem in order to enclose and defend the buildings which had gradually been constructed outside the old fortifications. The exact line of this third wall is not known with certainty, but it probably followed approximately the same line as the existing north wall of Jerusalem. Some writers have considered that it extended a considerable distance farther to the north, but of this there is no proof, and no remains have as yet been found which would support the opinion. The wall of Herod Agrippa was planned on a grander scale, but its execution was stopped by the Romans, so that it was not completed at the time of the siege of Jerusalem by Titus. The writings of Josephus give a good idea of the fortifications and buildings of Jerusalem at the time of the siege, and his accurate personal knowledge makes his account worthy of the most careful perusal. He explains clearly how Titus, beginning his attack from the north, captured the third or outer wall, then the second wall, and finally the fortress of Antonia, the Temple, and the upper city. After the capture, Titus ordered the Temple to be demolished and the fortifications to be levelled, with the exception of the three great towers at Herod's palace. It is, however, uncertain how far the order was carried out, and it is probable that the outer walls of the Temple enclosure were left partially standing and that the defences on the west and south of the city were not completely levelled. When Titus and his army went from Jerusalem, the tower of Antonia was left as a permanent Roman garrison, and a fortified camp for their occupation was established on the western hill. We have no account of the size or position of this camp, but a consideration of the site, and a comparison with other Roman camps in various parts of Europe, make it probable that it occupied an area of about 50 acres, extending over what is now known as the Armenian quarter of the town, and that it was bounded on the north by the
old or first wall, on the west also by the old wall, on the south by a line of defence somewhat in the same position as the present south wall where it passes the Zion Gate, and on the east by an entrenched running north and south parallel to the existing thoroughfare known as David Street. For sixty years the Roman garrison were left in undisturbed occupation, but in 132 the Jews rose in revolt under the leadership of Bar-Cocheba or Barcochba, and took possession of Jerusalem. After a severe struggle, the revolt was suppressed by the Roman general, Julius Severus, and Jerusalem was recaptured and again destroyed. According to some writers, this devastation was even more complete than after the siege by Titus. About 130 the emperor Hadrian decided to rebuild Jerusalem, and make it a Roman colony. The new city was called Aelia Capitolina. The exact size of the city is not known, but it probably extended as far as the present north wall of Jerusalem and included the northern part of the western hill. A temple dedicated to Jupiter Capitolinus was erected on the site of the Temple, and other buildings were constructed, known as the Theatre, the Demetrias, the Tetraunymphon, the Dodecaphylon and the Corda. The Jews were forbidden to reside in the city, but Christians were freely admitted. The history of Jerusalem during the period between the foundation of the city of Aelia by the emperor Hadrian and the accession of Constantine the Great in 336 is obscure, but no important change appears to have been made in the size or fortifications of the city, which continued as a Roman colony. In 356 Constantine, after his conversion to Christianity, issued orders to the bishop Macarius to recover the site of the crucifixion of Jesus Christ, and the tomb in which his body was laid (see SEPULCHRE, HOLY). After the holy sites had been determined, Constantine gave orders for the construction of two magnificent churches, the one over the tomb and the other over the place where the cross was discovered. The present church of the Holy Sepulchre stands on the site upon which one of the churches of Constantine was built, but the second church, the Basilica of the Holy Cross, has completely disappeared. The next important epoch in building construction at Jerusalem was about 460, when the empress Eudocia visited Palestine and expended large sums on the improvement of the city. The walls were repaired by her orders, and the line of fortifications appears to have been extended on the south so as to include the pool of Siloam. A church was built above the pool, probably at the same time, and, after having completely disappeared for many centuries, it was recovered by F. J. Bliss when making his exploration of Jerusalem. The empress also erected a large church in honour of St Stephen north of the Damascus Gate, and is believed to have been buried therein. The site of this church was discovered in 1874, and it has since been rebuilt. In the 6th century the emperor Justinian erected a magnificent basilica at Jerusalem, in honour of the Virgin Mary, and attached to it two hospitals, one for the reception of pilgrims and one for the accommodation of the sick poor. The description given by Procopius does not indicate clearly where this church was situated. A theory frequently put forward is that it stood within the Haram area near the Mosque of el Aksa, but it is more probable that it was on Zion, near the traditional place of the Caenaculum or last supper, where the Mahommedan building known as the tomb of David now stands. In 614 Chosroes II., the king of Persia, captured Jerusalem, devastated many of the buildings, and massacred a great number of the inhabitants. The churches at the Holy Sepulchre were much damaged, but were partially restored by the monk Modestus, who devoted himself with great energy to the work. After a severe struggle the Persians were defeated by the emperor Heraclius, who entered Jerusalem in triumph in 629 bringing with him the holy cross, which had been carried off by Chosroes. At this period the religion of Mahomet was spreading over the east, and in 637 the caliph Omar marched on Jerusalem, which capitulated after a siege of four months. Omar behaved with great moderation, restraining his troops from pillage and leaving the Christians in possession of their churches. A wooden mosque was erected near the site of the Temple, which was replaced by the Mosque of Aksa, built by the amir Abdalmalik (Abd el Malek), who also constructed the Dome of the Rock, known as the Mosque of Omar, in 688. The Mahommedans held Jerusalem until 1099, when it was captured by the crusaders under Godfrey of Bouillon, and became the capital of the Latin Kingdom of Jerusalem (see Crusades, vol. viii. p. 401) until 1187, when Saladin reconquered it, and rebuilt the walls. Since that time, except from 1229 to 1259, and from 1243 to 1244, the city has been held by the Mahommedans. It was occupied by the Egyptian sultans until 1517, when the Turks under Selim I. occupied Syria. Selim's successor, Suleiman the Magnificent, restored the fortifications, which since that time have been little altered.

**Modern Jerusalem.**—Jerusalem is the chief town of a sanjak, governed by a muftissar, who reports directly to the Porte. It has the usual executive and town councils, upon which the recognized religious communities, or millets, have representatives, and it is the more important buildings for ecclesiastical and public uses connected with its port, Jaffa, by a carriage road, 41 m., and by a metre-gauge railway, 54 m., which was completed in 1892, and is worked by a French company. There are also carriage roads to Bethlehem, Hebron, and Jericho, and a carriage was in course of construction in 1909. Prior to 1858, when the modern building period commenced, Jerusalem lay wholly within its 16th-century walls, and even as late as 1875 there were few private residences beyond their limits. The present walls of Jerusalem consist of four gates and eight walls, being due to the migration of Europeans, old Moslem families, and Jews from the city to the suburbs; the increased vegetation, due to the numerous gardens and improved methods of cultivation; the substitution of stone for mud and tile in buildings; and the depopulation of old quarters, which is characteristic of the old city; the striking want of beauty, grandeur, and harmony with their environment exhibited by most of the new buildings; and the introduction of wheeled transport, which, cutting the wholesale and continuous movement of the populace, may have led those who are interested in the decoration of the city to an increased effort in this direction.

Amongst the most marked features of the change that has taken place since 1875 are the growth of religious and philanthropic establishments; the erection of schools for education of Jews and Mohammedans in Europe; the building of a new Monastry of St. John the Baptist at the entrance to the Holy Sepulchre—largely due to Moslem contributions; and the erection of houses on the Mount of Olives, the Haram, and beyond them, and the conversion of many mosques into private dwellings. Numerous guesthouses and hotels, which are kept in good repair, little effort having been made to meet the increased sanitary requirements of the larger population and wider inhabited area. No municipal water-supply, and the main drain of the new buildings has been thrown into the sewer, which has become an open cesspit. In several places the débris within the walls is saturated with sewage, and the water of the Fountain of the Virgin, and of many of the old cisterns, is unfit for drinking. Amongst the more important buildings erected to the north of the city since 1860 are the Russian cathedral, hospice and hospital; the French hospital of St Louis, and hospice and church of St Augustin; the German schools, private and hospital; the new hospital and industrial school of the London mission to the Jews; the Abyssinian church; the church and schools of the Church missionary society; the Anglican church, college and bishop's house; the Dominican monastery, seminary and hospital; the Church of St Paul; the school of St Saba; the Franciscan seminary; the National seminary, and the industrial school and workshops of the Alliance Israélite.

On the Mount of Olives are the Russian church, tower and hospice, near the chapel of the Ascension; the French Paterenoster church; the Greek Greek church; the Melchites; the Maronite church of the Virgin Mary, near Gethsemane. South of the city are the Armenian monastery of Mount Zion and Bishop Gobat's school. On the west side are the institution of the sisters of St Vincent; the Ratisbon club, the German hospital, the Monastery of the Franciscans; the Coptic monastery; the German church of the Redeemer, and hospice; the United Armenian church of the Paspal; the convent and school of the Sisters of Zion; the Austrian hospital; the Turkish school and museum; the monastery and seminary of the Freres de la Mission Algérienne, with the restored church of St Anne, the church, schools and hospital of the London mission to the Jews; the Armenian seminary and Patriarchial buildings; the Rothschild hospital; and Jewish hospices and synagogues.
The climate is naturally good, but continued neglect of sanitary precautions has made the city unhealthy. During the summer months the heat is tempered by a fresh sea-breeze, and there is usually a sharp fall of temperature at night; but in spring and autumn it is an extension of the hot east winds, which blow down into the city from the desert plain of the Ghor, are enervating and oppressive. A dry season, which lasts from May to October, is followed by a rainy season, divided into the early winter and latter rains. Snow falls two or three times a year; and November, on the average, is the mildest month. The mean temperature of the month is 52° F., the maximum 64°, and the minimum 39°. During the month the mean temperature is lowest (42°) in February, and highest (73°) in August. The mean annual rainfall (1861 to 1899) is 26½ inches, and the seasonal rainfall for the months January to May is 13 inches. During the month of October, when there are, from time to time, outbreaks of typhoid, small-pox, diphtheria and other epidemics. The unhealthiness of the city is chiefly due to want of proper drainage, impure drinking-water, miasma from the disturbed rubbish heaps, and smoke from the buildings and roadsides. The only industry is the manufacture of olive-wood and mother-of-pearl goods for sale to pilgrims and for export. The imports (see Joppa) are chiefly cloth, clothing and building materials. The population in 1905 was about 60,000 Muslems, 7000 Christians, 13,000 Jews (40,000). During the pilgrimage season it is increased by about 15,000 travellers and pilgrims.

became a clerk in the secretary's department of the admiralty. He died in London on the 7th of July 1874. His poem on Mary Queen of Scots was published about 1831, and was followed by a collection of poems entitled Tales of the Dead. He also wrote a drama, Richard III., and a fragmentary poem entitled London. None of these ventures achieved any success, but his numerous historical works are written with vivacity and interest, and, in their own style, are an important contribution to the history of England. They include Memoirs of the Court of England during the Reign of the Stuarts (1840), Memoirs of the Court of England from the Revolution of 1688 to the Death of George II. (1843), George Selwyn and his Contemporaries (1843, new ed. 1882), Memoirs of the Pretenders and their Adherents (1843), Memoirs of Richard the Third and his Contemporaries (1861), and Memoirs of the Life and Reign of King George the Third (1867). The titles of these works are sufficiently indicative of their character. They are sketches of the principal personages and of the social details of various periods in the history of England rather than complete and comprehensive historical narratives. In addition to these works Jesse wrote Literary and Historical Memorials of London (1847), London and its Celebrities (1850), and a new edition of this work as London: its Celebrated Characters and Remarkable Places (1871). His Memoirs of Celebrated Etonians appeared in 1875.

A collected edition containing most of his works in thirty volumes was published in London in 1901.

JESSEL, SIR GEORGE (1824-1883), English judge, was born in London on the 13th of February 1824. He was the son of Zadok Aaron Jessel, a Jewish coral merchant. George Jessel was educated at a school for Jews at Kew, and being prevented by then existing religious disabilities from proceeding to Oxford or Cambridge, went to University College, London. He entered as a student at Lincoln's Inn in 1842, and a year later took his B.A. degree at the university of London, becoming M.A. and gold medallist in mathematics and natural philosophy in 1844. In 1846 he became a fellow of University College, and in 1847 he was called to the bar at Lincoln's Inn. His earnings during his first three years at the bar were £2,346, and 79 guineas, from which it will be seen that his rise to a tolerably large practice was rapid. His work, however, was mainly conveyancing, and for long his income remained almost stationary. By degrees, however, he got more work, and was called within the bar in 1865, becoming a bencher of his Inn in the same year and practising in the Rolls Court. Jessel entered parliament as Liberal member for Dover in 1868, and although neither his intellect nor his oratory was of a class likely to commend itself to his fellow-members, he attracted Gladstone's attention by two learned speeches on the Bankruptcy Bill of 1871. Probably the most important step was his appointment in 1871 as solicitor-general. His reputation at this time stood high in the chancery courts; on the common law side he was unknown, and on the first occasion upon which he came into the court of Queen's bench to move on behalf of the Crown, there was very nearly a collision between him and the bench. His forceful and direct method of bringing his arguments home to the bench was not modified in his subsequent practice before it. His great powers were fully recognized; his business in addition to that on behalf of the Crown became very large, and his income for three years before he was raised to the bench amounted to nearly £25,000 per annum. In 1873 Jessel succeeded Lord Romilly as master of the rolls. From 1873 to 1881 Jessel sat as a judge of first instance in the rolls court, being also a member of the court of appeal. In November 1874 the first Judicature Act came into effect, and in 1875 the Judicature Act of that year made the master of the rolls the ordinary president of the first court of appeal, relieving him of his duties as a judge of first instance. In the court of appeal Jessel presided almost to the day of his death. For some time before 1883 he suffered from diabetes with chronic disorder of the heart and liver, but struggled against it; on the 16th of March 1883 he sat in court for the last time, and on the 21st of March he died at his residence in London, the immediate cause of death being cardiac syncope.

As a judge of first instance Jessel was a revelation to those accustomed to the proverbial slowness of the chancery courts and of the master of the rolls who preceded him. He disposed of the business before him with rapidity combined with correctness of judgment, and he not only had no arraies himself, but was frequently able to help other judges to clear their lists. His knowledge of law and equity was wide and accurate, and his memory for cases and command of the principles laid down in them extraordinary. In the rolls court he never reserved a judgment, not even in the Epping Forest case (Commissioners of Sewers v. Glasne, L.R. 19 Eq.; The Times, 11th November 1874), in which the evidence and arguments lasted twenty-two days (150 witnesses being examined in court, while the documents went back to the days of King John), and in the court of appeal he did so only twice, and then in deference to the wishes of his colleagues. The second of these two occasions was the case of Roberts v. The Corporation of London (49 Law Times 455; The Times, 10th March 1883), and those who may read Jessel's judgment should remember that, reviewing as it does the law and custom on the subject, and the records of the city with regard to the appointment of a remembrancer from the 16th century, together with the facts of the case before the court, it occupied nearly an hour to deliver, but was nevertheless delivered without notes—this, too, on the 9th of March 1883, when the judge who uttered it was within a fortnight of his death. Never during the 19th century was the business of any court performed so rapidly, punctually, and satisfactorily as it was when Jessel presided. He was master of the rolls at a momentous period of legal history. The Judicature Acts, completing the fusion of law and equity, were passed while he was judge of first instance, and were still new to the courts when he died. His knowledge and power of assimilating knowledge of all subjects, his mastery of every branch of law with which he had to concern himself, as well as of equity, together with his willingness to give effect to the new system, caused it to be said when he died that the success of the Judicature Acts would have been impossible without him. His faults as a judge lay in his disposition to be intolerant of those who, not able to follow the rapidity of his judgment, endeavoured to persist in argument after he had made up his mind; but though he was peremptory with the most eminent counsel, young men had no cause to complain of his treatment of them.

Jessel sat on the royal commission for the amendment of the Medical Acts, taking an active part in the preparation of its report. He actively interested himself in the management of London University, of which he was a fellow from 1861, and of which he was elected vice-chancellor in 1880. He was one of the commissioners of patents, and trustee of the British Museum. He was also chairman of the committee which drafted the new rules rendered necessary by the Judicature Acts. He was treasurer of Lincoln's Inn in 1883, and vice-president of the council of legal education. He was also a fellow of the Royal Society. Jesse's career marks an epoch on the bench, owing to the active part taken by him in rendering the Judicature Acts effective, and also because he was the last judge capable of sitting in the House of Commons, a privilege of which he did not avail himself. He was the first Jew who, as solicitor-general, took a share in the executive government of his country, the first Jew who was sworn a regular member of the privy council, and the first Jew who took a seat on the judicial bench of Great Britain; he was also, for many years after being called to the bar, so situated that any one might have driven him from it, because, being a Jew, he was not qualified to be a member of the bar. In person Jessel was a stoutish, square-built man of middle height, with dark hair, somewhat heavy features, a fresh ruddy complexion, and a large mouth. He married in 1856 Amelia, daughter of Joseph Moses, who survived him together with three daughters and two sons, the elder of whom, Charles James (b. 1860), was made a baronet shortly after the death of his distinguished father and in recognition of his services.

See The Times, March 23, 1883; E. Manson, Builders of our Law (1904).

JESSORE, a town and district of British India, in the Presidency division of Bengal. The town is on the Bhairab river, with a railway station 75 m. N.E. of Calcutta. Pop. (1901), 8054.
The District of Jessore has an area of 2025 sq. m. Pop. (1901), 1,813,155, showing a decrease of 4% in the decade. The district forms the central portion of the delta between the Huggli and the united Ganges and Brahmaputra. It is a vast alluvial plain intersected by rivers and watercourses, which in the southern portion spread out into large marshes. The northern part is verdant, with extensive groves of date-palms; villages are numerous and large; and the people are prosperous. In the central portion the population is sparse, the only part suitable for dwellings being the high land on the banks of rivers. The principal rivers are the Madhumati or Haringhata (which forms the eastern boundary of the district), with its tributaries the Nabaganga, Chitra, and Bhairab; the Kumar, Kabadak, Katki, Harihar, Bhadra and Ahatrabanka. Within the last century the rivers in the interior of Jessore have ceased to be true deltaic rivers; and, whereas the northern portion of the district formerly lay under water for several months every year, it is now reached only by unusual inundations. The tide reaches as far north as the latitude of Jessore town. Jessore is the centre of sugar manufacture from date palms. The exports are sugar, rice, pulse, timber, honey, shels, &c.; the imports are salt, English goods, and cloth. The district is crossed by the Eastern Bengal railway, but the chief means of communication is by river and by the sea.

British administration was completely established in the district in 1781, when the governor-general ordered the opening of a court at Murali near Jessore. Before that, however, the fiscal administration had been in the hands of the English, having been transferred to the East India company with that of the rest of Bengal in 1765. The changes in jurisdiction in Jessore have been very numerous. After many transfers and rectifications, the district was in 1852 finally constituted as it at present stands. The rajas of Jessore or Chanchra trace their origin to Bhubeswar Rai, a soldier in the army of Khan-i-Azam, an imperial general, who deprived Raja Pratapdaya, the popular hero of the Sundarban, of several fiscal divisions, and conferred them on Bhubeswar. But Manohar Rai (1649-1705) is regarded as the principal founder of the family. The estate when he inherited it was of moderate size, but he acquired one pargana after another, until, at his death, the property was by far the largest in the neighbourhood.

JESTER, a provider of "jests" or amusements, a buffoon, especially a professional fool at a royal court or in a nobleman's household (see Foot). The word "jest," from which "jester" is formed, is used from the 16th century for the earlier "gest," Lat. gesta, or res gestae, things done, from gere, to do, hence deeds, exploits, especially as told in history, and so used of the metrical and prose romances and chronicles of the middle ages. The word became applied to satirical writings and to any long-winded empty tale, and thence to a joke or piece of fun, the current meaning of the word.

JESUATI, a religious order founded by Giovanni Colombini of Siena in 1530. Colombini had been a prosperous merchant and a senator in his native city, but, coming under ecstatic religious influences, abandoned secular affairs and his wife and daughter (after making provision for them), and with a friend of like temperament, Francesco Miani, gave himself to a life of apostolic poverty, penitential discipline, hospital service and public preaching. The name Jesuati was given to Colombini and his disciples from the habit of calling loudly on the name of Jesus at the beginning and end of their ecstatic sermons. The senate banished Colombini from Siena for imparting foolish ideas to the young men of the city, but he continued his mission in Arezzo and other places, only to be honourably recalled home on the outbreak of a devastating pestilence. He went out to meet Urban V. on his return from Avignon to Rome in 1367, and craved his sanction for the new order and a distinctive habit. Before this was granted Colombini had to clear the movement of a suspicion that it was connected with the heretical sect of Fraticelli, and he died on the 31st of July 1367, soon after the papal approval had been given. The guidance of the new order, whose members (all lay brothers) gave themselves entirely to works of mercy, devolved upon Miani. Their rule of life, originally a compound of Benedictine and Franciscan elements, was later modified partially by the two orders, and finally made a combination of the two orders, the one of the latter, the other of the former. The religious idea is well sustained, e.g., the wearing of sandals and a daily flagellation. Paul V. in 1606 arranged for a small proportion of clerical members, and later in the 17th century the Jesuati became so secularized that the members were known as the Aquavita Fathers, and the order was dissolved by Clement IX. in 1668. The female branch of the order, the Jesuati sisters, founded by Caterina Colombini (d. 1387) in Siena, and thence widely dispersed, more consistently maintained the primitive strictness of the society and survived the male branch by 200 years, existing until 1872 in small communities in Italy.

JESUITS, the name generally given to the members of the Society of Jesus, a religious order in the Roman Catholic Church, founded in 1539. This Society may be defined, in its original conception and well-avowed object, as a body of highly trained religious men of various degrees, bound by the three personal vows of poverty, chastity and obedience, together with, in some cases, a special vow to the pope's service, with the object of laburing for the spiritual good of themselves and their neighbours. They are declared to be mendicants and enjoy all the privileges of a religious order. Their main object is to educate and dispose by constitutions and rules, mostly drawn up by their founder, St Ignatius of Loyola, and approved by the popes. Their proper title is "Clerks Regulars of the Society of Jesus," the word Societas being taken as synonymous with the original Spanish term, Compania; perhaps the military term Cohors might more fully have expressed the original idea of a band of spiritual soldiers living under martial law and discipline. The ordinary term " Jesuit " was given to the Society by its avowed opponents; it is first found in the writings of Calvin and in the registers of the Parliament of Paris as early as 1532.

Constitution and Character.—The formation of the Society was a masterpiece of genius on the part of a man (see Loyola) who was quick to realize the necessity of the moment. Just before Ignatius was experiencing the call to conversion, Luther had begun his revolt against the Roman Church by burning the papal bull of excommunication on the 10th of December 1520. But while Luther's most formidable opponent was thus being prepared in Spain, the actual formation of the Society was not to take place for eighteen years. Its conception seems to have developed very slowly in the mind of Ignatius. It is evident that he had a plan in mind for the Church. Hitherto all the regulars had made a point of the choral office in choir. But as Ignatius conceived the Church to be in a state of war, what was desirable in days of peace ceased when the life of the cloister had to be exchanged for the discipline of the camp; so in the sketch of the new society which he laid before Paul III., Ignatius laid down the principle that the obligation of the breviary should be fulfilled privately and separately and not in choir. The other orders, too, were bound by the idea of a constitutional monarchy based on the democratic spirit. Not so with the Society. The founder placed the general for life in an almost uncontrolled position of authority, giving him the faculty of dispensing individuals from the decrees of the highest legislative body, the general congregations. Thus the principle of military obedience was exalted to a degree higher than that existing in the older orders, which preserved to their members certain constitutional rights.

The soldier-mind of Ignatius can be seen throughout the constitutions. Even in the spiritual labours which the Society shares with the other orders, its own ways of dealing with persons and things are different, and the system of dealing with men is largely due to a type that is considered desirable. But it must not be thought that in practice the rule of the Society and the high degree of obedience demanded result in mere mechanism. By a system of check and counter check devised in the constitutions the power of local superiors is modified, so that in practice the working is smooth. Ignatius knew that while a high ideal was necessary for every society, his followers were flesh and blood, not machines. He made clear from the first that the Society was everything and the individual nothing, except so far as he might prove a useful instrument for carrying out the Society's objects. Ignatius said to his
secretary Polanco that "in those who offered themselves he looked less to purely natural goodness than to firmness of character and ability for business, for he was of opinion that those who were not fit for public business were not adapted for filling offices in the Society," but before long he had to admit that the Jesuits "who endowments in a candidate were valuable in his eyes only on the condition of their being brought into play, or held in abeyance, strictly at the command of a superior. Hence his teaching on obedience was based on the idea that the reason of a superior is the chief in giving him the absolute disposal of all members of the Society in every place and for every purpose. He pushes the claim even further, requiring, besides entire outward submission to command, also the complete submission of the interior will to the will of the superior. He lays down that the superior is to be obeyed simply as such and as standing in the place of God, without reference to his personal wisdom, piety or discretion; that any obedience which fails short of this perfect submission is imperfect obedience, as well as in outward effect, is lax and imperfect; that going beyond the letter of command, even in things abstractly good and praiseworthy, is disobedience, and that the "sacrifice of the intellect" is the third and highest grade of obedience, well pleasing to God, when the reason of the inferior leads him not only to do what the superior says or requires, but what he thinks, submitting his judgment, so far as it is possible for the will to influence and lead the judgment. This Letter on Obedience was written for the guidance and formation of Ignatius's own followers. It was never placed in the hands of anyone, except members of other orders whose institutes represented the normal days of peace rather than those of war. The learned Jesuit, however, undertook the explanation of the Ignatian spirit, and it asked all the skill and learning of Bellarmine as its apostle, together with the whole influence of the Society, to avert what seemed to be a probable condemnation at Rome.

... Ignatius himself lays down the rule that an inferior is bound to make all necessary representations to his superior so as to guide him in imposing a precept of obedience. When a superior knows the case of his jewel, and he has a conscientious, although it is aware of other sides of the question which appear of greater importance than those that the inferior has brought forward. Ignatius distinctly excepts the case where obedience in itself would be entire, where a precept of obedience has been given in the constitution of the Society in the name of the Roman See or in the name of the Pope, or it is part of the Constitutions or the precepts of the Church to which the Jesuits belong, and it is not an interferent or an exterior obstacle which makes the obedience in question imperfect. In this case, the Jesuit is free to present to the superior of the province all the arguments he thinks fit, and is sure the cause will be heard and decided. This rule is expressed with great force in the preface of the "Spiritual Exercises," where Ignatius says: "The first task is to know the will of God. The Jesuit is bound to do what he knows to be the will of God for the benefit of his soul. To prevent himself from doing wrong, and to do good, he must know the will of God."

... "A lay brother, before he can become a temporal coadjutor for the discharge of domestic duties, must pass ten years before he is admitted to vows. Sometimes after ordination the priest, in the midst of his work, is again called away to a third year's novitiate, called the tertianship, as a preparation for his solemn profession of the three vows. His former vows were simple and the Society was at liberty to dismiss him for any canonical reason. The formula of the famous Jesuit vow is as follows:"

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M., in place of the General of the Church) humbly pray from Thine infinite goodness, for the perpetual Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys, according to the manner expressed in the Apostolic Letter and Constitutions of the said Society."

The lay brothers leave out the clause concerning education. The scholastic does not begin the study of theology until he is twenty-eight or thirty, and then passes through a four or six years course. Only when he is thirty-four or thirty-six can he be ordained a priest and enter on the grade of a spiritual coadjutor. A lay brother, before he can become a temporal coadjutor for the discharge of domestic duties, must pass ten years before he is admitted to vows. Sometimes after ordination the priest, in the midst of his work, is again called away to a third year's novitiate, called the tertianship, as a preparation for his solemn profession of the three vows. His former vows were simple and the Society was at liberty to dismiss him for any canonical reason. The formula of the famous Jesuit vow is as follows:

"I, N., promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father M., in place of the General of the Church) humbly pray from Thine infinite goodness; for the perpetual Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys according to..."
the form of life contained in the Apostle Letters of the Society of Jesus and in its Constitutions.

Immediately after the vows the Jesuit adds the following simple vows: (1) that he will never act nor consent that the provisions in the constitutions concerning poverty should be changed; (2) that he will not directly nor indirectly procure election or promotion for himself to any prelacy or dignity in the Society; (3) that he will not accept or consent to his election to any dignity or prelacy outside of the Society unless forced thereunto by obedience; (4) that if he knows of others doing these things he will denounce them to the superiors; (5) that if elected to a bishopric he will never refuse to hear such advice as the general may deign to send him and will follow it if he judges it is better than his own opinion. The professed is now eligible to certain offices in the Society, and he may return secretly professed father of the three vows for the rest of his life. The highest class, who constitute the real core of the Society, whence all its chief officers are taken, is the professed of the four vows. This grade can seldom be retained if the candidate is in his forty-fifth year, which involves a probation of thirty-one years in the case of those who have entered on the novitiate at the earliest legal age.

The number of these select members is small in comparison with the whole Society; the exact proportion varies from time to time, the present tendency being to increase the number. The vows of this grade are the same as the last formula, with the addition of the following important clause:

"Moreover I promise the special obedience to the Sovereign Pontiff concerning missions, as is contained in the same Apostle Letter and Constitutions."}

These various members of the Society are distributed in its novitiate houses, its colleges, its professed houses and its mission residences. The question has been hotly debated whether, in addition to these six grades, there be not a seventh answering in some degree to the tertiaries of the Franciscan and Dominican orders, but less related to the Society and acting as its emissaries in various lay positions. This class was styled in France "Jesuits of the short robe," and there is some evidence in support of its actual existence under Louis XV. The Jesuits themselves deny the existence of any such body, and are able to adduce the negative disproof that no provision for it is to be found in their constitutions. On the other hand there are clauses therein which make the creation of such a class perfectly feasable if thought expedient. An admitted instance is the case of Francisco Borgia, who in 1548, while still duke of Gandia, was received into the Society. What has given colour to the idea is that certain persons have made vows of obedience to individual Jesuits; as Thomas Worthington, rector of the Douai seminary, to Father Robert Parsons; Ann Vaux to Fr. Henry Garnet, who told her that he was not indeed allowed to receive her vows, but that she might make them if she wished and then receive his direction. The archaeologist George Oliver of Exeter was, according to Foley's Records of the English Province, the last of the secular priests of England who vowed obedience to the Society before its suppression.

The general lives permanently at Rome and holds in his hands the right to appoint, not only to the office of provincial over each of the head districts into which the Society is mapped, but to the offices of each house in particular. There is no standard of an electoral right in the Society except in the election of the general himself. By a minute and frequent system of official and private reports he is informed of the doings and progress of every member of the Society and of everything that concerns it throughout the world. Every Jesuit has not only the right but the duty in certain cases of communicating, directly and privately, with his general. While the general thus controls everything, he himself is not exempt from supervision on the part of the Society. A consultative council is imposed upon him by the general congregation, consisting of the assistants of the various nations, a socius, or adviser, to warn him of mistakes, and a confessor. These he cannot remove nor select; and he is bound, in certain circumstances, to listen to their advice, although he is not obliged to follow it. Once elected the general may not refuse the office, nor abdicate, nor accept any dignity or prelacy outside of the Society; on the other hand, for certain definite reasons, he may be suspended or even deposed by the authority of the Society, which can thus preserve itself from destruction. No such instance has occurred, although steps were once taken in this direction in the case of a general who had set himself against the current feeling.

It is said that the general of the Jesuits is independent of the pope; and his popular name, "the black pope," has gone to confirm this idea. But it is based on an entirely wrong conception of the two offices. The suppression of the Society by Clement XIV, in 1773 was an object-lesson in the supremacy of the pope. The Jesuits were one of the very last groups, long after time, received extraordinary privileges from popes, who were warned by the necessities of the times in granting them. A great number of influential friends, also, gathered round the fathers who, naturally, sought in every way to retain what had been granted. Popes who thought it well to bring about certain changes, or to withdraw privileges that were found to have passed their intentions or to interfere unduly with the rights of other bodies, often met with loyal resistances against their proposed measures. Resistance up to a certain point is lawful and is disobedience, for every society has the right of self-preservation. In cases where the popes insisted, in spite of the representations of the Jesuits, their commands were obeyed. Many of the popes were distinctly unfavourable to the Society, and while others, on the contrary, were anxious against the Jesuits, not the next pope withdrew. Whatever was done in times when strong divergence of opinion existed, and whatever may have been the actions of individuals who, even in so highly organized an institution as the Society of Jesus, cannot always have been controlled by their superiors, yet the ultimate result on the part of the Society has always been obedience to the pope, who authorized, protected and privileged them, and on whom they ultimately depend for their very existence.

Thus constituted, with a skilful union of strictness and freedom, of complex organization with a minimum of friction in working, the Society was admirably devised for its purpose of introducing a new power into the Church and the world. Its immediate services to the Church were great. The Society did much, single-handed, to roll back the tide of Protestant advance when half of Europe, which had not already shaken off its allegiance to the papacy, was threatening to do so. The honour of the reaction belong to the Jesuits, and the reactionary spirit has become the Society of Jesus. They had the wisdom to see and to admit, in their correspondence with their superiors, that the real cause of the Reformation was the ignorance, neglect and vicious lives of so many priests. They recognized, as most earnest men did, that the difficulty was in the higher places, and that these could best be touched by indirect methods. At a time when primary or even secondary education had in most places become a mere effect and pedantic adherence to obsolete methods, they were bold enough to innovate, both in system and material. Putting fresh spirit and devotion into the work, they not merely taught and catechized in a new, fresh and attractive manner, besides establishing free schools of good quality, but provided new school books for their pupils which were an enormous advance on those they found in use; so that for nearly three centuries the Jesuits were accounted the best schoolmasters in Europe, as they were, till their forcible suppression in 1901, confessedly the best in France. The Jesuit teachers conciliated the goodwill of their pupils by mingled firmness and gentleness. Although the method of the Ratio Studiorum has ceased to be acceptable, yet it played in its time as a part in the collective development of Europe as did the method of Frederick the Great in modern warfare. Bacon succinctly gives his opinion of the Jesuits teaching in these words: "As for the pedagogical part, the same rule would be, Consult the schools of the Jesuits; for nothing better has been put in practice" (De Augmentis, vi. 4). In instruction they were excellent; but in education, or formation of character, deficient. Again, when most of the continental clergy had sunk, more or less, into the moral and intellectual slough which is pictured for us in the writings of Erasmus and the Epistolarum obscurorum virorum (see Hutten, Ulrich von), the Jesuits won back respect for the clerical calling by their personal culture
and the unimpeachable purity of their lives. These qualities they have carefully maintained; and probably no large body of men in the world has been so free from the reproach of discreditable members or has kept up, on the whole, an equally high average of intelligence and conduct. As preachers, too, they delivered the pulpit from the bondage of an effete scholasticism and reached at once a clearness and simplicity of treatment such as the English pulpit scarcely begins to exhibit till after the days of Tillotson; while in literature and theology they count a far larger number of respectable writers than any other religious society can boast. It is in the mission field, however, that their achievements have been most remarkable. Whether toiling among the teeming millions in Hindustan and China, labouring amongst the Hurons and Iroquois of North America, governing and civilizing the natives of Brazil and Paraguay in the missions and "reductions," or ministering, at the hourly risk of his life to his fellow-Catholics in England under Elizabeth and the Stuarts, the Jesuit appears alike devoted, indefatigable, cheerful and worthy of hearty admiration and respect.

Nevertheless, two startling and indisputable facts meet the student who pursues the history of the Society. The first is the universal suspicion and hostility it has incurred—not merely from the Protstants whose avowed foe it has been, not yet from the enemies of all clericalism and dogma, but from every Catholic state and nation in the world. Its chief enemies have been those of the household of the Roman Catholic faith. The second fact is the ultimate failure which seems to dog all its most promising schemes and efforts. These two results are to be observed alike in the provinces of morals and politics. The first cause of the opposition indeed redounds to the Jesuits' credit, for it was largely due to their success. Their pulpits rang with a studied eloquence; their churches, sumptuous and attractive, were crowded; and in the con" 

JESUITS

It was no wonder that, when opportunity served, the train that had been heedlessly laid by speculative professors was fired by rash hands. What professors like Suarez taught in the calm atmosphere of the lecture hall, what writers like Mariana upheld and praised, practical men took as justification for deeds of blood. There is no evidence that any Jesuit took a direct part in political assassinations; however, indirectly, they may have been morally responsible. They were playing with edged tools and often got wounded through their own carelessness. Other grievances were raised by their perpetual meddling in politics, e.g., their large share in fanning the flames of political hatred against the Huguenots under the last two Valois kings; their perpetual plotting against England in the reign of Elizabeth; their share in the Thirty Years' War and in the religious miseries of Bohemia; their decisive influence in causing the revocation of the edict of Nantes and the expulsion of the Protestants from France; the ruin of the Stuart cause under James II., and the establishment of the Protestant succession. In a number of cases where the evidence against them is defective, it is at least an unfortunate coincidence that there is always direct proof of some Jesuit having been in communication with the actual agents engaged. They were the stormy petrels of politics. Yet the Jesuits, as a body, should not be made responsible for the doings of men who, in their political intrigues, were going directly against the distinct law of the Society, which in strict terms, and under heavy penalties, forbade them to have anything to do with such matters. The politicians were comparatively few in number, though unfortunately they held high rank; and their disobedience to the rule besmirched the name of the society and destroyed the good work of the other Jesuits who were faithfully carrying out their own proper duties.

A far graver cause for uneasiness was given by the Jesuits' activity in the region of doctrine and morals. Here the charges against them are precise, early, numerous and weighty. Their founder himself was arrested, more than once, by the Inquisition and committed to prison, and though eventually he was set free, the Society, as St Ignatius, with all his powerful gifts of intellect, was entirely practical and ethical in his range, and had no turn whatever for speculation, nor desire to discuss, much less to question, any of the received dogmas of the Church. He gives it as a rule of orthodoxy to be ready to say that black is white if the Church says so. He was therefore acquitted on every occasion, and applied each time for a formally attested certificate of his orthodoxy, knowing well that, in default of such documents, the fact of his arrest as a suspected heretic would be more distinctly recollected by opponents than that of his honourable dismissal from custody. His followers, however, have not been so fortunate. On doctrinal questions indeed, though their teaching on grace, especially in the form given to it by Molina (q.v.), ran contrary to the accepted teaching on the subject by the Augustinians, Dominicans and other representative schools; yet by the pertinacity thee gained for their views, as a recognized and established position. A special congregation of cardinals and theologians known as de auxiliiis was summoned by the pope to settle the dispute, for the odium theologiceum had risen to a desperate height between the representatives of the old and the new theology; but after many years they failed to arrive at any satisfactory conclusion, and the pope, instead of settling the dispute, was only able to impose mutual silence on all opponents. Among those who held out stiffly against the Jesuits on the subject of grace were the Jansenists, who held that they were following the special teaching of St Augustine, known par excellence as the doctor of grace. The Jesuits and the Jansenists soon became deadly enemies; and in the ensuing conflict both parties accused each other of flinging scruples to the wind. (See Jansenism.)

But the accusations against the Jesuit system of moral theology and their action as guides of conduct have had a more serious effect on their reputation. It is undeniable that some of their moral writers were lax in their teaching; and conscience was strained to the snapping point. The Society was trying to make itself all things to all men. Propositions extracted from
JESUITS

Jesuit moral theologians have again and again been condemned by the pope and declared untenable. Many of these can be found in Viva's Condemned Propositions. As early as 1560 the Jesuits were censured by the Sorbonne, chiefly at the instance of Eustache de Bellay, bishop of Paris, as being dangerous in matters of faith. Melchior Cano, a Dominican, one of the ablest divines of the 16th century, never ceased to lift up his testimony against them, from their first beginnings till his own death in 1560; and, unmollified by the bribe of the bishopric of the Canaries, which their interest procured for him, he succeeded in banishing them from the university of Salamanca. Carlo Borromeo, to whose original advocacy they owed much, especially in the council of Trent, found himself attacked in his own cathedral pulpit and interfered with in his jurisdiction. He withdrew his protection and expelled them from his colleges and churches; and he was followed in 1604 in this policy by his cousin and successor Cardinal Federigo Borromeo. St. Theresa learnt, in after years, to mistrust their methods, although she was grateful to them for much assistance in the first years of her work. The credit of the Society was seriously damaged by the publication, at Cattaneo in 1621, of the Monita Secreta, etc., which doubtly and at a forgery. As, however, to gain the authoritative secret instructions drawn up by the general Acquaviva and given by the superiors of the Society to its various officers and members. A bold caricature of Jesuit methods, the book has been ascribed to John Zaporovsky or to Camilloe and Schloss, all ex-Jesuits, and it is stated to have been discovered in manuscript by Christian of Brunswick in the Jesuit school at Prague. It consists of suggestions and methods for extending the influence of the Jesuits in various ways, for securing a foothold in new places, for acquiring wealth, for creeping into households and leading silly rich widows captive and so forth, all marked with ambition, craft and unscrupulosity. It had a wide success and popularity, passing through several editions, and even to this day it is used by controversialists as unscrupulous as the original writers. It may, perhaps, represent the actions of some individuals who allowed their zeal to outrun their discretion, but surely no society which exists for good and is marked by so many worthy men could systematically have conducted its operations in such a manner. Later on a formulable assault was made on Jesuit moral theology in the famous Provincial Letters of Blaise Pascal (q.v.), eighteen in number, issued under the pen-name of Louis de Montalte, from January 1656 to March 1657. Their wit, irony, eloquence and finished style have kept them alive as one of the great French classics—a destiny more than that of the kindred works by Antoine Arnauld, Théologie morale des Jésuites, consisting of extracts from writings of members of the Society, and Morale pratique des Jésuites, made up of narratives professing to set forth the manner in which they carried out their own maxims. But, like most controversial writers, the authors were not scrupulous in their quotations, and by giving passages divorced from their contexts often entirely misrepresented their opponents. The immediate reply on the part of the Jesuits, The Discourses of Cleander and Eudoxus by Père Daniel, could not compete with Pascal's work in brilliancy, wit or style; moreover, it was unfortunate enough to be written on the kind of inhibited hand, which had been the usual and expected reply of the Jesuits. The immediate reply on behalf of the Society to Pascal's charges of lax morality, apart from mere general denials, is broadly as follows:—

(1) St. Ignatius himself, the founder of the Society, had a special aversion from untruthfulness in all its forms, from quibbling, equivocation or even studied obscurity of language, and it would be contrary to his character to have taught such a system to his followers for them to think and act otherwise. Hence, any who practised equivocation were, so far, unfaithful to the Society.

(2) Several of the cases cited by Pascal are abstract hypotheses, meant to be ingeniously argued by him as illustrating the principles of the systematic theologians, but having no practical bearing whatever.

(3) Even such as do belong to the sphere of actual life are of the nature of counsel to spiritual physicians, how to deal with exceptional maladies; and were never intended to fix the standard of moral obligation for the general public. (4) The theory that they were intended for this latter purpose and do represent the normal teaching of the Society becomes more untenable in exact proportion as this immorality is insisted on, because it is a matter of notoriety that the Jesuits themselves have been singularly free from personal, as distinguished from corporate, evil repute; and no one pretends that the large number of lay-folk whom they have educated or influenced exhibit greater moral inferiority than others.

The third of these replies is the most cogent as regards Pascal, but the real weakness of his attack lies in that nervous dread of appeal to first principles and their logical result which has been the besetting snare of Gallicanism. Pascal, at his best, has mistaken the part for the whole; he charges to the Society what, at the most, are the doings of individuals; and from these he asserts the degeneration of the body from its original standard; whereas the stronger the life and the more extensive the natural development, side by side will exist marks of degeneration; and a society like the Jesuits has no difficulty in asserting its life independently of such excesses or, in time, in freeing itself from them.

A charge persistently made against the Society is that it teaches that which justifies the means. And the words of Bussebaurn, whose Medulla theologiae has gone through more than fifty editions, are quoted in proof. True it is that Bussebaurn uses these words: Cuius est exist est licet sit medietas. But on turning to his work it is found that the passage (720, pr. 6, sec. 3, cap. 1, dubium ii.) it will be found that the author is making no universal application of an old legal maxim: but is treating of a particular subject (concerning certain lawful liberties in the marital relation) seemingly with regard to women. The sense in which the Jesuit theologians—a. e. Paul Laymann (1575-1635), in his Theologia moralis (Munich, 1625), and Ludwig Wagemann (1713-1792), in his Synophsis theologiae moralis (Insbruck, 1762)—quote the axiom is a wrong one. They generally mean that it is not only lawful to go on a journey by railway it is lawful to take a ticket. No one who put forth that proposition would be thought to mean that it is lawful to defraud the company by stealing a ticket; for the proposition is always taken to understand that every means employed in it should, in themselves, not be bad but good or at least indifferent. So when Wagemann says tersely Finis determinant probitatem actus he is clearly referring to acts which in themselves are indifferent, i.e., acts determined or not by a good or a bad end.

The society for the suppression of popery was formed, in 1613, for the encouragement of religious and political liberty. If any other society was needed to be formed with such a law, it would have been very miserable, for the law was neither good nor bad in itself. The morality of any specified shooting depends upon what is shot, and the circumstances attending that act: shooting a man in self-defence is, as a moral act, on an entirely different plane to shooting a man in murder. It has never been proved, and never can be proved, although the attempt has frequently been made, that the Jesuits ever taught the nefarious proposition ascribed to them, which would be entirely subversive of all morality. Again, the doctrine of probity is utterly misunderstood. It is based on an accurate conception of law. Law to bind must be clear and definite; if it be not so, its obligation ceases and liberty of action remains. No probable opinion can stand against a clear and definite law; but when a law is doubtful in its obligation, then the question of its execution is involved in the ascertainment of the act: as an act, it is lawful; as a doubtful act, for practical purposes, no law at all, so it superinduces no obligation. Hence a probable opinion is one, founded on reason and held on serious grounds, that the law does not apply to certain specified cases; and that the law-giver therefore did not intend to bind. It is the principle of equity applied to law. In moral matters a probable opinion, that is one held on no trivial grounds but by unprejudiced and solid thinkers, has no place where the voice of conscience is clear, distinct and formed.

Two causes have been at work to produce the universal failure of the great Society in all its plans and efforts. First stands its lack of really great intellects. It has had its golden age. No man of the first order of genius can live for any length of time without being a little broader in his conceptions than the plain matter of fact would allow. One who has once done one great thing is likely to be a little more bound by the fact than the truth than the popular conception of the ordinary Jesuit as a being of almost superhuman abilities and universal knowledge. The Society, numbering as it does so many thousands, and with abundant means of devoting men to special branches of study, has, without doubt, produced men of great intelligence and solid learning. The average member, too, on account of his long and systematic training, is always equal and often superior to the average member of any other equally large body, besides being disciplined by a far more perfect drill. But it takes great men to carry out great plans; and of really great men, as the outside world knows and judges, the Society has been markedly barren from almost the first. Apart from its founder and his early companion, St. Francis Xavier, there is none who stands in the very first rank. Laynez and Acquaviva were able administrators and politicians; the Bollandists (q.v.) were industrious workers and have developed a critical spirit from which much good can be expected; Francisco Suarez,
Leonard Lessius and Cardinal Franzelin were some of the leading Jesuit theologians; Cornelius a Lapidis (1567–1637) represents their old school of scriptural studies, while their new German writers are the most advanced of all orthodox higher critics; the French Louis Bourdaloue (1528–1604), the Italian Paolo Segneri (1621–1664), and the Portuguese Antonio Vieyra (1668–1697) represent their best pulpit orators; while of the many mathematicians and astronomers produced by the Society Angelo Secchi, Ruggiero Giuseppe Bosovich and G.B. Beccaria are conspicuous, and in modern times Stephen Joseph Perry (1833–1889), director of the Stonyhurst College observatory, took a high rank among men of science. Their boldest and most original thinker, Denis Petiot, so many years neglected, is now, by inspiring Cardinal Newman’s Essay on the Development of Christian Doctrine, producing a permanent influence over the current of human thought. The Jesuits have produced no Aquinas, no Anselm, no Bacon, no Richelieu. Men whom they trained, and who broke loose from their teaching, Pascal, Descartes, Voltaire, have powerfully affected the philosophical and religious beliefs of great masses of mankind; but respectable mediocrity is the brand on the long list of Jesuit names in the catalogues of Alemagbe and De Backer. This is doubtless due in great measure to the destructive process of scooping out the will of the Jesuit novice, to replace it with that of his superior (as a watchmaker might fit a new movement into a case), and thereby tending, in most cases, to annihilate those subtle qualities of individuality and originality which are essential to genius. Men of the higher stamp will either refuse to submit to the process and leave the Society, or run the danger of coming forth with the mill with their finest qualities pulverized and useless. In accordance with the spirit of its founder, who wished to secure uniformity in the judgment of his followers even in points left open by the Church ("Let us all think the same way, let us all speak in the same manner if possible"), the Society has shown itself to be impartial of those who think or write in a way different from what is current in its ranks.

Nor is this all. The Ratio Studiorum, devised by Acquaviva and still extant in the colleges of the Society, lays down rules which are incompatible with all breadth and progress in the higher forms of education. True to the anti-spectaculaire and traditional side of the founder’s mind, it prescribes that, even where religious topics are not in order, the teacher is not to permit any free discussion, nor to cite the opinions of an author not of known repute; nor to teach or suffer to be taught anything contrary to the prevalent opinions of acknowledging the text of the Vulgate as the sole rule of doctrine. These rules are not to be mentioned at all, even for refutation, nor are objections to received teaching to be dwelt on at any length. The result is that the Jesuit emerges from his schools without any real knowledge of argumentation, and the method of thought which he has been taught is not implanted into him. The professor of Biblical Literature is always to support and defend the Vulgate and cannot refer the marginal readings from the Hebrew and Greek. The Septuagint, as far as it is incorrupt, is to be held not less authentic than the Vulgate. In philosophy Aristotle is always to be followed, and St Thomas Aquinas generally, care being taken to speak respectfully of him even when abandoning his opinions, though now it is customary for the Jesuit to express the theories of other thinkers. Hence the Compendium B. Thomas is no unfamiliar expression in their books. It is not wonderful, under such a method of training, fixed as it has been in minute detail for more than three hundred years, that highly cultured communions should be the inevitable victims of Jesuits and that in proportion as Jesuit power has become dominant in Christendom, especially in ecclesiastical circles, the same doom of intellectual sterility and consequent loss of influence with the higher and intellectual classes has sprung from that which his predecessors had accomplished. The initial mistake in the formation of character is that the Jesuits have aimed at educating lay boys in the same manner as they consider advisable for their own children, for whom obedience and direction is the primary aim; whereas, if the lay people the right use of liberty and initiative are to be desired.

The second cause which has blighted the efforts of the Society is the Jesuit, too faithfully learnt and practised, of making its converts into the first foxes of his own flock. Men were quick to see that Jesuits did not aim at co-operation with the other members of the Church but directly or indirectly at mastery. The most brilliant exception to this rule is found in some of the missions of the Society and notably in that of St Francis Xavier (c.n.). But he quitted Europe in 1541 before the new society, especially under Laynez, had hardened into its final mould; and he never returned. His work, so far as can be gathered from contemporary accounts, was not done on true Jesuit lines as they afterwards developed, though the Society has repaid all the credit; and it is even possible that, had he succeeded the founder as general, the institute might not have received that political and self-seeking turn which Laynez, as second general, gave at the critical moment.

It would almost seem that careful selection was made of the men of the greatest piety and enthusiasm, whose unworldliness made them less apt for diplomatic intrigues, to break new ground in the various missions where their success would throw lustre on the order, for their success abroad, such men are not to be found easily; and, as they died off, the tendency was to fill their places with more ordinary characters, whose aim was to increase the power and resources of the body. Hence the condescension to hitherto rid in Hindustan and China, and the attempted subjugation of the English Catholic clergy. The first successes of the Indian mission were entirely among the lower classes; but when in Madura, in 1606, Robert de Nobili, a nephew of Bellarmine, to win the Brahmins, adopted their dress and mode of life—a step sanctioned by Gregory XV. in 1623 and by Clement XI. in 1707—the fathers who followed his example pushed the new caste-feeling so far as absolutely to refuse the ministrations and sacraments to the non-Christian (They are now under the Bishops of the Brahmi, and the Jesuits report that which was reported to Rome and was mainly censured by the brevets of Innocent X. in 1645, Clement IX. in 1669, Clement XII. in 1724 and 1739, and Benedict XIV. in 1745. The Chinese rites, assailed at that time by numerous protests, were not, however, officially put down until 1744 by a bull of Benedict XIV. For, where their side of the story is that best known, we have a remarkable letter, printed by Lucas Wadding in the Annales minoraum, addressed to the Jesuit Societys, and concluded by the missive of a French Jesuit, who was martyred in 1624, in which he complains to the pope that the Jesuits systematically postponed the spiritual welfare of the native Christians to their own convenience and advantage: while as regards the test of many a new convert, that was to be used was, not the test of the principle, but the fact of its being a solution of the names of the other orders who had undertaken missionary work in Japan. Yet soon many Jesuit martyrs in Japan were to shed a new glory on the Society (see Japan: Foreign Intercourse). Again, even in Paraguay, the most promising of all Jesuit undertakings, the evidence shows that the fathers, though civilizing the Guaraní population just sufficiently to make them useful and docile servants, happier no doubt than they were before or after, stopped there. While the mission was begun on the rational principle of governing races still in their childhood by methods adapted to that stage in their mental development, yet for one hundred and fifty years the "reductions" were conducted in the same manner, and when the hour of trial came the Jesuit civilization fell like a house of cards.

These examples are sufficient to explain the final collapse of so many promising efforts. The individual Jesuit might be, and often was, a hero, saint and martyr, but the system which he was obliged to administer was foredoomed to failure; and the suppression which came in 1773 was the natural result of forces and elements they had set in antagonism without the power of controlling.

The influence of the Society since its restoration in 1814 has not been marked with greater success than in its previous history. It was natural after the restoration that an attempt should be made to pick up again the threads that were dropped; but soon they came to realize the truth of the saying of St Ignatius: "The Society shall adapt itself to the times and not the times to the Society." The political conditions of Europe have completely changed, and constitutionalism is unfavourable to that personal influence which, in former times, the Jesuits were able to bring to bear upon the heads of states. In Europe they confine themselves mainly to educational and ecclesiastical politics, although both Germany and France have followed the example of Portugal and refused, on political grounds, to allow them to be in these countries. It would appear as though some of the Jesuits had not, even yet, learnt the lesson that meddling with politics has always been their ruin. The main cause of any difficulty that may exist to-day with the Society is the same, the same panegyric, the Imago primi sacelli Societatis (probably written by John Tollenarius in 1640), by identifying the Church with their own body, and being intolerant of all who will not share this view. Their power is still large in certain sections of the ecclesiastical
world, but in secular affairs it is small. Moreover within the church itself there is a strong and growing feeling that the intention of Catholicism may necessitate a second and final suppression of the Society. Cardinal Manning, a keen observer of times and influences, was wont to say:—"The work of 1773 was the work of God: and there is another 1773 coming." But, if this be true, it will be due not to the pressure of secular governments, as in the 18th century, but to the action of the Church itself. The very nations which have cast out the Society have shown no disposition to accept its own estimate and identify it with the Church; while the Church itself is not conscious of depending upon the Society. To the Church the Jesuits have been what the Janissaries were to the Ottoman Empire, at first its defenders and its champions, but in the end its taskmasters.

History.—The separate article on Loyola tells of his early years, his conversion, and his first gathering of companions. It was not until November 1537, when all hope of going to the Holy Land was given up, that any outward steps were taken to form these companions into an organized body. It was on the eve of their going to Rome, for the second time, that the fathers met Ignatius at Vicenza and it was determined to adopt a common rule and, at the suggestion of Ignatius, the name of the Company of Jesus. Whatever may have been his private hopes and intentions, it was not until he, Laynez and Faber (Pierre Lefevre), in the name of their companions, were sent to lay their services at the feet of the pope that the history of the Society really begins.

On their arrival at Rome the three Jesuits were favourably received by Paul III., who at once appointed Faber to the chair of scripture and Laynez to that of scholastic theology in the university of the Sapientia. But they encountered much opposition and were even charged with heresy when this decision had been arrived at, and there were difficulties in the way of starting any new order. Despite the approval of Cardinal Contarini and the goodwill of the pope (who is said to have exclaimed on perusing the scheme of Ignatius, "It is the work of God") there was a general feeling that the regular system had broken down and could not be widened farther. Cardinal Guidiccioni, one of the commission of three appointed to examine the draft constitution, was a great adversary of Ignatius and wished to destroy the institute, which was to be remodelled and put under strict control. That very year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadolet, Caraffa (afterwards Paul IV.), Fregoso and Lomellini, were sent to Rome to deliberate on the constitution of the order, which were to be remodelled and put under strict control. That very year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadolet, Caraffa (afterwards Paul IV.), Fregoso and Lomellini, were sent to Rome to deliberate on the constitution of the order, which were to be remodelled and put under strict control. That very year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadolet, Caraffa (afterwards Paul IV.), Fregoso and Lomellini, were sent to Rome to deliberate on the constitution of the order, which were to be remodelled and put under strict control. That very year, 1538, a commission of cardinals, including Reginald Pole, Contarini, Sadolet, Caraffa (afterwards Paul IV.), Fregoso and Lomellini, were sent to Rome to deliberate on the constitution of the order, which were to be remodelled and put under strict control.

Igna\i\tius and his companions, however, had but little doubt of ultimate success, and so bound themselves, on the 15th of August, to obey any superior chosen from amongst their body, and added on the 4th of May certain other rules, the most important of which was a vow of special allegiance to the pope for mission purposes to be entered into with the members of the order. But his careful study of the papers, changed his mind; it is supposed that the cause of this change was in large measure the strong interest in the new scheme exhibited by John III., king of Portugal, who instructed his Privy Council to look into the matter. Ignatius, the first principle that the members of his institute should mix freely in the world and be as little marked off as possible externally from secular clerical life and usages, ran counter to all tradition and prejudice, save in Caraffa's then recent order of Theatins, who, had some analogy with the proposed Society, had taken some steps in the same direction.

and partly to a conviction that penitents living in enclosure, as all religious persons then were, would be of no effective use to the Society; whereas the founder, against the wishes of several of his companions, laid much stress on the duty of accepting the post of confessor to kings, queens and women of high rank when opportunity presented itself. And the year 1546 is notable in the annals of the Society as that in which it embarked on its great educational career, especially by the annexation of free day-schools to all its colleges.

The council of Trent, in its first period, seemed to increase the reputation of the Society; for the pope chose Laynez, Faber and Salmeron to act as its theologians in that assembly, and in this capacity attended the sessions in which the council reassembled under Pius IV., Laynez and Salmeron again attended in the same capacity. It is sometimes said that the council formally approved of the Society. This is impossible; for as the Society had received the papal approval, that of the council would have been impertinent as well as unnecessary. St Charles Borromeo wrote to the presiding cardinals, on the 11th of May 1562, saying that, as France was disaffected to the Jesuits whom the pope wished to see established in every country, Pius IV., desired, when the council was occupying itself about regulars, that it should make some honourable mention of the Society in order to recommend it. This was done in the twenty-fifth session (cap. XVI., d. r.) when the decree was passed, and at the end of the time of pontifical session it was ordered that either be professed or dismissed. The words of the council are: “By these things, however, the Synod does not intend to make any innovation or prohibition, so as to hinder the religious order of Clerics Regular of the province of Jesus from being able to serve God and His Church, in accordance with their ponts institute approved of by the Holy Apostolic See.”

In 1548 the Society received a valuable recruit in the person of Francisco Borgia, duke of Gandia, afterwards general, while two important events marked 1550—the foundation of the Collegio Romano and a fresh confirmation of the Society by Julius III. The German college, for the children of poor nobles, was founded in 1552; and in the same year Ignatius firmly settled the discipline of the Society by putting down, with promptness and severity, some attempts at independent action on the part of Rodriguez at Coimbra—this being the occasion of the famous letter on obedience; while 1553 saw the despatch of a mission to Abyssinia with one of the fathers as patriarch, and the first rift within the lute when the pope thought that the Spanish Jesuits were taking part with the emperor against the Holy See. Paul IV. (whose election alarmed the Jesuits, for they had not foreseen it), an avowed and declared enemy, was passed over with supreme tact by Ignatius, whom he respected personally. In 1556, the founder died and left the Society consisting of forty-five professed fathers and two thousand ordinary members, distributed over twelve provinces, with more than a hundred colleges and houses.

After the death of the first general there was an interregnum of two years, with Laynez as vicar. During this long period he occupied himself with completing the constitutions by incorporating certain declarations, said to be Ignatius, which explained and sometimes completely altered the meaning of the original text. Laynez was an astute politician and saw the vast capabilities of the Society over a far wider field than the founder contemplated; and he prepared to give it the direction that it has since followed. In some respects, the council appointed the only one who looked upon as the real founder of the Society as history knows it. Having carefully prepared the way, he summoned the general congregation from which he emerged as second general in 1556. As successor to Ignatius he succeeded in effecting reforms in the Society, especially in two points: the public recitation of the office in choir and the limitation of the general's office to a term of three years. Despite all the protests and negotiations of Laynez, the pope remained obstinate; and there was nothing but to submit. On the 8th of September 1558, two points were added to the constitutions: that the generalship should be triennial and not perpetual, although after the three years the general might remain; that the council should have the right to dismiss anyone in choir after the manner of the other orders, but with that moderation which should seem expedient to the general. Taking advantage of this last clause, Laynez applied the new law to two houses only, namely, of Laynez, then Gonzaga, the other houses contending with each other, with singing vespers on feast days; and as soon as Paul IV. died, Laynez, acting on advice, quietly ignored for the future the orders of the late pope. He also succeeded in increasing further the already enormous powers of the general. Laynez took a leading part in the colloquy of Poissy in 1561 between the Catholics and Huguenots; and obtained a legal footing from the states-general for college of the Society in France. He died in 1564, leaving the Society increased to eighteen provinces with a hundred and thirty colleges, and was succeeded by Francisco Borgia. During the third generalate, the Society was confirmed in its privileges by a new form extended to the Society, as being a mendicant institute, all favours that had been or might afterwards be granted to mendicant bodies. It was a trying set-off that in 1567 the pope again refused to follow the general's advice, and dismissed the Jesuits from the papal states. Laynez, who had been professed to priests' orders, especially as Gregory XIII. rescinded both these injunctions in 1573; and indeed, as regards the hours, all that Pius V. was able to obtain was the nominal concession that the breviary be recited in choir. It should be recited in the professed house is only, and that not of necessity by more than two persons at a time. Everard Mercurian, a Fleming, and a subject of Spain, succeeded Borgia in 1573, being forced on the Society by the pope, in preference to the English general, who was rejected partly as a Spaniard and still more because he was a “New Christian” of Jewish origin and therefore objected to in Spain itself. During his term of office there took place the troubles in France that lay the Jesuit theme and their powerful Jesuits' rule over that institution; and in 1580 the first Jesuit mission, headed by the redoubtable Robert Parsons and the saintly Edmund Campion, set out for England. This mission, on one side, carried on an active propaganda against Elizabeth in favour of Spain; and on the other, among the true missionaries, was marked with devoted zeal and heroism even to the ghastly death of traitors. Claude Acquaviva, the fifth general, held office from 1581 to 1615, a time when the Jesuits were chiefly concerned with their work in England, due to the Jesuits. He was an able, strong-willed man, and crushed what was tantamount to a rebellion in Spain. It was during this struggle that Mariana, the historian and the author of the famous De Rege Christiano, wrote his History of the Society, defending the order and the Society against the attacks of its enemies. On the Defects in the Government of the Society, he confessed freely that the Society had faults and that there was a great deal of unseemly among the members; and he mentioned among the various points calling for improvement the absence of ecclesiastical discipline, the state of the lay brother and the possessions of the Society; the spying system, which he declared to be carried so far that, if the general's archives at Rome should be searched, no one Jesuit's character would be found to escape; the monopoly of the higher offices by a small clique; and the absence of all encouragement and recompense for the best men of the Society.

It was chiefly during the generalship of Acquaviva that the Society began to gain an evil reputation which eclipsed its good report. In France the Jesuits joined, if they did not originate, the league against Henry of Navarre. Absolution was refused by them to those who would not join in the Guise rebellion, and Acquaviva is said to have tried to stop them, but in vain. The assassination of Henry III., in the interests of the league and the grounding of Henry IV. in 1594 by Chastel, a pupil of theirs, revealed the danger that the whole Society was running by the intrigues of a few men. The Jesuits were banished from France in 1594, but were allowed to return by Henry IV. under conditions; as Sully has recorded, the king declared his only motive to be the expediency of not driving them into a corner with possible disastrous results to his life, and because his only hope of reform lay in the Jesuits’ guidance. In England the political schemings of Parsons were no small factors in the odium which fell on the Society at large; and his determination to capture the English Catholics as an apanage of the Society, to the exclusion of all else, was an object lesson to the rest of Europe of a restless ambition and lust of domination which were to find many imitators. The political turn which was being given by some to the Society, to the detriment of its real spiritual work, evoked the fears of the wiser heads of the body; and in the fifth general congregation held in 1593–1594 it was decreed: “Whereas in these times of difficulty and danger it has happened through the fault of certain individuals, through ambition and intemperate zeal, that our institute has been ill spoken of in divers places and before divers sovereigns...” It is severely and strictly forbidden to all members of the Society to interfere in any manner whatever in public affairs even though they be thereto invited, or to deviate from the institute through prejudice or any other motive whatever.” It would have been well had Acquaviva enforced this decree; but Parsons was allowed to keep on with his work, and other Jesuits in France for many years after directed, to the loss of religion, affairs of state. In 1605 took place in England the Gunpowder Plot, in which Henry Garnet, the superior of the Society in
England, was implicated. That the Jesuits were the instigators of the plot there is no evidence, but they were in close touch with the conspirators, of whose design Garnet had a general knowledge. There is now no reasonable doubt that he and other Jesuits were legally accessory, and that the condemnation of Garnet as a traitor was substantially just (see GARNET, HENRY).

It was during Acquaviva's generalship that Philip II. of Spain complained bitterly of the Society to Sixtus V., and encouraged him in those plans of reform (even to changing the name) which were only carried into effect by his successor's death in 1592, and also to protracted discussions on grace, wherein the Dominicans contended against the Jesuits, were carried on at Rome with little practical result, by the Congregation de auxiliis, which sat from 1598 till 1607. The course of the society's influence in the last thirty years of Philip's life was not unduly modified by this discussion. The influence at Rome was supported by the Spanish ambassador; but when Henry IV. "went to Mass," the balance inclined to the side of France, and the Spanish monopoly became a thing of the past.

Acquaviva's suppression of the Jesuits from Venice in 1606 for siding with Paul V. when he placed the republic under interdict, but did not live to see their recall, which took place at the intercession of Louis XIV. in 1657. He also had to banish Parsons from Rome, by order of Clement VIII., who was wearied of the perpetual complaints made against that intriguer. Gregory XIV., by the bull Ecclesiae Christi (July 28, 1591), again confirmed the Society, and granted that Jesuits might, for true cause, be expelled from the body without any form of trial or even documentary procedure. This, however, was not carried into effect. In 1697 attempts were made to save the pope or his legates, who directly or indirectly infringed the constitutions of the Society or attempted to bring about any change therein.

Under Virelleschi, the next general, the Society celebrated its first centenary on the 24th of September 1639, the hundredth anniversary of the verbal approbation given to the scheme by Paul III. During this hundred years the society had grown to thirty-six provinces, with branches and sub-branches containing about four thousand members.

In 1650 broke out the great Jansenist controversy, in which the Society took the leading part on one side and finally secured the victory. In this year, considering the matter as a chronicler of the times declares it to have been, Spain, the Jesuits powerfully aided the revolution which placed the duke of Braganza on the throne of Portugal; and their services were rewarded for nearly one hundred years with the practical control of education in that country.

The Society also gained ground steadily in France; for, though held in check by Richelieu and little more favoured by Mazarin, yet from the moment that Louis XIV. took the reins, their star was in the ascendant, and Jesuits possessed the most powerful whom were François de La Chaise (q.v.) and Michel Le Tellier (1643-1719), guided the policy of the king, not hesitating to take his side in his quarrel with the Holy See, which nearly resulted in a schism, nor even to sign the Gallican articles. Their hostility to the Huguenots forced them in the year 1685 on the pretext of the Edict of Nantes to declare war against their Jansenist opponents; the general state of France; and the body of the dead taken with every mark of respect. The king attacked and lied the Jesuits, and to devise a new system. But while thus gaining power in one direction, the Society was losing it in another. The Jesuits were banished from the king's court, and though many Jesuits died with their converts bravely as martyrs for the faith, yet it is impossible to estimate their numbers, it is said that their mission, and the great decay of the Church, was due to the persecution of the Jesuits.

But the terrible power in the universal church, the great riches and the extraordinary prestige of the Society, which Paulo Falconi considered "above all the rest," and "above even apostolic constitutions," carried with them the seeds of rapid and inevitable decay. A succession of devout but incapable generals, after the death of Acquaviva, saw the gradual secularization of tone by tone. To the Jesuits' wealth of resources, with the loss of influence in the world, but not well adapted to increase them. The general's supremacy received a shock when the death of Philip IV. of Spain came, and again the Jesuits were nearly expelled from that country. In 1759, the Jesuits were petitioned to the pope to govern with the necessary application and vigour; and an attempt was made to depose the pope. The thirteenth general, whose views on probabilism diverged from those favoured by the rest

of the Jesuits. Though the political weight of the Society continued to increase in the cabinets of Europe, it was being steadily weakened internally. The Jesuits abandoned the system of free education which had won them so much influence and honor; the Jesuits were in fact not only to the interests of courts, but lost favour with the middle and lower classes; and above all, their monopoly of influence and patronage in France, with the fatal use they had made of it, drew down the bitterest hostility upon them. It was this vexatious ecclesiastical issue with the pope that gave to the Jesuits the reputation of being the most active and skilful of all the non-Catholic representatives of Christianity, but they are accountable in no small degree in France, as in England, for alienating the minds of men from the religion for which they professed to work.

But the most fatal part of the policy of the Society was its activity, wealth and importance as a great trading firm with branch houses scattered over the richest countries of the world. Its founder, with a wise instinct, had forbidden the accumulation of wealth; its own constitutions, as revised in the 8th decree of the sixth general congregation, had forbidden all pursuits of a commercial nature, as also had various popes; but nevertheless the trade went on unceasingly, necessarily with the full knowledge of the general, unless it be pleaded that the system of obligatory episcopacy had completely broken down. The first sign of the opening of the storm which was soon to break was heard in a brief issued in 1741 by Benedict XIV., wherein he denounced the Jesuit offenders as "disobedient, contumacious, captious and reproube persons," and enacted many stringent regulations for their better government. The first serious attack came from a country where they had been long dominant. In 1753 Spain and Portugal exchanged certain American provinces with each other, which involved a transfer of sovereign rights over Paraguay; but it was also provided that the populations should severally migrate also, that the subjects of each crown might remain the same as before. The inhabitants of the "reductions," whom the Jesuits had trained in the use of European arms and discipline, naturally rose in defense of their homes, and attacked the troops and authorities. Their previous docility and their entire submission to the Jesuits left no possible doubt as to the source of the rebellion, and gave the enemies of the Jesuits the handle against them that was not forgotten. In 1757 Carvalho, minister of Pombal, prime minister of Joseph I. of Portugal, and an old pupil of the Jesuits at Coimbra, dismissed the three Jesuit chaplains of the king and named three secular priests in their stead. He next complained to Benedict XIV. that the trading operations of the Society hampered the commercial prosperity of the nation, and asked for remedial measures. The pope, who knew the situation, committed a visitation of the Society to Cardinal Saldanha, an intimate friend of Pombal, who issued a severe decree against the Jesuits and ordered the confiscation of all their merchandise. But at this juncture Benedict XIV., the most learned and able pole of the period, was succeeded by a pope strongly in favor of the Jesuits, Clement XIII. Pombal, finding no help from Rome, adopted other means. The king was fired at and wounded on returning from a visit to his mistress on the 3rd of September 1758. The duke of Avelo and other high personages were tried and executed for conspiracy; while some of the Jesuits, who had undoubtedly been in communication with them, were charged with guilt on doubtless evidence, with duplicity in the attempted assassination. Pombal charged the whole Society with the possible guilt of a few, and, unwilling to wait the dubious issue of an application to the pope for licence to try them in the civil courts, whence they were exempted, issued on the 1st of September 1759 a decree ordering the immediate deportation of every Jesuit from Portugal and all its dependencies and their suppression by the bishops in the schools and universities. Those in Portugal were at once shipped, in great misery, to the papal states, and were soon followed by those in the colonies. In France, Madame de Pompadour was their enemy because they had refused her absolute power while she remained the king's mistress; but the immediate cause of their ruin was the bankruptcy of Father Lavallette, the Jesuit superior in Martinique, a daring speculator, who failed, after trading for some years, for 2,400,000 francs and brought ruin upon some French commercial houses of note. Lorenzo Ricci, then general of the Society, repudiated the debt, alleging lack of authority on Lavallette's part to pledge
the credit of the Society, and he was sued by the creditors. Losing his case, he appealed to the parlement of Paris, and it, to decide the issue raised by Ricci, required the constitutions of the Jesuits to be produced in evidence, and affirmed the judgment of the courts below. But the publicity given to a document scarcely known till then raised the utmost indignation against the Society. A royal commission, appointed by the duc de Choiseul to examine the constitutions, convoked a private assembly of fifty-one archbishops and bishops under the presidency of Cardinal de Luynes, all of whom except six voted that the unlimited authority of the general was incompatible with the laws of France, and that the appointment of a resident vicar, subject to those laws, was the only solution of the question fair on all sides. Ricci replied with the historical answer, Sint ut sunt, at non sint; and after some further delay, during which much interest was exerted in their favour, the Jesuits were suppressed by an edict in November 1764, but suffered to remain on the footing of secular priests, a grace withdrawn in 1767, when they were expelled from the kingdom. In the very same year, Charles III. of Spain, a monarch known for personal devotion, convinced, on evidence not now forthcoming, that the Jesuits were plotting against his authority, prepared, through his minister D’Aranda, a decree suppressing the Society in every part of his dominions. Sealed despatches were sent to every Spanish colony, to be opened on the same day, the 2nd of April 1767, when the measure was to take effect in Spain itself, and the expulsion was relentlessly carried out, nearly six thousand priests being deported from Spain alone, and sent to the Italian coast, whence, however, they were repelled by the orders of the pope and Ricci himself, finding a refuge at Corte in Corsica, after some months’ suffering in overcrowded vessels at sea. The general’s object may probably have been to accentuate the harshness with which the fathers had been treated, and so to increase public sympathy, but the actual result of his policy was blame for the cruelty with which he enhanced their misfortunes, for the poverty of Corsica made even a bare subsistence scarcely procurable for them there. The Bourbon courts of Naples and Parma followed the example of France and Spain; Clement XIII. retorted with a bull launched at the weakest adversary, and declaring the rank and title of the duke of Parma forfeit. The Bourbon sovereigns threatened to make war on the pope in return (France, indeed, seizing on the county of Avignon), and a joint note demanding a retraction, and the abolition of the Jesuits, was presented by the French ambassador at Rome on the 10th of December 1768 in the name of France, Spain and the two Sicilies. The pope, a man of eighty-two, died of apoplexy, brought on by the shock, early in 1769. Cardinal Lorenzo Ganganelli, a conventual Franciscan, was chosen to succeed him, and took the name of Clement XIV. He endeavoured to avert the decision forced upon him, but, as Portugal joined the Bourbon league, and Maria Theresa with her son the emperor Joseph II. ceased to protect the Jesuits, there remained only the petty kingdom of Sardinia in their favour, though the fall of Choiseul in France raised the hopes of the Society for a time. The pope began with some preliminary measures, permitting first the renewal of lawsuits against the Society, which had been suspended by papal authority, and which, indeed, had in no case been ever successful at Rome. He then closed the Collegio Romano, on the plea of its insolventy, seized the houses at Frascati and Tivoli, and broke up the establishments in Bologna and the Legations. Finally on the 21st of July 1773 the famous breve Dominus ac Redemptor appeared, suppressing the Society of Jesus. This remarkable document opens by citing a long series of precedents for the suppression of religious orders by the Holy See, amongst which occurs the ill-omened instance of the Templars. It then briefly sketches the objects and history of the Jesuits themselves. It speaks of their defiance of their own constitution, expressly revived by Paul V., forbidding them to meddle in politics; of the great ruin to souls caused by their quarrels with local ordinaries and the other religious orders, their condensation to heathen usages in the East, and the disturbances, resulting in persecutions of the Church, which they had stirred up even in Catholic countries, so that several popes had been obliged to punish them. Seeing then that the Catholic sovereigns had been forced to expel them, that many bishops and other eminent persons demanded their extinction, and that the Society had ceased to fulfil the intention of its institute, the pope declares it necessary for the peace of the Church that it should be suppressed, extinguished, abolished and abrogated for ever, with all its houses, colleges, schools and hospitals; transfers all the authority of its general or officers to the local ordinaries; forbids the reception of any more novices, directing that such as were actually in probation should be dismissed, and declaring that profession in the Society should not serve as a title to holy orders. Priests of the Society are given the option of either joining other orders or remaining as secular clergy, under obedience to the ordinaries, who are empowered to grant or withhold from them licences to hear confessions. Such of the fathers as are engaged in the work of education are permitted to continue, on condition of abstaining from lax and questionable doctrines apt to cause strife and trouble. The question of missions is reserved, and the relaxations granted to the Society in such matters as fasting, reciting the hours and reading heretical books, are withdrawn, while the breve ends with clauses carefully drawn to bar any legal exceptions that might be taken against its full validity and obligation. It has been necessary to cite these heads of the breve because the apologists of the Society allege that no motive influenced the pope save the desire of peace at any price, and that he did not believe in the culpability of the fathers. The censurable charges made in the document rebut this plea. The pope followed up this breve by appointing a congregation of cardinals to take possession of the temporalities of the Society, and armed it with summary powers against all who should attempt to retain or conceal any of the property. He also threw Lorenzo Ricci, the general, into prison, first in the English college and then in the castle of St Angelo, where he died in 1775, under the pontificate of Pius VI., who, though not unfavourable to the Society, and even his predecessor, had not, dastardly not release the general, probably because his continued imprisonment made it a condition by the powers who enjoyed a right of veto in papal elections. In September 1774 Clement XIV. died after much suffering, and the question has been hotly debated ever since whether poison was the cause of his death. But the latest researches have shown that there is no evidence to support the theory of poison. Salicetti, the pope’s physician, denied that the body showed signs of poisoning, and Tanucci, Neapolitan ambassador at Rome, who had a large share in procuring the breve of suppression, entirely acquires the Jesuits, while F. Theiner, no friend to the Society, does the like.

At the date of this suppression, the Society had 41 provinces and 22,589 members, of whom 11,293 were priests. Far from submitting to the papal breve, the ex-Jesuits, after some ineffectual attempts at direct resistance, withdrew into the territories of the free-thinking sovereigns of Russia and Prussia, Frederick II. and Catherine II., who became their active friends and protectors; and the fathers alleged as a principle, in so far as their theology is concerned, that no papal bull is binding in a state whose sovereign has not approved and authorized its publication and execution. Russia formed the headquarters of the Society, and two forged breves were speedily circulated, being dated June 9 and June 29, 1774, approving their establishment in Russia, and implying the repeal of the breve of suppression. But these are contradicted by the tenor of five genuine breves issued in September 1774 to the archbishop of Gnesen, and making certain assurances to the ex-Jesuits, on condition of their complete obedience to the injunctions already laid on them. The Jesuits also pleaded a verbal approbation by Pius VI., technically known as an Oraculum vitae vocis, but this is invalid for purposes of law unless reduced to writing and duly authenticated.

They elected three Poles successively as generals, taking, however, only the title of vicars, till on the 7th of March 1802 Pius VII. granted them liberty to reconstitute themselves in north Russia, and permitted Kareu, then vicar, to exercise full authority as general. On the 26th of July 1804 a similar breve restored the Jesuits in the two Sicilies, the express desire of Ferdinand IV.
the pope thus anticipating the further action of 1814, when, by the constitution Solicitude omnium Ecclesiarum, he revoked the action of Clement XIV, and formally restored the Society to corporate legal existence, yet not only omitted any censure of his predecessor's conduct, but all vindication of the Jesuits from the heavy charges in the breve Dominus ac Redemptor. In France, even after their expulsion in 1765, they had maintained a precarious footing in the country under the partial disguise and names of "Fathers of the Faith" or "Clerks of the Sacred Heart," but were obliged by Napoleon I. to retire in 1804. They reappeared under their true name in 1814, and obtained formal licence in 1822, but became the objects of so much hostility that Charles X. deprived them by ordinance of the right of instruction, and obliged all applicants for licences as teachers to make oath that they did not belong to any community unrecognized by the laws. They were dispersed again by the revolution of July 1830, but soon reappeared and, though put to much inconvenience during the latter years of Louis Philippe's reign, notably in 1845, maintained their footing, recovered the right to teach freely after the revolution of 1848, and gradually became the leading educational and ecclesiastical power in France, notably under the Second Empire, till they were given more encouragement than they had received since the execution of those measures. They were again expelled by the Law of Associations of 1901. In Spain they came back with Ferdinand VII., but were expelled at the constitutional rising in 1820, returning in 1823, when the duke of Angoulême's army replaced Ferdinand on his throne; they were driven out once more by Espartero in 1835, and have had no legal position since, though their presence is openly tolerated. In Portugal, ranging themselves on the side of Dom Miguel, they fell with his cause, and were exiled in 1834. There are some to this day in Lisbon under the name of "Fathers of the Faith." Russia, which had been their warmest patron, drove them from St Petersburg and Moscow in 1813, and from the whole empire in 1820, mainly on the plea of attempted proselytizing in the imperial army. Holland drove them out in 1816, and, by giving them thus a valid excuse for aiding the Belgian revolution of 1830, secured them the strong position they have ever since held in Belgium; but they have succeeded in returning to Holland. They were expelled from Switzerland in 1837-1845 for the part they were charged with in exciting the war of the German confederacy. Though the German confederacy offered no serious resistance to numerical or intellectual power in the Society, its restoration has been uneventful; but in north Germany, owing to the footing Frederick II. had given them in Prussia, they became very powerful, especially in the Rhine provinces, and, gradually moulding the younger generation of clergy after the close of the War of Liberation, succeeded in spreading Ultramontane views amongst them, and so leading up to the difficulties with the civil government which issued in the Falk laws, and their own expulsion by decree of the German parliament (June 19, 1872). Since then many attempts have been made to procure the recall of the Society to the German Empire, but without success, although as individuals they are now allowed in the country. In Great Britain, whither they began to struggle over during the revolutionary troubles at the close of the 18th century, and where, practically unaffected by the clause directed against them in the Emancipation Act of 1829, their chief settlement has been at Stonyhurst in Lancashire, an estate conferred on them by Thomas Weld in 1795, they have been unmolested; but there has been little affinity to the order in the English temperament, and the English province has never acquired any considerable or national influence in the Society.

In Rome itself, its progress after the restoration was at first slow, and it was not till the reign of Leo XII. (1823-1829) that it recovered its place as the chief educational body there. It advanced steadily under Gregory XVI., and, though it was at first shunned by Pius IX., it secured his entire confidence after his return from Gaeta in 1846, and obtained from him a special brief erecting the staff of its literary journal, the Civiltà Cattolica, into a perpetual college under the general of the Jesuits, for the purpose of teaching and propagating the faith in its pages. How with this pope's support throughout his long reign, one gradual filling of nearly all the sees of Latin Christendom with bishops of their own appointment, and their political capture, directly or indirectly, of the education of the clergy in seminaries, they contrived to stamp out the last remains of independence everywhere, and to crown the Ultramontane triumph with the Vatican Decrees, is matter of familiar knowledge. Leo XIII., while favouring them somewhat, never gave them his full confidence; and by his adhesion to the Thomist philosophy and theology, and his active work for the regeneration and progress of the older orders, he made another suppression possible by destroying much of their prestige. But the usual sequence has been observed under Pius X., who appeared to be greatly in favour of the Society and to rely upon them for many of the measures of his pontificate.

The Society has been ruled by twenty-five generals and four vicars from its foundation to the present day (1910). Of all the various nationalities represented in the Society, neither France, its original cradle, nor England, has ever given it a head, while Spain, Italy, Holland, Belgium, Germany and Poland, were all represented. The numbers of the Society are not accurately known, but are estimated at about 20,000, in all parts of the world; and of these the English, Irish and American Jesuits are under 3000.

The generals of the Jesuits have been as follows:

1. Ignatius de Loyola (Spaniard) 1514-1556
2. Diego Laynez (Spaniard) 1558-1585
3. Francisco Borgia (Spaniard) 1556-1573
4. Everard Mercierian (Belgian) 1573-1580
5. Claudio Acquaviva (Neapolitan) 1581-1585
6. Filippo Medelleschi (Roman) 1585-1615
7. Vincenzo Caraffa (Neapolitan) 1615-1649
8. Francesco Piccolomini (Florentine) 1649-1651
9. Alessandro Gottofredi (Roman) 1652
10. Girolamo Nicci (Genoese) 1652-1664
11. Giovanni Paolo Oliva (Genoese) vicar-general and coadjutor, 1661; general 1664-1681
12. Charles de Noyelle (Belgian) 1682-1686
13. Bartz Gonzalez (Spaniard) 1687-1701
14. Michele Angelo Tamburini (Modenese) 1706-1730
15. Franz Retz (Bohemian) 1730-1735
16. Ignazio Visconti (Milanese) 1735-1735
17. Alessandro Centurion (Genoese) 1740-1755
18. Lorenzo Richi (Florentine) 1755-1775
a. Stanislaus Czerniewicz (Pole) vicar-general 1782-1785
b. Gabriel Lienkiewicz (Pole) 1785-1798
19. Francis Xavier Karol (German) (general in Rome March 1860) 1799-1802
d. Gabriel Gruber (German) 1802-1805
20. Thaddeus Brzozowski (Pole) 1805-1820
21. Aloysius Fortis (Veronese) 1820-1825
22. Johannes Roothoorn (Dutchman) 1825-1833
23. Peter Johannes Beckx (Belgian) 1833-1884
24. Antoine Anderley (Swiss) 1884-1892
25. Louis Martin (Spanish) 1892-1906
26. Francis Xavier Wernez (German) 1906-

The bibliography of Jesuitism is of enormous extent, and it is impracticable to cite more than a few of the most important works. They are as follows: Institutum Societatis Jesu (7 vols., Avignon, 1830-1838); Orlandini, Historia Societatis Jesu (Antwerp, 1629); Imago primi saeculi Societatis Jesu (Antwerp, 1640); Nieremberg, Vida de San Ignacio de Loyola (9 vols., fol. Madrid, 1736); Genelli, Life and Times of Ignatius of Loyola (London, 1782); Backer, Bibliothèque des écrivains de la Compagnie de Jésus (7 vols., Paris, 1853-1861); Crétejol Yule, Histoire de la Compagnie de Jésus (6 vols., Paris, 1844); Guettée, Histoire des Jésuites (5 vols., Paris, 1856-1859); N. Grenier, Les Establements de la Compagnie de Jésus, 4 vols. (Zurich, 1792); Gioberti, Il Gesuita moderno (Lausanne, 1836); F. Parkman, Pioneers of France in the New World and the Jesuits in North America (Boston, 1865); Lettres édifiantes et curieuses, écrites des missions étrangères de la Compagnie de Jésus (20 vols., Lyons, 1819-1854); Saint-Priest, Histoire de la chute des Jésuites au XVIII° Siècle (Paris, 1844); Ranke, Römische Päpste (3 vols., Berlin, 1838); E. Taunton, History of the Jesuits in England (London, 1901); L. Talon, Histoire des Compagnons de Jésus en North America (London and New York, 1907); R. G. Thwaites, Jesuit Relations and Allied Documents (73 vols, Cleveland, 1896-1901).

(R. F. L.; E. Tz.)

JESUPE, MORRIS KETCHUM (1830-1908), American banker and philanthropist, was born at Westport, Connecticut, on the 21st of June 1830. In 1842 he went to New York City, where after some experience in business he established a banking house
in 1852. In 1856 he organized the banking firm of M. K. Jesup & Company, which after two reorganizations became Cuyler, Morgan & Jesup. He became widely known as a financier, retiring from active business in 1884. He was best known, however, as a munificent patron of scientific research, a large contributor to the needs of education, and a public-spirited citizen of wide interests, who did much for the betterment of social conditions in New York. He contributed largely to the funds for the Arctic expeditions of Commander Robert E. Peary, becoming president of the Peary Arctic Club in 1899. To the American museum of natural history, in New York City, he gave large sums in his lifetime and bequeathed $1,000,000. He was president of the New York chamber of commerce from 1899 until 1907, and was the largest subscriber to its new building. To his native town he gave a fine public library. He died in New York City on the 22nd of January 1908.

JESUS CHRIST.—In writing a summary account of the life of Christ, though always involving a grave responsibility, was until recent years a comparatively straightforward task; for it was assumed that all that was needed, or could be offered, was a chronological outline based on a harmony of the four canonical Gospels. But to-day history is not satisfied by this simple procedure. Literary criticism has analysed the documents, and has already established some important results; and many questions are still in debate, the answers to which must affect our judgment of the historical value of the existing narratives. It seems therefore consonant alike with prudence and reverence to refrain from attempting to combine afresh into a single picture the materials derivable from the various documents, and to endeavour instead to describe the main contents of the sources from which our knowledge of the Lord Jesus Christ as an historical personage is ultimately drawn, and to observe the picture of Him which each writer in turn has offered to us.

The chief elements of the evidence with which we shall deal are the following:

1. First, because earliest in point of time, the references to the Lord Jesus Christ in the earliest Epistles of St. Paul.
2. The Gospel according to St. Mark.
3. A document, no longer extant, which was partially incorporated into the Gospels of St. Matthew and St. Luke.

With the traditional sayings or teachings of our Lord, which were only written down at a later period, it will suffice to say that those which have any claim to be genuine are very scanty, and that their genuineness has to be tested by their correspondence with the great bulk of information which is derived from the sources already enumerated. The fictitious literature of the second and third centuries, known as the Apocryphal Gospels, offers no direct evidence of any historical value at all: it is chiefly valuable for the contrast which it presents to the grave simplicity of the canonical Gospels, and as showing how in a later age was adding anything to the Gospel history which was not palpably absurd.

1. Letters of St Paul.—In the order of chronology we must give the first place to the earliest letters of St Paul. The first piece of Christian literature which has an independent existence and to which we can fix a date is St Paul's first Epistle to the Thessalonians. Lightfoot dates it in 52 or 53; Harnack places it five years earlier. We may say, then, that it was written some twenty years after the Crucifixion. St Paul is not an historian; he is not attempting to describe what Jesus Christ said or did. He is writing a letter to encourage a little Christian society which he, a Jew, had founded in a distant Greek city; and he reminds his readers of many things which he had told them when he was with them, in order to be relieved from his epistles generally must not detain us here, but we may give them at this one letter, because it contains what appears to be the first mention of Jesus Christ in the literature of the world. Those who would get a true history cannot afford to neglect their earliest documents. Now the opening sentence of this letter is as follows: "Paul and Silvanus and Timothy to the Church of the Thessalonians in God the Father and the Lord Jesus Christ: Grace to you, and peace." Three men with Greek or Latin names are writing to some kind of assembly in a city of Macedon. The writers are Jews, to judge by their salutation of "peace," and by their mention of "God the Father," and of the assembly or society as being "in" Him. But what is this new name which is placed side by side with the Divine Name—"in God the Father and the Lord Jesus Christ"? An educated Greek, who knew something (as many at that time did) of the Greek translation of the ancient Hebrew Scriptures, if he had picked up this letter before he had ever heard the name of Jesus Christ, would have been deeply interested in these opening words. He would have known that "Jesus" was the Greek form of Joshua; that "Christ" was the Greek rendering of Messiah, or Anointed, the title of the great King for whom the Jews were looking; he might further have remembered that "the Lord" is the expression which the Greek Old Testament constantly uses instead of the ineffable name of God, which we now call "Jehovah" (q.e.). Who, then, he might well ask is this Jesus Christ who is lifted to this unexampled height? For it was known that Jesus Christ stands in some close relation to "God the Father," and that on the ground of that relation a society has been built up, apparently by Jews, in a Greek city far distant from Palestine. He would learn something as he read on; for the letter makes a passing reference to the foundation of the society, and to the expansion of its influence in other parts of Greece; to the conversion of its members from heathenism, and to the consequent sufferings at the hands of their heathen neighbours. The writers speak of themselves as "apostles," or messengers, of Christ; they refer to similar societies "in Christ Jesus," which they call "churches of God," in Judaea, and they say that these also suffer from the Jews there, who had "killed the Lord Jesus" some time before. But they further speak of Jesus as "raised from the dead," and they refer to the belief which they had had led the society to entertain, that He would come again "from heaven to deliver them from the coming wrath." Moreover, they urge them not to grieve for certain members of the society who have already died, saying that, "if we believe that Jesus died and rose again," we may also be assured that "the dead in Christ will rise" and will live for ever with Him. Thus the letter assumes that its readers already have considerable knowledge as to "the Lord Jesus Christ," and as to His relation to "God the Father," a knowledge derived from teaching given in person on a former visit. The purpose of the letter is not to give information as to the past, but to stimulate its readers to perseverance by giving fresh teaching as to the future. Historically it is of great value as showing how widely within twenty or twenty-five years of the Crucifixion a religion which proclaimed developed theological teaching as to "the Lord Jesus Christ" had spread in the Roman Empire. We may draw a further conclusion from this and other letters of St Paul before we go on.

St Paul's missionary work must have created a demand. Those who had heard him and read his letters would want to know more than he had told them of the earthly life of the Lord Jesus. They would wish to be able to picture Him to their minds; and especially to understand what could have led to His being put to death by the Romans at the requisition of the Jews. St Paul had not been one of his personal disciples in Galilee or Jerusalem; he had no memories to relate of His miracles and teaching. Some written account of these was an obvious need. And we may be sure that any such narrative concerning One who was so deeply revered would be most carefully scrutinized at a time when many were still living whose memories went back to the period of our Lord's public ministry. One such narrative we now proceed to describe.

2. St Mark's Gospel.—The Gospel according to St Mark was written within fifteen years of the first letter of St Paul to the Thessalonians—i.e., about 60; it was designed to meet the requirements of Christians living far away from Palestine. The author was not an eye-witness of what he relates, but he writes with firm security of a man who has the best authority behind him. The characteristics of his work confirm the early belief that St Mark wrote this Gospel for the Christians of Rome under the guidance of St Peter. It is of the first importance that
we should endeavour to see this book as a whole; to gain the total impression which it makes on the mind; to look at the picture of Jesus Christ which it offers. That picture must inevitably be an incomplete representation of Him; it will need to be supplemented by other pictures which other writers have drawn. But it is important to consider it by itself, as showing us what impress the Master had made on the memory of one disciple who had been almost constantly by His side.

The book opens thus: "The beginning of the Gospel of Jesus Christ." This "beginning" is shown to be itself rooted in the past. Hebrew prophets had foretold that God would send a "messenger"; that a voice would be heard saying, "Prepare the way of the Lord." And so, in fact, John came, baptizing in the wilderness and turning the heart of the nation back to God. But John was only a forerunner. He was himself a prophet, and his prophecy was this, "He that is stronger than I am is coming after me." Then, we read, "Jesus came." St Mark introduces Him quite abruptly, just as he had introduced John; for he is writing for those who already know the outlines of the story. "Jesus named Himself John," he said. But John, as He came out of the water He had a vision of the opened heaven and the Holy Spirit, like a dove, descending upon Him; and He heard a voice saying, "Thou art My son, the Beloved: in Thee I am well pleased." He then passed away into the wilderness, where He was tempted by Satan and fed by angels. Then He begins His work; and from the very first we feel that He fulfills John’s sign: He is strong. His first words are words of strength; "the time is fulfilled"—that is to say, all the past has been leading up to this great moment; the kingdom of God is at hand—that is to say, all your best hopes are on the point of being fulfilled; "repent, and believe the Gospel"—that is to say, turn from your sins and accept the tidings which I bring you. It is but a brief summary of what He must have said; but we feel its strength. He does not hesitate to fix all eyes upon Himself. Then we see Him call two brothers who are fishermen. "Come after Me," He says, "and I will make you fishers of men." They dropped their nets and went after Him, and so did two other brothers. And for they all felt the power of this Master of men: He was strong. He began to teach in the synagogue; they were astonished at His teaching, for He spoke with authority. He was interrupted by a demoniac, but He quelled the evil spirit by a word; He was stronger than the power of evil. When the sun set the Sabbath was at an end, and the people could carry out their sick into the street where He was; and He came forth and healed them all. The demoniacs showed a strange faculty of recognition, and cried that He was "the holy one of God," and "the Christ," but He silenced them at once. The next morning He was gone. He had sought a quiet spot for prayer. Peter, one of those fishermen whom He had called, whose wife’s mother had been healed the day before, found Him and tried to bring Him back. "All men are seeking Thee," He pleaded. "Let us go elsewhere" was the quiet reply of one who could not be moved by popular enthusiasm. Once again, we observe, He fulfills John’s sign: He is strong. This is our first sight of Jesus Christ. The next shows us that this great strength is united to a most tender sympathy. To touch a leper was forbidden, and the offence involved ceremonial defilement. Yet, when a leper declared that Jesus could heal him, if only He would, "He put forth His hand and touched him." The act perfected the leper’s faith, and he was healed immediately. But He disobeyed the command to be silent about the matter, and the result was that Jesus could not openly enter into the town, but remained outside in the country. It is the first shadow that falls across His path; His power finds a check in human wilfulness. Presently He is in Capernaum again. He heals a paralysed man, but not until He has come into touch, as we say, with him also, by reaching his deepest need and declaring the forgiveness of his sins. This declaration disturbs the rabbi, who regard it as a blasphemous usurpation of Divine authority. But He claims that "the Son of Man hath authority on earth to forgive sins." The title which He thus adopts must be considered later.

We may note, as we pass on, that He has again, in the exercise of His power and His sympathy, come into conflict with the established religious tradition. This freedom from the trammels of convention appears yet again when He claims as a new disciple a publican, a man whose calling as a tax-gatherer for the Roman government made him odious to every patriotic Jew. Publicans were classed with open sinners; and when Jesus went to this man’s house and met a company of his fellows the rabbits were scandalized: "Why didest thou with publicans and sinners?" The gentle answer of Jesus showed His sympathy even with those who opposed Him: "The doctor," He said, "must go to the sick." And again, when they challenged His disciples for not observing the regular fasts, He gently reminded them that they themselves relaxed the discipline of fasting for a bridegroom’s friends. And He added, in picturesque and pregnant sayings, that an old garment could not bear a new patch, and that old wine-skins could not take new wine. Such language was not gentle and strong; without undermining the old, it claimed liberty for the new. To what lengths would this liberty go? The sacred badge of the Jews’ religion, which marked them off from other men all the world over, was their observance of the Sabbath. It was a national emblem, the test of religion and patriotism. The rabbis had fenced the Sabbath round with minute commands, lest any Jew should even seem to work on the Sabbath day. Thus, plucking and rubbing the ears of corn was counted a form of reaping and threshing. The hungry disciples had so transgressed as they walked through the fields of ripe corn. Jesus defended them by the example of David, who had eaten the shewbread, which only priests might eat, and had given it to his hungry men. Necessity absolves from ritual restrictions. And He went farther, and proclaimed a principle: "The Sabbath was made for man, and not man for the Sabbath, so that the Son of Man is lord even of the Sabbath." For a second time, in justifying His position, He used the expression "the Son of Man." The words might sound to Jewish ears merely as a synecdoche for "man." For Himself, and possibly for some others, they involved a reference, as appears later, to the "one like to a son of man" in Daniel’s prophecy of the coming kingdom. They emphasized His relation to humanity as a whole, in contrast to such narrower titles as "Son of Abraham" or "Son of David." They were fitted to express a wider mission than that of a merely Jewish Messiah: He stood and spoke for mankind. The controversy was renewed when a man with a withered hand appeared in the synagogue on the Sabbath, and the rabbis watched to see whether Jesus would heal him. For the first time, we read that Jesus was angry. They were wilfully blind, and they would rather not see good done than see it done in a way that contradicted their teachings and undermined their influence. After a sharp remonstrance, He healed the man by a mere word. And they went out to make a compact with the followers of the worldly Herod to kill Him, and so to stave off a religious revolution which might easily have been followed by political troubles. Up to this point what have we seen? On the stage of Palestine, an outlying district of the Roman Empire, the home of the Jewish nation, now subject but still fired with the hope of freedom and even of universal domination under the leadership of a divinely anointed King, a new figure has appeared. His appearance has been announced by a reforming prophet, who has summoned the nation to return to its God, and promised that a stronger than himself is to follow. In fulfilment of this promise, who is it that has come? Not a rough prophet in the desert like John, not a leader striking for political freedom, not a pretender aiming at the petty throne of the Herods, not even a great rabbi, building on the patriotic foundation of the Pharisees who had secured the national life by a new devotion to the ancient law. None of these; but, on the contrary, an unknown figure from the remote hills of Galilee, standing on the populous shores of its lake, proclaiming as
a message from God that the highest hopes were about to be fulfilled by a fastening of attention on Himself by speaking with authority and attaching a few followers to His person, exhibiting wonderful powers of healing as a sign that He has come to fulfil all needs, manifesting at the same time an unparalleled sympathy and setting quietly aside every religious convention which limited the outflow of this sympathy; and as the result of all this arousing the enthusiasm of astonished multitudes and evoking the opposition and even the murderous resentment of the religious guides of the nation. Of His teaching we have heard nothing, except in the occasional sentences by which He justified some of His unexpected actions. No party is formed, no programme is announced, no doctrine is formulated; without assuming the title of Messiah, He offers Himself as the centre of expectation, and seems to invite an unlimited confidence in His person. This, then, in brief summary, is what we have seen: the natural development of an historical situation, a march of events leading rapidly to a climax; an unexampled strength and an unexampled sympathy issuing inevitably in an unexampled liberty; and then the forces of orthodox religion combining with the forces of worldly indifference in order to suppress a dangerous innovator. Yet the writer who in a few pages presents us with so remarkable a representation shows no consciousness at all of artistic treatment. He tells a simple tale in the plainest words: he never stops to offer a comment or to point a moral. The wonder of it all is not in the writing, but in the subject itself. We feel that we have here no skilful composition, but a bare transcript of what occurred. And we feel besides that such a narrative as this is the worthy commencement of an answer to the question with which its readers would have come to it: What was the beginning of the Gospel? How did the Lord Jesus speak and act? And why did He arouse such malignant enmity amongst His own people?

We have followed St Mark's narrative up to the point at which it became clear that conciliatory argument could have no effect on the Jewish religious leaders. The controversy about the Sabbath had brought their dissatisfaction to a climax. Henceforth Jesus was to them a revolutionary, who must, by any means, be suppressed. After this decisive breach a new period opens. Jesus leaves Capernaum, never again, it would seem, to appear in its synagogue. Henceforward He was to be found, with His disciples, on the shore of the lake, where vast multitudes gathered round Him, drawn not only from Galilee and Judaea, but also from the farther districts north and east of these. He would take refuge from the crowds in a boat, which carried Him from shore to shore; and His healing activity was now at its height. Yet in the midst of this popular enthusiasm He knew that the time had come to prepare for a very different future, and accordingly a fresh departure was made when He selected twelve of His disciples for a more intimate companionship,-with a view to a special mission: "He appointed twelve that they might be with Him, and that He might send them forth to preach, and to have authority to cast out devils." The excitement and pressure of the crowds was at this time almost overwhelming, and the relatives of Jesus endeavoured to restrain Him; "for they said, He is mad." The sermons from Jerusalem offered a more sinister explanation, saying that He was possessed by the prince of devils, and that this was why He was able to control all the evil spirits. He answered them first in figurative language, speaking of the certain downfall of a kingdom or a family divided against itself, and of the strong man's house which could not be looted unless the strong man were first bound. Then followed the tremendous warning, that to assign His work to Satan, and so to call good evil, was to blaspheme against the Holy Spirit—the one sin which admitted of no forgiveness. Presently, when He was told that His mother and brethren were calling for Him, He declared their interference by pointing to a new circle of family relationship, consisting of all who "do the will of God."

Again we find Him teaching by the lake, and the pressure of the multitude is still so great that He sits in a boat while they line the shore. For the first time we are allowed to hear how He taught them. He gives them a parable from nature—the sower's three kinds of failure, compensated by the rich produce of the good soil. At the close He utters the pregnant saying: "He that hath ears to hear let him hear." When His disciples afterwards asked for an explanation, He prefaced it by saying that the inner circle only were intended to understand. The disciples might learn that the message would often prove fruitless, but that nevertheless an abundant harvest would result. For the light was intended to shine, and the hidden was meant to be revealed. Another parable compared the kingdom of God to seed which, when once planted, must inevitably germinate; the process was secret and slow, but the harvest was certain. Again, it was like the tiny mustard-seed which grew out of all proportion to its original size, till the birds could shelter in its great branches. These enigmatic speeches were all that the multitudes got, but the disciples in private were taught their lesson of hope. As we review this teaching it is very remarkable. The world of common things is seen to be a lesson-book of the kingdom of God to those who have eyes to read it. What that kingdom is to be we are not told; we are only taught that its coming is secret, slow and certain. If nature in its ordinary processes was thus seen to be full of significance, the disciples were also to learn that it was under His control. As the boat from which He had been teaching passed to the other side, the tired Teacher slept. A sudden storm terrified the disciples, and they roused Him in alarm. He stilled the storm with a word and rebuked their want of faith. "Who then is this," they whispered with awe, "that even the wind and the sea obey Him?" On the opposite hills a solitary spectator had watched the rise and the lull of the tempest, a fierce demoniac who dwelt among the tombs on the mountain-side. He believed himself to be possessed by a regiment of demons. When Jesus bade them go forth, he begged that they might be allowed to enter into a herd of swine which was hard by. His request was granted, and the swine rushed over a steep place into the lake. It is worth while to mention while most of the cures which Jesus had performed appear to have belonged to this class, this particular case is described as an exceptionally severe one, and the visible effect of the removal of his tormentors may have greatly helped to restore the man's shattered personality.

We must not attempt to trace in detail the whole of St Mark's story. We have followed it long enough to see its directness and simplicity, to observe the naturalness with which one incident succeeds another, and to watch the gradual manifestation of a personality at once strong and sympathetic, wielding extraordinary powers, which are placed wholly at the service of others, and refusing to be hindered from helping men by the ordinary restrictions of social or religious custom. And we have seen as the consequence of all this the development of an historical situation in which the leaders of current orthodoxy ally themselves with the indifferentism which accepts existing political conditions in order to put down a disturber of the peace. We must now be content with a broader survey of the course of events.

Two notable cures were wrought on the western side of the lake—the healing of the woman with the issue and the raising of Jairus's daughter. In each of these cures prominence is given to the requirement and the reward of faith— that is to say, of personal confidence in the Healer: "Thy faith hath made thee whole." "Fear not, only believe." After this Jesus passed away from the enthusiastic crowds by the lake to visit His own Nazareth, and to find there a strange incredulity in regard to one whom the villagers knew as the carpenter. Once more we come across a mysterious limitation of His powers: "He could not do there any miracle," save the cure of a few sick folk; and He marvelled because of their want of faith. The moment had now come when the twelve disciples were to be entrusted with a share of His healing power and with the proclamation of repentance. While they are journeying two and two in various directions St Mark takes occasion to tell us the current conjectures as to who Jesus really was. Some
thought him Elijah or one of the ancient prophets returned to earth—a suggestion based on popular tradition; others said He was John the Baptist risen from the dead—the superstition of Herod who had put him to death. When the disciples returned, Jesus took them apart for rest; but the crowds re-assembled when they found Him again near the lake, and His yearning compassion for these shepherdless sheep led Him to give them an impression sign that He had indeed come to supply all human needs. Hitherto His power had gone forth to individuals, but now He fed five thousand men from the scanty stock of five loaves and two fishes. That night He came to His disciples walking upon the waters, and in the period which immediately followed there was once more a great manifestation of healing power.

We have heard nothing for some time of any opposition; but now a fresh conflict arose with certain scribes who had come down from Jerusalem, and who complained that the disciples neglected the ceremonial washing of their hands before meals. Jesus replied with a stern rebuke, addressing the questioners as hypocrites, and exposing the falsity of a system which allowed the breach of fundamental commandments in order that traditional regulations might be observed. He then turned from them to the multitude, and uttered a saying which in effect annulled the Jewish distinction between clean and unclean meats. This was a direct attack on the whole Pharisaic position. The controversy was plainly irreconcilable, and Jesus withdrew to the north, actually passing outside the limits of the Holy Land. He desired to remain unknown, and not to extend His mission to the heathen population, but the extraordinary faith and the modest importance of a Syrophoenician woman induced Him to heal her daughter. Then He returned by a circuitous route to the Sea of Galilee. His return was marked by another miraculous feeding of the multitude, and also by two healing miracles which presented unusual features. In both the patient was withdrawn from the multitude and the cure was wrought with the accomplishment of symbolic actions. Moreover, in one case Jesus is described as groaning before He spoke; in the other the cure was at first incomplete; and both of the men were strictly charged to observe silence afterwards. It could not be a mere coincidence that these are the last cures which St. Mark records as performed in Galilee.

In fact the Galilean ministry is now closed. Jesus retires northwards to Caesarea Philippi, and appears henceforth to devote Himself entirely to the instruction of his disciples, who needed to be prepared for the fatal issue which could not long be delayed. He begins by asking them Messiah Teaching. the popular opinion as to His Person. The suggestions are still the same—John the Baptist, or Elijah, or some other of the prophets. But when He asked their own belief, Peter replied "Thou art the Christ," He warned them not to make this known; and He proceeded to give them the wholly new teaching that the Son of Man must suffer and be killed, adding that after three days He must rise again. Peter took Him aside and urged Him not to speak so. But He turned to the other disciples and openly rebuked Peter. And then, addressing a yet wider circle, He demanded of those who should follow Him a self-sacrifice like His own. He even used the metaphor of the cross which was carried by the sufferer to the place of execution. Life, he declared, could only be saved by voluntary death. He went on to demand an unwavering loyalty to Himself and His teaching in the face of a threatening world; and then He promised that some of those who were present should not die before they had seen the coming of the kingdom of God. We have had no hint of such teaching as this in the whole of the Galilean ministry. Jesus had stood forth as the strong healer and helper of men; it was bewildering to hear Him speak of dying. He had promised to fulfill men's highest expectations, if only they would not doubt His willingness and power. He had been enthusiastically revered by the common people, though suspected and attacked by the religious leaders. He had spoken of the "will of God" as supreme, and had set aside ceremonial traditions. He had announced the nearness of the kingdom of God, but had described it only in parables from nature. He had adopted the vague title of the "Son of Man," but had refrained from proclaiming Himself as the expected Messiah. At last the disciples had expressed their conviction that He was the Christ, and immediately He tells them that He goes to meet humiliation and death as the necessary steps to a resurrection and a coming of the Son of Man in the glory of His Father. It was an amazing announcement and He plainly added that their path like His own lay through death to life. The dark shadows of this picture of the future alone could impress their minds, but a week later three of them were allowed a momentary vision of the light which should overcome the darkness. They saw Jesus transfigured in a radiance of glory: Elijah appeared with Moses, and they talked with Jesus. A cloud came over them, and a Voice, like that of the Baptist, proclaimed "This is My Son, the Beloved; hear ye Him." They were bidden to keep the vision secret till the appearance of Elijah and Moses, which fulfilled the whole of the moment of glory: He was it in itself a foretaste of resurrection, and the puzzled disciples remembered that the scribes declared that before the resurrection Elijah would appear. Their minds were confused as to what resurrection was meant. Jesus told them that Elijah had in fact come; and He also said that the Scriptures foretold the sufferings of the Son of Man. But the situation was wholly beyond their grasp, and the very language of St. Mark at this point seems to reflect the confusion of their minds.

The other disciples, in the meantime, had been mainly endeavouring to cure a peculiarly violent case of demoniacal possession. Jesus Himself cast out the demon, but before the suffering child had been rendered seemingly lifeless by a final assault. Then they journeyed secretly through Galilee towards Judaea and the eastern side of the Jordan. On the way Jesus reinforced the new lesson of self-renunciation. He offered the little children as the type of those to whom the kingdom of God belonged; and He disappointed a young and wealthy aspirant to His favour, amazing His disciples by saying that the kingdom of God could hardly be entered by the rich; he who forsook all should have all, and more than all; the world's estimates were to be reversed—the first should be last and the last first. They were now journeying towards Jerusalem, and the prediction of the Passion was repeated. James and John, who had witnessed the Transfiguration, and who were confident of the coming glory, asked for the places nearest to their Master, and professed their readiness to share His sufferings. When the other ten were aggrieved Jesus declared that greatness was measured by service, not by rank; and that the Son of Man had come not to be served but to serve, and to give His life to ransom many other lives. As they came up from the Jordan valley and passed through Jericho, an incident occurred which signalized the beginning of the final period. A blind man seated by the road called out to Jesus "the Son of David," and was answered by the restoration of his sight; and when, a little later, Jesus fulfilled an ancient prophecy by mounting an ass and riding into Jerusalem, the multitudes shouted their welcome to the returning "kingdom of David." Hitherto He had not permitted any public recognition of His Messiahsip, but now He entered David's city in lowly but significant pomp as David's promised heir.

Two incidents illustrate the spirit of judgment with which He approached the splendid but apostate city. On His arrival He had carefully observed the condition of the Temple, and had retired to sleep outside the city. On the following morning, finding no fruit on a fig-tree in full leaf, He said, "Let no man eat fruit of thee henceforth for ever." It was a parable of impending doom. Then, when He entered the Temple, He swept away with a fiery zeal the merchants and merchants of which had turned God's House into a "robbers' den." The act was at once an assertion of commanding authority and an open condemnation of the religious rulers who had permitted the desecration. Its immediate effect was to make new and powerful enemies; for the chief priests, as well as their rivals the scribes, were now inflamed against Him. At the moment they could do nothing, but the next day they formally
demanded whence He derived His right so to act. When they refused to answer His question as to the authority of John the Baptist He in turn refused to tell them His own. But He uttered a parable which more than answered them. The owner of the vineyard, who had sent his servants and last of all his only son, would visit their rejection and murder on the wicked husbandmen. He added a reminder that the stone which the builders refused was, after all, the Divine choice. They were restrained from arresting Him by fear of the people, to whom the meaning of the parable was plain. They therefore sent a joint deputation of Pharisees and Herodians to entrap Him with a question as to the Roman tribute, in answering which He must either lose His influence with the people or else lay Himself open to a charge of treason. When they were baffled, the Sadducees, to whose party the chief priests belonged, sought in vain to pose Him with a problem as to the resurrection of the dead; and after that a more honest scribe confessed the truth of His teaching as to the supremacy of love to God and man over all the sacrificial worship of the Temple, and was told in reply that he was not far from the kingdom of God. Jesus Himself now put a question as to the teaching of the scribes which identified the Messiah with “the Son of David,” and then He denounced those scribes whose pride and extortion and hypocrisy were preparing for them a terrible doom. Before He left the Temple, never to return, one incident gave Him pure satisfaction. His own teaching that all must give what he had given for God was illustrated by the devotion of a poor widow who cast into the treasury two small coins which were all she had. As He passed out He foretold, in words which corresponded to the doom of the fig-tree, the utter demolition of the imposing but profitless Temple; and presently He opened up to four of His disciples a vision of the future, warning them against false Christs, bidding them expect great sorrows, national and personal, declaring that the gospel must be proclaimed to all the nations, and that after a great tribulation the Son of Man should appear, “coming with the clouds of heaven.” The day and the hour none knew, neither the angels nor the Son, but only the Father: it was the duty of all to watch.

We now come to the final scenes. The passover was approaching, and plots were being laid for His destruction. He Himself spoke mysteriously of His burial, when a woman poured a vase of costly ointment upon His head. To some this seemed a wasteful act; but He accepted it as a token of the love which gave all that was in its power, and He promised that it should never cease to illustrate His Gospel. Two of the disciples were sent into Jerusalem to prepare the Passover meal. During the meal Jesus declared that He should be betrayed by one of their number. Later in the evening He gave them bread and wine, proclaiming that these were His body and His blood—the tokens of His giving Himself to them, and of a new covenant with God through His death. He went to the Mount of Olives and foresaw the general flight, but promised that when He was risen He would go before them into Galilee. Peter protested faithfulness unto death, but was told that he would deny His Master three times that very night. Then coming to a place called Gethsemane, He had the disciples wait while He should pray; and taking the three who had been with Him at the Transfiguration He told them to tarry near Him and to watch. He went forward, and fell on the ground, praying that “the cup might be taken away” from Him, but resigning Himself to His Father’s will. Presently Judas arrived with a hand of armed men, and greeted His Master with a kiss—the signal for His arrest. The disciples fled in panic, after one of them had wounded the high priest’s servant. Only a nameless young man tried to follow, but he too fled when hands were laid upon him. Before the high priest Jesus was charged, among other accusations, with threatening to destroy the Temple; but the matter was brought to an issue when He was plainly asked if He were “the Christ, the Son of the Blessed One.” He answered that He was, and He predicted that they should see the fulfilment of Daniel’s vision of the Son of Man sitting on the right hand of power. Thereupon He was condemned to death for manifest blasphemy, and a scene of cruel mockery followed. Meanwhile Her in the court below had been sitting with the servants and in his anxiety to escape recognition had thrice declared that he did not know Jesus. Thus the night passed, and in the morning Jesus was taken to Pilate, for the Jewish council had no power to execute their decree of death. Pilate’s question, “Art Thou the King of the Jews?” shows the nature of the accusation which was thought likely to tell with the Roman governor. He had already in bonds one leader of revolution, whose hands were stained with blood—a striking contrast to the calm and silent figure who stood before him. At this moment a crowd came up to ask the fulfilment of his annual act of grace, the pardon of a prisoner at the Passover. Pilate, discerning that it was the envy of the rulers which sought to destroy an inconvenient rival, offered “the King of the Jews” as the prisoner to be released. But the chief priests succeeded in making the people ask for Barahbas and demand the crucifixion of Jesus. Pilate fulfilled his pledge by giving them the man of their choice, and Jesus, whom he had vainly hoped to release on a satisfactory pretext, he now condemned to the shameful punishments of scourging and crucifixion; for the cross, as Jesus had foreseen, was the inevitable fate of a Jewish pretender to sovereignty. The Roman soldiers mocked “the King of the Jews” with a purple robe and a crown of thorns. As they led Him out they forced the cross, which the sufferer commonly carried, upon the shoulders of one Simon of Cyrene, whose sons Alexander and Rufus are here mentioned—probably as being known to St Mark’s readers; at any rate, it is probable to note that, in writing to the Christians at Rome, St Paul a few years earlier had sent a greeting to “Rufus and his mother.” Over the cross, which stood between two others, was the condemnation inscription, “The King of the Jews.” This was the Roman designation of Him whom the Jewish rulers tauntingly addressed as “the King of Israel.” The same revilers, with a deeper truth than they knew, summed up the mystery of His life and death when they said, “He saved others, Himself He cannot save.”

A great darkness shrouded the scene for three hours, and then, in His native Aramaic, Jesus cried in the words of the Psalm, “My God, My God, why has Thou forsaken Me?” One other cry He uttered, and the end came, and at that moment the veil of the Temple was rent from top to bottom—an omen of fearful import to those who had mocked Him, even on the cross, as the destroyer of the Temple, who in three days should build it anew. The disciples of Jesus do not appear as spectators of the end, but only a group of women who had ministered to His needs in Galilee, and had followed Him up to Jerusalem. These women watched His burial, which was performed by a Jewish councilor, to whom Pilate had granted the body after the centurion had certified the reality of the unexpectedly early death. The body was laid in a rock-hewn tomb, and a great stone was rolled against the entrance. Sunset brought on the Jewish sabbath, but the next evening the women brought spices to anoint the body, and at sunrise on the third day they arrived at the tomb, and saw that the stone was rolled away. They entered and found a young man in a white robe, who said, “He is risen, He is not here,” and bade them say to His disciples and Peter, “He goeth before you into Galilee; there ye shall see Him, as He said unto you.” In terror they fled from the tomb, “and they said nothing to any man, for they feared . . .”

So with a broken sentence the narrative ends. The document is imperfect, owing probably to the accidental loss of its last leaf. In very early times attempts were made to furnish it with a fitting close; but neither of the supplements which we find in manuscripts can be regarded as coming from the original writer. If we ask what must, on grounds of literary probability, have been added before the record was closed, we may content ourselves here with saying that some incident must certainly have been narrated which should have realized the two-repeated promise that Jesus would be seen by His disciples in Galilee.

3. Document used by St Matthew and St Luke.—We pass on now to compare with this narrative of St Mark another very early
JESUS CHRIST

353
document which no longer exists in an independent form, but which can be partially reconstructed from the portions of it which have been embodied in the Gospels of St Matthew and St Luke.

When we review St Mark's narrative as a whole we are struck, first of all, with its directness and simplicity. It moves straightforward upon a well-defined path. It shows us the Lord Jesus entering on the mission predicted by the Baptist without declaring Himself to be the Messiah; attracting the multitudes in Galilee by His healing power and His unbounded sympathy, and at the same time awakening the envy and suspicion of the leaders of religion; training a few disciples till they reach the conviction that He is the Christ, and then, but not till then, admitting them into the secret of His coming sufferings, and preparing them for the work in which they are to be employed as St Mark, showing us the process by which He foresaw, accepting the responsibility of the Messianic title, only to be condemned by the religious authorities as a blasphemer and handed over to the Roman power as a pretender to the Jewish throne. That is the story in its barest outline. It is adequate to its presumed purpose of offering to distant Gentile converts a clear account of their Master's earthly work, and of the causes which led to His rejection by His own people and to His death by Roman crucifixion. The writer makes no comment on the wonderful story which he tells. Allusions to Jewish customs are, indeed, explained as they occur, but apart from this the narrative appears to be a mere transcript of remembered facts. The actors are never characterized; their actions are deplored or noted down in order to praise and to blame. To this simplicity and directness of narrative we may in large measure attribute the fact that when two later evangelists desired to give fuller accounts of our Lord's life they both made this early book the basis of their work. In those days there was no sense of unfairness in using up existing materials in order to make a more complete treatise. Accordingly so much of St Mark's Gospel has been taken over word for word in the Gospels of St Luke and St Matthew that, if every copy of it had perished, we could still reconstruct large portions of it by carefully comparing their narratives. They did not hesitate, however, to alter St Mark's language where it seemed to them too rough or obscure, for each of them had a distinctive style of his own, and St Luke was a literary artist of a high order. Moreover, though they both adhered to the general form of the earlier narrative, each of them was obliged to omit many incidents in order to find room for other material which was at their disposal, by which they were able to supplement the deficiencies of the earlier book. The most conspicuous deficiency was in regard to our Lord's teaching, of which, as we have seen, St Mark had given surprisingly little. Here they were happily in a position to make a very important contribution.

For side by side with St Mark's Gospel there was current in the earliest times another account of the doings and sayings of Jesus Christ. Our knowledge of it to-day is entirely derived from a comparison of the two later evangelists who embodied large portions of it, working it in and out of the general scheme which they had squared off from St Mark, according as each of them thought most appropriate. St Luke appears to have taken it over in sections for the most part without much modification; but in St Matthew's Gospel its incidents seldom find an independent place; the sayings to which they gave rise are often detached from their context and grouped with sayings of a similar character so as to form considerable discourses, or else they are linked on to sayings which were uttered on other occasions recorded by St Mark. It is probable that many passages of St Luke's Gospel which have no parallel in St Matthew were also derived from this early source; but this is not easily capable of distinct proof; and, therefore, in order to gain a secure conception of the document we must confine ourselves at first to those parts of it which were borrowed by both writers. We shall, however, look to St Luke in the main as preserving for us the more nearly its original form.

We proceed now to give an outline of the contents of this
Capernaum, favoured above all, shall sink to the deepest depth. If words could be sterner than these, they are those which follow. "He thatareth you heareth Me; and he that rejecteth you rejecteth Me, but he that rejecteth Me rejecteth Him that sent Me." This reference to His own personal mission is strikingly expanded in words which He uttered on the return of the disciples. After thanking the Father for revealing to babes what He hides from the wise, He continued in mysterious language: "All things are delivered to Me by My Father; and none knoweth who the Son is but the Father; and who the Father is but the Son, and he to whom the Son chooseth to reveal Him." Happy were the disciples in seeing and hearing what prophets and kings had looked for in vain.

When His disciples, having watched Him at prayer, desired to be taught how to pray, they were bidden to address God as "Father"; to ask first for the hallowing of the Father's name, and the coming of His kingdom; then for their daily food, for the pardon of their sins, and for freedom from temptation. It was the prayer of a family—that the sons might be true to the Father, and the Father true to the sons; and they were further encouraged by a parable of the family: "Ask ye and ye shall receive.... Every one that asketh receiveth: for the heavenly Father is not given to feeds his children. After He had cast out a dumb demon, some said that His power was due to Beelzebub. He accordingly asked them by whom the Jews themselves cast out demons; and He claimed that His power was a sign that the kingdom of God was come. But He warned them that demons cast out once might return in greater force. When they asked for a sign from heaven, He would give them no more than the sign of Jonah, explaining that the repentant Ninevites should condemn the present generation: so, too, should the queen of Sheba: for that which they were now rejecting was more than Jonah and more than Solomon. Yet further warnings were given when a Pharisee invited Him to his table, and expressed surprise that He did not wash His hands before the meal. The cleansing of externals and the tithing of garden-produce, He declares, have usurped the place of judgment and the love of God. Woe is pronounced upon the Pharisees: they are successors to the murderers of the prophets. Then citing from Genesis and 2 Chronicles, the first and last books in the order of the Jewish Bible, He declared that Abraham's father was Abimelech, and that Abraham is less his father than his son. Thus He shows what should be required of that generation. After this the disciples are encouraged not to fear their murderous opponents. The very sparrow is God's care—much more shall they be; the hairs of their head are all counted. In the end the Son of Man will openly own those who have owned Him before men. For earthly needs no thought is to be taken: the birds and the flowers make no provision for their life and beauty. God will give food and raiment to those who are seeking His kingdom. Earthly goods should be given away in exchange for the imperishable treasures. Suddenly will the Son of Man come: happy the servant whom His Master finds at his appointed task. In brief parables the kingdom of God is likened to a mustard- seed and to leaven. When Jesus is asked if the saved shall be few, He replies that the door is a narrow one. Then, changing His illustration, He says that many shall seek entrance in vain; for the master of the house will refuse to recognize them. But while they are excluded, a multitude from all quarters of the earth shall sit down with Abraham, Isaac and Jacob, and the righteous shall stand in the Son of God. His eyes are now fixed on Jerusalem, where, like the prophets, He must die. "Jerusalem, Jerusalem, how often have I desired to gather thy children together, as a bird her brood beneath her wings, but ye refused." "Ye shall not see Me, until ye shall say, Blessed is He that cometh in the name of the Lord." After this we have the healing of a dyspastic man on the Sabbath, with a reply to the murmuring Pharisees; and then a parable of the failure of invited guests and the filling of their places from the streets. A few fragmentary passages remain, of which it will be sufficient to cite a word or two to call them to remembrance. There is a warning that he who forsakes not father and mother cannot be a disciple, nor he who does not bear his cross. Savourless salt is fit for nothing. The lost sheep is brought home with a special joy. "Ye cannot serve God and Mammon." Scandals must arise, but woe to him through whom they arise. The Son of Man will come with the suddenness of lightning; the days of Noah and the days of Lot will find a parallel in their blind gaiety and their inevitable disaster. He who seeks to gain his life will lose it. "One shall be taken, and the other left." "Where the carcass is, the vultures will gather." Then, lastly, we have a parable of the servant who failed to employ the money entrusted to him; and a promise that the disciples shall sit on twelve thrones to judge the twelve tribes of Israel. We cannot say by our present method of determination, how this document was closed; for in the narratives of the Passion and the Resurrection St Matthew and St Luke only coincide in passages which they have taken from St Mark.

Now that we have reconstructed in outline this early account of the Lord Jesus, so far as it has been used by both the later evangelists, we may attempt to compare the picture which it presents to us with that which was offered by St Mark. But in doing so we must remember that we know it only in fragments. There can be little doubt that the passages in St Matthew, St Mark, and something more also in St Matthew's; but in order to stand on firm ground we have considered thus far only those portions which both of these writers elected to use in composing their later narratives. To go beyond this is a work of delicate discrimination. It can only be effected by a close examination of the style and language of the document, which may enable us in some instances to identify with comparative security certain passages which are found in St Luke, but which St Matthew did not regard as suitable for his purpose. Among these we may venture, quite tentatively, to mention the sermon at Nazareth which opened with a passage from the Book of Isaiah, the raising of the widow's son at Na'im, and the parable of the good Samaritan. These are found in St Luke, but not in St Matthew. On the other hand, it is not improbable that the wonderful words which begin, "Come unto Me all ye that labour," were drawn by St Matthew from the same document, though they are not recorded by St Luke. But here we have entered upon a region of less certainty, in which critical scholarship has still much to do; and in any case, the whole document must have contained more than what St Matthew and St Luke each independently determined to borrow from it. Looking, then, at the portions which we have indicated as having this two-fold testimony, we see that in their fragmentary condition we cannot trace the clear historical development which was so conspicuous a feature of St Mark's Gospel; yet we need not conclude that in its complete form it failed to present an orderly narrative. Next, we see that wherever we are able to observe its method of relating an incident, as in the case of the healing of the centurion's servant, we have the same characteristics of brevity and simplicity which we admired in St Mark. No comment is made by the narrator; he tells his tale in the fewest words and passes on. Again, we note that it supplies just what we feel we most need when we have reached the end of St Mark's story, a fuller account of the teaching which Jesus gave to His disciples and to the people at large. And we see that the substance of that teaching is in complete harmony with the scattered hints that we found in St Mark. If the fatherhood of God stands the test, we can say that the passage of St Mark also which speaks of "the Heavenly Father" as forgiving those who forgive. If prayer is encouraged, we may also remember that the same passage of St Mark records the saying: "All things whatsoever ye pray for and ask, believe that ye have received them and ye shall have them." If in one mysterious passage Jesus speaks of "the Father" and "the Son"—terms with which the Gospel of St John has made us familiar—St Mark also in one passage uses the same impressive terms—"the Son" and "the Father." There are, of course, many other parallels with St Mark, and at some points the two documents seem to overlap and to relate the same incidents in
somewhat different forms. There is the same use of parables from nature, the same incisiveness of speech and employment of paradox, the same demand to sacrifice all to Him and for His cause, the same importunate claim made by Him on the human soul.

But the contrast between the two writers is even more important for our purpose. No one can read through the passages to which we have pointed without feeling the solemn sternness of the great Teacher, a sternness which can indeed be traced here and there in St Mark, but which does not give its tone to the whole of his picture. Here we see Christ standing forth in solitary grandeur, looking with the eyes of another world on a society which is blindly hastening to its dissolution. It may be that if this document had come down to us in its entirety, we should have gathered from it an exaggerated idea of the severity of our Lord’s character. Certain it is that as we read over these fragments we are somewhat startled by the predominance of the element of warning, and by the assertion of rules of conduct which seem almost inconsistent with a normal condition of settled social life. The warning to the nation sounded by the Baptist, that God could raise up a new family for Abraham, is heard again and again in our Lord’s teaching. Gentle faith puts Israel to shame. The sons of the kingdom will be left outside, while strangers feast with Abraham. Capernaum shall go to perdition; Jerusalem shall be a desolate ruin. The doom of the nation is pronounced; its fate is imminent; there is no ray of hope for the existing constitution of religion and society. As to individuals within the nation, the despised publicans and sinners will find God’s favour before the self-satisfied representatives of the national religion. In such a condition of affairs it is hardly surprising to find that the great and stern Teacher congratulates the poor and has nothing but pity for the rich; that He has no interest at all in comfort or prosperity. If a man asks you for anything, give it him; if he takes it without asking, do not seek to recover it. Nothing material is worth a thought; anxiety is folly; your Father, who feeds His birds and clothes His flowers, will feed and clothe you. Kise to the height of your sonship to God; love your enemies even as God loves His; and if they kill you, God will care for you still; fear them not, fear only Him who loves you all.

Here is a new philosophy of life, offering solid consolation amid the ruin of a world. We have no idea who the disciple may have been who thus seized upon the sadder elements of the teaching of Jesus; but we may well think of him as one of those who were living in Palestine in the dark and threatening years of intermitting strife, when the Roman eagles were gathering round their prey, and the faithful were muttering of the storm which was to leave Jerusalem a heap of stones. At such a moment the warnings of our Lord would claim a large place in a record of His teaching, and the strange comfort which He had offered would be the only hope which it would seem possible to entertain.

4. Additions by the Gospel according to St Matthew.—We have now examined in turn the two earliest pictures which have been preserved to us of the life of Jesus Christ. The first portrays Him chiefly by a record of His actions, and illustrates His strength, His sympathy, and His freedom from conventional restraints. It shows the disturbing forces of these characteristics, which aroused the envy and apprehension of the leaders of religion. The first bright days of welcome and popularity are soon clouded; the storm begins to lower. More and more the Master devotes Himself to the little circle of His disciples, who are taught that they, as well as He, can only triumph through defeat, succeed by failure, and find their life in giving it away. At length, in fear of religious innovations and pretending that He is a political usurper, the Jews deliver Him up to die on a Roman cross. The last page of the story is torn away, just at the point when it has been declared that He is alive again and about to show Himself to His disciples. The second picture has a somewhat different tone. It is mainly a record of teaching, and the teaching is for the most part stern and paradoxical. It might be described as revolutionary. It is good tidings to the poor: it sets no store on property and material comfort: it pityes the wealthy and congratulates the needy. It reverses ordinary judgments and conventional maxims of conduct. It proclaims the downfall of institutions, and compares the present blind security to the days of Noah and of Lot: a few only shall escape the coming overthrow. Yet even in this sterner setting the figure portrayed is unmistakably the same. There is the same strength, the same tender sympathy, the same freedom from convention: there is the same promise to fulfil the highest hopes, the same surrender of life, and the same imperious demand on the lives of others. No thoughtful man who examines and compares these pictures can doubt that they are genuine historical portraits of a figure wholly different from any which had hitherto appeared on the world’s stage. They are beyond the power of human invention. They are drawn with a simplicity which is their own guarantee. If we had these, and these only, we should have an adequate explanation of the beginnings of Christianity. There would still be a great gap to be filled before we reached the earliest letters of St Paul; but yet we should know what the Apostle meant when he wrote to “the Church of the Thessalonians in God the Father and the Lord Jesus Christ,” and reminded them how they had “turned from idols to serve the living and true God, and to wait for His Son from heaven, whom He raised from the dead, even Jesus who delivereth us from the wrath to come.”

If these two narratives served the first needs of Christian believers, it is easy to see that they would presently stimulate further activity in the same direction. For, to begin with, they were obviously incomplete: many incidents and teachings known to the earliest disciples found no place in them; and they contained no account of the life of Jesus Christ before His public ministry, no record of His pedigree, His birth or His childhood. Secondly, their form left much to be desired; for one of them at least was rude in style, sometimes needlessly repetitive and sometimes brief to obscurity. Moreover the very fact that there were two challenged a new and combined work which perhaps should supersede both.

Accordingly, some years after the fall of Jerusalem—we cannot tell the exact date or the author’s name—the book which we call the Gospel according to St Matthew was written to give the Palestinian Christians a full account of Jesus Christ, which should present Him as the promised Messiah, fulfilling the ancient Hebrew prophecies, proclaiming the kingdom of heaven, and founding the Christian society. The writer takes St Mark as his guide but he incorporates into the story large portions of the teaching which he has found in the other document. He groups his materials with small regard to chronological order; and he fashions out of the many scattered sayings of our Lord continuous discourses, everywhere bringing like with like, with considerable literary art. A wide knowledge of the Old Testament supplies him with a text to illustrate one incident after another; and so deeply is he impressed with the correspondence between the life of Christ and the words of ancient prophecy, that he does not hesitate to introduce his quotations by the formula “that it might be fulfilled which was spoken by the prophet.”

His Hebrew instinct leads him to begin with a table of genealogy, artificially constructed in groups of fourteen generations—from Abraham to David, from David to the Captivity, and from the Captivity to the Christ. The royal descent of the Messiah is thus declared, and from the outset His figure is set against the background of the Old Testament. He then proceeds to show that, though His lineage is traced through Joseph’s ancestors, He was but the adopted son of Joseph, and he tells the story of the Virgin-birth. The coming of the Child draws Eastern sages to his cradle and fills the court of Herod with suspicious fears. The cruel tyrant kills the babes of Bethlehem, but the Child has been withdrawn by a secret flight into Egypt, whence he presently returns to the family home at Nazareth in Galilee. All this is necessarily fresh material, for the other records had dealt only with the period of public ministry. We have no knowledge of the source from which it was drawn. From the historical standpoint
its value must be appraised by the estimate which is formed of the writer's general trustworthiness as a narrator, and by the extent to which the incidents receive confirmation from other quarters. The central fact of the Virgin-birth, as we shall presently see, has high attestation from another early writer.

The next addition which St Matthew's Gospel makes to our knowledge is of a different kind. It consists of various important sayings of our Lord, which are combined with discourses found in the second document and are worked up into the great utterance which we call the Sermon on the Mount. Such grouping of materials is a feature of this Gospel, and was possibly designed for purposes of public instruction; so that continuous passages might be read aloud in the services of the Church, just as passages from the Old Testament were read in the Jewish synagogues. This motive would account not only for the arrangement of the material, but also for certain changes in the language which seem intended to remove difficulties, and to interpret what is ambiguous or obscure. An example of such interpretation meets us at the outset. The startling saying, "Blessed are ye poor," followed by the woe pronounced upon the rich, might seem like a condemnation of the very principle of property; and when the Christian Church had come to be organized as a society containing rich and poor, the heart of the saying was felt to be more truly and clearly expressed in the words, "Blessed are the poor in spirit." This interpretative process may be traced again and again in this Gospel, which frequently seems to reflect the definite tradition of a settled Church.

Apart from the important parables of the tares, the pearl, and the net, the writer adds little to his sources until we come to the remarkable passage in ch. xvi., in which Peter the Rock is declared to be the foundation of the future Church, and is entrusted with the keys of the kingdom of heaven. The function of "binding and loosing," here assigned to him, is in identical terms assigned to the disciples generally in a passage in ch. xviii., in which for the second time we meet with the word "Church"—a word not found elsewhere in the Gospels. There is no sufficient ground for denying that these sayings were uttered by our Lord, but the fact that they were now first placed upon record harmonizes with what has been said already as to the more settled condition of the Christian society which this Gospel appears to reflect.

The parables of the two debtors, the labourers in the vineyard, the two sons, the ten virgins, the sheep and goats, are recorded only by this evangelist. But by way of incident he has almost nothing to add till we come to the closing scenes. The earthquake at the moment of our Lord's death and the subsequent appearance of departed saints are strange traditions unattested by other writers. The same is to be said of the soldiers placed to guard the tomb, and of the story that they had been bribed to say that the sacred body had been stolen while they slept. On the other hand, the appearance of the risen Christ to the women may have been taken from the lost pages of St Mark, being the sequel to the narrative which is broken off abruptly in this Gospel: and it is not improbable that St Mark's Gospel was the source of the story of the women to use which St Matthew closes, though the wording of it has probably been modified in accordance with a settled tradition.

The work which the writer of this Gospel thus performed received the immediate sanction of a wide acceptance. It met a definite spiritual need. It presented the Gospel in a suitable form for the edification of the Church; and it confirmed its truth by constant appeals to the Old Testament scriptures, thus manifesting its intimate relation with the past as the outcome of a long preparation and as the fulfilment of a Divine purpose. No Gospel is so frequently quoted by the early post-apostolic writers: none has exercised a greater influence upon Christianity, and consequently upon the history of the world.

Yet from the purely historical point of view its evidential value is not the same as that of St Mark. Its facts for the most part are simply taken over from the earlier evangelist, and the historian must obviously prefer the primary source. Its true importance lies in its attestation of the genuineness of the earlier portraits to which it has so little to add, in its recognition of the relation of Christ to the whole purpose of God as revealed in the Old Testament, and in its interpretation of the Gospel message in its bearing on the living Church of the primitive days.

5. Additions by St Luke.—While the needs of Jewish believers were amply met by St Matthew's Gospel, a like service was rendered to Gentile converts by a very different writer. St Luke was a physician who had accompanied St Paul on his missionary journeys. He undertook a history of the beginnings of Christianity, two volumes of which have come down to us, entitled the Gospel and the Acts of the Apostles. His Gospel, like St Matthew's, is founded on St Mark, with the incorporation of large portions of the second document of which we have spoken above. But the way in which the two writers have used the same materials is strikingly different. In St Matthew's Gospel the original sources are frequently blended: the incidents of St Mark are rearranged and often grouped afresh according to subject matter: harsh and ambiguous sentences of both documents are toned down or interpreted. St Luke, on the contrary, chooses between parallel stories of his two sources, preferring neither to duplicate nor to combine: he incorporates St Mark in continuous sections, following him alone for a time, then leaving him entirely, and then returning to introduce a new block of his narrative. He modifies St Mark's style very freely, but he makes less change in the recorded words of our Lord, and he adheres more closely to the original language of the second document.

In his first two chapters he gives an account of the birth and childhood of St John the Baptist and of our Lord Himself, gathered perhaps directly from the traditions of the Holy Family, and written in close imitation of the sacred stories of the Old Testament which were familiar to him in their Greek translation. The whole series of incidents differ from that which we find in St Matthew's Gospel, but there is no direct variance between them. The two narratives are in agreement as to the central fact of the Virgin-birth. St Luke gives a table of genealogy which is irreconcilable with the artificial table of St Matthew's Gospel, and which traces our Lord's ancestry up to Adam, "whom was the son of God."

The opening scene of the Galilean ministry is the discourse at Nazareth, in which our Lord claims to fulfill Isaiah's prophecy of the proclamation of good tidings to the poor. The same prophecy is alluded to in His reply to the Baptist's messengers which is incorporated subsequently from the second document. The scene ends with the rejection of Christ by His own townsfolk, as in the parallel story of St Mark which St Luke does not give. It is probable that St Luke found this narrative in the second document, and chose it after his manner in preference to the less instructive story in St Mark. He similarly omits the Marcan account of the call of the fishermen, substituting the story of the miraculous draught. After that he follows St Mark alone, until he introduces after the call of the twelve apostles the sermon which begins with the beatitudes and woes. This is from the second document, which he continues to use, and that without interruption. It was he who first assigned to it the raising of the widow's son at Nain and the anointing by the sinful woman in the Pharisee's house, until he returns to incorporate another section from St Mark.

This in turn is followed by the most characteristic section of his Gospel (ix. 51—xviii. 14), a long series of incidents wholly independent of St Mark, and introduced as belonging to the period of the final journey from Galilee to Jerusalem. Much of this material is demonstrably derived from the second document; and it is quite possible that the whole of it may come from that source. There are special reasons for thinking so in regard to certain passages, as for example the mission of the seventy disciples and the parable of the good Samaritan, although they are not contained in St Matthew's Gospel.

For the closing scenes at Jerusalem St Luke makes considerable additions to St Mark's narrative: he gives a different account of the Last Supper, and he adds the trial before Herod and the
incident of the penitent robber. He appears to have had no information as to the appearance of the risen Lord in Galilee, and he accordingly omits from his reproduction of St Mark's narrative the twice-repeated promise of a meeting with the disciples there. He supplies, however, an account of the appearance to the two disciples at Emmaus and to the whole body of the apostles in Jerusalem.

St Luke's use of his two main sources has preserved the characteristics of both of them. The sternness of certain passages, which has led some critics to imagine that he was an Ebionite, is mainly, if not entirely, due to his faithful reproduction of the language of the second document. The key-note of his Gospel is universality: the mission of the Christ embraces the poor, the weak, the despised, the heretic and the sinful: it is good tidings to all mankind. He tells of the devotion of Mary and Martha, and of the band of women who ministered to our Lord's needs and followed Him to Jerusalem: he tells also of His kindness to more than one sinful woman. Zaccheus the publican and the grateful Samaritan leper further illustrate this characteristic. Writing as he does for Gentile believers he omits many details which from their strongly Jewish cast might be unintelligible or uninteresting. He also modifies the harshness of St Mark's style, and frequently recasts his language in reference to diseases. From an historical point of view his Gospel is of high value. The proved accuracy of detail elsewhere, as in his narration of events which he witnessed in company with St Paul, enhances our general estimation of his work. A trustworthy observer and a literary artist, the one non-Jewish evangelist has given us—to use M. Renan's words—" the most beautiful book in the world."

6. Additions by St John. — We come lastly to consider what addition to our knowledge of Christ's life and work is made by the Fourth Gospel. St Mark's narrative of our Lord's ministry and passion is so simple and straightforward that it satisfies our historical sense. We trace a natural development in it: we see why with such power and such sympathy He necessarily came into conflict with the religious leaders of the people, who were jealous of the influence which He gained and were scandalized by His refusal to be hindered in His mission of mercy by rules and conventions to which they attached the highest importance. The issue is fought out in Galilee, and when our Lord finally journeys to Jerusalem He knows that He goes there to die. The story is so plain and convincing in itself that it gives at first sight an impression of completeness. This impression is confirmed by the Gospels of St Matthew and St Luke, which though they add much fresh material do not disturb the general scheme presented by St Mark. But on reflection we are led to question the sufficiency of the account thus offered to us. Is it probable that St Mark, that our Lord should have neglected the sacred custom in accordance with which the pious Jew visited Jerusalem several times each year for the observance of the divinely appointed feasts? It is true that St Mark does not break his narrative of the Galilean ministry to record such visits: but this does not prove that such visits were not made. Again, is it probable that He should have so far neglected Jerusalem as to give it no opportunity of seeing Him and hearing His message until the last week of His life? If the writers of the other two Gospels had no means at their disposal for enlarging the narrow framework of St Mark's narrative by recording definite visits to Jerusalem, at least they preserve to us words from the second document which seem to imply such visits: for how else are we to explain the pathetic complaint, "Jerusalem, Jerusalem, how often would I have gathered thee, as a hen gathereth her chickens under her wings, and ye would not!"

St John's Gospel meets our questionings by a wholly new series of incidents and by an account of a ministry which is concerned mainly not with Galileans but with Jews, and which centres in Jerusalem. It is carried on to a large extent concurrently with the Galilean ministry: it is not continuous, but is taken up from feast to feast as our Lord visits the sacred city at the times of its greatest religious activity. It differs in character from the Galilean ministry: for among the simple, unsophisticated folk of Galilee Jesus presents Himself as a healer and helper and teacher, keeping in the background as far as possible His claim to be the Messiah; whereas in Jerusalem His authority is challenged at His first appearance, the element of controversy is never absent, His relation to God is from the outset the vital issue, and consequently His Divine claim is of necessity made explicit. Time after time His life is threatened before the feast is ended, and when the last passover has come we can well understand, what was not made sufficiently clear in the brief Marcan narrative, why Jerusalem proved so fatally hostile to His Messianic claim.

The Fourth Gospel thus offers us a most important supplement to the limited sketch of our Lord's life which we find in the Synoptic Gospels. Yet this was not the purpose which led to its composition. That purpose is plainly stated by the author himself: "These things have been written that ye may believe that Jesus Christ is the Son of God, and that believing ye may have life in His name." His avowed aim is, not to write history, but to produce conviction. He desires to interpret the coming of Jesus Christ into the world, to declare whence and why He came, and to explain how His coming, as light in the midst of darkness, brought a crisis into the lives of all with whom He came in contact. The issue of this crisis in His rejection by the Jews at Jerusalem is the main theme of the book.

"St John's prologue prepares us to find that he is not writing for persons who require a succinct narrative of facts, but for those who having such already in familiar use are asking deep questions as to our Lord's mission. It goes back far behind human birth or lines of ancestry. It begins, like the sacred story of creation, "In the beginning." The Book of Genesis had told how all things were called into existence by a Divine utterance: "God said, Let there be . . . and there was." The creative Word had been long personified by Jewish thought, especially in connexion with the prophets to whom "the Word of the Lord" came. "In the beginning," then, St John tells us, the Word was—was with God—yea, was God. He was the medium of creation, the source of its life and its life—especially of that higher life which finds its manifestation in men. So He was in the world, and the world was made by Him, and yet the world knew Him not. At length He came, to the home which had been prepared for Him, but His own people rejected Him. But such as did receive Him found a new birth, beyond their birth of flesh and blood: they became children of God, were born of God. In order thus to manifest Himself He had undergone a human birth: "the Word was made flesh, and dwelt among us, and we beheld His glory"—the glory, as the evangelist has learned to see, of the Father's only-begotten Son, who was made a man in the world as real to God, whom no man hath ever seen." In these opening words we are invited to study the life of Christ from a new point of view, to observe His self-manifestation and its issue. The evangelist looks back across a period of half a century, and writes of Christ not merely as he saw Him in those far-off days, but as he has come by long experience to think and speak of Him. The past is now filled with a glory which could not be so fully perceived at the time, which, as St John tells, it was the function of the Holy Spirit to reveal to Christ's disciples.

The first name which occurs in this Gospel is that of John the Baptist. He is even introduced into the prologue which sketches in general terms the manifestation of the Divine Word: "There was a man sent from God, whose name was John: he came for witness, to witness to the Light, that through him all might believe." This witness of John holds a position of high importance in this Gospel. His mission is described as running on for a while concurrently with that of our Lord, whereas in the other Gospels we have no record of our Lord's work until John is cast into prison. It is among the disciples of the Baptist on the banks of the Jordan that Jesus finds His first disciples. The Baptist has pointed Him out to them in striking language, which recalls at once the symbolic ritual of the law and the spiritual lessons of the prophets: "Behold, the Lamb of God, which taketh away the sin of the world."
the heavenly food, the flesh and blood of Him who came down from heaven. This teaching leads to a conflict with certain Jews who seem to have come from Jerusalem, and it proves a severe test even to the faith of disciples.

The feast of tabernacles brings fresh disputes in Jerusalem, and an attempt is made to arrest Jesus. A climax of indignation is reached when a blind man is healed at the pool of Siloam on the sabbath day. At the feast of the dedication a fresh effort at arrest was made, and Jesus then withdrew beyond the Jordan. Here He learned of the sickness of Lazarus, and presently He returned and came to Bethany to raise him from the dead. The excitement produced by this miracle led to yet another attack, destined this time to be successful, on the life of Jesus. The Passover was at hand, and the last supper of our Lord with His disciples on the evening before the Passover lamb was killed is made the occasion of the most inspiring consolations. Our Lord interprets His relation to the disciples by the figure of a tree and its branches—He is the whole of which they are the parts; He promises the mission of the Holy Spirit to continue His work in the world; and He solemnly commends to His Father the disciples whom He is about to leave.

The account of the trial and the crucifixion differs considerably from the accounts given in the other Gospels. St John's narratives are in large part personal memories, and in more than one incident he himself figures as the unnamed disciple "whom Jesus loved." In the Resurrection scenes he also gives incidents in which he has played a part; and the appearances of the risen Lord are not confined either to Jerusalem or to Galilee, but occur in both localities.

If we ask what is the special contribution to history, apart from theology, which St John's Gospel makes, the answer would seem to be this—that beside the Galilean ministry reported by St Mark there was a ministry to "Jews" (Judeans) in Jerusalem, not continuous, but occasional, taken up from time to time as the great feasts came round; that its teaching was widely different from that which was given to Galileans, and that the situation created was wholly unlike that which arose out of the Galilean ministry. The Galilean ministry opens with enthusiasm, ripening into a popularity which even endangers a satisfactory result. Where opposition manifests itself, it is not native opposition, but comes from religious teachers who are parts of a system which centres in Jerusalem, and who are sometimes expressly noted as having come from Jerusalem. The Jerusalem ministry on the contrary is never welcomed with enthusiasm. It has to do with those who challenge it from the first. There is no atmosphere of simplicity and teachableness which rejoices in the manifestation of power and sympathy and liberty. It is a witness delivered to a hostile audience, whether they will hear or no. Ultimate issues are quickly raised; keen critics see at once the claims which underlie deeds and words, and the claims in consequence become explicit: the relation of the teacher to God Himself is the vital interest. The conflict which thus arose explains what St Mark's succinct narrative had left unexplained—the fatal hostility of Jerusalem. It may have been a part of St John's purpose to give this explanation, and to make other supplements or corrections where earlier narratives appeared to him incomplete or misleading. But he says nothing to indicate this, while on the other hand he distinctly proclaims that his purpose is to produce and confirm conviction of the divine claims of Jesus Christ.

For bibliography see Bible; Christianity; Church History; and the articles on the separate Gospels.

(J. A. R.)

JET (Fr. jais, Ger. Gagat), a substance which seems to be a peculiar kind of lignite or anthracite; often cut and polished for ornaments. The word "jet" probably comes, through O. Fr. jaiet, from the classical gagates, a word which was derived, according to Pliny, from Gagas, in Lycia, where jet, or a similar substance, was originally found. Jet was used in Britain in prehistoric times; many round bars of the Bronze age have yielded jet beads, buttons, rings, armlets and other ornaments. The abundance of jet in Britain is alluded to by Caius Julius
Solinus (fl. 3rd century) and jet ornaments are found with Roman relics in Britain. Probably the supply was obtained from the coast of Yorkshire, especially near Whitby, where nodules of jet were formerly picked up on the shore. Caedmon refers to this jet, and at a later date it was used for rosary beads by the monks of Whitby Abbey.

The Whitby jet occurs in irregular masses, often of lenticular shape, embedded in hard shales known as jet-rock. The jet-rock series belongs to that division of the Upper Lias which is termed the zone of Ammonites serpentines. Microscopic examination of jet occasionally reveals the structure of conular wood, which A. C. Seward has shown to be araucarian. Probably masses of wood were brought down by a river, and drifted out to sea, where becoming water-logged they sank, and became gradually buried in a deposit of fine mud, which eventually hardened into shale. Under pressure, perhaps assisted by heat, and with exclusion of air, the wood suffered a peculiar kind of decomposition, probably modified by the presence of salt water, as suggested by Percy E. Spielmann.

Scales of fish and other fossils of the jet-rock are frequently impregnated with bituminous products, which may replace, or fill in, the original tissues. Drops of liquid bitumen occur in the cavities of some fossils, whilst inflammable gas is not uncommon in the jet-workings, and petroleum may be detected by its smell. Iron pyrites is often associated with the jet.

Formerly sufficient jet was found in loose pieces on the shore, set free by the disintegration of the cliffs, or washed up by a submarine source. When this supply became insufficient, the rock was attacked by the employees of the coastal iron mines, levels being driven into the shales not only at their outcrop in the cliffs but in some of the inland dales of the Yorkshire moorlands, such as Estdale. The best jet has a uniform black colour, and is rich in bituminous products. It is fracture is conchoidal, and is easily attacked by acidulated water. Although it is inflammable, but insufficient, it is occasionally compact, and has been used as jet.

Much jet is imported from Spain, but it is generally less hard and lustrous than true Whitby jet. In Spain the chief locality is Villaviciosa, in the province of Asturias, France furnishes jet, especially in the department of the Aude. Much jet, too, occurs in the Lias of Wurttemberg, and works have been established for its utilization. In the United States jet is known on many localities, but is not systematically worked. Pennsylvania anthracite, however, has been occasionally employed as a substitute. In like manner Scotch coal-nit is sometimes used at Whitby. Imitations of jet, or substitutes for it, are furnished by vulcanite, glass, black obsidian and black onyx, or stained chalcedony. Jet is sometimes black or brown, or termed Spanish jet, or jet black, or jet-amber, and also sold as jet-amber, though in less degree, it becomes electric by friction.

JETHRO (or JEHET, Exod. iv. 18), the priest of Midian, in the Bible, whose daughter Zipporah became the wife of Moses. He is known as Hobab the son of Reuel the Kenite (Num. x. 29; Judg. iv. 11), and once as Reuel (Exod. ii. 18); and if Zipporah is the wife of Moses referred to in Num. xii. 1, the family could be regarded as Cushite (see Cush). Jethro was the priest of Yahweh, and resided at the sacred mountain where the deity commissioned Moses to deliver the Israelites from Egypt. Subsequently Jethro came to Moses (probably at Kadesh), a great sacrificial feast was held, and the priest instructed Moses in legislative procedure; Exod. xviii. 27 (see Exodus) and Num. x. 30 imply that the scene was not Sinai. Jethro was invited to accompany the people into the promised land, and later, we find his clan settling in the south of Judah (Judg. i. 16); see Kenites. The traditions agree in representing the kin of Moses as related to the mixed tribes of the south of Palestine (see Edom), and in ascribing to the family an important share in the early development of the worship of Yahweh. Cheyne suggests that the names of Hobab and of Jonadab the father of the Rechabites (q.v.) were originally identical (Ency. Bib. ii. col. 2101).

JETTY. The term jetty, derived from Fr. jetée, and therefore signifying something “thrown out,” is applied to a variety of structures employed in river, dock and maritime works, which are generally carried out in pairs from river banks, or in continuation of river channels at their outlets into deep water; or out into docks, and outside their entrances; or for forming basins along the sea-coast for ports in tideless seas. The forms and construction of these jetties are as varied as their uses; for though they invariably extend out into water, and serve either for directing a current or for accommodating vessels, they are sometimes formed of high open timber-work, sometimes of low solid projections, and occasionally only differ from breakwaters in their object.

Jetty for regulating Rivers.—Formerly jetties of timber-work were very commonly extended out, opposite one another, from each bank of a river, at intervals, to contract a wide channel, and by concentration of the current, to make it sufficient for ships. But if they should lie too near the central channel, or on either side, they allow the lateral channels, or sometimes mounds of rubble stone, stretching down the foreshore from each bank, served the same purpose. As, however, this system occasioned a greater scour between the ends of the jetties than in the lime of channels, they have been principally used for the purpose of holding the water of a river in its bed, it has to a great extent been superseded by longitudinal training works, or by dipping cross dikes pointing somewhere upstream (see River Engineering).

Jetties at Docks.—Where docks are given sloping sides, openwork timber jetties are generally carried across the slope, at the ends of which vessels can lie in deep water (fig. 1); or more solid structures are erected over the slope for supporting coal-tips. Pilework jetties are also constructed in the water outside the entrances to docks on each side, so as to form an enlarging trumpet-shaped channel between the entrance, lock or tidal basin and the approach channel, in order to guide vessels in entering or leaving the docks. Solid jetties, moreover, lined with quay walls, are sometimes carried out into a wide dock, at right angles to the line of quays at the side, to enlarge the accommodation; and they also serve, when extended on a large scale from the coast of a tideless sea under shelter of an outlying breakwater, to form the basins in which vessels lie when discharging and taking in cargoes in such a port as Marseilles (see Dock).

Jetty at Entrances to Jetty Harbours.—The approach channel to some ports situated on sandy coasts is guarded and protected across the beach by parallel jetties, made solid up to a little above low water of mean tides, on which open timber-work is erected, provided with a planked platform at the high above the highest tides. The channel between the jetties was originally maintained by tidal scour from low-lying areas close to the coast, and subsequently by the current from sluicing basins; but it is now often considerably deepened by sand-dump dredging. It is protected to some extent by the solid portion of the jetties from the intrusion of sand from the adjacent beach, and from the levelling action of the waves; whilst the upper open portion serves to indicate the channel, and to guide the vessels if necessary (see Harbour). The bottom part of the older jetties, in such long-established jetty ports as Calais, Dunkirk and Ostend, was composed of clay or rubbly stone, covered on the top by fascine-work or pitching; but the deepening of the jetty channel by dredging, and the need which arose for its enlargement, led to the construction of the jetties at these ports. The new jetties at Dunkirk were founded in the sandy beach, by the aid of the^dredged air, at a depth of 12 ft. below low water of spring tides; and their solid masonry portion, on a concrete foundation, was raised 54 ft. above low water of mean tides (fig. 2).

Jetty at Lagoon Outlets.—A small tidal rise spreading tidal water over a large area of land on the coast, and the influx and efflux of the tide to maintain a deep channel through a narrow outlet; but the issuing current on emerging from the outlet, being
JEVER—JEVEROS

no longer confined by a bank on each side, becomes dispersed, and
owing to the reduction of its scouring force, is no longer able at
a moderate distance from the shore
effectually to resist the action of
the waves and littoral currents
tending to form a continuous beach
in front of the outlet. Hence a bar
is produced which diminishes
the available depth in the ap-
proach channel. By carrying out
a solid jetty over the bar, however,
on each side of the outlet, the tidal
currents are concentrated in the
channel across the bar, and lower it
by scour. Thus the available depth
of the approach channels to Venice
through the Malamocco and Lido
outlets from the Venetian lagoon
have been deepened several feet
over their bars by jetties of rubble
stone surmounted by a small super-
structure (fig. 3), carried out across
the foreshore into deep water on
both sides of the channel. Other examples are provided by the long
jetties extended into the sea in front of the entrance to Charleston
harbour, formerly constructed of fascines, weighted with stone and

logs, but subsequently of rubble stone, and by the two converging
rubble jetties carried out from each shore of Dublin bay for deepening
the approach to Dublin harbour.

Jetties at the Outlet of Tidless
Rivers.—Jetties have been con-
structed on each side of the outlet
of some of the rivers flowing into
the Baltic, with the objects of
prolonging the scour of the river
and protecting the channel from
being shoaled by the littoral drift
along the shore. The most inter-
esting application of parallel
jetties is in lowering the bar in
front of one of the mouths of a
deltaic river flowing into a tide-
less sea, by extending the scour
of the river out to the bar by
a virtual prolongation of its
banks. Jetties prolonging the
Suila branch of the Danube into the Black Sea, and the south pass of the Mississippi
into the Gulf of Mexico (fig.
4), formed of rubble stone
and concrete blocks, and
fascine mattresses weighted
with stone and surmounted
with large concrete blocks
respectively, have enabled the
discharge of these rivers to
scour away the bars ob-
structing the access to them;
and they have also carried the
sediment-bearing waters
sufficiently far out to come
under the influence of littoral
currents, which, by conveying away some of the sediment, post-
pone the eventual formation of a fresh bar farther out (see River
Engineering).

Jetties at the Mouth of Tidal Rivers.—Where a river is narrow near
its mouth, and its discharge is generally feeble, the sea is liable on
an exposed coast, when the tidal range is small, to block up its outlet
during severe storms. The river is thus forced to seek another exit
at a weak spot of the beach, which along a low coast may be at some
distance off; and this new outlet in its turn may be blocked up, so
that the river from time to time shifts the position of its mouth.
This inconvenient cycle of changes may be stopped by fixing the
outlet of the river at a suitable site, by carrying a jetty on each side
of this outlet across the beach, thereby concentrating its discharge
in a definite channel and protecting the mouth from being blocked
up by littoral drift. This system was long ago applied to the

shifting outlet of the river Yare to the south of Yarmouth, and has also
been successfully employed for fixing the wandering mouth of the
Adur near Shoreham, and of the Adour flowing into the Bay of
Biscay below Bayonne. When a new channel was cut across the
Hook of Holland to provide a straighter and deeper outlet channel
for the river Maas, forming the approach channel to Rotterdam, low,
wide, parallel jetties, composed of fascine mattresses weighted with
stone (fig. 5), were carried across the foreshore into the sea on either
side of the new mouth of the river, to protect the jetty channel from
littoral drift, and cause the discharge of the river to maintain it
to deep water (see River Engineering). The channel, also,
both beyond the outlet of the river Nervion into the Bay of Biscay has
been regulated by jetties; and by extending the south-west jetty
out for nearly half a mile with a curve concave towards the channel
the outlet has not only been protected to some extent from the
easterly drift, but the bar in front has been lowered by the scour
produced by the discharge of the river following the concave bend
of the south-west jetty. As the outer portion of this jetty was
exposed to westerly storms from the Bay of Biscay before the outer
harbour was constructed, it has been given the form and strength
of a breakwater situated in shallow water (fig. 6). (L. F. V-H.)

JEVER, a town of Germany, in the grand-duchy of Oldenburg,
13 m. by rail N.W. of Wilhelmshaven, and connected with the
North Sea by a navigable canal. Pop. (1901), 5486. The chief
industries are weaving, spinning, dyeing, brewing and milling;
there is also a trade in horses and cattle. The fathers (Die
Gebreun) of the town used to send an annual birthday present of
101 plowmen's eggs to Bismarck, with a dedication in verse.

The castle of Jever was built by Prince Edo Wiemken (d. 1410),
the ruler of Jeverland, a populous district which in 1575 came
under the rule of the dukes of Oldenburg. In 1603 it passed to
the house of Anhalt and was later the property of the empress
Catherine II. of Russia, a member of this family. In 1814 it came
again into the possession of Oldenburg.
though upon the conquest of Peru they temporarily submitted, a general insurrection in 1590 won them back their liberty. Curious dried human heads, supposed to have been objects of worship, have been found among the Jevonos (see Ethnol. Soc. Trans. 1862, W. Bollaert).

JEVONS, WILLIAM STANLEY (1835-1882), English economist and logician, was born at Liverpool on the 1st of September 1835. His father, Thomas Jevons, a man of strong scientific tastes and a writer on legal and economic subjects, was an iron merchant. His mother was the daughter of William Roscoe. At the age of fifteen he was sent to London to attend University College school. He appears at this time to have already formed the belief that important achievements as a thinker were possible to him, and at more than one critical period in his career this belief was the decisive factor in determining his conduct. Towards the end of 1853, after having spent two years at University College, where his favourite subjects were chemistry and botany, he unexpectedly received the offer of an university fellowship of the new mint in Australia. The idea of leaving England was distasteful, but pecuniary considerations had, in consequence of the failure of his father's firm in 1847, become of vital importance, and he accepted the post. He left England for Sydney in June 1854, and remained there for five years. At the end of that period he resigned his appointment, and in the autumn of 1859 entered again as a student at University College, London, proceeding in due course to the B.A. and M.A. degrees of the university of London. He now gave his principal attention to the moral sciences, but his interest in natural science was by no means exhausted: throughout his life he continued to write occasional papers on scientific subjects, and his intimate knowledge of the physical sciences greatly contributed to the success of his chief logical work, _The Principles of Science_. Not long after taking his M.A. degree Jevons obtained a post as tutor at Owens College, Manchester. In 1866 he was elected professor of logic and mental and moral philosophy, a position which he occupied until 1871, when he was appointed to the professsorship of political economy in Owens college. Next year he married Harriet Ann Taylor, whose father had been the founder and proprietor of the Manchester Guardian. Jevons suffered a good deal from ill health and sleeplessness, and found the delivery of lectures covering so wide a range of subjects very burdensome. In 1876 he was glad to exchange the Owens professorship for the professorship of political economy in University College, London. Travelling and music were the principal recreations of his life; but his health continued bad, and he suffered from depression. He found his professorial duties increasingly irksome, and feeling that the pressure of literary work left him no spare energy, he decided in 1880 to resign the post. On the 13th of August 1882 he was drowned whilst bathing near Hastings. Throughout his life he had pursued with devotion and industry the ideals with which he had set out, and his journal and letters display a noble simplicity of disposition and a love of truth which commanded the admiration of all who knew him. He was a prolific writer, and at the time of his death he occupied the foremost position in England both as a logician and as an economist. Professor Marshall has said of his work in economics that it "will probably be found to have more constructive force than any, save that of Ricardo, that has been done during the last hundred years." At the time of his death he was engaged upon an economic work that promised to be at least as important as any that he had previously undertaken. It would be difficult to exaggerate the loss which logic and political economy sustained through the accident by which his life was prematurely cut short.

Jevons arrived quite early in his career at the doctrines that constituted his most characteristic and original contributions to economics and logic. The theory of utility, which became the keynote of his general theory of political economy, was practically formulated in a letter written in 1860; and the germ of his logical principles of the substitution of similars may be found in the letter which he pronounced he had written for 1861, that "philosophy would be found to consist solely in pointing out the likeness of things." The theory of utility above referred to, namely, that the degree of utility of a commodity is some continuous mathematical function of the quantity of the commodity available, together with the implied doctrine that economics is essentially a mathematical science, took more definite form in a paper on "A General Mathematical Theory of Political Economy," written for the British Association in 1862. This paper does not appear to have attracted much attention either in 1862 or on its publication four years later in the _Journal of the Statistical Society_; and it was not till 1871, when the _Theory of Political Economy_ appeared, that Jevons set forth his doctrines in a fully developed form. It was not till after the publication of this work that Jevons became acquainted with the applications of mathematics to political economy made by earlier writers, notably Antoine Augustin Cournot and H. H. Gossen. The theory of utility was about 1870 being independently developed on somewhat similar lines by Carl Menger in Austria and M.E.L. Walras in Switzerland. As regards the discovery of the connexion between value in exchange and final (or marginal) utility, the priority belongs to Gossen, but this in no way detracts from the great importance of the service which Jevons rendered to English economics by his fresh discovery of the principle, and by the way in which he ultimately forced it into notice. In his reaction from the prevailing view he sometimes expressed himself without due qualification: the declaration, for instance, made at the commencement of the _Theory of Political Economy_, that "value depends entirely upon utility," lent itself to misinterpretation. But a certain exaggeration of emphasis may be pardoned in a writer seeking to attract the attention of an indifferent public. It was not, however, as a theorist dealing with the fundamental data of economic science, but as a brilliant writer on practical economic questions, that Jevons first received general recognition. A _Serious Fall in the Value of Gold_ (1863) and _The Coal Question_ (1865) placed him in the front rank as a writer on applied economics and statistics; and he would be remembered as one of the leading economists of the 19th century even had his _Theory of Political Economy_ never been written. Amongst his economic works may be mentioned _Money and the Mechanism of Exchange_ (1875), written in a popular style, and descriptive rather than theoretical, but wonderfully fresh and original in treatment and full of suggestiveness, a _Primer on Political Economy_ (1878), _The State in Relation to Labour_ (1882), and two works published after his death, namely, _Methods of Social Reform and Investigations in Currency and Finance_, containing papers that had appeared separately during his lifetime. The last-named volume contains Jevons's interesting speculations on the connexion between commercial crises and sun-spots. He was engaged at the time of his death upon the preparation of a large treatise on economics and had drawn up a table of contents and completed some chapters and parts of chapters. This fragment was published in 1905 under the title of _The Principles of Economics: a Fragment of a Treatise on the Industrial Mechanism of Society, and other Papers_. Jevons's work in logic went on pari passu with his work in political economy. In 1864 he published a small volume, entitled _Pure Logic; or, the Logic of Quantity apart from Quantity_, which was based on Boole's system of logic, but freed from what he considered the false mathematical dress of that system. In the years immediately following he devoted considerable attention to the construction of a logical machine, exhibited before the Royal Society in 1870, by means of which the conclusion derivable from any given set of premises could be mechanically obtained. In 1866 what he regarded as the great and universal principle of all reasoning dawned upon him; and in 1886 he published a sketch of this fundamental doctrine under the title of _The Substitution of Similars_. He expressed the principle in its simplest form as follows: "Whatever is true of a thing is true of its like," and he worked out in detail its various applications. In the following year appeared the _Elementary Lessons on Logic_, which were of practical value to the great number of students who have profited by this little work. Jevons's essays on logic in the English language. In the meantime he was engaged upon a much more important logical treatise, which appeared in 1874 under the title of _The Principles of Science_. In this work Jevons embodied the substance of his earlier works on pure logic and the substitution of similars; he also enunciated
JEW, THE WANDERING

JEW, THE WANDERING, a legendary Jew (see JEW) doomed to wander till the second coming of Christ because he had taunted Jesus as he passed bearing the cross, saying, “Go on quicker.” Jesus is said to have replied, “I go, but thou shalt wait till I return.”

The legend in this form first appeared in a pamphlet of four leaves alleged to have been printed at Leiden in 1602. This pamphlet relates that Paulus von Eizen (d. 1598), bishop of Schleswig, had met at Hamburg in 1542 a Jew named Ahasuerus (Ahasverus), who declared he was “eternal” and was the same who had been punished in the above-mentioned manner by Jesus at the time of the crucifixion. The pamphlet is supposed to have been written by Chrysostomus Dudulaeus of Westphalia and printed by one Christof Cruter, but as no such author or printer is known at this time—the latter name indeed refers directly to the legend—it has been conjectured that the whole story is a myth invented to support the Protestant contention of a continuous witness to the truth of Holy Writ in the person of this “eternal” Jew; he was to form, in his way, a counterpart to the apostolic tradition of the Catholic Church. The story met with ready acceptance and popularity. Eight editions of the pamphlet appeared in 1602, and the fourth edition before the end of the following century. It was translated into Dutch and Flemish with almost equal success. The first French edition appeared in 1609, and the story was known in England before 1625, when a parody was produced. Denmark and Sweden followed suit with translations, and the expression “eternal Jew” passed as a current term into Czech. In other words, the story in its usual form spread wherever there was a tincture of Protestantism. In southern Europe little is heard of it in this version, though Rudolph Botoreus, parliamentary advocate of Paris (Comm. hist., 1604), writing in Paris two years after its first appearance, speaks contemptuously of the popular belief in the Wandering Jew in Germany, Spain and Italy.

The growing popularity of the pamphlet and its translations soon led to reports of the appearance of this mysterious being in almost all parts of the civilized world. Besides the original meeting of the bishop and Ahasuerus in 1542 and others referred back to 1525 in Spain and 1590 at Vienna, the Wandering Jew was stated to have appeared at Prague (1602), at Lübeck (1603), in Bavaria (1604), at Ypres (1623), Brussels (1640), Leipzig (1642), Paris (1644), the “Turkish Spy”), Stamford (1668), Astrakhan (1672), and Frankenstein (1678). In the next century the wandering Jew was seen at Munich (1721), Altbach (1769), Brussels (1774), Newcastle (1790, see Brand, Pop. Antiquities, &c.), and on the streets of London between 1816 and 1830 (see Athenæum, 1866, ii. 561). So far as can be ascertained, the latest report of his appearance was in the neighborhood of Salt Lake City in 1868, when he is said to have made himself known to a Mormon named O’Grady. It is difficult to tell in any one of these cases how far the story is an entire fiction and how far some ingenious impostor took advantage of the existence of the myth.

The reiterated reports of the actual existence of a wandering being, who retained in his memory the details of the crucifixion, show how the idea had fixed itself in popular imagination and found its way into the 17th-century collections of German legends. The two ideas combined in the story of the restless fugitive akin to Cain and wandering for ever are separately represented in the current names given to this figure in different countries. In most Teutonic languages the stress is laid on the perpetual character of his punishment and he is known as the “everlasting,” or “eternal” Jew (Ger. “Ewige Jude”). In the lands speaking a Romance tongue, the usual form has reference to the wanderings (Fr. “le Juif errant”). The English form follows the Romance analogy, possibly because derived directly from France. The actual name given to the mysterious Jew varies in the different versions: the original pamphlet calls him Ahasver, and this has been followed in most of the literary versions, though it is difficult to imagine any Jew being called by the name of the typical anti-Semitic king of the Book of Esther. In one of his appearances at Brussels his name is given as Isaac Laquem, implying an imperfect knowledge of Hebrew in an attempt to represent Isaac “from of old.” Alexandre Dumals also made use of this title. In the Turkish Spy the Wandering Jew is called Paul Marrane and is supposed to have suffered persecution at the hands of the Inquisition, which was mainly occupied in dealing with the Marranos, i.e. the secret Jews of the Iberian peninsula. In the few references to the legend in Spanish writings the Wandering Jew is called Juan Espeira en Dios, which gives a more hopeful turn to the legend.

Under other names, a story very similar to that given in the pamphlet of 1602 occurs nearly 400 years earlier on English soil. According to Roger of Wendover in his Flores historiarum under the year 1228, an Armenian archbishop, then visiting England, was asked by the monks of St Albans about the well-known Joseph of Arimathea, who had spoken to Jesus and was said to be still alive. The archbishop claimed to have seen him in Armenia under the name of Carthaphilus or Cartaphilus, who had confessed that he had taunted Jesus in the manner above related. This Carthaphilus had afterwards been baptized by the name of Joseph. Matthew Paris, in repeating the passage from Roger of Wendover, reported that other Armenians had confirmed the story on visiting St Albans in 1252, and regarded it as a great proof of the Christian religion. A similar account is given in the chronicles of Philippe Mouskès (d. 1243). A variant of the same story was known to Guido Bonati, an astronomer quoted by Dante, who calls his hero or villain Butta Deus because he struck Jesus. Under this name he is said to have appeared at Mugello in 1413 and at Bologna in 1415 (in the garb of a Franciscan of the third order).

The source of all these reports of an ever-living witness of the crucifixion is probably Matthew xvi. 28: “There be some of them that stand here which shall in no wise taste of death till they see the Son of Man coming in his kingdom.” As the kingdom had not come, it was assumed that there must be somebody living who had been present at the crucifixion; the same reasoning is at the root of the Anglo-Israel belief. These words are indeed quoted in the pamphlet of 1602. Again, a legend was based on John xxi. 20 that the beloved disciple would not die before the second coming; while another legend (current in the 17th century) condemned Malchus, whose ear Peter cut off in the garden of Gethsemane (John xvii. 10), to wander perpetually till the second coming. The legend alleges that he had been so condemned for having scoffed at Jesus. These legends and the
utterance of Matt. xvi. 28 became "contaminated" by the legend of St. Joseph of Arimathea and the Holy Grail, and took the form given in Roger of Wendover and Matthew Paris. But there is nothing to show the spread of this story among the people before the pamphlet of 1602, and it is difficult to see how this Carthophilus could have given rise to the legend of the Wandering Jew, since he is not a Jew nor does he wander. The author of 1602 was probably acquainted either directly or indirectly with the story as given by Matthew Paris, since he gives almost the same account. But he gives a new name to his hero and directly connects his fate with Matt. xvi. 28.

Moncure D. Conway (Ency. Brit., 9th ed., xiii. 673) attempted to connect the legend of the Wandering Jew with a whole series of myths relating to never-dying heroes like King Arthur, Frederick Barbarossa, the Seven Sleepers, and Thomas the Rhymer, not to speak of Rip Van Winkle. He goes even farther and connects our legend with mortals visiting earth, as the Yma in Persia, and the "Ancient of Days" in the Books of Daniel and Enoch, and further connects the legend with the whole medieval tendency, to regard the Jew as something uncanny and mysterious. But these mythological explanations are supererogatory, since the actual legend in question can be definitely traced to the pamphlet of 1602. The same remark applies to the identification with the Mahomedan legend of the "eternal" Chadhir proposed by M. Lidzbarski (Zeti, f. Assyr. vii. 116) and I. Friedländer (Arch. f. Religionsswiss. xii. 110).

This combination of eternal punishment with restless wandering has attracted the imagination of innumerable writers in almost all European tongues. The Wandering Jew has been regarded as a symbolic figure representing the wanderings and sufferings of his race. The Germans have been especially attracted by the legend, which has been made the subject of poems by Schubart, Schreiber, W. Müller, Lenau, Chamisso, Schlegel, Mosen and Koehler, from which enumeration it will be seen that it was a particularly favourite subject with the Romantic school. They were perhaps influenced by the example of Goethe, who in his Autobiography describes, at considerable length, the plan of a poem he had designed on the Wandering Jew. More recently poems have been composed on the subject in German by Adolf Wilbrandt, Fritz Liehnard and others; in English by Robert Buchanan, and in Dutch by H. Heijermans. German novels also exist on the subject, by Franz Horn, Oeklers, Laun and Schuck, and in France by Kleinmann, Haushofer and Zedlitz. Sigismund Keller wrote three cantos on the wanderings of Ahasuerus, while Hans Andersen made of him an "Angel of Doubt." Robert Hamerling even identifies Nero with the Wandering Jew. In France, E. Quint published a prose epic on the subject in 1833, and Eugène Sue, in his best-known work, Le Juif errant (1844), introduces the Wandering Jew in the prologues of its different sections and associates him with the legend of Herodias. In modern times the subject has been made still more popular by Gustave Doré's elaborate designs (1856), containing some of his most striking and imaginative work. Thus, probably, he suggested Greiner's poem on the subject (1857).

In England, besides the ballads in Percy's Reliques, William Cowper's "The Task," and Robert Southey's "Parson's Progress," Thomas Bewick introduced Ahasuerus in his Queen Mab. It is doubtful how far Swift derived his idea of the immortal Struldburgs from the notion of the Wandering Jew. George Cruikshank's Satathiel, which appeared anonymously in 1828, gave a highly elaborate turn to the legend; this has been re-published under the title Tarry Thou Till I Come.

JEWEL, JOHN (1522–1573), bishop of Salisbury, son of John Jewel of Buden, Devonshire, was born on the 24th of May 1522, and educated under his uncle John Bellamy, rector of Hampton, and other private tutors until his matriculation at Merton college, Oxford, in July 1535. There he was taught by John Parkhurst, afterwards bishop of Norwich; but on the 19th of August 1539 he was elected scholar of Corpus Christi college. He graduated B.A. in 1540, and M.A. in 1545, having been elected fellow of his college in 1542. He made some mark as a teacher at Oxford, and became after 1547 one of the chief disciples of Peter Martyr. He graduated B.D. in 1552, and was made vicar of Sunningwell, and public orator of the university, in which capacity he had to compose a congratulatory epistle to Mary on her accession. In April 1554 he acted as notary to Cranmer and Ridley at their disputation, but in the autumn he signed a series of Catholic articles. He was, nevertheless, suspected, fled to London, and thence to Frankfort, which he reached in March 1555. There he sided with Coxe against Knox, but soon joined Martyr at Strassburg, accompanied him to Zurich, and then paid a visit to Padua.

Under Elizabeth's succession he returned to England, and made earnest efforts to secure what would now be called a low-church settlement of religion. Indeed, his attitude was hardly distinguishable from that of the Elizabethan Puritans, but he gradually modified it under the stress of office and responsibility. He was one of the disputants selected to confute the Romanists at the conference of Westminster after Easter 1559; he was select preacher at St. Paul's cross on the 15th of June; and in the autumn was engaged as one of the royal visitors of the western counties. He composed the Apologia, which he had written for Salisbury, and it had been published on the 27th of July, but he was not consecrated until the 21st of January 1560. He now constituted himself the literary apologist of the Elizabethan settlement. He had on the 26th of November 1559, in a sermon at St. Paul's cross, challenged all comers to prove the Roman case out of the Scriptures, or the councils or fathers for the first six hundred years after Christ. He repeated his challenge in 1560, and Dr Henry Cole took it up. The chief result was Jewel's Apologia ecclesiae Anglicanae, published in 1562, which in Bishop Creighton's words is "the first methodical statement of the position of the Church of England against the Church of Rome, and forms the groundwork of all subsequent controversy." A more formidable antagonist than Cole now entered the lists in the person of Thomas Harding, an Oxford contemporary whom Jewel had deprived of his prebend in Salisbury cathedral for recusancy. He published an elaborate and bitter Answer in 1564, to which Jewel issued a Reply in 1565. Harding followed with a Confutation, and Jewel with a Defence, of the Apologia in 1566 and 1567; the combatants ranged over the whole field of the Anglo-Roman controversy, and Jewel's theology was officially enjoined upon the Church by Archbishop Bancroft in the reign of James I. Latterly Jewel had been confronted with criticism from James I. The arguments that had weaned him from his Zwinglian simplicity did not satisfy his unpromoted brethren, and Jewel had to refuse admission to a benefice to his friend Laurence Humphrey (1564), who would not wear a surplice. He was consulted a good deal by the government on such questions as England's attitude towards the council of Trent, and political considerations made him one of the most to the views of his government. He had previously sympathized. He wrote an attack on Cartwright, which was published after his death by Whitgift. He died on the 23rd of September 1571, and was buried in Salisbury Cathedral, where he had built a library. Hooker, who speaks of Jewel as "the worthiest divine that Christendom hath bred for so many hundreds of years," was one of the boys whom Jewel prepared in his house for the university, and his Ecclesiastical Polity owes much to Jewel's training.

Jewel's works were published in a folio in 1609 under the direction of Bancroft, who ordered the Apologia to be placed in churches, in some of which it may still be seen chained to the lectern; other editions appeared at Oxford (1648, 8 vols.) and Cambridge (Parker Soc., 4 vols.). See also Cough's Index to Parker Soc., Public strawberry's Works (General Index); Acts of the Privy Council; Calendars of Domestic and Spanish State Papers; Dixon's and Frere's Church Histories; and Dictionary of National Biography (art. by Bishop Creighton). (A. F. P.).
JEWELRY (O. Fr. jouel, Fr. joyau, perhaps from joie, joy; Lat. gaudium; retranslated into Low Lat. jocale, a toy, from joca, by misapprehension of the origin of the word), a collective term for jewels, or the art connected with them—jewels being personal ornaments, usually made of gems, precious stones, &c., with a setting of precious metal; in a restricted sense it is also common to speak of a gem-stone itself as a jewel, when utilized in this way. Personal ornaments appear to have been among the very first objects on which the invention and ingenuity of man were exercised; and there is no record of any people so rude as not to employ some kind of personal decoration. Natural objects, such as small shells, dried berries, small perforated stones, feathers of variegated colours, were combined by stringing or tying together to ornament the head, neck, arms and legs, the fingers, and even the toes, whilst the cartilages of the nose and ears were frequently perforated for the more ready suspension of suitable ornaments.

Amongst modern Oriental nations we find almost every kind of personal decoration, from the simple caste mark on the forehead of the Hindu to the gorgeous examples of beaten gold and silver work of the various cities and provinces of India. Nor are such decorations mere ornaments without use or meaning. The hook with its corresponding perforation or eye, the clasp, the buckle, the button, grew step by step into a special ornament, according to the rank, means, taste and wants of the wearer, or became an evidence of the dignity of office. Nor was the jewel deemed to have served its purpose with the death of its owner, for it is to the tombs of ancient peoples that we must look for evidence of the early existence of the jeweller's art.

The jewelry of the ancient Egyptians has been preserved for us in their tombs, sometimes in, and sometimes near the sarcophagi which contained the embalmed bodies of the wearers. An amazing series of finds of the intact jewels of five princesses of the XIth Dynasty (c. 2400 B.C.) was the result of the excavations of J. de Morgan at Dahshur in 1894–1895. The treasure of Princess Hathor-Set contained jewels with the names of Senwosri (Usertesen) II. and III., one of whom was probably her father. The treasure of Princess Merit contained the names of the same two monarchs, and also that of Amenemhe III., to whose family Princess Nebhotep may have belonged. The two remaining princesses were Ita and Khnumit.

![Fig. 1](image1)

The art of the nameless Memphite jewellers of the XIth Dynasty is marked by perfect accuracy of execution, by sureness of intention, by decorative instinct and sobriety in design, and by the serviceable nature of the jewels for actual wear. All forms of work are represented—including chiselling, soldering, inlaying with coloured stones, moulding and working with twisted wires and filigree. Here also occurs the earliest instance of granulated work, with small grains of gold, soldered on a flat surface (fig. 1). The principal items in the dazzling group are the following: Three gold pectorals (fig. 2 and Plate I. figs. 33, 36) worked à jour (with the interstices left open); on the front side they are inlaid with coloured stones, the fine lines being the only portion of the gold that is visible; on the back, the gold surfaces are most delicately carved, in low relief. Two gold crowns (Plate I. figs. 32, 34), found together, are curiously contrasted in character. The one (fig. 32) is of a formal design, of gold, inlaid (the plume, Plate I. fig. 33, was attached to it); the other (fig. 34) has a multitude of star-like flowers, embodied in a filigree of daintily twisted wires. A dagger with inlaid patterns on the handle shows extraordinary perfection of finish.

Near a thousand years later we have another remarkable collection of Egyptian art in the jewelry taken from the coffin of Queen Aah-hotep, discovered in 1859 by Mariette in the entrance to the valley of the tombs of the kings and now preserved in the Cairo museum. Compared with the Dahshur treasure the jewelry of Aah-hotep is in parts rough and coarse, but none the less it is marked by the ingenuity and mastery of the materials that characterize all the work of the Egyptians. Hammered work, incised and chased work, the evidence of soldering, the combinations of layers of gold plates, together with coloured stones, are all present, and the handicraft is complete in every respect.

A diadem of gold and enamel, found at the back of the head of the mummy of the queen (fig. 3), was fastened in the hair, showing the cartouche in front. The brow holding this cartouche has on the upper surface the titles of the king, 'the son of the sun, Aahmes, living for ever and ever,' in gold on a ground of lapis lazuli, with a chequered ornament in blue and gold pastes, and a sphinx couchant on each side. A necklace with three pendant flies (fig. 4) is entirely of gold, having a hook and loop to fasten it round the neck. Fig. 5 is a gold drop, inlaid with turquoise or blue paste, in the shape of a fig. A gold...
JEWELRY

chain (fig. 6) is formed of wires closely plaited and very flexible, the ends terminating in the heads of water fowl, and having small rings to secure the collar behind. To the centre is suspended by a small ring a scarabaeus of solid gold inlaid with lapis lazuli. We have an example of a bracelet, similar to those in modern use (fig. 7).

![Fig. 6](image)

![Fig. 7](image)

and worn by all persons of rank. It is formed of two pieces joined by a hinge, and is decorated with figures in repoussé on a ground inlaid with lapis lazuli.

That the Assyrians used personal decorations of a very distinct character, and no doubt made of precious materials, is proved by the bas-reliefs from which a considerable collection of jewels could be gathered, such as bracelets, ear-rings and necklaces. Thus, for example, in the British Museum we have representations of Assur-nazir-pal, king of Assyr (c. 885–860 B.C.), wearing a cross (fig. 8) very similar to the Maltese cross of modern times. It happens, however, that the excavations have not hitherto been fertile in actual remains of gold work from Assyria. Chance also has so far ordained that the excavations in Crete should not be particularly rich in ornaments of gold. A few isolated objects have been found, such as a duck and other pendants, and also several necklaces with beads of the Argonaut shell-fish pattern. More striking than these is a short bronze sword. The handle has an agate pommel, and is covered with gold plates, engraved with spirited scenes of lions and wild goats (fig. 9, A. J. Evans in Archaeologia, 59, 447). In general, however, the gold jewelry of the later Minoan periods is more brilliantly represented by the finds made on the mainland of Greece and at Enkomi in Cyprus. Among the former the gold ornaments found by Heinrich Schliemann in the graves of Mycenae are pre-eminent.

![Fig. 9](image)

The objects found ranged over most of the personal ornaments still in use; necklaces with gold beads and pendants, butterflies (fig. 10), cuttlefish (fig. 11), single and concentric circles, rosettes and leafage, with perforations for attachment to clothing, crosses and stars formed of combined crosses, with crosses in the centre forming spikes—all elaborately ornamented in detail. The spiral forms an incessant decoration from its facile production and repetition by means of twisted gold wire. Grasshoppers or tree crickets in gold repoussé suspended by chains and probably used for the decoration of the hair, and a griffin (fig. 12), having the upper part of the body of an eagle and the lower parts of a lion, with wings decorated with spirals, are among the more remarkable examples of perforated ornaments for attachment to the clothing. There are also perforated ornaments belonging to necklaces, with intaglio engravings of such subjects as a contest of a man and lion, and a duel of two warriors, one of whom stabs his antagonist in the throat. There are also pinheads and brooches formed of two stages lying down (fig. 13), the bodies and necks crossing each other, and the horns meeting symmetrically above the heads, forming a finial. The heads of these ornaments were of gold, with silver blades or pointed pins inserted for use. The bodies of the two stages rest on fronds of the date-palm growing out of the stem which receives the pin. Another remarkable series is composed of figures of women with doves. Some have one dove resting on the head; others have three doves, one on the head and the others resting on arms. The arms in both instances are extended to the elbow, the hands being placed on the breasts. These ornaments are also perforated, and were evidently sewed on the dresses, although there is some evidence that an example with three doves has been fastened with a pin.

An extraordinary diadem was found upon the head of one of the bodies discovered in the same tomb with many objects similar to those noticed above. It is 25 in. in length, covered with shield-like or rosette ornaments in repoussé, the relief being very low but perfectly distinct, and further ornamented by thirty-six large leaves of repoussé gold attached to it. As an example of design and perfection of detail, another smaller diadem found in another tomb may be noted (fig. 14). It is of gold plate, so thick as to require no "piping" at the back to sustain it; but in general the repoussé examples have a piping of copper wire.

The admirable inlaid daggers of the IVth grave at Mycenae are unique in their kind, with their subjects of a lion hunt, of a lion chasing a herd of antelopes, of running lions, of cats hunting wild duck, of inlaid lilies, and of geometric patterns. The subjects are inlaid in gold of various tints, and silver, in bronze plates which are inserted in the flat surfaces of the dagger-blades. In part also the subjects are rendered in relief and gilded. The whole is executed with marvellous precision and vivid representation of motion. To a certain limited extent these daggers are paralleled by a dagger and hatchet found in the treasure of Queen Aah-hotep mentioned above, but in their most characteristic features there is little resemblance. The gold ornaments found by Schliemann at Hissarlik, the supposed site of Troy, divide themselves, generally speaking, into two groups, one being the "great treasure" of diadems, ear-rings, beads, bracelets, &c., which seem the product of a local and uncultured art. The other group, which were found in smaller "treasures," have spirals and rosettes similar to those of Mycenae. The discovery, however, of the gold treasures of the Artemision at Ephesus has brought out points of affinity between the Hissarlik treasures and those of Ephesus, and has made any reasoning difficult, in view of the uncertainties surrounding the Hissarlik finds. The group with
Mycenaean affinities (fig. 15) includes necklaces, brooches, bracelets (g), hair-pins (a), ear-rings (c, d, e, f), and with and without pendants, beads and twisted wire drops. The majority of these ornaments were evidently portions of necklaces. A circular plaque decorated with a rosette

(a) is very similar to those found at Mycenae, and a conventionalized eagle (b) is characteristic of much of the detail found at that place as well as at Hissarlik. They were all of pure gold, and the wire must have been drawn through a plate of harder metal—probably bronze. The principal ornaments differing from those found at Mycenae are diadems or head fillets of pure hammered gold (b) cut into thin plates, attached to rings by double gold wires, and fastened together at the back with thin twisted wire. To these pendants (of which those at the two ends are nearly three times the length of those forming the central portions) are attached small figures, probably of idols. It has been assumed that these were worn across the forehead by women, the long pendants falling on each side of the face.

The jewelry of the close of the Mycenaean period is best represented by the rich finds of the cemetery of Enkomi near Salamis, in Cyprus. This field was excavated by the British Museum in 1896, and a considerable portion of the finds is now at Bloomsbury. It was rich in all forms of jewelry, but especially in pins, rings and diadems with patterns in relief. In its geometric patterns the art of Enkomi is entirely Mycenaean, but special stress is laid on the mythical forms that were inherited by Greek art, such as the sphinx and the gryphon.

Figs. 37-48 (Plate I.) are examples of the late Mycenaean treasures from Enkomi.

Fig. 51 (Plate I.) Ring, with cut blue glass-pastes in the grooves.

Another find of importance was that of a collection of gold ornaments from one of the Greek islands (said to be Aegina) which also found its way to the British Museum. Here we find the themes of archaic Greek art, such as a figure holding up two water-birds, in immediate connexion with Mycenaean gold patterns.

Greek, Etruscan and Roman ornaments partake of very similar characteristics. Of course there is variety in design and sometimes in treatment, but it does not rise to any special individuality. Fretwork is a distinguishing feature of all, together with the wave ornament, the guilloche, and the occasional use of the human figure. The workmanship is often of a character which modern gold-workers can only rival with their best skill, and can never surpass.

JEWELRY

The Greek jewelry of the best period is of extraordinary delicacy and beauty. Fine examples are shown in the British Museum from Melos and elsewhere. Undoubtedly, however, the most brilliant collection of such ornaments is that of the Hermitage, which was derived from the tombs of Kerch and the Crimea. It contains examples of the purest Greek work, together with objects which must have been of local origin, as is shown by the themes which the artist has chosen for his reliefs. Fig. 18 illustrates the jewelry of the Hermitage (see also Ear-Ring).

As further examples of Greek jewelry see the pendant oblong ornament for containing a scroll (Fig. 19).

The ear-rings (Figs. 20, 21) are also characteristic.

Figs. 59-70 (Plate II.) Examples of fine Greek jewelry, in the British Museum.

59-60 Pair of ear-rings, from a grave at Cyme in Aeolis, with filigree work and pendant Erotes.
61 Small bracelet.
62-63 Small gold reel with repoussé figures of Nereid with helmet of Achilles, and Eros. From Cameiros (Rhodes).
64 Filigree ornament (ear-ring?) with Eros in centre. From Syria. Fig. 78.
65 Medallion ornament with repoussé head of Dionysos and filigree work. (Blacas coll.)
66 Stud, with filigree work.
67-68 Pair of ear-rings, of gold, with filigree and enamel, from Eretria.
69 Diadem, with filigree, and enamel scales, from Tarquinii.
70 Necklace pendants.

Etruscan jewelry at its best is not easily distinguished from the Greek, but it tends in its later forms to become florid and diffuse, without precision of design. The granulation of surfaces practised with the highest degree of refinement by the Etruscans was long a puzzle and a problem to the modern jeweller, until Castellani of Rome discovered gold-workers in the Abruzzi to whom the method had descended through many generations. He induced some of these men to go to Naples, and so revived the art, of which he contributed examples to the London Exhibition of 1872 (see Filigree).

Figs. 71-77 (Plate II.) are well-marked examples of Etruscan work, in the British Museum.

71 Pair of sirens, repoussé, forming a hook and eye fastening. From Chiusi (?).
72 Early fibula. Horse and chimera. (Blaes coll.)
73 Medallion-shaped fibula, of fine granulated work, with figures of sirens in relief, and set with dark blue pastes. (Blaes coll.)
74 Pair of late Etruscan ear-rings.
75, 76, 77 Pair of late Etruscan ear-rings, in the florid style.

The jewels of the Roman empire are marked by a greater use of large cut stones in combination with the gold, and by larger surfaces of plain and undecorated metal. The adaptation of imperial gold coins to the purposes of the jeweller is also not uncommon.

79 Pierced-work pendant, set with a coin of the emperor Philip.
80 Ear-ring, roughly set with garnets.
81 Bracelet, with a winged cornucopia as central ornament, set with pearls, and with filigree and leaf work.
82 Bracelet, roughly set with pearls and stones. From Tunis, 4th century.

With the decay of the Roman empire, and the approach of the barbarian tribes, a new Teutonic style was developed. An important example of this style is the remarkable gold treasure, discovered at Pétrosa in Transylvanian Alps in 1837, and now preserved, as far as it survives, in the museum of Bucharest. A ronic inscription shows that it belonged to the Goths. Its style is in part the classical tradition, debased and modified; in part it is a singularly rude and vigorous form of barbaric art. Its chief characteristics are a free use of strongly conventionalized animal forms, such as great bird-shaped fibulae, and an ornamentation consisting of pierced gold work, combined with a free use of stones cut to special shapes, and inlaid either cloisonné-fashion or in a perforated gold plate. This part of the hoard has its affinities in objects found over a wide field from Siberia to Spain. Its rudest and most naturalistic forms occur in the East in uncouth objects from Siberian tombs, whose lineage however has been traced to Persepolis, Assyria and Egypt. In its later and more refined forms the style is known by the name, now somewhat out of favour (except as applied to a limited number of finds), of Merovingian.

The so-called Merovingian jewelry of the 5th century, and the Anglo-Saxon of a later date, have as their distinctive feature thin plates of gold, decorated with thin slabs of garnet, set in walls of gold soldered vertically like the lines of cloisonné enamel, with the addition of very decorative details of filigree work, beading and twisted gold. The typical group are the contents of the tomb of King Childeric (A.D. 481) now in the Bibliothèque Nationale at Paris. In Figs. 22 and 23 we have examples of Anglo-Saxon fibulae, the first being decorated with a species of cloisonné, in which garnets are inserted, while the other is in hammerd work in relief. A pendant (Fig. 24) is also set with garnets. The buckles (Figs. 25, 26, 27) are remarkably charac
whole group is a special development within the British Isles of the art of the mid-European Early Iron age, which in its turn had been considerably influenced by early Mediterranean culture. In its early stages its special marks are combinations of curves, with peculiar central thickenings which give a quasi-naturalistic effect; a skilful use of inlaid enamels, and the chased line. After the introduction of Christianity, a continuous tradition combined the old system with the interlaced winding scrolls and other new forms of decoration, and so led up to the extreme complexity of early Irish illumination and metal work.

A remarkable group of gold ornaments of the pre-Christian time (probably of the 1st century) was discovered at 156, in the north-west of Ireland, and acquired by the British Museum. It was subsequently claimed by the Crown as treasure trove, and after litigation was transferred to Dublin (see Archaeologia, lv., pl. 22).

Figs. 29 and 30 are illustrations of two brooches of the latest period in this class of work. The first is 13th century; the latter is probably 12th century, and is set with paste, amber and blue.

Rings are the chief specimens now seen of medieval jewelry from the 10th to the 13th century. They are generally massive and simple. Through the 16th century a variety of changes arose; in the traditions and designs of the cinquecento we have plenty of evidence that the workmen used their own designs, and the results culminated in the triumphs of Albert Dürer, Benvenuto Cellini and Hans Holbein. The goldsmiths of the

Italian republics must have produced works of surpassing excellence in workmanship, and reaching the highest point in design as applied to handicrafts of any kind. The use of enamels, precious stones, niello work and engraving, in combination with skilful execution of the human figure and animal life, produced effects which modern art in this direction is not likely to approach, still less to rival.

In Fig. 31 illustrations are given of various characteristic specimens of the Renaissance and later forms of jewelry. A crystal cross set in enamelled gold (a) is German work of the 16th century. The pendant reliquary (b), enamelled and jewelled, is of 16th century Italian work, and so probably is the jewel (c) of gold set with diamonds and rubies. The Darnley or Lennox jewel (d), now in the possession of the king, was made about 1576-1577 for Lady Margaret Douglas, countess of Lennox, the mother of Henry Darnley. It is a pendant golden heart set with a heart-shaped sapphire, richly jewelled and enamelled with emblematic figures and devices. It also has Scottish mottoes around and within it. The ear-ring (e) of gold, enamelled, hung with small pearls, is an example of 17th century Russian work, and another (f) is Italian of the same period, being of gold and filigree in enamel, also with pendant pearls. A Spanish ear-ring of 16th century work (g), is a combination of ribbed candle and filigree in gold; and another (h) is Flemish, of probably the same period; it is of gold open work set with diamonds in projecting collets. The old French-Normandy pendant cross and locket (i) presents a characteristic example of peasant jewelry; it is of branchy open work set with pearls, and ridged ornaments of crystal. The ear-ring (j) is French of 17th century, also of gold open work set with crystals. A small pendant locket (k) is of rock crystal, with the cross of Santiago in gold and translucent crimson enamel. It is 16th or 17th century Spanish work. A pair of 17th century gold open scroll work (m), set with minute diamonds and three pendant pearls, is Portuguese of 17th century, and another ear-ring (n) of gold circular open work, set also with minute diamonds, is Portuguese work of 18th century. These examples fairly illustrate the general features of the most characteristic jewelry of the dates quoted.

During the 17th and 18th centuries we see only a mechanical kind of excellence, the results of the mere tradition of the workshop—the lingering of the power which when wisely directed had done so much and so well, but now simply living on traditional forms, often combined in a most incongruous fashion. Gorgous effects were aimed at by massing the gold, and introducing stones elaborately cut in themselves or clustered in groups. Thus diamonds were clustered in rosettes and bouquets; rubies, pearls, emeralds and other coloured special stones were brought together for little other purpose than to get them into a given space in conjunction with a certain quantity of gold. The question was not of design in its relation to use as personal decoration, but of the value which could be got into a given space to produce the most striking effect.

The traditions of Oriental design as they had come down through the various periods quoted, were comparatively lost in the wretched results of the rococo of Louis XIV. and the inanities of what modern revivalists of the Anglo-Dutch call "Queen Anne." In the London exhibition of 1837, the extravagances of modern jewelry had to stand comparison with the Oriental examples contributed from India. Since then we have learnt more about these works, and have been compelled to acknowledge, in spite of what is sometimes called inferiority of workmanship, how completely the Oriental jeweller understood his work, and with what singular simplicity of method he carried it out. The combinations are always harmonious, the result aimed at is always achieved; and if in attempting to work to European ideas the jeweller failed, this was rather the fault of the forms he had to follow, than due to any want of skill in making the most of a subject in which half the thought and the intended use were foreign to his experience.

A collection of peasant jewelry got together by Castellani for the Paris exhibition of 1857, and now in the Victoria and Albert Museum, illustrates in an admirable manner the traditional jewelry and personal ornaments of a wide range of peoples in Europe. This collection, and the additions made to it since its acquisition by the nation, show the forms in which these objects existed over several generations among the peasantry of France (chiefly Normandy), Spain, Portugal, Holland, Denmark, Germany and Switzerland, and also show how the forms popular in one country are followed and adopted in another, almost invariably because of their perfect adaptation to the purpose for which they were designed.

Apart from these humbler branches of the subject, in the middle of the 19th century the production of jewelry, regarded as a personal art, and not as a commercial and anonymous industry, was almost extinct. Its revival must be associated with the artistic movement which marked the close of that century, and which found emphatic expression in the Paris international exhibition of 1867. For many years before 1857 this industry, though prosperous from the commercial point of view, and always remarkable from that of technical finish, remained stationary as an art. French jewelry rested on its
reputation. The traditions were maintained of either the 17th and 18th centuries or the style affected at the close of the second empire—light pierced work and design borrowed from natural flowers. The last type, introduced by Massin, had exercised, indeed, a revolutionary influence on the treatment of jewelry. This clever artist, not less skilful as a craftsman, produced a new genre by copying the grace and lightness of living blossoms, thus introducing a perfectly fresh element into the limited variety of traditional style, and by the use of filigree gold work altering its character and giving it greater elegance. Massin still held the first rank in the exhibition of 1878; he had a marked influence on his contemporaries, and his name will be remembered in the history of the goldsmith’s art to designate a style further confirmed in his remarkable position by the exhibition of 1900. What specially stamps the works of Lalique is their striking originality. His work may be considered from the point of view of design and from that of execution. As an artist he has completely reconstructed from the foundation the scheme of design which had fed the poverty-stricken imagination of the last generation of goldsmiths. He had recourse to the art of the past, but to the spirit rather than the letter, and to nature for many new elements of design—free double curves, suave or soft; opalescent harmonies of colouring; reminiscences, with quite a new feeling, of Egypt, Chaldea, Greece and the East, or of the art of the Renaissance; and infinite variety of floral forms even of the humblest. He introduces also the female nude in the

and a period. Throughout these years the craft was exclusively devoted to perfection of workmanship. The utmost finish was aimed at in the mounting and setting of gems; jewelry was, in fact, not so much an art as a high-class industry; individual effort and purpose were absent.

Up to that time precious stones had been of such intrinsic value that the jeweller’s chief skill lay in displaying these costly stones to the best advantage; the mounting was a secondary consideration. The settings were seldom long preserved in their original condition, but in the case of family jewels were renewed with each generation and each change of fashion, a state of things which could not be favourable to any truly artistic development of taste, since the work was doomed, sooner or later, to destruction. However, the evil led to its own remedy. As soon as diamonds fell in value they lost at the same time their overwhelming prestige, and refined taste could give a preference to trinkets which dwelt their value and character from artistic design. This revolutionized the jeweller’s craft, and revived the simple ornament of gold or silver, which came forward but timidly at first, till, in the Salon of 1895, it burst upon the world in the exhibits of René Lalique, an artist who was

form of sirens and sphinxes. As a craftsman he has effected a radical change, breaking through old routine, combining all the processes of the goldsmith, the chaser, the enameller and the gem-setter, and freeing himself from the narrow lines in which the art had been confined. He ignores the hierarchy of gems, caring no more on occasion for a diamond than for a flint, since, in his view, no stone, whatever its original estimation, has any value beyond the characteristic expression he lends it as a means to his end. Thus, while he sometimes uses diamonds, rubies, sapphires or emeralds as a background, he will, on the other hand, give a conspicuous position to common stones—carnelian, agate, malachite, jasper, coral, and even materials of no intrinsic value, such as horn. One of his favourite stones is the opal, which lends itself to his arrangements of colour, and which has in consequence become a fashionable stone in French jewelry.

In criticism of the art of Lalique and his school it should be observed that the works of the school are apt to be unsuited to the wear and tear of actual use, and inconveniently eccentric in their details. Moreover, the preciousness of the material is an almost inevitable consideration in the jeweller’s craft, and cannot be set at naught by the artist without violating the canons of his art.

---

**Fig. 31.**
The movement which took its rise in France spread in due course to other countries. In England the movement conveniently described as the "arts and crafts movement" affected the design of jewelry. A group of designers has aimed at purging the jeweller's craft of its character of mere gem-mounting in conventional forms (of which the more unimaginative, representing stars, bows, flowers and the like, are varied by such absurdities as insects, birds, animals, figures of men and objects made up simply of stones clustered together). Their work is often excellently and fancifully designed, but it lacks that exquisite perfection of execution achieved by the incomparable craftsmen of France. At the same time English sculptor-decorators—such as Alfred Gilbert, R.A., and George J. Frampton, A.R.A.—have produced objects of a still higher class, but it is usually the work of the goldsmith rather than of the jeweller. Examples may be seen in the badge executed by Gilbert for the president of the Institute of Painters in Water Colours and in the mayoral chain for Preston. Symbolism here enters into the design, which has not only an ornamental but a didactic purpose.

The movement was represented in other countries also. In the United States it was led by L. C. Tiffany, in Belgium by Philippe Wolfers, and in the Netherlands in Belgium the position which in France is held by René Lalique. In England the branch carried the name of Liberty, and it is not less beautiful in imagination or less masterly in execution. Graceful, ingenious, fanciful, elegant, fantastic, by turns, his objects of jewelry and goldsmithery have a solid claim to be considered créations d'art. It has also been felt in Germany, Austria, Russia and Switzerland. It must be admitted that many of the best artists who have devoted themselves to jewelry have been more successful in design than in securing the lightness and strength which are required by the wearer, and which were a characteristic in the works of the Italian craftsmen of the Renaissance. For this reason many of their masterpieces are more beautiful in the case than upon the person.

Modern Jewelry.—So far we have gone over the progress and results of the jeweller's art. We have now to speak of the production of jewelry as a modern art industry, in which large numbers of men and women are employed in the larger cities of Europe. Paris, Vienna, London and Birmingham are the most important centres. An illustration of the manufacture as carried on in London and Birmingham will be sufficient to give an insight into the technique and artistic manipulation of this branch of the industry. But, by way of contrast, it may be interesting to give in the first place a description of the native working jeweller of Hindustan.

He travels very much after the fashion of a tinker in England; his budget contains tools, materials, fire-pots, and all the requisites of his handicraft. The gold to be used is generally supplied by the patron or employer, and is frequently in gold coin, which the travelling jeweller undertakes to convert into the ornaments required. He squats down in the corner of a courtyard, or under cover of a veranda, lights his fire, cuts up the gold pieces entrusted to him, hammers, cuts, shapes, drills, solder's with the blow-pipe, files, scrapes and burnishes until he has produced the desired effect. If he is a good colourist, to introduce, he never seems to make a mistake; his instinct for harmony of colour, like that of his brother craftsman the weaver, is as unerring as that of the bird in the construction of its nest. Whether the materials are uncommon or rich and rare, he invariably does the very best possible with them, according to native ideas of beauty in design and combination. It is only when he is interfered with by European dictate that he ever vulgarizes his art or makes a mistake. The result may appear rude in its finish, but the design and the thought are invariably right. We thus see how a trade in the working of which the "plant" is so simple and wants so readily met could spread itself, as in years past it did at Clerkenwell and at Birmingham before gigantic factories were invented for producing everything under cover.

It is impossible to find any date at which the systematic production of jewelry was introduced into England. Probably the Clerkenwell trade dates its origin from the revocation of the edict of Nantes, as the skilled artisans in the jewelry, clock and watch, and trinket trades appear to have been descendants of the emigrant Huguenots. The Birmingham trade would appear to have had its origin in the skill to which the workers in fine steel had attained towards the middle and end of the 18th century, a branch of industry which collapsed after the French Revolution.

Modern jewelry may be classified under three heads: (1) objects in which gems and stones form the principal portions, and in which the work in silver, platinum or gold is really only a means for carrying out the design by fixing the gems or stones in the metal; (2) objects in which the material is worked and polished into various shapes, being used simply as a decorative object, visible only as a setting; (3) when gold or other metal is alone used, the design being wrought out by hammering in repousse, casting, engraving, chasing or by the addition of other ornament. In the work seen the various surfaces are left absolutely plain but polished and highly finished.

Of course the most ancient and primitive methods are those wholly dependent upon the craft of the workman; but gradually various ingenious processes were invented, by which greater accuracy in the portions to be repeated in the design could be produced with certainty and economy; hence the various methods of stamping used in the production of hand-made jewelry, which are in themselves as much mechanical in relation to the end in view as if the whole object were stamped out at a blow, twisted into its proposed details, and regarded as the detail, or the various stamped portions fitted into each other for the mechanical completion of the work. It is therefore rather difficult to draw an absolute line between hand-made and machine-made jewelry; but the actual difference may be regarded as this: when everything is worked, so to speak, from the solid, or of machine-made, when the workman, or rather the machine, has only to give the ornament a few touches of a tool, or fit the parts together if of more than one piece.

Whether gold, silver, or platinum are the materials used, they are largely employed in the form of wire, strip, foil, or sheet, as well as in solid form. Gold, whether as regards gold work, gems, enamelling or engraving, is made in London, and chiefly at Clerkenwell. A design is first made with pencil, sepia or water-colour, and when needful with separate enlargement, and then passed to the drawing-room in which the drawing is to be made, and in which the work is to be carried on by the engraver or modeller.

When ready for the engraver, the design is traced upon the plate in such a manner as best adapts it for engraving. The engraver proceeds at his work, and when complete, the plate is examined, and if necessary, the design is enlarged or reduced, that the portion of the design, or ornament, to be engraved shall be intelligible to the engraver. According to the nature and purpose of the design, the engravings are divided into three classes, engraving on the ground, the ground being left unengraved or being wrought out in the design, and being finally completed by chiselling. When stones are to be set, or when they form the principal portions of the design, the gold or other metal has to be cut away in preparation for the setting of the stones. The cup-like or saucer-shaped setting, with the flat bottom, may be made of gold, and in this case the metal is stamped, and the chamfering and bevelling are done by hand, the whole being left as part of the ornament. The metal is then fixed in the setting, and the edges to be bent over to secure it. Setting is never effected by cement in well-made jewelry. Machine-made settings have in recent years been used, but the imitation of the true hand-made setting is so skilful that even experts can barely distinguish the true from the false.

"Cold" settings, or those in which the gold is made to enhance the appearance of the gold by removing the particles of alloy on the surface, and thus allowing the pure gold only to remain visible to the eye. The process has, however, been much improved, and the maximum of light and richness can be better finished by electro-gilding.

The application of machinery to the economical production of certain classes of jewelry, not necessarily imitations, but as much or more than the hand-made, is a branch of the trade, that has been on the increase for many years. Nearly every kind of gold chain now made is manufactured by machinery, and nothing like
the beauty of design or perfection of workmanship could be obtained by hand at all, probably any cost. The question therefore in relation to chains is not the mode of manufacture, but the quality of the metal. Eighteen carat gold is of course preferred by those who wear chains, but the higher the price the poorer the quality of gold represented by 24. The gold coin of the realm is 22 carat; that is, it contains one-twelfth of alloy to harden it to stand wear and tear. Thus 21 carat gold has one-fourth of alloy, and so on with lower qualities up to 12, which is a really gold by name and by nature. It must be remembered that the alloys are made by weight, and as gold is nearly twice as heavy as the metal it is mixed with, it only forms a third of the bulk of a 12 carat mixture.

The demand for machinery to produce personal ornaments in gold and silver can only be economically and successfully carried on when there is a large demand for similar objects, that is to say, objects of precisely the same design and decoration thrown out in large quantities, that is, in quantity. If there is no work to do, and nothing is passing through for the manufacturer, it is not so to speak, and the only work required for the hand is to fit the parts together—in some instances scarcely that. A design is made, and from it steel dies are sunk for stamping out as rapidly as possible from a plate of steel (1888); stamper and stamp to the design of the ornament. It is in these steel dies that the skill of the artist die-sinker is manifested. Brooches, earring-rings, pins, bracelets, lockets, pendants, &c., are struck out by the gross. This is more especially the case in silver and in plated work—that is, inlay jewelry—the base of which is an alloy, afterwards gilt by electro-plating. With these ornaments imitation stones in paste and glass, pearls, &c., are used, and it is remarkable that of late years some of the best designs, the most varied and original ornaments are adapted for these articles of jewelry. It is only just to those engaged in this manufacture to state distinctly that their work is never sold wholesale for anything else. An Indian printer, who in gold only makes gold or real jewelry, and he only makes of a kind that is made to suit the customer. The producer of silver work only manufactures silver ornaments, and so on throughout the whole class of plated goods.

It is the retailer who, if he is unprincipled, takes advantage of the ignorance of the public and which is in reality an imitation, and which he bought as such. The imitations of old styles of jewellery which are largely sold in curiosity shops at foreign places of fashion can be sold to be made in Germany, especially at Munich.

JEWEKT—JEWS

JEWES (Heb. Yehudi, man of Judah; Gr. Iews: Lat. Judæi), the general name for the Semitic people which inhabited Palestine from early times, and is known in various connexions as “the Hebrews,” “the Jews,” and “Israel” (see § 5 below). Their history may be divided into three great periods: (1) That covered by the Old Testament to the foundation of Judaism in the Persian age, (2) that of the Greek and Roman domination to the destruction of Jerusalem, and (3) that of the Diaspora or Dispersion to the present day.

I.—OLD TESTAMENT HISTORY

1. The Land and the People.—For the first two periods the history of the Jews is mainly that of Palestine. It begins among those people which occupied the area lying between the Nile on the one side and the Tigris and the Euphrates on the other. Surrounded by ancient seats of culture in Egypt and Babylonia, by the mysterious deserts of Arabia, and by the highlands of Asia Minor, Palestine, with Syria on the north, was the high road of civilization, trade and warfare enterprise, and the meeting-place of religions. Its small principalities were entirely dominated by the great Powers, whose weakness or acquiescence alone enabled them to rise above dependence and vassalage. The land was traversed by old-established trade routes and possessed important harbours on the Gulf of 'Akaba and on the Mediterranean coast, the latter exposing it to the influence of the Levantine culture. It was the “physical centre of those movements of history from which the world has grown.” The portion of this district abutting upon the Mediterranean may be divided into two main parts:—Syria (from the Leucippine to the Taurian) and Palestine (southward to the desert—bordering upon Egypt). The latter is about 150 m. from north to south (the proverbial “Dan to Beersheba”), with a breadth varying from 25 to 80 m., i.e. about 6040 sq. m. This excludes the land east of the Jordan, on which see Palesine.

From time to time streams of migration swept into Palestine and Syria. Semitic tribes wandered northwards from their home in Arabia to seek sustenance in its more fertile fields, to plunder, or to escape the pressure of tribes in the rear. The course leads naturally into either Palestine or Babylonia, and, following the Euphrates, northern Syria is eventually reached. Tribes also moved down from the north: nomads, or offshoots from the powerful states which stretch into Asia Minor. Such frequently recurring movements introduced new blood. Tribes, chiefly of pastoral habits, settled down among others who were so nearly of their own type that assimilation could be effected, and this without any marked modification of the general characteristics of the earlier inhabitants. It is from such a fusion as this that the ancestors of the Jew were descended, and both the history and the genius of this people can be properly understood only by taking into account the physical features of their land and the characteristics of the Semitic races in general (see Palesine, Semitic Languages).

2. Society and Religion.—The similarity uniting the peoples of the East in respect of racial and social characteristics is accompanied by a striking similarity of mental outlook which has survived to modern times. Palestine, in spite of the numerous vicissitudes to which it has been subjected, has not lost its cardinal characteristics. The political changes involved in the Babylonian, Assyrian, Egyptian or Persian conquests surely affected it as little as was the subsequent waves of Greek, Roman and other European invasions. Even during the temporary Hellenization in the second great period the character of the people as a whole was untouched by the various external influences which produced so great an effect on the upper classes. When the foreign civilization perished, the old culture once more came to the surface. Hence it is possible, by a comparative study of Eastern peoples, in both ancient and modern times, to supplement and illustrate within certain limits our direct knowledge of the early Jewish people, and thus to understand more clearly those characteristics which were
peculiar to them, in relation to those which they shared with other Oriental peoples.

Even before authentic history begins, the elements of religion and society had already crystallized into a solid coherent structure which was to persist without essential modification. Religion was inseparable from ordinary life, and, like that of all peoples who are dependent on the fruits of the earth, was a nature-worship. The tie between deities and worshippers was regarded as physical and entailed mutual obligations. The study of the clan-group as an organization is as instructive here as in other fields. The members of each group lived on terms of equality, the families forming a society of worship the rites of which were conducted by the head. Such groups (each with its local deity) would combine for definite purposes under the impulse of external needs, but owing to inevitable internal jealousies and the incessant feuds among a people averse from discipline and authority, the unions were not necessarily lasting. The elders of these groups possessed some influence, and tended to form an aristocracy, which took the lead in social life, although their authority generally depended merely upon custom. Individual leaders in times of stress acquired a recognized supremacy, and, once a tribe outstripped the rest, the opportunities for continued advance gave further scope to their authority. "The inerminable feuds of tribes, conducted on the theory of blood-revenge...can seldom be durably healed without the intervention of a third party who is called in as arbitrator, and in this way an impartial and wise power acquires of necessity a great and beneficent influence over all around it" (W. R. Smith). In time, notwithstanding a certain inherent individualism and impatience of control, veritable despots arose in the Semitic world, although such organizations were invariably liable to sudden collapse as the old forms of life broke down with changing conditions.1

3. Early History.—Already in the 15th century B.C. Palestine was inhabited by a settled people whose language, thought and religion were not radically different several hundred years later. Small native princes ruled as vassals of Egypt which, after expelling the Hyksos from its borders, had entered upon a series of conquests as far as the Euphrates. Some centuries previously, however, Babylonia had laid claim to the western states, and the Babylonian (i.e. Assyrian) script and language were now used, not merely in the diplomatic correspondence between Egypt and Asia, but also for matters of private and everyday life among the Palestinian princes themselves. To what extent specific Babylonian influence showed itself in other directions is not completely known. Canaan (Palestine and the south Phoenician coast land) and Amor (Lebanon district and beyond) were under the constant supervision of Egypt, and Egyptian officials journeyed round to collect tribute, to attend to complaints, and to assure themselves of the allegiance of the vassals. The Amarna tablets and those more recently found at Taaneen (bibl. Taanach), together with the contemporary archaeological evidence (from Lachish, Gezer, Megiddo, Jericho, &c.), represent advanced conditions of life and culture, the precise chronological limits of which cannot be determined with certainty. This area, with its regular maritime intercourse between the Aegean settlements, Phoenicia and the Delta, and with lines of caravans connecting Babylonia, North Syria, Arabia and Egypt, presents a remarkable picture of life and activity, in the centre of which lies Palestine, with here and there Egyptian colonies and some traces of Egyptian cults. The history of this, the "Amarna" age, reveals a state of anarchy in Palestine for which the weakness of Egypt and the downward pressure of north Syrian peoples were responsible. Subdivided into a number of little local principalities, Palestine was suffering both from internal intrigues and from the designs of this northern power. It is now that we find the restless Habiru, a name which is commonly identified with that of the "Hebrews" (ibrim). They offered themselves where necessary to either party, and some at least perhaps belonged to the settled population. The growing prominence of the new northern group of "Hittite" states continued to occupy the energies of Egypt, and when again we have more external light upon Palestinian history, the Hittites (q.v.) are found strongly entrenched in the land. But by the end of the first quarter of the 13th century B.C. Egypt had recovered its province (precise boundary uncertain), leaving its rivals in possession of Syria. Towards the close of the 13th century the Egyptian king Merneptah (Mineptah) records a successful campaign in Palestine, and alludes to the defeat of Canaan, Ascalon, Gezer, Yenuam (in Lebanon) and the (people or tribe) Israel.2 Bodies of aliens from the Levantine coast had previously threatened Egypt and Syria, and at the beginning of the 12th century it formed a coalition on land and sea which taxed all the resources of Rameses III. In the Purasati, apparently the most influential of these peoples, may be recognized the origin of the name "Philistine." The Hittite power became weaker, and the invaders, in spite of defeat, appear to have succeeded in maintaining themselves on the sea coast. External history, however, is very fragmentary just at the age when its evidence would be most welcome. For a time the fate of Syria and Palestine seems to have been no longer controlled by the great powers. When the curtain rises again we enter upon the historical traditions of the Old Testament.

4. Biblical History.—For the rest of the first period the Old Testament forms the main source. It contains in fact the history itself in two forms: (a) from the creation of man to the fall of Judah (Genesis–2 Kings), which is supplemented and continued further—(b) to the foundation of Judaism in the 5th century B.C. (Chronicles–Ezra–Nehemiah). In the light of contemporary monuments, archaeological evidence, the progress of scientific knowledge and the recognized methods of modern historical criticism, the representation of the origin of mankind and of the history of the Jews in the Old Testament can no longer be implicitly accepted. Written by an Oriental people and clothed in an Oriental dress, the Old Testament does not contain objective records, but subjective history written and incorporated for specific purposes. Like many Oriental works it is a compilation, as may be illustrated from a comparison of Chronicles with Samuel–Kings, and the representation of the past in the light of the present (as exemplified in Chronicles) is a frequently recurring phenomenon. The critical examination of the nature and growth of this compilation has removed much that had formerly caused insuperable difficulties and had quite unnecessarily been made an integral or a relevant part of practical religion. On the other hand, criticism has given a deeper meaning to the Old Testament history, and has brought into relief the central truths which really are vital; it may be said to have removed a divine account of man by the analysis or account of the divine. Scholars are now almost unanimously agreed that the internal features are best explained by the Graf-Wellhausen hypothesis. This involves the view that the historical traditions are mainly due to two characteristic though very complicated recensions, one under the influence of the teaching of Deuteronomy (Joshua to Kings, see § 20), the other, of a more priestly character (akin to Leviticus), of somewhat later date (Genesis to Joshua, with traces in Judges to Kings, see § 23). There are, of course, numerous problems relating to the nature, limits and dates of the two recensions, of the incorporated sources, and of other sources (whether early or late) of independent origin; and here there is naturally room for much divergence of opinion. Older material (often of composite origin) has been used, not so much for the purpose of providing historical information, as with the object of showing the religious significance of past history;

2 For fuller information on this section see Palestine: History, and the related portions of BABYLONIA AND ASSYRIA, EGYPT, HITTITES, SYRIA.  

ORLANDO SPIEGELBERG, ORIENT. LIT. ZEIT. XI. (1908), cols. 403–405.
and the series Joshua-Kings is actually included among the "prophets" in Jewish reckoning (see MIDRASH). In general, one may often observe that freedom which is characteristic of early and unscientific historians. Thus one may note the reshaping of older material to agree with later thought, the building up of past periods from the records of other periods, and a frequent loss of perspective. The historical traditions are to be supplemented by the great body of prophetic, legal and poetic literature, which reveal contemporary conditions in various internal literary, theological or sociological features. The investigation of their true historical background and of the trustworthiness of their external setting (e.g., titles of psalms, dates and headings of prophetic) involves a criticism of the historical traditions themselves, and thus the two major classes of material must be constantly examined both separately and in their bearing on one another. In a word, the study of biblical history, which is dependent in the first instance upon the written sources, is more conservative than that of the Bible (the latter has had an interesting history) and to the literary features; and it requires a sympathetic acquaintance with Oriental life and thought, both ancient and modern, an appreciation of the necessity of employing the methods of scientific research, and (from the theological side) a reasoned estimate of the dependence of individual religious convictions upon the letter of the Old Testament.1

In view of the numerous articles in this work dealing with biblical subjects, the present sketch is limited to the outlines of the traditional history; the religious aspect in its bearing upon biblical theology (which is treated together with the traditions) is handled separately under HEBREW RELIGION. The related literature is enormous (see the bibliographies to the special articles); it is interesting alone as indicating the historical thinking, which was expressed so uniformly in the Bible. It is also useful to summarize in the Theologische Jahrbuecher (Berlin). On the development of the study of biblical history see C. A. Briggs, Study of Holy Scripture (1899), especially ch. xx. The first scientific historical work was by H. Ewald, Geschichte der Welt-Israel (1843-39, ed. 1882); it has been popularized by Ewald Penrhyn Stanley in his Hist. of the Jewish Church (1863-1879). The works of J. Wellhausen (especially Prolegomena to the Hist. of Israel, Eng. trans., 1885, also the brilliant article "Israel" in the 9th ed. of the Encyclopaeia Britannica) were the first to be interpreted by English readers with W. Robertson Smith, Old Testament in Jewish Church, 1881, 2nd ed., 1892; Prophecies of Israel, 1882, 2nd ed., by J. K. Cheyne, 1902. The (historical and related) works of T. Häring, Allgemeine Geschichte der alttestamentlichen Geschichte (1850), K. Weidner, Alterthums- und Kirchengeschichte (1863), C. Penrose, A. Kuenen, C. Piepenbring, and especially B. Stade, although varying greatly in standpoint, are among the most valuable by recent scholars; H. F. Smith, Old Testament Hist. ("International Critical Commentary," Edinburgh, 1903) is in many respects the most serviceable and complete study; a modern and more critical "Ewald" is a desideratum. For the works of numerous other scholars who have furthered Old Testament research in the past it must be referred to the alphabetical list by J. M. P. Smith, Books for O.T. Study (Chicago, 1908).

For the external history, E. Schrader, Cuneiform Inscrip. and the Old Testament (Eng. trans., by O. C. Whitehouse, 1883-1888) is still helpful and the best technical work on J. F. Müller, History of Prophecy and the Monuments; B. Paton, Syria and Palestine (1902); G. Maspero, Hist. ancienne (6th ed., 1904) and J. Jeremias, Allte. Zeit. im Lichte der alt. Orient (2nd ed., 1906); and especially Altertuml. Bibliothek, ed. by W. Braune, and H. Ranke (1909). The most complete is that of Ed. Meyer, Geschichte der Altertums (2nd ed., 1907 sqq.). That of Jeremias follows upon the lines of H. Winckler, whose works depart from the somewhat technical and "scientific" (so-called) approach, and in the necessary of observing the characteristics of Oriental thought and policy, and are invaluable for discriminating students. Winckler's own views are condensed in the 3rd edition—a re-writing—of Schrader's work (Keltinschr. u. d. Allte. Testament, 1903), and is an instructive account of the history of "ancient nearer Asia," in H. F. Helmolt's World's History, iii. 1-252 (1903). All modern historians of any value are necessarily compromises between the biblical traditions and the results of recent investigation, and those studies which appear to depart most widely from the biblical or canonical representation often do greater justice to the evidence as a whole. The slip of the author, and apocryphal reconstructions.2 Scientific biblical historical study, nevertheless, is still in a relatively backward condition; and although the labourers of scholars since Ewald constitute a distinct epoch, the trend of the researches to the latter day is still largely objective. The extant historical literary requires a more historical treatment in the light of our increasing knowledge of external and internal conditions in the old Orient world. But an inductive and deductive treatment, both comprehensive and in due proportion, does not as yet (1910) exist, and awaits fuller external evidence.3

5. Traditions of Origin.—The Old Testament preserves the remains of an extensive literature, representing different standpoints, which passed through several hands before it reached its present form. Surrounded by ancient civilizations where writing had long been known, and enjoying, as excavation has proved, a considerable amount of material culture, Palestine could look back upon a lengthy and stirring history which, however, has rarely left its mark upon our records. Whatever ancient sources may have been accessible, whatever trustworthy traditions were in circulation, and whatever a knowledge of the ancient oriental world might lead one to expect, one is not naturally restricted in the first instance to those unadulterated records which have survived in the form which the last editors gave to them. The critical investigation of these records is the indispensable prelude to all serious biblical study, and hasty or sweeping deductions from monumental or archaeological evidence, or versions compiled promiscuously from materials of distinct origin, are usually unreliable. A glimpse into the inner life is the first half of the second millennium b.c. (§ 5) prepares us for busy scenes and active intercourse, but it is not a history of this kind which the biblical historians themselves transmit. At an age when—on literary-critical grounds—the Old Testament writings were assuming their present form, it was possible to divide the immediately preceding centuries into three distinct periods. (a) The first, that of the two rival kingdoms: Israel (Ephraim or Samaria) in the northern half of Palestine, and Judah in the south. Then (b) the former lost its independence towards the close of the 8th century b.c., when a number of its inhabitants were carried away; and the latter shared the fate of exile at the beginning of the 6th, but succeeded in making a fresh reconstruction some fifty or sixty years later. Finally (c), in the so-called "post-exile" period, religion and life were reorganized under the influence of a new spirit; relations with Samaria were broken off, and Judaism took its definite character, perhaps about the middle of the 4th century. Throughout these centuries there were important political and religious changes which render the study of the composite sources a work of unique difficulty. In addition to this it should be noticed that that the term "Jew" (originally Yehudi), in spite of its wider application, means properly "man of Judah," i.e. of that small district which, with Jerusalem as its capital, became the centre of Judaism. The favourite name "Israel" with all its religious and national associations is somewhat ambiguous in an historical sketch, since, although it is used as opposed to Judah (a), it ultimately came to designate the true nucleus of the worshippers of the national god Yahweh as opposed to the Samaritans, the later inhabitants of Israelite territory (c). A more general term is "Hebrew" (see Hebrew Language), which, whether originally identical with the Hubin or not (§ 3), is used in contrast to foreigners, and this non-committal ethnic

1 It is useful to compare the critical study of the Koran (q.v.), where, however, the investigation of its various "revelations" is simpler than that of the biblical "prophecies" on account of the greater wealth of independent historical tradition. See also G. B. Gray, Contempoary Review (July 1907); A. A. Bevan, Cambridge Bible, (1910), pp. 405 sqq., 1898, pp. 131 sqq.; G. B. Gray, Expositor, May 1898; W. G. Jordan, Bib. Crit., and Modern Thought (1909), pp. 42 sqq.

History, especially sections vii.-ix.) July and October 1907, April 1908; American Journal of Theology, July 1900; "Simeon and Levi: the Origin of the Old Testament," and Swete's Cambridge Bible, Essays, pp. 54-86 ("The Present Stage of O.T. Research").
 JEWS

[OLD TESTAMENT HISTORY]

deserves preference where precise distinction is unnecessary or impossible.

The traditions which prevailed among the Hebrews concerning their origin belong to a time when Judah and Israel were regarded as a unit. Twelve divisions or tribes, of which Judah was one, held together by a traditional sentiment, were traced back to the sons of Jacob (otherwise known as Israel), the son of Isaac and grandson of Abraham. Their names vary in origin and probably also in point of age, and where they represent fixed territorial limits, the districts so described were in some cases certainly peopled by groups of non-Israelite ancestry. But as tribal names they invited explanation, and of the many characteristic traditions which were doubtless current a number have been preserved, though not in any very early dress. Close relationship was recognized with the Aramaeans, with Edom, Moab and Ammon. This is characteristically expressed when Esau, the ancestor of Edom, is represented as the brother of Jacob, or when Moab and Ammon are the children of Lot, Abraham's nephew (see Genealogy: Biblical). Abraham, it was believed, came from Harran (Carrhae), primarily from Babylonia, and continued with his Aramaean wives and concubines (Benjamin excepted). It is on this occasion that Jacob's name is changed to Israel. These traditions of migration and kinship are in themselves entirely credible, but the detailed accounts of the ancestors Abraham, Isaac and Jacob, as given in Genesis, are inherently doubtful as regards both the internal conditions, which (the late) chronological scheme ascribes to the first half of the second millennium B.C., and the general circumstances of the life of these strangers in a foreign land. From a variety of independent reasons one is forced to conclude that, whatever historical elements they may contain, the stories of this remote past represent the form which tradition had taken in a very much later age.

Opinion is at variance regarding the patriarchal narratives as a whole. To deny their historical character is to reject them as trustworthy accounts of the age to which they are ascribed, and even those scholars who claim that they are essentially historical already go so far as to concede idealization and the possibility or probability of later revision. The failure to apprehend historical method has often led to the fallacious argument that the trustworthiness of individual features justifies our accepting the whole, or that the elimination of unhistorical elements will leave an historical residuum. Here and frequently elsewhere in biblical history it is necessary to recognize in the narratives of the ancient tradition an unhistorical dress, but since many diverse motives are often concentrated upon one narrative (e.g. Gen. xxxii, 22-32, xxxiv, xxxviii.), the work of internal historical criticism (in view of the scantiness of the evidence) can rarely claim finality. The patriarchal narratives themselves belong to the popular stock of tradition of which only a portion has been preserved. Many of the elements lie outside questions of time and place and are almost immemorial. Some appear written for the first time in the book of Jubilees, in "the Testament of the Twelve Patriarchs" (both perhaps 2nd century B.C.) and in later sources; and although in Genesis the stories are now in a post-exilic setting (a stage earlier than Jubilees), the older portions may well belong to the 7th or 6th cent. This question, however, will rest upon those criteria alone which are of true chronological validity (see further Genesis).

The story of the settlement of the national and tribal ancestors in Palestine is interrupted by an account of the southward movement of Jacob (or Israel) and his sons into a district under the immediate influence of the kings of Egypt. After an interval of uncertain duration we find in Exodus a numerous people subjected to rigorous oppression. No longer individual sons of Jacob or Israel, united tribes were led out by Moses and Aaron; and, after a series of incidents extending over forty years, the "children of Israel" invaded the land in which their ancestors had lived. The traditions embodied in the books Exodus-Joshua are considerably later than the apparent date of the events themselves, and amid the diverse and often conflicting data it is possible to recognize distinct groups due to some extent to distinct historical conditions. The story of the "exodus" is that of the religious birth of "Israel," joined by covenant with the national god Yahweh whose aid in times of peril and need proved his supremacy. In Moses (q.v.) was seen the founder of Israel's religion and laws; in Aaron (q.v.) the prototype of the Israelite priesthood. Although it is difficult to determine the true historical kernel, two features are most prominent in the narratives which the post-exilic compiler has incorporated: the revelation of Yahweh, and the movement into Palestine. Yahweh had admittedly been the God of Israel's ancestors, but his name was only now made known (Exod. iii. 13 sqq., vi. 2 sqq.), and this conception of a new era in Yahweh's relations with the people is associated with the family of Moses and with small groups from the south of Palestine which reappear in religious movements in later history (see Kenites). Amid a great variety of motives the promise of Kadesh in south Palestine is to be recognized, but it is uncertain what clans or tribes were at Kadesh, and it is possible that traditions, originally confined to those with whom the new conception of Yahweh is connected, were subsequently adopted by others who came to regard themselves as the worshippers of the only true Yahweh. At all events, two quite distinct views seem to underlie the opening books of the Old Testament. The one associates itself with the narrative of the Hebrew immigrants to the east, the other, part of the religious history of "Israel," is essentially bound up with the religious genius of the people, and is partly connected with clans from the south of Palestine whose influence appears in later times. Other factors in the literary growth of the present narratives are not excluded (see further § 8, and Exodus, The).2

6. The Monarchy of Israel.—The book of Joshua continues the fortunes of the "children of Israel" and describes a successful occupation of Palestine by the united tribes. This stands in striking contrast to other records of the partial successes of individual groups (Judg. i.). The former, however, is based upon the account of victories by the Ephraimite Joshua over confederations of petty kings to the south and north of central Palestine, apparently the specific traditions of the people of Ephraim describing from their standpoint the entire conquest of Palestine.3 The book of Judges represents a period of unrest after the settlement of the people. External oppression and internal rivalries rent the Israelites, and in the religious philosophy of a later (Deuteronomic) age the period is represented as one of alternate apostasy from and of penitent return to the Yahweh of the "exodus." Some vague recollection of known historical events (§ 3 end) might be claimed among the traditions ascribed to the closing centuries of the second millennium, but the view that the prelude to the monarchy was an era when individual leaders "judged" all Israel finds no support in the older narratives, where the heroes of the age (whose correct sequence is uncertain) enjoy only a local fame. The best historical narratives belong to Israel and Gilead; Judah scarcely appears, and in a relatively old poetic account a great fight of the united tribes against a northern adversary lies outside the writer's horizon or interest (Judg. v., see Deborah). Stories of successful warfare and of temporary leaders (see Abimelech; Ehud; Gideon; Jephthah) form an introduction to the institution of the Israelite monarchy, an epoch of supreme importance in biblical history. The heroic figure who stands at the head is Samson ("asked"), and two accounts of his rise are recorded. The Philistines, a foreign people destined to possess Palestine,2 the story of Joseph has distinctive internal features of its own, and appears to be from an independent cycle, which has been used to form a connecting link between the Settlement and the Exodus; see also Ed. Meyer, Die Israeliten u. ihre Nachbarstaaten (1906), pp. 433, 439. B. Luther, Die Bibel u. die Anfänge, 142 sqq. Neither of the items in Deut. xxxii. seems to allude to a time when Israel is merely a desert tribe inspired to settle in Palestine. Apparently even the older accounts of the exodus are not of very great antiquity; according to Jeremiah ii. 2, 7 (cf. Hos. i. 15), some traditions are even considered by the elders must have represented Israel in a very favourable light; for the "canonical" view, see Ezekiel xvi., xx., xxiii.

2 The capture of central Palestine itself is not recorded; according to its own traditions the district had been seized by Jacob (Gen. xxxviii. 22; cf. the late form of the tradition in Judges xxiv.). This conception of a conquering hero is entirely distinct from the narratives of the descent of Jacob into Egypt, &c. (see Meyer and Luthur, op. cit. pp. 110, 227 seq., 415. 433).

3 On the name see JEHOVAH, TETRAGRAMMATON.
OLD TESTAMENT HISTORY

JEWS

has already been noticed, had oppressed Israel (cf. Samson) until a brilliant victory was gained by the prophet Samuel, an account of whose early history is recorded. He himself held supreme sway over all Israel as the last of the "judges" until compelled to acquiesce to the popular demand for a king. The young Saul was chosen by lot and gained unanimous recognition by delivering Jabesh in Gilead from the Ammonites. (2) But other traditions represent the people scattered and in hiding; Israel is groaning under the Philistine yoke, and the unknown Saul is raised up by Yahweh to save his people. This he accomplishes with the help of his son Jonathan. The first account, although now essential to the canonical history, clearly gives a less authentic account of the change from the "judges" to the monarchy, while the second is fragmentary and can hardly be fitted in with the narrative which is abridged. It is the first of a series of annalistic notices of the kings of Israel ascribes to Saul conquests over the surrounding peoples to an extent which implies that the district of Judah formed part of his kingdom (1 Sam. xiv. 47 seq.). His might is attested also by the fine eleyg (2 Sam. i. 19 sqq.) over the death of two great Israelite heroes, Saul and Jonathan, knit together by mutual love, inseparable in life and death, whose unhappy end after a career of success was a national misfortune. Disaster had come upon the north, and the plain of Jezreel saw the total defeat of the king and the rout of his army. The court was hastily removed across the Jordan to Mahanaim, where Saul's son Ishbaal (Ish-bosheth), thanks to his general Abner, recovered some of the lost prestige. In circumstances which are not detailed, the king must have lost confidence in Saul, and a rising of the northern tribes is implied, which is attested to by the narratives of the Song of Saul. With Ishbaal Saul was laid at the court of the first king of the northern kingdom, when the scenes cover the district which he took with the sword, and when the brave Saul is represented in an unfavourable light, one must allow for the popular tendency to idealize great figures, and for the Judaean origin of the compilation. To David is ascribed the sovereignty over a united people. But the stages in his progress are not clear. After being the popular favourite of Israel in the little district of Benjamin, he was driven away by the jealousy and animosity of Saul. Gradually strengthening his position by alliance with Judaean clans, he became king at Hebron at the time when Israel suffered defeat in the north. His subsequent advance to the kingship over Judah and Israel at Jerusalem is represented as due to the weak condition of Saul, facilitated by the compliance of Abner; partly, also, to the fearlessness, which is repeatedly pointed to, and the long-expressed wish of the Israelites that their old hero should reign over them. Yet again, Saul had been chosen by Yahweh to free his people from the Philistines; he had been rejected for his sins, and had suffered continuously from this enemy; Israel at his death was left in the unhappy state in which he had found it; it was the Judaean David, the faithful servant of Yahweh, who was now chosen to deliver Israel, and to the last the people gratefully remembered their debt. David accomplished the conquests of Saul but on a grander scale; "Saul hath slain his thousands and David his tens of thousands" is the popular couplet comparing the relative merits of the rival dynasts. A series of campaigns against Edom, Moab, Ammon and the Aramaean states, friendly relations with Hiram of Tyre, and the recognition of his sovereignty by the king of Hamath on the Orontes, combine to portray a monarchy which was the ideal.

But in passing from the books of Samuel, with their many rich and vivid narratives, to the books of Kings, we enter upon another phase of literature; it is a different atmosphere, due to the character of the material and the aims of other compilers (see § 6 beginning). David, the conqueror, was followed by his son Solomon, famous for his wealth, wisdom and piety, above all for the magnificent Temple which he built at Jerusalem. Phoenician artificers were enlisted for the purpose, and with Phoenician sailors successful trading-journeys were regularly undertaken. Commercial intercourse with Asia Minor, Arabia, Tarshish (probably in Spain) and Ophir (q.e.) filled his coffers, and his armies, in the Second Monarchy, spread to the borders of Egypt. Tradition depicts him as a worthy successor to his father's line and represents a state of luxury and riches impressive to all who were familiar with the great Oriental courts. The commercial activity of the king and the picture of intercourse and wealth are quite in accordance with what is known of the ancient monarchies, and could already be illustrated from the Amarna tablets. David and Israel dwelt at ease, or held the superior position of military officials, while the earlier inhabitants of the land were put to forced labour. But another side of the picture shows the domestic intrigues which darkened the last days of David. The accession of Solomon had not been without bloodshed, and Judah, together with David's old general Joab and his faithful priest Abiathar, were opposed to the son of a woman who had been the wife of a Hittite warrior. The era of the Temple of Jerusalem starts with a new régime, another captain of the army

Amarna tablets may indicate the worship of a Babylonian war and astral god (cf. the solar name Beth-Shemesh). Such was the religious environment of the ancient city which was destined to become the centre of Judaism. Judaean tradition dated the sanctity of Jerusalem from the installation of the ark, a sacred movable object which symbolized the presence of Yahweh. It is associated with the half-nomad clans in the south of Palestine, or with the wanderings of David and his own priest Abiathar; it is ultimately placed within the newly captured city. Quite another body of tradition associates it with the invasion of all the tribes of Israel from beyond the Jordan (see Ark). To combine the heterogeneous narratives and isolated statements into a consecutive account is impossible; to ignore those conflicts which with the now predominating views would be unmetho
ded, facilitated by the compliance of Abner; partly, also, to the fearlessness, which is repeatedly pointed to, and the long-expressed wish of the Israelites that their old hero should reign over them. Yet again, Saul had been chosen by Yahweh to free his people from the Philistines; he had been rejected for his sins, and had suffered continuously from this enemy; Israel at his death was left in the unhappy state in which he had found it; it was the Judaean David, the faithful servant of Yahweh, who was now chosen to deliver Israel, and to the last the people gratefully remembered their debt. David accomplished the conquests of Saul but on a grander scale; "Saul hath slain his thousands and David his tens of thousands" is the popular couplet comparing the relative merits of the rival dynasts. A series of campaigns against Edom, Moab, Ammon and the Aramaean states, friendly relations with Hiram of Tyre, and the recognition of his sovereignty by the king of Hamath on the Orontes, combine to portray a monarchy which was the ideal.

But in passing from the books of Samuel, with their many rich and vivid narratives, to the books of Kings, we enter upon another phase of literature; it is a different atmosphere, due to the character of the material and the aims of other compilers (see § 6 beginning). David, the conqueror, was followed by his son Solomon, famous for his wealth, wisdom and piety, above all for the magnificent Temple which he built at Jerusalem. Phoenician artificers were enlisted for the purpose, and with Phoenician sailors successful trading-journeys were regularly undertaken. Commercial intercourse with Asia Minor, Arabia, Tarshish (probably in Spain) and Ophir (q.e.) filled his coffers, and his armies, in the Second Monarchy, spread to the borders of Egypt. Tradition depicts him as a worthy successor to his father's line and represents a state of luxury and riches impressive to all who were familiar with the great Oriental courts. The commercial activity of the king and the picture of intercourse and wealth are quite in accordance with what is known of the ancient monarchies, and could already be illustrated from the Amarna tablets. David and Israel dwelt at ease, or held the superior position of military officials, while the earlier inhabitants of the land were put to forced labour. But another side of the picture shows the domestic intrigues which darkened the last days of David. The accession of Solomon had not been without bloodshed, and Judah, together with David's old general Joab and his faithful priest Abiathar, were opposed to the son of a woman who had been the wife of a Hittite warrior. The era of the Temple of Jerusalem starts with a new régime, another captain of the army
and another priest. Nevertheless, the enmity of Judah is passed over, and when the kingdom is divided for administrative purposes into the two districts, which ignore the fact that the tribes, the core of David's kingdom, was exempted from the duty of providing supplies (2 Kings iv.). Yet again, the approach of the divided monarchy is foreshadowed. The employment of Judaeans and Israelites for Solomon's palatial buildings, and the heavy taxation for the upkeep of a court which was the wonder of the world, caused grave internal discontent. Externally, too, were unsatisfactory. The Edomites, who had been almost extirpated by David in the valley of Salt, south of the Dead Sea, were now strong enough to seek revenge; and the powerful kingdom of Damascus, whose foundation is ascribed to this period, began to threaten Israel on the north and north-east. These troubles, we learn, had affected all Solomon's reign, and even Hiram appears to have acquired a portion of Galilee. In the approaching disruption writers saw the punishment for the king's apostasy, and they condemn the sanctuaries in Jerusalem which he erected to the gods of his heathen wives. Nevertheless, these places of cult remained some 300 years until almost the close of the monarchy, when their destruction is attributed to Josiah (§ 16). When at length Solomon died the opportunity was at once seized to request from his son Rehoboam a more generous treatment. The reply is memorable. "My little finger is thicker than my father's loins; my father smote the men with whips; I will smite them with scorpions."
The word will be calculated to inflame a people whom history proves to have been haughty and high-spirited, and the great Israel renounced its union with the small district of Judah. Jeroboam (q.e.), once one of Solomon's officers, became king over the north, and thus the history of the divided monarchy begins (about 930 B.C.) with the Israelite power on both sides of the Jordan and with Judah extending southwards from a point a few miles north of Jerusalem.

8. Problems of the Earliest History.—Biblical history previous to the separation of Judah and Israel holds a prominent place in current ideas, since over two-fifths of the entire Old Testament deals with these early ages. The historical sources for the crucial period, from the accession to the fall of Jerusalem (586 B.C.), occupy only about one-twelfth, and even of this about one-third is spread over some fifteen years (see below, § 11). From the flourishing days of the later monarchy and onwards, different writers handled the early history of their land from different standpoints. The feeling of national unity was not yet so intense as to obliterate the differences, and the existence of rival monarchies would demand an explanation. But the surviving material is extremely uneven; vital events in these centuries are treated with a slightness in striking contrast to the attention which is lavished on the rise of a religious and national life. The interlacing of myth and history, however, which is far from being contemporary. Where the material is fuller, serious discrepancies are found; and where external evidence is fortunately available, the independent character of the biblical record is vividly illustrated. The varied traditions up to this stage cannot be regarded as objective history. It is naturally impossible to treat them from any modern standpoint as fiction; they are honest even where they are most untrustworthy. But the recovery of successive historical nuclei does not furnish a continuous thread, and if one is to be guided by the historical context of events the true background to each nucleus must be sought. The northern kingdom cherished the institution of a monarchy, and in this, as in all great political events, the prophets took part. The precise part these men played in the development of the national idea is as important to resolve as is the question of their credibility, of their influence on their contemporaries, and of their character as representatives of the northern kingdom. It was only after a bitter experience that the kingship was no longer regarded as a divine gift, and traditions have been revised in order to illustrate the opposition to secular authority. In the north, this process has been relatively slow, and has not been completed. They have been elaborated and now reveal traces of differing conceptions of the events (see DAN; DAVID; ELI; SAMUEL; SAUL; SOLOMON).

The oldest narratives are not in their original contexts, and they containing some relics of the period when the earliest trustworthy recollection of the period was retained. Although the rise of the Hebrew state, at an age when the great powers were quiescent and when such a people as the Philistines is known to have appeared upon the scene (see § 9), is so improbable, and the traditions of Saul and David, the title holders of the two kingdoms, have been put in a historical setting with the help of later historical tradition. It is at least necessary to distinguish provisionally between a possibly historical framework and narratives which may be of later growth—between the general outlines which only external evidence can test and details which cannot be tested and appear isolated without any cause or devoid of any effect.

Many attempts have been made to present a satisfactory sketch of the early history and to do justice to (a) the patriarchal narratives, (b) the exodus from Egypt and the Israelite invasion, and (c) the rise of the monarchy. As regards (b), external evidence has already suggested to scholars that there were Israelites in Palestine before the invasion; internal historical criticism is against the view that all of the exodus, as an historical event, actually took place. The numerous indications that the Israelites established an actual settlement in the land, entirely distinct from the cycle of narratives which prepare the way for (b). The various reconstructions and compromises by modern apologetic and critical writers alike involve without exception an extremely free treatment of the biblical evidence. They attempted to write the history of the ancient world in the round, to evidence against the existence of the period which is of such importance in the history. In the second part of the book Hebrew kings held power from Jerusalem back to the date of the exodus (1 Kings vi. 1) corresponds to the period forward to the return from the exile (§ 20). This falls into three equal divisions, of which the first ends with Jehoshaphat's temple-reforms and the second with Hezekiah's death.

1 This is especially true of the various ingenious attempts to combine the invasion of the Israelites with the movements of the Habiru in the Amarna period (§ 3).

9. The Ritual Kingdoms.—The Palestine of the Hebrews was but part of a great area breathing the same atmosphere, and there was little to distinguish Judah from Israel except when they were distinct political entities. The history of the two kingdoms is contained in Kings and the later and relatively less trustworthy Chronicles, which deals with Judah alone. In the former a separate history of the northern kingdom has been combined with Judah's history by means of synchronism in accordance with a chronological series which links the events of the kingdom of Judah with the fate of Jerusalem back to the date of the exodus (1 Kings vi. 1) corresponds to the period forward to the return from the exile (§ 20). This falls into three equal divisions, of which the first ends with Jehoshaphat's temple-reforms and the second with Hezekiah's death.

1 This is especially true of the various ingenious attempts to combine the invasion of the Israelites with the movements of the Habiru in the Amarna period (§ 3).
Of the 240 years from Jeroboam I. (807 B.C.) to the death of his son, the last two are of exceptional importance. Jeroboam I. was the founder of a dynasty which descended from one of the most ancient families of Israel, and which continued to exert an influence on the national life of the country till the end of the monarchy. This dynasty is known as the House of David, and is the subject of the following chapter.

The kingdom of Israel was established by Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Jeroboam I. was a man of great ability and astuteness, who succeeded in establishing a strong and independent kingdom in the north of Palestine. He was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.

The kingdom of Judah was established by Solomon (960-922 B.C.) and continued to exist until the fall of Jerusalem in 586 B.C. Solomon was a great builder, and his reign was characterized by a number of important events.

The two kingdoms were united under one king, Rehoboam, after the death of Jeroboam I. (807 B.C.) and continued to exist until the fall of Samaria in 722 B.C. Rehoboam was a great ruler, and his reign was characterized by a number of important events.
show that Damascus was neither crushed nor helpless, but thenceforth for a number of years Assyria was fully occupied elsewhere and the west was left to itself. The value of this external evidence for the history of Israel is enhanced by the fact that biblical tradition associates the changes in the thrones of Israel and Damascus with the work of the prophets Elijah and Elisha, but handles the period without a single reference to the Assyrian Empire. Ahab, it seems, had aroused popular resentment by encroaching upon the rights of the people to their landed possessions; had it not been for Jezebel (q.v.) the tragedy of Naboth would not have occurred. The worship of Baal of Tyre roused a small circle of zealots, and again the Phoenician cause was the cause of the evil. We read the history from the point of view of prophets. Elijah of Gilead led the revolt. To one who favoured simplicity of cult the new worship was a desecration of Yahweh, and, braving the anger of the king and queen, he foreshadowed their fate. Hostility towards the dynasty culminated a few years later in a conspiracy which placed on the throne the general Jehu, the son of one Jehoshaphat (or, otherwise, of Nimshi). The work which Elijah began was completed by Elisha, who supported Jehu and the new dynasty. A massacre ensued, in which the inhabitants of Samaria, so far as Jehu and Judah were concerned. While the extinction of the cult of Baal was furthered by Jezebel, the "people of the land" who undertook a similar reform in Judah. Jehu (q.v.) became king as the champion of the purer worship of Yahweh. The descendants of the detested Phoenician marriage were rooted out, and unless the close intercourse between Israel and Judah had been suddenly broken, it would be supposed that the new king at least laid claim to the south. The events form one of the fundamental problems of biblical history.

11. Damascus, Israel, and Judah.—The appearance of Assyria in the Mediterranean coast-lands had produced the results which inevitably follow when a great empire comes into contact with minor states. It awakened fresh possibilities—successful combination against a common foe, the sinking of petty rivalries, the chance of gaining favour by a neutrality which was scarcely benevolent. The alliances, counter-alliances and far-reaching political combinations which sprang up at every advance of the greater powers are often perplexing in the absence of records of the states concerned. Even the biblical traditions alone do not always represent the state of the evidence of the pertinent sources preserved by the works of several hands. Hazael of Damascus, Jezebel of Israel and Elisha the prophet are the three men of the new age linked together in the words of one writer as though commissioned for like ends (1 Kings xix. 15-17). Hostility to Phoenicia (i.e. the Baal of Tyre) is as intelligible as a tendency to look to Aramaean neighbours. Though Elisha sent to anoint Jehu as king, he was none the less on most intimate terms with Bar-hadad (Old. Test. Ben-hadad) of Damascus and recognized Hazael as its future ruler. It is a natural assumption that Damascus could still count upon Israel as an ally in 842; not until the withdrawal of Assyria and the accession of Jehu did the situation change. "In those days Yahweh began to cut short" (or, altering the text, "to be angry with") "Israel." This brief notice heralds the commencement of Hazael's attack upon Israelite territory east of the Jordan (2 Kings x. 32). The origin of the outbreak is uncertain. It has been assumed that Israel had withdrawn from the great coalition, that Jehu sent tribute to Shalmaneser to obtain that monarch's recognition, and that Hazael took advantage of this opportunity to retaliate. Certain traditions, it is true, indicate that Israel had been at war with the Aramaeans from before 854 to 842, and that Hazael was attacking Gilead at the time when Jehu revolted; but in the midst of these are other traditions of the close and friendly relations between Israel and Damascus! With these perplexing data the position of Judah is inextricably involved.

The special points which have to be noticed in the records for this brief period (1 Kings xvii.-2 Kings x.) concern both literary and historical criticism.¹ A number of narratives illustrate the work of the prophets, and sometimes purely political records appear to have been used for the purpose (see ELIJAH; ELISHA). If Elijah is the prophet of the fall of Omri's dynasty, Elisha is no less the prophet of Jehu and his successors; and it is extremely probable that his life-work was confined to the dynasty of Jehu. In the present narratives, however, the stories in which he possesses influence with king and court are placed before the rise of Jehu, and some of them point to a state of hostility with Damascus before the period of Jehu's campaign. It is not impossible that the wars with Syria can with difficulty be reconciled with the Assyrian evidence (see AHAB), and the narratives, largely anonymous, agree in a singular manner with what is known of the serious conflicts between Damascus and Israel. Jehoiada, as it has been said, began the policy of the joint undertaking by Judah (under Jehoshaphat) and Israel against Syria at Ramoth-Gilead at the time of Ahab's death, and again (under Ahaziah) when Jehoram was wounded, shortly before the accession of Jehu, are historical doublets, and they can hardly be supposed to have been entirely without the king with the course of the intervening years. Further, all the traditions point clearly to the very close union of Israel and Judah at this period, a union which is apt to be obscured by the fact that the prophets summarize in each case the summaries of the previous period. Thus we may contrast the favourable Judean view of Jehoshaphat with the condemnation passed upon Ahab and Jezebel, whose daughter Athaliah married Jehoram, son of Jehoshaphat. It is necnecnecnec necessarily, also, that Ahab and Jezebel are regarded by neither of the two kingdoms. The most striking is a great revolt in south Palestine. The alliance between Ahab and Jehoram was furthered by Jezebel's descent, and was succeeded by his son Ahaziah, and some disaster befell their trading fleet in the Gulf of Akaba (1 Kings xxii. 46 seq.; 2 Chron. xx. 35-37). Next came the revolt of Moab (2 Kings i. 1), and Ahaziah, Jehoram and Athaliah. The briefest record of revolt in the ancient annals, in the account of the revolt of Edom and the Philistines Libnah (see PHILISTINES), and allude obscurely to a defeat of the Judean Jehoram (2 Kings vii. 20-22). Further details in 2 Chron. xxii.-xxiii. I even record an invasion of Philistines and Aramites (2 Edomites), an attack upon Jerusalem, and mention the participation in the campaign of the prophet Elisha in the sole exception of Jehoahaz, i.e. Ahaziah (see JEHEZIAH; JEHOAHAZ).

The two kingdoms had been under a single head, these features might find an explanation, but it must be allowed that it is not easy to give a complete parallel of the events of the present history, and to determine whether the line is to be drawn between trustworthy and untrustworthy details. Moreover, of the various accounts of the massacre of the princes of Judah, the Judean annals (2 Kings x. 34 seq.) are superior to the other accounts, and can be more readily reconciled with the events of the time. On the other hand, the inscriptions of Jehoiada, as it is here suddenly introduced, belonging apparently to a history of the eighteenth century B.C. (i.e. of Jehu's day) are perhaps more in harmony with its priests and Israel with its prophets, the circumstances of the empire being unexplained, and the Temple reforms occupy the first place in the compiler's interest. The Judean annals mention Israel advanced to Gath; the city was captured and Jerusalem was saved only by using the Temple and palace treasure as a bribe. On the other hand, Chronicles has a different story with a novel prelude. Jehoahaz, it is said, turned away from Yahweh, and Elisha, in doublet of the Judean annals, seizes the first opportunity to retaliate. Certain traditions, it is true, indicate that Israel had been at war with the Aramaeans from before 854 to 842, and that Hazael was attacking Gilead at the time when Jehu revolted; but in the midst of these are other traditions of the close and friendly relations between Israel and Damascus! With these perplexing data the position of Judah is inextricably involved.

¹ See Jev. Quart. Rev. (1908), pp. 597-630. The independent Israelite traditions which here become more numerous have points of contact with those of Sam in 1 Samuel, and the relation is highly suggestive for the study of their growth, as also for the perspective of the various writers.

² See W. R. Smith (after Kuenen, Enc. Bibl., s.v. Ben-Hadad), 1870, and W. F. Albright, 1922, concerning Ben-zinger (p. 140) and Kittel (pp. 153 seq.) on Kings; J. S. Strachan, Hastings's Dict. Bible, i. 694; G. A. Smith, Hist. Geog. of Holy Land, p. 582; König and Hirsch, Jev. Ency. v. 137 seq. ("legend as indifferent to accuracy in dates as it is to definiteness of places and names"); W. R. Harper, Amos and Hosea, p. xlii. seq. ("the lack of chronological order... the result is to create a wrong impression of Elisha's career"). The bearing of this displacement upon the literary and historical criticism of the narratives has never been worked out.
as trustworthy as those in Kings. In the present instance the novel element is the fact that the writer of Judges was known to each other. The position of Judah at this period must be estimated (a) from the preceding years of intense warfare with Israel and the coming of the great enemy Assyria, and (b) from the fact that the latter, as well as the former, was a tributary of the former. The position of Israel in this period must be estimated from their relations with Assyria, which were never altogether free from the fear of invasion, and from their relations with Judah, which were often of a more friendly character. In both cases the position of Judah is less secure than that of Israel, and the position of Israel is less secure than that of Judah. The latter were in a condition of constant warfare, and the former were in a condition of constant warfare, but the latter are in a condition of constant warfare. The position of Judah at this period must be estimated from the preceding years of intense warfare with Israel and the coming of the great enemy Assyria, and (b) from the fact that the latter, as well as the former, was a tributary of the former. The position of Israel in this period must be estimated from their relations with Assyria, which were never altogether free from the fear of invasion, and from their relations with Judah, which were often of a more friendly character. In both cases the position of Judah is less secure than that of Israel, and the position of Israel is less secure than that of Judah. The latter were in a condition of constant warfare, and the former were in a condition of constant warfare, but the latter are in a condition of constant warfare. The position of Judah at this period must be estimated from the preceding years of intense warfare with Israel and the coming of the great enemy Assyria, and (b) from the fact that the latter, as well as the former, was a tributary of the former. The position of Israel in this period must be estimated from their relations with Assyria, which were never altogether free from the fear of invasion, and from their relations with Judah, which were often of a more friendly character. In both cases the position of Judah is less secure than that of Israel, and the position of Israel is less secure than that of Judah. The latter were in a condition of constant warfare, and the former were in a condition of constant warfare, but the latter are in a condition of constant warfare.

12. The Aramaen Wars.—If the records leave it uncertain (a) whether Jehu (like Tyre and Sidon) sent tribute to Shalmaneser, and (b) whether Judah only escaped Hazael's vengeance by a timely bribe or, in freeing itself from Israel, had bribed Hazael to create a division, it appears that the northern kingdom suffered little in the disastrous wars between Damascus and Israel. There were, indeed, internal troubles, and Jehoash perished in a conspiracy. His son Amaziah had some difficulty in gaining the kingdom and showed unwonted leniency in sparing the children of his father's murderers. This was a departure from the customs of the age, and was perhaps influenced less by generosity than by expediency. Israel, on the other hand, was almost annihilated. The Syrians seized Gilead, crossed over into Palestine, and occupied the land. Jehu's son Jehoahaz saw his army made "like the dust in threshing," and the desperate condition of the country recalls the straits in the time of Saul (1 Kings xii. 6, 7, 19-22), and the days before the great overthrow of the northern power as described in Judges v. 6-8. The impression left by the horrors of the age is clear from the allusions to the barbarities committed by Damascus and its Ammonite allies upon Gilead and the land of Israel (Amos i. 3, 13), and from the mention of the King of Damascus (2 Kings xii. 12). Several of the situations can be more vividly realized from the narratives of Syrian wars ascribed to the time of Omri's dynasty, even if these did not originally refer to the later period. Under Joash, son of Jehoahaz, the tide turned. Elisha was apparently the champion, and posterity told of his exploits when Samaria was visited with the sword. Thrice Joash smote the Syrians—in accordance with the last words of the dying prophet—and Aphek in the Sharon plain, famous in history for Israel's disasters, now witnessed three victories. The enemy under Hazael's son Ben-hadad (properly Bar-hadad) was driven out and Joash regained the territory which his father had lost (2 Kings xii. 25); it may reasonably be supposed that a treaty was concluded (1 Kings xx. 34). But the peace does not seem to have been popular. The story of the last scene in Elisha's life implies in Joash an easily contented disposition which hindered him from completing his successes. Syria had not been crushed, and the failure to utilize the opportunity was an act of impolitic leniency for which Israel was bound to suffer (2 Kings xii. 10). Elisha's indignation can be illustrated by the denunciation passed upon an anonymous king by the prophetic party on a similar occasion (1 Kings xx. 35-43).

At this stage it is necessary to notice the fresh invasion of Syria by Hadad (Adad)-nirari, who besieged Mari, king of Damascus, and exacted a heavy tribute (c. 800 B.C.). A diversion of this kind may explain the Israelite victories; the subsequent withdrawal of Assyria may have afforded the occasion for retaliation. Those in Israel who remembered the previous war between Assyria and Damascus would realize the recuperative power of the latter, and would perceive the danger of the short-sighted policy of Joash. It is interesting to find that Hadad-nirari claims tribute from Tyre, Sidon and Beth-omri (Israel), also from Edom and Palastu (Philistia). There are no signs of an extensive coalition as in the days of Shalmaneser; Ammon is probably included under Damascus; the position of Moab—which had freed itself from Jehoram of Israel—can hardly be calculated. But the absence of Judah is surprising. Both Jehoash (of Judah) and his son Amaziah left behind them a great name; and the latter was comparable only to David (2 Kings xiv. 3). He defeated Edom in the Valley of Salt, and hence it is conceivable that Amaziah's kingdom extended over both Edom and Philistia. A vaunting challenge to Joash (of Israel) gave rise to one of the two tales that are preserved in the Old Testament (Judg. ix. 8 sqq.; see ANZEICHEN). It was followed by a fresh renewal of the struggle, which suggests that Philistia also was involved. The result was the route of Jehoash, the capture of Amaziah, the destruction of the northern wall of Jerusalem, the sacking of the temple and palace, and the removal of hostages to Samaria (2 Kings xiv. 12 sqq.). Only a few words are preserved, but the details, when carefully weighed, are extremely significant. This momentous event for the southern kingdom was scarcely the outcome of a challenge to a trial of strength; it was rather the sequel to a period of smoldering jealousy and hostility.

The Judaeans have obscured the history since the days of Omri's dynasty, when Israel and Judah were as one, when they were divided by the covenant relations between Jehovah and the two kingdoms, and when only Israel's vengeance gives the measure of the injuries she had received. That the Judaean compiler has not given fuller information is not surprising; the wonder is that he should have given so much. It is one of those epoch-making facts in Israel's history which, because of the course of the history of the preceding and following years, must be estimated. It is, strangely enough, from an Israelite source, but the tone of the whole is quite dispassionate and objective. It is one of those epoch-making facts in the history of Israel, of which the compiler would have been proud, and one which he would have liked to preserve. It is a true picture of the situation at the time, and it is a true picture of the situation at the time. It is a true picture of the situation at the time, and it is a true picture of the situation at the time. It is a true picture of the situation at the time, and it is a true picture of the situation at the time.
Hamath and the quiescence of Assyria may have encouraged Israelite ambitions, but until more is known of the campaigns of Haddad-nirari and of Shalmaneser III. (against Damascus, 773 B.C.) the situation cannot be safely gauged. Moab was probably tributary; the position of Judah and Edom is involved with the chronological problems. According to the Judaean annals, the "people of Judah" set Azariah (Uzziah) upon his father's throne; and to his long reign of fifty-two years are ascribed conquests over Philistia and Edom, the fortification of Jerusalem and the reorganization of the army. As the relations with Israel are not specified, the sequel to Amaziah's defeat is a matter for conjecture; although, when at the death of Jeroboam Israel hastened to its end amid anarchy and dissension, it is hardly likely that the southern kingdom was unmoved. All that can be recognized from the biblical records, however, is the period of internal prosperity which Israel and Judah enjoyed under Jeroboam II and Uzziah (992 B.C.) respectively.

It is difficult to trace the biblical history century by century as it reaches these last years of bitter conflict and of renewed prosperity. The northern kingdom at the height of its power included Judah, it extended its territory east of the Jordan towards the north and the south, and maintained close relations with Phoenicia and the Aramaean states. It had a national history which left its impress upon the popular imagination, and sundry fragments of tradition reveal the pride which the patriot felt in the past. An original close connexion is felt with the east of the Jordan and with Gilead; stories of invasion and conquest express themselves in varied forms. In so far as internal wealth and luxury presuppose the control of the trade-routes, periodical alliances are implied in which Judah, willingly or unwillingly, was included. But the Judaean records do not allow us to trace its independent history with confidence, and our estimate can scarcely base itself solely upon the accidental fulness or scarcity of political details. In the subsequent discussion of Judah (§ 15) we may perceive the growing supremacy of Judah, and the Assyrian inscriptions clearly indicate the dependence of Judaean politics upon its relations with Edom and Arab tribes on the south-east and with Philistia on the west. Whatever had been the effect of the movement of the Parusati some centuries previously, the Philistines (i.e. the people of Philistia) are now found in possession of a mature organization, and the Assyrian evidence is of considerable value for an estimate of the stories of conflict and covenant, of hostility and friendship, which were current in south Palestine. The extension of the term "Judah" (cf. that of "Israel" and "Samaria") is involved with the incorporation of non-Judaean elements. The country for ten miles north of Jerusalem was the exposed and highly debatable district ascribed to the young tribe of Benjamin (the favourite "brother" of both Judah and Joseph; Gen. xxxvii., xxxix. sqq.); the border-line between the rival kingdoms oscillated, and to trace accurately the political position of the smaller and half-desert Judaean state depended upon the attitude of its neighbours. It is possible that tradition is right in supposing that "Judah went down from his brethren" (Gen. xxxviii. 1; cf. Judg. i. 3). Its monarchy traced its origin to Hebron in the south, and its growth is contemporary with a decline in Israel (§ 7). It is at least probable that when Israel was supreme an independent Judah would centre around a more southerly site than Jerusalem. It is naturally uncertain how far the traditions of David can be utilized; but they illustrate Judaean situations when they depict intrigues with Israelite officials, vassalage under Philistia, and friendly relations with Moab, or when they suggest how enmity between Israel and Ammon could be turned to useful account. Tradition, in fact, is concentrated upon the rise of the Judaean dynasty under David; but there are significant periods before the rise of both Jehoshaphat and Uzziah upon which the historical records maintain a perplexing silence.

The Hebrews of Israel and Judah were, political history apart, men of the same general stamp, with the same cult and custom; for the study of religion and social usages, therefore, they can be treated as a single people. The institution of the monarchy was opposed to the simpler local forms of government, and a military régime had distinct disadvantages (cf. 1 Sam. viii. 11-18). The king stood at the head, as the court of final appeal, and upon him and his officers depended the people's welfare. A more intricate social organization caused internal weakness, and Eastern history shows with what rapidity peoples who have become strong by discipline and moderation pass from the height of their glory into extreme corruption and disintegration. This was Israel's fate. Opposition to social abuses and enmity towards religious innovations are regarded as the factors which led to the overthrow of Omri's dynasty by Jehu, and when Israel seemed to be at the height of its glory under Jeroboam II, warning voices again made themselves heard. The two factors are inseparable, for in ancient times no sharp dividing-line was drawn between religious and civic duties: righteousness and equity, religious duty and national custom were one.

Elaborate legal enactments codified in Babylonia by the 29th century B.C. and striking parallels in Hebrew and Jewish (Arabic), Syrian and Mahommedan law, or in the unwritten usages of all ages; for even where there were neither written laws nor duly instituted lawgivers, there was no lawlessness, since custom and belief were, and still are, almost inflexible. Various collections are preserved in the Old Testament; they are attributed to the time of Moses the lawgiver, who stands at the beginning of Israelite national and religious history. But at many of the laws were quite unsuitable for the circumstances of his age, and the theocratic and intertribal character of a national, civic, and religious code was imposed suddenly upon a people newly emerged from bondage in Egypt raises insuperable objections, and underestimates the fact that legal usage existed in the earliest stages of society, and therefore in pre-Mosaic times. The more important question is the date of the laws in their present form and content. Collections of laws are found in Deuteronomy and in exilic and post-exilic writings; groups of a relatively earlier type are preserved in Exod. xxxiv. 14-26, xx. 23-xxii., and (of another series) in Lev. xxvi. 1—xx. 35. For a useful conspectus of details, see J. E. Carpenter and G. Harford-Battersby, The Hexateuch (vol. i., appendix); C. F. Kent, Israel's Laws and Legal Enactments (1907); and in general I. Benzinger, "Articles (1908); G. B. Gray, "Law Literature," ib. (the literary growth of legislation). Reference may also be made, for illustrative material, to W. R. Smith, Kinship and Marriage, Religion of the Semites; to E. Day, Handbook of the Hebrews; and, for some comparison of customary usage in the Semitic field, to S. A. Cook, Laws of Moses and Code of Hammurabi.

14. Religion and the Prophets.—The elements of the thought and religion of the Hebrews do not sever them from their neighbours; similar features of cult are met with elsewhere under different names. Hebrew religious institutions can be understood from the biblical evidence studied in the light of comparative religion; and without going afield to Babylonia, Assyria or Egypt, valuable data are furnished by the cults of Phoenicia, Syria and Arabia, and these in turn can be illustrated from excavation and from modern custom. Every religion has its customary cult and ritual, its recognized times, places and persons for the observance. Worship is simpler than at the more famous temples, and as the rulers are the patrons of the religion and are brought into contact with the religious personnel, the character of the social organization leaves its mark upon those who hold religious and judicial functions alike. The Hebrews shared the paradoxes of Orientals, and religious enthusiasm and ecstasy were prominent features. Seers and prophets of all kinds ranged from those who were consulted for daily mundane affairs to those who revealed the oracles in times of stress, from those who haunted local holy sites to those high in royal favour, from the quiet domestic communities to the austere mountain, recluse. Among these were to be found the most sordid opportunism and the most heroic self-effacement, the crassest supernaturalism and—the loftiest conceptions of practical morality. A development of ideals and a growth of spirituality can be traced which render the biblical writings with their series of prophecies a unique

1 This is philosophically handled by the Arabian historian Ibn Khaldûn, whose Prolegomena is well worthy of attention; see De Slane, Not. et extr. vol. xix.—xxi., with Von Kremer's criticisms in the St. d. Kais. Akad. of Vienna (vol. x cvii., 1879); cf. also R. Flint, History of the Philosophy of History, i. 157 sqq.
The problem of the history of Yahwism depends essentially upon the view adopted as to the date and origin of the biblical details and their validity for the various historical and religious conditions they presuppose. Yahwism is a religion which appears upon a soil prepared with ideas which were not Jewish but which drew from extrabiblical sources and in neighbouring lands. The problem cannot be approached from modern preconceptions because there was much associated with the worship of Yahweh which only gradually came to be recognized as Jewish, and there was much in the writings of the prophets and the emphasis which is laid upon purity and simplicity of religious life which is suggestive of the influence of the nomadic spirit rather than of an internal evolution on Palestinian soil. Moreover, the prophetical books in their present form, like much in the writings of the prophets and the emphasis which is laid upon purity and simplicity of religious life, are not artifically moulded through the influence of other civilizations. Nomadic life is recognized by many critics, as possessing two relative superiorities, and its characteristic purity of manner and its religious ideas are not incompatible with a warlike spirit. If nomadism be recognized as one of the factors in the growth of Yahwism, there is no reason to be said for the hypothesis which associates it with the clans connected with the Levites (see E. Meyer, Israeliten, pp. 82 sqq.; B. Luther, ib. 138). It is, however, obvious that the influence due to immigrants could be, and doubtless was, exerted at more than one period (see §§ 18, 20; also Hebrew Religion; Priest).

15. The Fall of the Israelite Monarchy.—The prosperity of Israel was its undoing. The disorders that hastened its end find an analogy in the events of the more obscure period after the death of the earlier Jeroboam. Only the briefest details are given. Zareah was slain after six months by Shallum ben Tahash in Ibleam; but the usurper fell a month later to Menahem (q.s.), who only after much bloodshed established his position. Assur again appeared upon the scene under Tiglath-pileser IV. (745-725 B.C.). His approach was the signal for the formation of a coalition, which was overthrown in 738. Among those who paid tribute were Raṣān (the biblical Rezin) of Damascus, Menahem of Samaria, the kings of Tyre, Byblos and Hamath and the queen of Aribi (Arabia, the Syrian desert). Israel was once more in league with Damascus and Phoenicia, and the biblical records must be read in the light of political history. Judah was probably holding aloof. Its king, Uzziah, was a leper in his latter days, and his son and regent, Jotham, claims notice for the circumstantial reference (2 Chron. xxvii.; cf. xxvi. 8) to his subjugation of Ammon—the natural allies of Damascus for three years. Scarcely had Assyria withdrawn before Menahem lost his life in a conspiracy, and Pekah with the help of Gilgal made himself king. The new movement was evidently anti-Assyrian, and strengthened by the threat of Assyria to present a united front. It is suggestive to find Judah the centre of attack. Raṣān and Pekah directed their blows from the north, Philistia threatened the west flank, and the Edomites who drove out the Judaeans from Elath (on the Gulf of 'Akaba) were no doubt only taking their part in the concerted action. A more critical situation could scarcely be imagined. The throne of David was then occupied by the young Ahas, Jotham's son.

The commendation passed upon the impetuous and fiery zeal of the adherents of the new movement (cf. Hos. i. 4), like the remarkable vicissitudes in the traditions of Moses, Aaron and the Levites (see § 10), which stand out as if harking back to earlier ages, in the shape of a new movement or a new situation of some real significance, whose true place in the history can with difficulty be recovered.

Formerly thought to be the third of the name.

Perhaps Judah had come to an understanding with Tiglath-pileser (H. H. Haydn, Journ. Bib. Lit., xxvii. 1969, pp. 182-199); see Uzziah.
In this crisis we meet with Isaiah (q.v.), one of the finest of Hebrew prophets. The disorganized state of Egypt and the uncertain allegiance of the desert tribes left Judah without direct aid; on the other hand, opposition to Assyria among the conflicting interests of Palestine and Syria was rarely unanimous. Either in the natural course of events—to preserve the unity of his empire—or influenced by the rich presents of gold and silver with which Ahaz accompanied his appeal for help, Tiglath-pileser intervened with campaigns against Philistia (734 B.C.) and Damascus (732-731). Israel was punished by the ravaging of the northern districts, and the king claims to have carried away the people of "the house of Omri." Pekah was slain and one Hoshea (q.v.) was recognized as his successor. Assyrian officers were placed in the land and Judah thus gained its deliverance at the expense of Israel. But the proud Israelites did not remain submissive for long; Damascus had indeed fallen, but neither Philistia nor Edom had yet been crushed.

At this stage a new problem becomes urgent. A number of petty peoples, of whom little definite is known, fringed Palestine from the south of Judah and the Delta to the Syrian desert. They belong to an area which merges itself in the west into Egypt, and Egypt in fact had a hereditary claim upon it. Continued intercourse between Egypt, Gaza and north Arabia is natural in view of the trade-routes which connected them, and on several occasions joint action on the part of Edomites (with allied tribes) and the Philistines is recorded, or may be inferred. The part played by Egypt proper in the ensuing anti-Assyrian combinations is not clearly known; with a number of petty dynasts fomenting discontent and revolt, there was an absence of cohesion in that ancient empire previous to the rise of the Ethiopian dynasty. Consequently the references to "Egypt" (Heb. Mīsrayim, Ass. Mahr) sometimes suggest that the geographical term was really extended beyond the bounds of Egypt proper towards those districts where Egyptian influence or domination was or had been recognized (see further Mizraim).

When Israel began to recover its prosperity and regained confidence, its policy halted between obedience to Assyria and reliance upon this ambiguous "Egypt." The situation is illustrated in the writings of Hosea (q.v.). When at length Tiglath-pileser died, in 727, the slumbering revolt became general; Israel refused the usual tribute to its overlord, and definitely threw in its lot with "Egypt." In due course Samaria was besieged for three years by Shalmaneser IV. The alliance with So (Seveh, Sibi) of "Egypt," upon whom hopes had been placed, proved futile, and the forebodings of keen-sighted prophets were justified. Although no evidence is at hand, it is probable that Ahaz of Judah rendered service to Assyria by keeping the allies in check; possible, also, that the former enemies of Jerusalem had now been induced to turn against Samaria. The actual capture of the Israelite capital is claimed by Sargon (722), who removed 27,290 of its inhabitants and fifty chariots. Other peoples were introduced, officers were placed in charge, and the usual tribute re-imposed. Another attempt was made by Sennacherib, in 705 in which the enemy was joined with Hamath and Damascus, with the Phoenician Arpad and Shumur, and with Gaza and "Egypt." Two battles, one at Karkar in the north, another at Raphia (Raphia) on the border of Egypt, sufficed to quell the disturbance. The desert peoples who paid tribute on this occasion still continued restless, and in 715 Sargon removed men of Tamüd, Ibdid, Marsian, Ḥayāp, the "remote Arabs of the desert," and placed them in the land of Beth-Omri. Sargon's statement is significant for the internal history; but unfortunately the biblical historians take no further interest in the fortunes of the northern kingdom after the fall of Samaria, and see in Judah the sole survivor of the Israelite tribes (see 2 Kings xvi. 7-23). Yet the situation in this neglected district must continue to provoke inquiry.

16. Judah and Assyria.—Amid these changes Judah was intimately connected with the south Palestinian peoples (see further Philistines). Ahaz had recognized the sovereignty of Assyria and visited Tiglath-pileser at Damascus. The Temple records describe the innovations he introduced on his return. Under his son Hezekiah there were fresh disturbances in the southern states, and anti-Assyrian intrigues began to take a more definite shape among the Philistine cities. Ashdod openly revolted and found support in Moab, Edom, Judah, and the still ambiguous "Egypt." This step may possibly be connected with the attempt of Marduk (Merodach)-baladan in south Babylonia to form a league against Assyria (cf. 2 Kings xx. 12); at all events Ashdod fell after a three years' siege (711) and for a time there was peace. But with the death of Sargon in 705 there was another great outburst; practically the whole of Palestine and Syria was in arms, and the integrity of Sennacherib's empire was threatened. In both Judah and Philistia the anti-Assyrian party was not without opposition, and those who adhered or favoured adherence to the great power were justified by the result. The inevitable lack of cohesion among the petty states weakened the national cause. At Sennacherib's approach, Ashdod, Ammon, Moab and Edom submitted; Ekron, Ascalon, Lachish and Jerusalem held out strenuously. The southern allies (with Egypt) were defeated at Eltekeh (Jos. xix. 44). Hezekiah was besieged and compelled to submit (707). The small kings who had remained faithful were rewarded by an extension of their territories, and Ashdod, Ekron and Gaza were enriched at Judah's expense. These events are related in Sennacherib's inscription; the biblical records preserve their own traditions (see Hezekiah).

If the impression left upon current thought can be estimated from certain of the utterances of the court-prophet Isaiah and the Judaean countryman Micah (q.v.), the light which these throw upon internal conditions must also be used to gauge the real extent of the religious changes ascribed to Hezekiah. A brazen serpent, whose institution was attributed to Moses, had not hitherto been considered out of place in the cult; its destruction was perhaps the king's most notable reform.

In the long reign of his son Manasseh later writers saw the deathblow to the Judaean kingdom. Much is related of his wickedness and enmity to the followers of Yahweh, but few policy details have come down. It is uncertain whether Sennacherib invaded Judah again shortly before his death, nevertheless the land was practically under the control of Assyria. Both Esar-haddon (681-668) and Assur-bani-pal (668-c. 626) number among their tributaries Tyre, Ammon, Moab, Edom, Ascalon, Gaza and Manasseh himself, and cuneiform docketts unearthed at Gezer suggest the presence of Assyrian garrisons there (and no doubt elsewhere) to ensure allegiance. The situation was conducive to the spread of foreign customs, and the condemnation passed upon Manasseh thus perhaps becomes more significant. Precisely what form his worship took is a matter of conjecture; but it is possible that the religion must not be judged too strictly from the standpoint of the late compiler, and that Manasseh merely assimilated the older Yahweh-worship to new Assyrian forms. Politics and religion, however, were inseparable, and the supremacy of Assyria meant the supremacy of the Assyrian pantheon.

If Judah was compelled to take part in the Assyrian campaigns against Egypt, Arabia (the Syrian desert) and Tyre, this would only be in accordance with a vassal's duty. But when tradition preserves some recollection of an offence for which Manasseh was taken to Babylon to explain his conduct (2 Chron. xxxiii.), also of the settling of foreign colonists in Samaria by Esar-haddon (Ezra iv. 2), there is just a possibility that Judah made some attempt to gain independence. According to Assur-bani-pal all the western lands were inflamed by the revolt of his brother Samsam-ukin. What part Judah took in the Transjordanic disturbances, in which Moab fought invading Arabian tribes on behalf of Assyria, is unknown (see Moab). Manasseh's son Amon fell in a court intrigue and the "people of the land," after avenging the murder, set up in his place the infant Josiah (637). The circumstances imply a regency, but the records are silent upon the matter.

1 The fact that these lists are of kings of the "land Hatti" would suggest that the term "Hittite" had been extended to Palestine.

2 So K. Budde, Rel. of Israel to Exile, pp. 165-167. For an attempt to recover the character of the cults, see W. Erbt, Hebraer (Leipzig, 1906), pp. 130 sqq.
the outlook. The assumption that the decay of Assyria awoke the national feeling of independence is perhaps justified by those events which made the greatest impression upon the compiler, and an account is given of Josiah’s religious reforms, based upon a source apparently identical with that which described the work of Jehoash. In an age when the oppression and corruption of the ruling classes had been such that those who cherished the old worship of Yahweh dared not confide in their most intimate companions (Mic. vii. 5, 6), no social reform was possible; but now the young Josiah, the popular choice, was upon the throne. A roll, it is said, was found in the Temple, its contents struck terror into the hearts of the priests and king, and it led to a solemn covenant before Yahweh to observe the provisions of the law-book which had been so opportunely recovered.

That the writer (2 Kings xxii. seq.) meant to describe the discovery of Deuteronomy in the Temple, and that this identification of the roll, already made by Jerome, Chrysostom and others, has been substantiated by modern literary criticism since De Wette (1803). (See Deuteronomy; Josiah.) Some very interesting parallels have been cited from Egyptian and Assyrian records where religious texts, said to have been found in temples, or oracles from the distant past, have come to light at the very time when “the days were full.” There is, however, no real proof for the theory that the roll was Deuteronomy: the entrance of the religious book as a landmark in the history of Israel by reason of its position at the cult and ritual is a matter of dispute (see Hebrew Religion, § 7). In particular it is aimed against the worship at the numerous minor sanctuaries and the rejection of Yahweh as the only god. The Temple of the Lord, which is a distinctive landmark in the religious history by reason of its attitudes to Yahweh, the religious book as a landmark in the history of the Temple of Jerusalem. This centralization involved the removal of the local priests and a modification of ritual and legal observance. The fall of Samaria, Sennacherib’s devastation of Judah, and the growth of Babylonian power, can be traced back to the rise of the Temple, although Israel itself, as also Judah, had famous sanctuaries of its own. From the standpoint of the popular religion, the removal of the local altars, like Hezekiah’s destruction of the temple altars, would be an act of desecration, and an exchange of worship places can be partially appreciated from the sentiments of 2 Kings xviii. 22, and partly also from the modern Wahhabitite reform (of the 19th century). But the details and success of the reforms, when viewed in the light of the history of the Temple, are uncertain. The book of Deuteronomy crystallizes a doctrine; it is the codification of teaching which presupposes a carefully prepared soil. The account of Josiah’s work, like that of Hezekiah, is written by one of the chroniclers of the fifth generation of the reign of Josiah, which can be so far as is possible interpreted from the writings of Jeremiah (xxv. 3–7; xxxvi. 2 seq.) and Ezekiel. Josiah himself is praised for his justice, but faithless Judah is insinuere of Judah’s wickedness (Jer. xxvi. 15 seq.) and the circumstances in which he carried out the reform also suggest that he, like Hezekiah (2 Kings xi. 17; cf. xxii. 3), had entered into a reciprocal covenant with a people who, as Micah’s writings would indicate, had suffered grievous oppression and misery.1

17. The Fall of the Judaean Monarchy.—In Josiah’s reign a new era was beginning in the history of the world. Assyria was rapidly decaying and Egypt had recovered from the blows of Assur-bani-pal (to which the Hebrew prophet Nahum alludes, ii. 8–10). Psammetichus (Psamtik) I., one of the ablest of Egypt’s kings, established Egyptian authority in Syria, threw off the Assyrian yoke and carried his arms as far as the eastern doors of Rome (Livy xx. 26), upon which undue weight has sometimes been laid (see Klostermann, Der Pentateuch (1906), pp. 155 seq. and T. K. Cheyne, Decline and Fall of Judah (1908), p. 13, with references. [The genuineness of such discoveries is naturally a matter for historical discussion. Thus, for instance, the discovery of the inscriptions of the Nubian king Taharqo (Livy xix. 26) upon which undue weight has sometimes been laid (see Klostermann, Der Pentateuch (1906), pp. 155 seq. was not accepted as genuine by the senate (who had the laws destroyed), and it was only after the death of the king himself that they were destroyed in the belief in their trustworthiness. — (Communicated)])

Both kings came to the throne after a conspiracy aimed at existing abuses, and other parallels can be found (see Kings).

with the help of troops from Asia Minor and employed these to guard his eastern frontiers at Daphne. He also revived the old trading-connections between Egypt and Phoenicia. A Chaldean prince, Nabopolassar, set himself up in Babylonia, and Assyria was compelled to invite the aid of the Aššur. It was perhaps after this that an inroad of Scythians (q.v.) occurred (c. 626 B.C.; if it did not actually touch Judah, the advent of the people of the north appears to have caused great alarm (Jer. iv. 5–6: Zephaniah). Bethshean in Samaria has perhaps preserved in its later (though temporary) name Scythopolis an echo of the invasion.2 Later, Nebcho, son of Psammetichus, proposed to add to Egypt some of the Assyrian provinces, and marched through Palestine. Josiah at once interposed; it is uncertain whether, in spite of the power of Egypt, he had hopes of extending his kingdom, or whether the famous reformer was, like Manasseh, a vassal of Assyria. The book of Kings gives the standpoint of a later Judaean writer, but Josiah’s authority over a much larger area than Judah alone is suggested by xxii. 10 (part of an addition), and by the references to the border at Riblah in Ezek. vi. 14, xi. 10 seq. He was slain at Megido in 688, and Egypt, as in the long-distant past, again held Palestine and Syria. The Judaean made Jehoahaz (or Shalman) their king, but the Pharaoh banished him to Egypt three months later and appointed his brother Jehoiakim. Shortly afterwards Nineveh fell, and with it the empire which had dominated the fortunes of Palestine for over two centuries (see 10. Nabonidus (Nabu-naid) king of Babylonia (550 B.C.) saw in the disaster the vengeance of the gods for the sacrilege of Sennacherib; the Hebrew prophets, for their part, exalted over Yahweh’s far-reaching judgment. The newly formed Chaldean power at once recognized in Necho a dangerous rival and Nabopolassar sent his son Nebuchadrezzar, who overthrew the Egyptian forces at Carchemish (605). The battle was the turning-point of the age, and with it the succession of the new Chaldean or Babylonian kingdom was assured. But the relations between Egypt and Judah were not broken off. The course of events is not clear, but Jehoiakim (q.v.) at all events was inclined to rely upon Egypt. He died just as Nebuchadrezzar, seeing his warnings disregarded, was preparing to lay siege to Jerusalem. His young son Jehoiachin surrendered after a three months’ reign, with his mother and the court; they were taken away to Babylon, together with a number of the artisan class (356). Jehoiakim’s brother, Mattaniah or Zedekiah, was set in his place under an oath of allegiance, which he broke, preferring to suffer the new king of Egypt. A few years later the second siege took place. It began on the tenth day of the tenth month of the year 587. Theooked-for intervention of Egypt was a vain hope, although a Chaldean siege signal made on the fourth month 586, a breach was made in the walls. Zedekiah fled towards the Jordan valley but was seized and taken to Nebuchadrezzar at Riblah (45 m. south of Hamath). His sons were slain before his eyes, and he himself was blinded and carried off to Babylon after a reign of eleven years. The Babylonian Nebuzar-adan was sent to take vengeance upon the rebellious city, and on the seventh day of the fifth month 586 B.C. Jerusalem was destroyed. The Temple, palace and city buildings were burned, the walls broken down, the chief priest Seraiah, the second priest Zephaniah, and other leaders were put to death, and a large body of people was again carried away. The disaster became the great epoch-making event for Jewish history and literature. But the Babylonians, whose policy was less destructive than that of Assyria, contented themselves with appointing as governor a certain Gedaliah. The new centre was Mizpah, a commanding eminence and sanctuary, about 5 m. N.W. of Jerusalem; and here Gedaliah issued an appeal to the people to

be loyal to Babylon and to resume their former peaceful occupations. The land had not been devastated, and many gladly returned from their hiding-places in Moab, Edom and Ammon. But discontented survivors of the royal family under Ishmael intrigued with Baalis, king of Ammon. The plot resulted in the murder of Gedaliah and an unsuccessful attempt to carry off various princesses and officials who had been left in the governor’s care. This new confusion and a natural fear of Babylon’s vengeance led many to feel that their only safety lay in flight to Egypt, and, although warned by Jeremiah that even there the sword would find them, they fled south and took refuge in Tahpanhes (Daphnae, q.v.), afterwards forming small settlements in other parts of Egypt. But the thread of the history is broken, and apart from an allusion to the favour shown to the captive Jehoiachin (with which the books of Jeremiah and Kings conclude), there is a gap in the records, and subsequent events are viewed from a new standpoint (§ 20).

The last few years of the Judaean kingdom present several difficult problems.

(a) That there was some fluctuation of tradition is evident in the case of Jehoiakim, with whose quiet end (2 Kings xxiv. 6 [see also Lucian]; 2 Chron. xxxvi. 8 [Septuagint]) contrast the fate foretold by Jeremiah (Jer. xxxvi. 30, 31). The tradition of his captivity (2 Chron. xxxvi. 6; Dan. i. 2) has apparently confused him with Jehoiachin, and the latter’s reign is so brief that some overlapping is conceivable. Moreover, the prophecy does not state that a man was put to death at the close of the Babylonian exile bore out by the history, nor does Josiah’s fate agree with the promise in 2 Kings xxii. 20. There is also an evident relation between the pairs: Jehoahaz and Jehoiachin, Jehoiachin and Zedekiah (e.g., Jer. xxviii. 28; xxxvi. 5), and the difficulty lies in regard to the second and third is obvious in the attempts of the Jewish historian Josephus to provide a compromise. The contemporary prophecies ascribed to Jeremiah and Ezekiel require careful examination in this connexion, partly as regards their traditional background (especially the headings and setting), and partly for their contents, the details of which sometimes do not admit of a literal interpretation in accordance with our present historical material (cf. Ezek. xix. 3-9, where the time and place are 21st year of Nebuchadnezzar and Babylon in the west, and it would seem to be Jehoahaz and his nephew Jehoiachin).

(b) Some fluctuation is obvious in the number, dates and extent of the deportations. Jer. iii. 28-30 gives a total of 4600 persons, in contrast with Jer. xxvi. 14 (which omits the Jehoiakim group), and reckons three deportations in the 7th (i. 17th), 18th and 23rd years of Nebuchadrezzar. Only the second is specifically said to be from Jerusalem (the remaining are of Judaean), and the last has been regarded as a collection with which the book of Isaiah is connected.

(c) The city of Sura, deserted between 586 B.C. to the completion of the second temple) is the view of the canonical history (2 Chron. xxxvi. 21; Jer. xxvi. 11, xxix. 10; Zech. i. 12; cf. Tyre, Isa. xxiii. 15), but it is usually reckoned from the first deportation, which is supported by the census of landholders in the 21st year of Nebuchadrezzar (Jer. xxxix. xxix.), and it may be a round number. Another difficulty is the interpretation of the rephrases in Ezek. iv. 6 (cf. Egypt, xxxix. 11), and the 390 in v. 5 (Septuagint 150 or 190; 130 in Jos. x. 7 end). A period of fifty years is allowed by the chronological scheme (1 Kings vi. 1; cf. Jos. c. Ap. i. 21), and the late book of Baruch (vi. 3) even speaks of seven generations. Varying chronological schemes may have been current and some weight must be laid upon the remnant fragment of the historical information in later writings (see Daniel).

(d) The attitude of the neighboring peoples constitutes another serious problem (cf. 2 Kings xxiv. 2 and 2 Chron. xxxvi. 5, where Lucian’s records the second and third respectively as the Babylonian), conditions which the view of the circumstances of Gedaliah’s appointment (Jer. xl. 11, see above) as contrasted with the frequent prophecies against Ammon, Moab and Edom which seem to be contemporary (see Edom; Moab).

(e) Finally, the recurrence of similar historical situations in Judaean history must be considered. The period under review, with its relations between Judah and Egypt, can be illustrated by prophecies ascribed to a similar situation in the time of Hezekiah. But the descriptive prophetic elements of such prophecies are not to be expected respectively are the Babylonian, extraneous to the prophecy. When the text, and when we meet with indirect evidence for at least one similar disaster upon which the records are silent. There are a number of apparently related passages which, however, on internal grounds, are unsuitable to the prophecy. (a) There is an apparent hint in Jer. xxxvi. 30 that in the future a prophet shall not rise (b) There is a danger that they refer to such subsequent disasters. The scantiness of historical tradition makes a final solution impossible, but the study of these years has an important bearing on the history of the later Judaean state, which has been characterized from the standpoint of exile who returned from Babylon and regard them-selves as the kernel of “Israel.” From this point of view, the desire to intensify the denudation of Palestine and the fate of its remnant, and to look to the Babylonian exiles for the future, can probably be recognized in the writings attributed to contemporary prophets.

18. Internal Conditions and the Exile.—Many of the exiles accepted their lot and settled down in Babylonia (cf. Jer. xxix. 4-7); Jewish colonies, too, were being founded in Egypt. The agriculturists and herdsmen who had been left in Palestine formed, as always, the staple population, and it is impossible to imagine either Judah or Israel as denuded of its inhabitants. The down-trodden peasants were left in peace to divide the land among them, and new conditions arose as they took over the ownerless estates. But the old continuity was not entirely broken; there was a return to earlier conditions, and life moved more freely in its wonted channels. The fall of the monarchy involved a reversion to a pre-monarchical state. It had scarcely been otherwise in Israel. The Israelites who had been carried off by the Assyrians were also removed from the cult of the land (cf. 1 Sam. xxvi. 10, Ruth i. 15 seq.). It is possible that some had escaped by taking timely refuge among their brethren in Judah; indeed, if national tradition availed, there were doubtless times when Judah cast its eye upon the land with which it had been so intimately connected. It would certainly be unwise to draw a sharp boundary line between the two districts; kings of Judah could be tempted to restore the kingdom of their traditional founder, or Assyria might be complained towards a faithful Judaean vassal. The character of the Assyrian domination over Israel must not be misunderstood; the regular payment of tribute and the provision of troops were the main requirements, and the position of the masses underwent little change if an Assyrian governor took the place of an unpopular native ruler. The two sections of the Hebrews who had had so much in common were scarcely severed by a border-line only a few miles to the north of Jerusalem. But Israel after the fall of Samaria and the royal house of David was in effect a colony of its conquerors, an alien foreign land, although Judah itself had suffered from the intrusion of foreigners in the preceding centuries of war and turmoil, and strangers had settled in her midst, had formed part of the royal guard, or had even served as janissaries (§ 15, end).

Samaria had experienced several changes in its original population, and an instructive story tells how the colonists, in their ignorance of the religion of their new home, incurred the divine wrath. Cujus regio ejus religio—settlement upon a new soil involved dependence upon its god, and accordingly priests were sent to instruct the Samaritans in the fear of Yahweh. Thenceforth they continued the worship of the Israelite Yahweh along with their own native cults (2 Kings vii. 24-28, 33). Their descendants claimed participation in the privileges of the Judaean (cf. Jer. xii. 5), and must have identified themselves with the new state of Israel (xxiv. 9, xxviii. 1). They preserved of their origin and of the circumstances of their entry would be retold from a new standpoint; the ethnological traditions would gain a new meaning; the assimilation would in time become complete. In view of subsequent events it would be difficult to find a more interesting subject of inquiry than the internal religious and sociological conditions in Samaria at this age.

To the prophets the religious position was lower in Judah than in Samaria, whose iniquities were less grievous (Jer. iii. 11 seq., xxiii. 11 sqq.; Ezek. xvi. 51). The greater prevalence of heathen elements in Jerusalem, as detailed in the reforms of Josiah or in the writings of the prophets (cf. Ezek. viii.), would suggest.

1 So also one can now compare the estimate taken of the Jews in Egypt by Josephus with the Jewish religious traditions which are known to have prevailed later at Elephantine, where a small Jewish colony worshipped Yahu (Yahweh) at their own temple (see E. Sachau, “Drei aram. Papyrusurkunde,” in the Abhandlungen der Preussischen Akademie, Berlin, 1897).

2 Sargon had removed Babylonians into the land of Hatti (Syria and Palestine), and in 715 B.C. among the colonists were tribes apparently of desert origin (Tamud, Hayara, &c.); other settlements are specified to Esar-haddon and perhaps Assar-bani-pal (Ezek iv. 2, 10). See for the evidence, A. E. Cowley, Ency. Bibl. col. 2457, J. A. Montgomery, The Samaritans, pp. 46-57 (Philadelphia, 1907).
at least suggest that the destruction of the state was not entirely a disaster. To this catastrophe may be due the fragmentary character of old Judaean historical traditions. Moreover, the land was purified when it became divorced from the practices of a luxurious court and lost many of its worst inhabitants. In Israel as in Judah the political disasters not only meant a shifting of population, they also brought into prominence the old popular and non-official religion, the character of which is not to be condemned because of the attitude of lofty prophets in advance of their age. When there were sects like the Rechabites (Jer. xxxv.), when the Judaean fields could produce a Micah or a Zephaniah, and when Israel no doubt had men who inherited the spirit of a Hosea, the nature of the underlying conditions can be more vaguely appreciated. The writers of the historical books were loyal, not only in the unfavourable atmosphere of courts (see Jer. xxxvi., 2 x sqq.), but also in the circles of their followers (Isa. viii. 16). In the quiet smaller sanctuaries the old-time beliefs were maintained, and the priests, often perhaps of the older native stock (cf. 2 Kings xvii. 28 and above), were the recognized guardians of the religious cults. The old stories of earlier days encircle places which, though denounced for their corruption, were not regarded as illegitimate, and in the form in which the dim traditions of the past are now preserved they reveal an attempt to purify popular belief and thought. In the domestic circles of prophetic communities the part played by their great heads in history did not suffer in the telling, and it is probable that some part at least of their early sayings and actions was retained through the hands of men whose interest lay in the pre-eminence of their seers and their beneficent deeds on behalf of these small communities. This interest and the popular tone of the history may be combined with the fact that the literature does not take us into the midst of that world of activity in which the events unfolded themselves.

Although the records preserve complete silence upon the period now under review, it is necessary to free oneself from the narrow outlook of the later Judaean compilers. It is a gratuitous assumption that Israel was a manuscript of (north) Israel ceased with the fall of Samaria or Darius, &c. But this assumption falls short of the simple contemporary account of Cyrus himself as not having reached the idea of a Hebrew state; but these anticipations may have influenced the form which the Jewish traditions subsequently took. Nevertheless, if Cyrus was not originally a Persian and was not a worshipper of Yahweh (Isa. xlii. 25), he was at least tolerant towards subject races and their religions, and the persistent traditions unmistakably point to the honour in which his memory was held. Throughout the Persian supremacy Palestine was necessarily influenced by the course of events in Phoenicia and Egypt (with which intercourse was continual), and some light may thus be indirectly thrown on its otherwise obscure political history. Thus, when Cambyses, the son of Cyrus, made his great expedition against Egypt, with the help of the Pharaoh Cheos, Egypt and with the connivance of the Arabian kings it is highly probable that Palestine itself was concerned. Also, the revolt which broke out in the Persian provinces at this juncture may have extended to Palestine; although the usurper Darius encountered his most serious opposition in the north and north-east of his empire. An outburst of Jewish religious feeling is dated in the second year of Darius (520), but whether Judah was making a bold bid for independence or had received special favour for abstaining from the above revolts, external evidence alone can decide. Towards the close of the reign of Darius there was a fresh revolt in Egypt; it was quelled by Xerxes (485-465), who did not imitate the religious tolerance of his predecessors. Artaxerxes I. Longimanus (465-425), attracts attention because the famous Jewish reformers Ezra and Nehemiah flourished under a king of this name. Other revolts occurred in Egypt, and for these and also for the rebellion of the Persian satrap Megabyzos (c. 448-447), independent evidence for the position of Judah is needed, since a catastrophe apparently befell the unfortunate state before Nehemiah appears upon the scene. Little is known of the mild and indolent Artaxerxes II. Mnemon (404-359). With the growing weakness of the Persian empire Egypt reasserted its independence for a time. In the reign of Artaxerxes III. Ochus (359-338), Egypt, Phoenicia and Cyprus were in revolt; the rising was quelled without mercy, and the details of the vengeance are valuable for the possible fate of Palestine itself. The Jewish historian Josephus (Ant. xi. 7) records the enslavement of the Jews, the pollution of the Temple by a Chaldean priest, and the general destruction of Jerusalem. Other late sources narrate the destruction of Jericho and a deportation of the Jews to Babylonia and to Hyrcania (on the Caspian Sea). The evidence for the catastrophes under Artaxerxes I. and III. (see ARTAXERXES), exclusively contained in biblical and in external tradition respectively, is of particular importance, since several biblical passages refer to disasters similar to those of 586 but presuppose different conditions and are apparently of later origin. The murder of Artaxerxes III. by

---

1 The evidence for Artaxerxes III., accepted by Ewald and others (see W. R. Smith, Old Testament in Jewish Church, p. 438 sqq.; W. Judge, Kleinasiat. Stud., p. 170; T. K. Cheyne, Ency. Bib., col. 2902; F. C. Kent, Hist. [1894], pp. 230 sqq.) has however been questioned by Hoffmann, Biblical Names and Text (2nd ed., col. 3941). The account of Josephus (above) raises several difficulties, especially the identity of Bagose. It has been supposed that he has placed the record too late, and that this Bagose is the Judaean governor who flourished about 408 B.C. (see p. 286, n. 3.)

2 On the place of Palestine in Persian history see Persia: History, ancient, especially § 5 ii.; also ARTAXERXES; CAMBYSES; CYRUS; DARIUS, &c.; JEWS; TRAITS.
Bagdases gave a set-back to the revival of the Persian Empire. Under Darius Codomannus (356–330) the advancing Greek power brought matters to a head, and at the battle of Issus in 333 Alexander settled its fate. The overthrown of Tyre and Gaza secured the possession of the coast and the Jewish state entered upon the Greek period. (See § 25.)

During these two centuries the Jews in Palestine had been only one of an aggregate of subject peoples, and they had been provided in return for a regular tribute. They lived in comparative quietude; although Herodotus knows the Palestinian coast he does not mention the Jews. The earlier Persian kings acknowledged the various religions of the petty peoples; they were also allowed to keep their temples and would take care to preserve an ancient right of asylum or the privileges of long-established cults. Cyrus on entering Babylon had even restored the gods to the cities to which they belonged. The Persian kings, however, professed a monotheism which illustrates the environment of the Jews during this period. Those who had been scattered from Palestine lived in small colonies, sometimes mingling and intermarrying with the natives, sometimes strictly preserving their own individuality. Some took root in the strange lands, and, as later popular stories indicate, evidently reached high positions; others, retaining a more vivid tradition of the land of their fathers, cherished the ideal of a restored Jerusalem. Excavations at Nippur (q.v.) in Babylonia has brought to light numerous cuneiform documents of the Persian period from the last century B.C. to the time of Alexander, which can be classified as the name of the god Yahweh, the "God of Heaven," whose temple was located from the last Egyptian kings. Indeed, it was claimed that Cambyses had left the temple unharmed but had destroyed the temples of the Egyptians, the Babylonians, and the Persians in this country in which the elements of Babylonian-Assyrian culture prevailed, and the evidence from such widely separated fields is instructive for conditions in Palestine itself.4

20. The Restoration of Judah.—The biblical history for the Persian period is contained in a new source—the books of Ezra and Nehemiah, whose standpoint and period are that of Chronicles, with which they are closely joined. After a brief description of the fall of Jerusalem the "seventy years" of the exile are passed over, and we are plunged into a history of the return (2 Chron. xxxvi.; Ezra i.). Although Palestine had not been depopulated, and many of the exiled Jews remained in Persia, the standpoint is that of those who returned from Babylon. Settled in and around Jerusalem, they look upon themselves as the sole community, the true Israel, even as it was before the Exile. As soon as the Israel entered and developed independently in the land of its ancestors, it look back from the age when half-suppressed hostility with Samaria was still out, and when an exclusive Judaism had been formed. The interest of the writers is as usual in the religious history; they were indifferent to, or perhaps rather ignorant of, the strict order of events. Their narratives can be partially supplemented from other sources (Haggai; Zechariah i.–vi.; Isa. xlv.–lxvi.; Malachi), but a consecutive sketch is impossible.4

1 Thus a decree of Darius I. takes the part of his subjects against the excessive zeal of the official Godatas, and grants freedom of conversion from forced labour to those connected with a temple of Apollo in Asia Minor (Bibl. de correspondence hellénique, v. 1895, p. 385). See also E. Meyers, Entdeckung des Judenlandes, p. 19 seq.; cf. id. Forschungen, iv. 257 seq.

2 In addition to this, the Egyptian story of the priest Uzah-hor at the court of Cambyses and Darius reflects a policy of religious tolerance which is attested by the biblical account of Ezra and Nehemiah (Brugsch, Gesch. Aeg., pp. 784 seq.; see Cheyne, Jew. Relig. Life after the Exile, pp. 40–43).

3 From Tima in north Arabia, also, there is monumental evidence of the 7th century B.C. for Babylonian and Assyrian influence upon the language, cult and art. For Nippur, see B. Esped. of Unit. of Pennsylvania, series A, vol. ix. (1898), by H. V. Hilprecht; for Elephantine, the Mond papyri, A. H. Sayce and A. E. Cowley, Aramäische Papyri Discovered at Aswan (1903), and those cited above (p. 285, n. 1). For the Jewish colonies in general, see H. Guthe, Ency. Bib., art. "Dispersion," with references; also below, § 25 seq.

In 536 B.C. the captive Judean king, Jehoiachin, had received special marks of favour from Nebuchadrezzar’s son Amil-•••

There is an effort to preserve the continuity of tradition (a) in Ezra ii. which gives a list of families who returned from exile earlier than the time of Cyrus (contrast 1 Esdras iv. 43 seq.), a view which, in spite of Dan. i. 2, v. 2 seq., conflicts with 2 Kings xxv. 13 and xviii. 13 (see, however, v. 14). These attempts have been made to adjust contradictory representations is suggested by the prophecy ascribed to Jeremiah (xxvii. 16 seq.) where the restoration of the holy vessels finds no place in the shorter text of the Septuagint (see W. R. Smith, Old Test. and Jew. Church, pp. 104 seq.).
ideal kingdom, the trusted and highly favoured minister who was the signet-ring upon Yahweh's hand (contrast Hag. ii. 24 with Jer. xxiii. 3). Zechariah, in his turn, proclaims the overthrow of all difficulties in the path of the new king, who shall rule in glory supported by the priest (Zech. vi. 1). What political aspirations were revived, what other writers were inspired by these momentous events are questions of inference.

A work which incalculates the dependence of the state upon the purity of its ruler is the unfinished book of Kings with its story of the Davidic dynasty and the Temple. Its ideals culminate in Josiah (§ 16, end), and there is a strong presumption that it is intended to be a later, almost contemporaneous account of the events outlined above. But its treatment of the monarchy is only part of a great and now highly complicated literary undertaking (traceable in the books of Joshua to Kings), inspired with the thought and coloured by language, thought, and for Deuteronomistic purposes (especially the second part), which forms the necessary introduction. Whatever reforms Josiah actually accomplished, the restoration afforded the opportunity of bringing the Deuteronomic teaching into action; though its influence is not, it is probable that Deuteronomy was not much earlier than the second half of the 6th century B.C. It shows a strong nationalistic feeling which is not restricted to Judah alone, but comprises an Israel from Kadesh in Naphtali in the north to the borders of Egypt in the south, and Jordan. Distinctive non-Judaean features are included, as in the Samaritan liturgical office (Deut. xxxvii. 14–26), and the evidence for the consideration that traditions originally of (north) Israelite interest were then modified to suit the needs of the new Judaeo-Jerusalem (viz. in the Deuteronomic book of Kings) independently confirms the inferences drawn from Deuteronomy itself. The absence of direct testimony can be partially supplied by later events which bear upon the development of the Deuteronomic spirit of the Deuteronomy. This aspect of the developing relations with Samaria which had been by no means so unfriendly as the historians represent. A common ground for Judaism and Samaritanism is obvious, and it is in this obscure age that it is to be sought.

It is the curiously accidental appearance of more than a passing glimpse at the restoration of Judaean fortunes; not until the time of Nehemiah, about 140 years after the fall of Jerusalem, does the historical material become less imperfect. Upon the liberation of the), prophet Jeremiah (Jer. xxvi. 23), which is a throw forward by another body of evidence long been recognized that 1 Chron. ii. 4 represents a Judah composed mainly of groups which had moved up from the south (Hebron) to the plains. The writing of Judges Calebic and Jerahmeel, Kenites or Rechabite families, scir., and the "sons of Hezron, claim some relationship with Gilead. The nations point generally to an affinity with south Palestine and north Arabia (Edom, Midian, &c.; see especially the lists in Gen. xxxviii.); and suggests, a real influence which has not been recognized in the recent present account. The whole is indications of the original history and traditions of Kades, and it is in the northwards in which Caleb, Kenites, and others took part (§ 5). On this, and on others and grounds besides, it has long been felt that south Palestine, with its north Arabian connections, is of real importance in biblical study. In Deuteronomic, however, and probably the traditions of the early history becomes still more intricate when one observes such a feature as the late interest in the Israelite tribes. No doubt there is much that is purely artificial and untrustworthy in the late (post-exilic) representations of these tribes, but it is almost incredible that the historical foundation for their early career is served from the written sources by centuries of warfare, immigration and other disturbing factors. On the one hand, conservative scholars insist upon the close material relation between the constituent sources; critical scholars, on the other hand, while recognizing much that is relatively untrustworthy, refrain from departing from the general outlines of the canonical history more than a hundred years. When one considers some of the late additions and corrections of the earlier history, with all their inherent weaknesses. But

The view that Deuteronomy is later than the 7th century has been suggested by J. Wellhausen, De genitibus et familiis Judaicis (Göttingen, 1870); Prolegomena (Eng. trans.), pp. 216 seq., 342 seq., and 443 seq. (from art. "Israel"). 1 E. Meyer, lv. 2, Ency. Brit. 9th ed.; also A. A. Kennedy, Religionsgesch. 2, 175 seq., 176–182; W. K. Smith, Prophets of Israel, pp. 28 seq., 379.

2 See § 23, end, and Levites. When Edom is renowned for wisdom and a small Judaean family boasts of sages whose names have an alien-persian affinity (1 Chron. ii. 6), and when such names as Korah, Helel, and other persons occur in the prophetic books, there is no inherent improbability in the conjecture that the "southern" families settled around Jerusalem may have left their mark in other parts of the Old Testament. It is another question whether much literature can be identified (for Cheyne's views, see Ency. Bib. "Prophetic Literature"; "Psalms," and his recent studies).
historical criticism is faced with the established literary conclusions which, it should be noticed, place the Deuteronomistic and priestly compilations posterior to the great changes at and after the fall of the northern kingdom, and, to some extent, contemporary with the Persian period. These latter were the only means by which detrimental to the preservation of older literary records, and vicissitudes which, if they have not left their mark on contemporary history—which is singularly blank—may be traced on the representatives of foreign and domestic origin. The Persian historians and internal literary features which unite to show that the application of the literary hypotheses of the Old Testament to the course of Israelite history is still incomplete, and they warn us that the initial conclusions derived from them should not be accepted upon the accuracy of their history. Future research may not be able to solve the problems which arise in the study of the period now under discussion; it is the more necessary, therefore, that all efforts should be devoted to the study of purely external evidence (see further § 24; and Palestine: History).

21. Nehemiah and Ezra.—There is another remarkable gap in the historical traditions between the time of Zerubbabel and the beginning of the Persian Empire (Artaxerxes I). In obscure circumstances the enthusiasm of the Jews for the history of their kings and their priests, and the need for their presence in the city of Jerusalem, led them to return to their former homeland. This is the time of Nehemiah and his exploits, which may be divided into two parts: the rebuilding of the walls of Jerusalem and the Persian lordships in Babylonia and Susa. In both cases, Nehemiah's actions were intended to strengthen the community and the political and religious authority of the Jewish nation in the face of external threats. The rebuilding of the walls of Jerusalem was a significant event in the history of the Jews, as it symbolized the return to their homeland and the restoration of their religious and political independence. Nehemiah's actions were also a response to the political situation in Babylonia and Susa, where Jewish communities were facing challenges from local authorities. In this context, Nehemiah's role was that of a diplomat, working to protect the interests of the Jewish nation and to promote its spiritual and political independence. His actions were a reflection of the larger historical context of the Persian period, in which the Jews sought to establish themselves as a viable and independent community in the face of external threats.
and ritualistic; the other, more cosmopolitan, extended a freer welcome to strangers, and tolerated the popular elements and the superstitious cults which are vividly depicted (Isa. lxv. seq.). But the former gained the day, and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, its adherents were prepared to take measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to inquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and in due course he read the “book of the Law of Moses” daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.).

A special account is given of this return (Ezra ix. seq.) and the description of Ezra’s horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community (x. 24 seq.). The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly stayed the work for a time, and Ezra’s attempts to enforce the laws were delayed by Nehemiah’s return with a part of the people who had not returned, and the building of the Temple continued. It was this rebuilding that is described by Ezra (iv. 7-23). The walls were completed (Ezra iv. 2. seq.), and the Temple was erected (iv. 21 sqq.). Ezra and Nehemiah now appear together in the story of the rebuilding of the Temple and the returns from the captivity. Ezra is the more clear and definite record, and the story has been traditionally attributed to him. Nehemiah’s book is the sequel;

The record emphasizes the religious and political significance of the return from exile. The people were gathered together, and in due course Ezra read the “book of the Law of Moses” daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 sqq.).

A special account is given of this return (Ezra ix. seq.) and the description of Ezra’s horror at the prevalence of intermarriage, which threatened to destroy the distinctive character of the community (x. 24 seq.). The Samaritans reported that the Jews who had returned from the king to Jerusalem were rebuilding the city and completing its walls, an act calculated to endanger the integrity of the province. Artaxerxes accordingly stayed the work for a time, and Ezra’s attempts to enforce the laws were delayed by Nehemiah’s return with a part of the people who had not returned, and the building of the Temple continued. It was this rebuilding that is described by Ezra (iv. 7-23).

The walls were completed (Ezra iv. 2. seq.), and the Temple was erected (iv. 21 sqq.). Ezra and Nehemiah now appear together in the story of the rebuilding of the Temple and the returns from the captivity. Ezra is the more clear and definite record, and the story has been traditionally attributed to him. Nehemiah’s book is the sequel;
references to the rebuilding of the Temple in the reign of Artaxerxes (1 Esdras ii. 18, not in Ezra iv. 12; but both in a context relating to the history of the Temple), and (b) by the otherwise inaccurate statement that the Temple was finished according to the decree of Cyrus, Darius and Artaxerxes king of Persia (Ezra iv. 12). The untrustworthy account of the return in the time of Cyrus (Ezra i. seq.) or Darius (1 Esdras iv. seq.; probably the older form) is current indebted to material which seems to have belonged to the history of the work of Nehemiah (cf. the inscription with Neh vii. 10). The importance of the return in the reign of Artaxerxes (Ezra iv. 12) seems to be connected with other references to some new settlement (Neh. xi. 26, 27, 28, especially xii. 29). The independent testimony of the narrative of the building of the Temple in ii. (cf. Neh. iii.), and of the return in Neh. x. (cf. Ezra iv. 12), and clearly illustrates the strength of the groups of "southern" origin whose presence is only to be expected (p. 285). Moreover, the late compiler of 1 Chroncles distinguishes a Judah composed almost exclusively of "pure" stock (Gen. ii. 20, 21; Neh. i. 11) from a subsequent stage when the first inhabitants of Jerusalem, whether living in the main to the new population after Nehemiah had repaired the ruins (1 Chron. ix. and Neh. xi.). Consequently, underlining the canonical form of post-exilic history, one that perhaps recognizes some fresh disaster, after the completion of Zerubbabel's temple, when Judah suffered grievously at the hands of its Edomite brethren (in Mâlach, date uncertain, vengeance has at last been taken): Neh. ix. Such traditions and the exiles who returned at this period have been thrown back and localized on the work of Zerubbabel. The criticism of the history of Nehemiah, which leads to this conjecture, suggests that if Nehemiah repulsed the Medes, but failed to check the Babylonians (cf. Ezra iv. 3, where the building of the Temple is concerned) and returned to the city, (cf. Neh. xi. 12), it is extremely unlikely that Samaria had hitherto been seriously hostile; see also C. C. Torrey, Ezra Studies, pp. 321-333.

The triumph of the Judaean community, the true "Israel," the right to which the Exile is poind to in a confused past. The Judaeana pervades the present sources, and whilst David and Solomon ruled over a united land, the separation unto Edom is viewed as one of caji-worshiping northern tribes from Jerusalem, and the supposed subjection and the disruption of the Zadokiten. It is from this narrower standpoint of an exclusive and confined Judah (and Benjamin) that the traditions as incorporated in the late recensions gain fresh force, and in Israel's recognition of the authority of the Zadokite, as against that of the high priestly line continued during the present period. The book has no finale and the sudden break may not be accidental. It is replaced by Chronicles, which, refining itself to Judaean history from a later standpoint (after the Persian age), includes new and characteristic traditions wherein some recollection of more recent events may be recognized. Upon the south Judaean or southern Palestinian element shows itself in Judaean genealogies and lists; there are circumstantial stories of the rehabilitation of the Temple; there is an example of the royal cult in culture; there are fuller traditions of inroads upon Judah by foreigners and their allies. There is also a more definite subordination of the royal authority to the priesthood (so too in the writings of Ezekiel, g.p.); and matters of more general importance in the accounts of kings who dared to contend against the priests (Jehosh. Uzziah, etc.). It points to a point of authority, a hint of which is already found in the reconsecration of Zerubbabel and the priest Joshua in a passage ascribed to Zechariah (ch. vi.).

Post-exilic Judaism.—With Nehemiah and Ezra we enter upon the era in which a new impulse gave to Jewish life and thought that form which became the characteristic orthodox Judaism. It was not a new religion that took root; older tendencies were diverted into new paths, the existing material was shaped to new ends. Judah was now a religious community whose representative was the high priest of Jerusalem. Instead of sacerdotal kings, there were the royal priests, anointed with oil, arrayed with kingly insignia, claiming the usual royal due in addition to the customary rights of the priests. With their priestly and Levites, and with the chiefs and nobles of the Jewish families, the high priest directs this small state, and his death marks an epoch as truly as did that of the monarchs in the past. This hierarchical government, which can find no foundation in the Hebrew monarchy, is the forerunner of the Sanhedrin (g.p.); it is an institution which, however inaugurated, set its stamp upon the narratives which have survived. Laws were recast in accordance with the requirements of the time, with the result that, by the side of usages evidently of very great antiquity, details now appear which were previously unknown or wholly unsuitable. The genealogy and the scanty historical traditions themselves represent one as supreme importance for the history of the Jews, once seemed devoid of interest, and it is entirely through the laborious scholarship of the 19th century that it now begins to reveal its profound significance. The Graf-Wellhausen hypothesis, that the hierarchical law in its complete form in the Pentateuch stands at the close and not at the beginning of biblical history, that this mature Judaism was the fruit of the 5th century B.C. and not a divinely appointed institution at the exodus (nearly ten centuries previously), has won the recognition of almost all Old Testament scholars. It has been substantiated by numerous subsidiary investigations in different departments, from different standpoints, and under various aspects, and can be replaced only by one which shall more adequately explain the literary and historical evidence (see further, p. 289).

The post-exilic priestly spirit represents a tendency which is almost identical with the Judaean Deuteronomistic book of Kings but is fully mature in the post-exilic material. This reaches its goal in a parallel, book of Chronicles (g.p.). The priestly traditions that originated in the period of the work of Zerubbabel and the priests are further developed in the still later book of Jubilees, or "Little Genesis," where they are used to demonstrate the pre-Mosaic antiquity of the priestly or Légitimal institutions. There is also an unmistakable development in the laws; and the priestly legislation, though ahead of both Ezekiel and Deuteronomy, not to mention still earlier usage, not only continues to undergo continual internal modification, but finds a further distinct development, in the way of definition and interpretation, outside the Old Testament—in the Talmud (g.p.). Upon the characteristics of the post-exilic priestly writings we need not dwell. Though one may often be repelled by their lifelessness, their lack of spontaneity and the externalization of the ritual, it must be recognized that they placed a strict monotheism upon a legal basis. "It was a necessity that Judaism should inscribe itself in this manner; without those hard and ossified forms the preservation of its essential elements would have proved impossible. At a time when all nationalities, and at the same time all that historic religion and national customs, were beginning to be broken up, the seeming cosmos and real chaos of the Graeco-Roman Empire, the Jews stood out like a rock in the midst of the ocean. When the natural conditions of independent nationality all failed them, they nevertheless artificially maintained it with an energy truly marvellous, and thereby preserved for themselves, and at the same time for the whole world, an eternal good."

If one is apt to acquire too narrow a view of Jewish legalism, the whole experience of subsequent history, through the heroic age of the Maccabees (g.p.) and onwards, only proves that the minuteness of ritual procedure could not cramp the heart. Besides, this was only one of the aspects of Jewish literary activity. The work represented in Nehemiah and Ezra, and put into action by the supporters of an exclusive Judaism, certainly won the day, and their hands have left them impress upon the historical tradition. Yahwism, like Islam, had its sects and tendencies, and the opponents to the stricter ritualism always had followers. Whatever the predominant party might think of foreign marriages, the tradition of the half-Mosaic origin of David serves, in the beautiful idyll of Ruth (g.p.), to suggest the debt which Judah and Jerusalem owed to one at least of its neighbours. Again, although some may have desired a self-contained community opposed to the heathen neighbours of Jerusalem, the story of Jonah implicitly contends against the attempt of Judaism to close its doors. The conflicting tendencies were incompatible, but Judaism retained the...
incompatibilities within its limits, and the two tendencies, prophetic and priestly, continue, the former finding its further development in Christianity. The Graf-Wellhausen hypothesis (§ 4) does not pretend to be complete in all its details and it is independent of its application to the history of the Old Testament. But the general view of its thesis prevails, mere desultory criticism of the internal intricacies being quite inadequate. Maintaining that the position of the Pentateuch alone explains the books which follow, conservative writers and some of the reconstructions which attempt to render the law-roll which explains the noteworhies of Josiah (§ 16), but since it is naturally admitted that religious conditions had become quite inconsistent with Mosaicism, the conservative view implies, as the "longest" Deuteronomy must have differed profoundly from any known Mosaic writings to which earlier pious kings and prophets had presumably adhered. Similarly, the "book of the Law of Moses," brought from Babylon by Ezra (Ezra vii.; Neh. vii.) and the "book of the return of the people" to Jerusalem, from which the people were enlightened, and conservative writers, who oppose the theory that a new law was then introduced, emphasize: (a) the previous existence of legislation (to prove that Ezra's book was not entirely a novelty); and (b) the gross wickedness in Judah (as illustrated by the prophets) from the time of Josiah to the return. This illustrates the limitations of which, though often overlooked by their readers, are very detrimental to the position they endeavour to support, and the objections they bring against the theory of the introduction of new law-books (and the gross wickedness of Judah) is not better illustrated by the introduction of Mosaic teaching which had been admittedly ignored or forgotten. Their arguments have most weight, however, when they show the hazardous character of reconstructions which rely upon the idea of a complete historical monograph, in which Ezra really brought from Babylon is uncertain; the writer, it seems, is merely narrating the introduction of the Law ascribed to Moses, even as a predecessor has recounted the discovery of the Book of the Law, the Deuteronomic code subsequently included in the Pentateuch.

The importance which the biblical writers attach to the return from Babylon in the reign of Artaxerxes forms a starting-point for several reasons. Thus, in the most influential of the many attempts to explain the influence of Babylonian upon the Old Testament, it is obviously necessary to ask whether certain features (a) are of true Babylonian origin, or (b) merely find parallels or analogies in its stores of literature; whether the linguistic and formal features are due to the influence of the Assyrian, Persian, or even the Syrian-Assyrian domination or to the exiles who now returned. Again, there were priestly and other families—some of whom at least claim a "southern" origin—already settled around Jerusalem, and questions inevitably arise concerning the exact conditions which gave us the Old Testament in its present form. To this we may ascribe the literature of the Priestly writers (symbolized by P), which differs markedly from the other sources. Yet it is clear from the book of Genesis alone that in the age of Priestly writers and compilers there were other phases of thought. Popular stories with many features of popular religion were current. They could be, and indeed had been made more edifying; but the very noteworthy conservatism of even the last compiler or editor, in contrast to the re-shaping and rewriting of the materials in the book of Jubilees, indicates that the Priestly spirit was not that of the whole community. But through the Priestly hands the Old Testament history passed, and their standpoint colours its records.

This is especially true of the post-exilic and post-babylonian periods, when the effort is made to preserve the continuity of Israel and the Israelite community (Chronicles—Ezra—Nehemiah). The latterness aroused by the ardent and to some extent just unseal of the early period naturally lessens the interest of these books, and the attempt of the Priestly community to present a trend to legitimate new circumstances. Priesthoods, whose traditions connect them with the south, are subordinated; the ecclesiastical records are re-shaped or re-adjusted; and a picture is presented, at least so far as contemporary conditions (the idea thought) were settled once and for all in the days of the exodus from Egypt. Many features gain in significance as the account of the Exodus, the foundation of Israel, is read in the light of the age when, after the rededication of the temple, the former had assumed its present shape; it must suffice to mention the supremacy of the Aaronite priests and the glorification of uncomprising hostility to foreign marriages. The most "historical" tradition has some significance for the development of thought or of history-writing, and thus its internal features are ultimately of historical value. Only from an exhaustive comparison of controlling data can the scattered hints be collected and classified. Therein lies much that is suggestive, for example, in the relation between the "post-exilic" additions to the prophecies and their immediately earlier form; or in the singular prominence of the Judean family of Perez (Ezra), a prominent Zadokite, and the Messiah, a type of the connection with the Davidic dynasty, Ruth iv.; its position as head of all the Judean sub-divisions, 1 Chron. ii. 5 sqq.; or in the late insertion of local tradition encircling Jerusalem; or in the perplexing relations of the historical to the literary, with the suppression or displacement of that which is superficial or ephemeral. We have, however, to note the two or three centuries which are of the first importance for biblical history and theology.

23. Old Testament History and External Evidence.—Thus the Old Testament history, the history of the Jews during the first great period, describes the relation of the Hebrews to surrounding peoples, the superiority of Judah over the faithless (north) Israelite tribes, and the reorganization of the Jewish community in and around Jerusalem. The writer of Ezra has put his material together with great skill, and the total effect is an impression of unity, which is designed, and is to be expected in a compilation. But closer examination reveals remarkable gaps and irreconcilable historical standpoints. For all serious biblical study, the attempt must be to glean from every text the data that can be got from the archaeological evidences and from the surrounding circumstances which imply, must inevitably be carefully considered, and upon the result depends, directly or indirectly, almost every subject of Old Testament investigation. Yet it is necessary to discover what evidence has been preserved in the development of Hebrew history from the pages of the Old Testament alone. The keen interest taken by the great prophets in the world around them is not prominent in the national records; political history has been largely written away, and the very sweep of the narrative is not conspicuous in the didactic narratives. To external evidence one must look, therefore, for that which did not fall within the scope or the horizon of the religious historians. They do not give us the records of the age of the Babylonian monarch Khorsabad, and perhaps not the records of Babylonia's conquests in the XVIIIth and following dynasties, or of the period illustrated by the Amarna tablets (§ 3). They treat with almost unique fullness a few years in the middle of the 9th century B.C., but leave until after the time when the Babylonian conquests began. It might be expected that the antiquity of the elements of history proves or presupposes the antiquity of the records themselves, or even to deny the presence of some historical kernel merely on account of unhistorical elements in the record. But the basis of their history is not the internal research constantly justifies the cautious attitude which has its logical basis in the internal conflicting character of the written traditions or in their divergence from ascertained facts; at the same time we can hardly say that since the Old Testament has its limits. Heuere is the absence of more complete external evidence one is obliged to recognize the limitations of Old Testament historical criticism, even though this recognition means that positive reconstruction, tory are more precarious than negative conclusions.

The naive impression that each period of history was handled by some more or less contemporary authority is not confirmed by a criticism which confines itself strictly to the literary evidence. An important point is, therefore, the complete separation of the critical view of the fact that the biblical history has been compiled from relatively late standpoints finds support in the still later treatment of the events—in Chronicles as contrasted with Samuel-Kings or Kings and Chronicles as contrasted with Ezra. We can only trace the historical claims in Egypt the form which old traditions have taken in Manetho (Maspero, Rec. de travaux, xxvii., 1905, p. 22 sqq.); cf. also the late story of Rameses ii. and the Hittites (J. H. Breasted, Anc. Rec. of Egypt, iii. 199 sqq.). While in Babylon one may note the didactic spirit of the scribes; in the reign of Artaxerxes I. the Hamar-murabi (A. H. Sayce, Proc. Soc. Biblical Archæol., 1907, pp. 13 sqq.). The links which unite the traditional heroes with Babylonia (e.g. Abraham, Ezra), Mesopotamia (e.g. Jacob), Egypt (e.g. Joseph,
JERUSALEM, Midian (e.g. Moses, Jethro), &c., like the intimate relationship between Israel and surrounding lands, have a significance in the light of recent research. Israel can no longer be isolated from the politics, culture, folk-lore, thought and religion of western Asia and beyond. The Palestinian-Jewish-Persian, thought branch into the world of ancient Oriental life, and this life, in spite of the various forms in which it has from time to time been shaped, still rules in the East. This has far-reaching consequences for the tradition of monotheism, and in particular for the question of the origin of the Old Testament. It is common knowledge that the Old Testament is closely connected with the history of the ancient Hebrews, and especially with the history of the state of Judea, which, of course, had by the time of the Roman conquest, been swallowed up by the empire of Alexander the Great. The relationship of the Jews to the Hellenistic world, which was a characteristic feature of the history of the Jews under Alexander, is a matter of great importance for the interpretation of the Old Testament.

25. Alexander the Great — The second great period of the history of the Jews begins with the conquest of Asia by Alexander the Great, the disciple of Aristotle, king of Macedon and captain-general of the Greeks. It ends with the destruction of Jerusalem by the armies of the Roman Empire, which was, like Alexander, at once the masterful pupil and the docile patron of Hellenism. The destruction of Jerusalem might be regarded as an event of merely domestic importance; for the Roman cosmopolitan it was only the removal of the titular metropolis of a national and an Oriental religion. But, since a derivative of that religion has come to be a power in the world at large, this event has to be regarded in a different light. The destruction of Jerusalem in A.D. 70 concludes the period of four centuries, during which the Jews as a nation were in contact with the Greeks and exposed to the influence of Hellenism, not wholly of their own will nor yet against it. Whether the master of the provinces, in which there were Jews, be an Alexander, a Ptolemy, a Seleucid or a Roman, the force by which he rules is the force of Greek culture. These four centuries are the Greek period of Jewish history.

The ancient historians, who together cover this period, are strangely indifferent to the importance of the Jews, upon which Josephus is at pains to insist. When Alexander invaded the interior of the Eastern world, which had hitherto remained inviolable, he came as the champion of Hellenism. His death prevented the achievement of his designs; but he had broken down the barrier, he had planted the seed of the Greek influence in the four quarters of the Persian Empire. His successors, the Diadochi, carried on his work, but Antiochus Epiphanes was the first who deliberately took in hand to deal with the Jews. Daniel (viii. 8) describes the interval between Alexander and Antiochus thus: "The he-goat (the king of Greece) did very greatly: and when he was strong the great horn (Alexander) was broken; and instead of it came up four other ones—four kingdoms shall stand up out of his nation but not with his power. And out of one of them came forth a little horn (Antiochus Epiphanes) which waxed exceeding great (towards the south Egypt, Israel, Babylon)."

The significance of the Jewish community in Palestine was that they were the "beauteous land of the he-goat" of Daniel's prophecy, and the reforms of Nehemiah were directed towards the establishment of a religious community at Jerusalem, in which the rigger of the law should be observed. As a people who cherished their codes and traditions, and as a race whose chief sanctuary anyway maintained the ethnic traditions and ideals. In Egypt, moreover, in Babylon and in Persia individual Jews had responded to the challenges of their environment and won the respect of the aliens with whom they resided. The law which they cherished as their standard and guide kept them united and conscious of their identity. And the individuals, who acquired power or wisdom among those outside Palestine, reflected a glory upon the nation and its temple.

In connexion with Alexander's march through Palestine Josephus provides a tradition of his visit to Jerusalem. Alexander's narrative of Alexander's exploits, whose fame had already faded before the greater glory of Rome, there is no mention of the visit or the city or the Jews. Only Tyre and Gaza barred the way to Egypt. He crossed the Red Sea and the ocean, and then, by the central road, came to the city and to the temple and the palace of the king. This was the method by which the kingdom of Coele-Syria, made its submission and furnished supplies. Seven days after the capture of Gaza Alexander was at Pelusium. According to the tradition which Josephus has preserved the high priest refused to transfer his allegiance and Alexander therefore marched against Jerusalem after the capture of Gaza. The high priest dressed in his robes went out to meet him, and at the sight Alexander remembered a dream, in which such a man had appeared to him as the appointed leader of his expedition. So the danger was averted: Alexander offered sacrifice and was shown the prophecy of Daniel, which spoke of him. It is alleged, further, that at this time certain Jews who could not refrain from intermarriage with the Old Testament into its present form, and its preservation despite hostile forces, are the two remarkable phenomena which most arrest the attention of the historian; it is for the theologian to interpret their bearing upon the history of religious thought. (S. A. C.)
the heathen set up a temple on Mt Gerizim and became the Samaritan schism (§ 21 above). The combination is certainly artificial and not historical. But it has a value of its own inasmuch as it illustrates the permanent tendencies which mould the history of the Jews. The sad history of the schisms and schismatic movements, subject to dreams and visions, shrines in order to assure himself or his followers of victory. But it is not clear that he had such need of the Jews or such regard for the Temple of Jerusalem that he should turn aside on his way to Egypt for schismatic purposes.

However this may be, Alexander's tutor had been in Asia and had met a Jew there, if his disciple Clearchus of Soli is to be trusted. "The man," Aristotle says, "was by race a Jew out of Coele-Syria. His name was Clearchus and he was one of the Indian philosophers. It is reported that philosophers are called Calani among the Indians and Jews among the Syrians. The Jews take their name from the place of abode, which is called Judea. The name of their city is very similar to Judea. Herein, however, they differ: there had been a guest in many homes and having come down gradually from the highlands to the sea-coast, was Hellenic not only in speech but also in soul. And as we were staying in Asia at the time, the man cast his lot with the Hellenes in Judea. He was a man of tradition, inquiring into the nature and things; it was enough for him that Yahweh had created and ruled all things. He was a man of tradition, but not for many—he should study the Scriptures which had come down, and so become a scribe. For the scribe, as for the man at the plough-tall, the Law was the rule of life. All, however much or little, by whom were set up, must be the study of God, from whom come good things and evil, life, death, poverty and riches. It was not for men to meddle with secrets which are beyond human intelligence. Enough that the individual did his duty in the state of life and time in which he found himself, and to that extent he was a child of the world, and free. As a teacher Jesus gave his own services freely. For the soldier he had no commendation. There were physicians who understood the use of herbs, and must be rewarded when their help was invited. But this was not the case. If a head of a family adopted to get a head of a family, he must pay the priest's dues. The centre of the life of Israel was the Temple, over which the high priest presided and which was inhabited by Yahweh, the God of Israel. The scribe could train the individual in morals and in manners; but the high priest was the ruler of the nation.

As ruler of the nation the high priest paid its tribute to Egypt, its overlords. But Josephus reports of one Onias that for avarice he withheld it. The sequel shows how a Jew might rise to power in the civil service of the Egyptian Empire and yet remain a hero to some of the Jews—provided that he did not intermarry with a Gentile. For Joseph, the son of Tobiah and nephew of Onias, went to Egypt in an Egyptian manner, there was a certain Hellenic society, and he wrote a history of his country. The agreement with the Alexandrine work is so close that we must presume that it was a translation of it. For the work was on the limits of the Law. Apparently it was in progress at the time of his coming to Egypt in the reign of Ptolemy Euergetes I. or 11. He seems to regard this body of literature as the answer to the charge that the Jews had contributed nothing for learning, for which reason, the so-called "SacredScriptures became a bond of union for the Jews of the dispersion and were at least capable of being used as an instrument in the conversion of the world to Judaism. So far as the latter function is concerned Philo confesses that the Law in his day shared the obscurity of the people, and seems to imply that the proselytes adopted little more than the monotheistic principle and the observance of the Sabbath. According to Justinus the sons of such proselytes were apt to go farther and to substitute the Jewish Law for the Roman.

Romanius autem soliti contemnere leges,
Judaicam ediscunt et servant ac metuant ius
Tradidit arcano quodque volumine Moyzes.

27. The Seleucidae.—To the end of the 3rd century the Palestinian Jews became involved in the struggle between Egypt and Syria. In Jerusalem there were partisans of both the combatants. The more orthodox or conservative Jews preferred the tolerant rule of the Ptolemies: the rest, who chafed at the isolation of the nation, looked to the Seleucids, who inherited Alexander's ideal of a united empire based on a universal adoption of Hellenism. At this point Josephus cites the testimony of Polybius: "Scopas, the general of Ptolemy, advanced into the highlands and subdued the nation of the Jews in the winter. After the defeat of Scopas, Antiochus gained Bataanea and Samaria and Abila and Gadara, and a little later those of the Jews who live round the Temple called Jerusalem adhered to him." From this it appears that the pro-Syrian faction of the Jews had been strong and active enough to bring an Egyptian army upon them (199–198 B.C.). Josephus adds that an Egyptian garrison was left in Jerusalem. This act of oppression presumably strengthened the Syrian faction of the Jews and led to the transference of the nation's allegiance.

The language of Polybius suggests that he was acquainted with other Jewish communities and with the fame of the Temple: in his view they are not an organized state. They were not even a pawn in the game which Antiochus proposed to play with Rome for the possession of Greece and Asia Minor. His defeat left the territories of his kingdom exhausted and its extent diminished; and so the Jews became impotent to challenge the desire of the sages of their wealth and their position on the frontier. To pay his debt to Rome he was compelled to resort to extraordinary methods of raising money; he actually met his death (187 B.C.) in an attempt to loot the temple of Elymas.

The pro-Syrian faction of the Palestinian Jews found their opportunity in this emergency and informed the governor of Coele-Syria that the treasury in Jerusalem contained untold sums of money. Heliodorus, prime minister of Seleucus Philopator, who succeeded Antiochus, arrived at Jerusalem in his progress through Coele-Syria and Phoenicia and declared the treasure confiscated to the royal exchequer. According to the Jewish legend Heliodorus was attacked when he entered the Temple by a horse with a terrible rider and by two young men. He was scourged and only escaped with his life at the intervention of Onias, who appears to have been the governor of the temple. The people pleaded with him vainly that the treasure included the deposits of widows and orphans and also some belonging to Hyrcanus, "a man in very high position." Onias was accused by his enemies of having given the information which led to this outrage and when, relying upon the support of the provincial governor, they proceeded to attempt assassination, he fled to Antioch and appealed to the king.

When Seleucus was assassinated by Heliodorus, Antiochus IV., his brother, who had been chief magistrate at Athens, came
back secretly “to seize the kingdom by guile” (Dan. xi. 21 seq.). On his accession he appointed Jesus, the brother of Onias, to the high-priesthood, and sanctioned his proposals for the conversion of Jerusalem into a Greek city. The high priest changed his name to Jason and made a gymnasium near the citadel. The principle of separation was abandoned. The priests deserted the Temple for the palaestra and the young nobles wore the Greek cap. The Jews of Jerusalem were enrolled as citizens of Antioch. Jason sent money for a sacrifice to Hercules at Tyre; and the only recorded opposition to his policy came from his envoys, who pleaded that the money might be applied to naval expenditure. Thus Jason stripped the high-priesthood of its sacred character and did what he could to stamp out Judaism. Menelaus supplanted Jason, obtaining his appointment from the king by the promise of a larger contribution. In order to secure his position, he contrived the murder of Onias, who had taken sanctuary at Daphne. This outrage, coupled with his appropriation of temple vessels, which he used as bribes, raised against Menelaus the senate and the people of Jerusalem. His brother and deputy was killed in a serious riot, and an accusation was laid against Menelaus before Antiochus. At the inquiry he bought his acquittal from a courier and his accusers were executed. Antiochus required peace in Jerusalem and probably regarded Onias as the representative of the pro-Egyptian faction, the allies of his enemy.

During his second Egyptian campaign a rumour came that Antiochus was dead, and Jason made a raid upon Jerusalem. Menelaus held the citadel and Jason was unable to establish himself in the city. The people were presumably out of sympathy with hellenizers, whether they belonged to the house of Onias or that of Tobiah. When Antiochus finally evacuated Egypt in obedience to the decree of Rome, he thought that Judea was in revolt. Though Jason had fled, it was necessary to storm the city; the drastic measures which Menelaus advised seem to indicate that the poorer classes had been roused to defend the Temple from further sacrilege. A massacre took place, and Antiochus braved the anger of Yahweh by entering and polluting the Temple with impurity. The author of 2 Maccabees infers from his success that the nation had forfeited all right to divine protection for the time (2 Macc. v. 18–20).

The policy which Antiochus thus inaugurated he carried on rigorously and systematically. His whole kingdom was to be unified; Judaism was an eccentricity and as such doomed to extinction. The Temple of Jerusalem was made over to Zeus Olympius: the temple of Gerizim to Zeus Xenus. All the religious rites of Judaism were proscribed and the neighbouring Greek cities were requested to enforce the prohibition upon their Jewish citizens. Jerusalem was occupied by an army which took advantage of the Sabbath and proceeded to suppress its observance. An Athenian came to be the missionary of Hellenism and to direct its ceremonies, which were established by force up and down the country.

28. The Maccabees.—Jerusalem and Gerizim were purged and converted to the state religion with some success. Elsewhere, as there, some conformed and some became martyrs for the faith. Antiochus the resistance of those who refused to conform at length gave rise to active opposition. “The king’s officers who were enforcing the apostasy came into the city of Modin to sacrifice, and many of Israel went over to them, but Mattathias . . . slew a Jew who came to sacrifice and the king’s officer and pulled down the altar” (1 Macc. ii. 15 seq.). Whether led by this Mattathias or not, certain Jews fled into the wilderness and found a leader in Judas Maccabaeus his reputed son, the first of the Asmonean (Hasmonean) brethren. The warfare which followed was like that which Saul and David waged against the Philistines. Antiochus was occupied with his Parthian campaign and trusted that the Hellenized Jews would maintain their ascendency with the aid of the provincial troops. In his last illness he wrote to express his confidence in their loyalty. But the rebels collected adherents from the villages; and, when they resolved to violate the sabbath to the extent of resisting attack, they were joined by the company of the Asseidans (Hasidim). Such a breach of the sabbath was necessary if the whole Law was to survive at all in Palestine. But the transgression is enough to explain the disfavour into which the Maccabees seem to fall in the judgment of later Judaism, as, in that judgment, it is enough to account for the instability of their dynasty. Unstable as it was, their dynasty was soon established. In the country-side of Judaea, Judaism—and no longer Hellenism—was propagated by force. Apollonius, the commander of the Syrian garrison in Jerusalem, and Seron, the commander of the army in Syria, came in turn against Judas and his bands and were defeated. The revolt thus became important enough to engage the attention of the governors of Coele-Syria and Phoenicia, if not of Lysias the regent himself. Nicanor was dispatched with a large army to put down the rebels and to pay the tribute due to Rome by selling them as slaves. Judas was at Emmaus; “the men of the citadel” guided a detachment of the Syrian troops to his encampment by night. The rebels escaped in time, but not into the hills, as their enemies surmised. At dawn they made an unexpected attack upon the main body and routed it. Next year (165 B.C.) Lysias himself entered the Idumean country and laid siege to the fortress of Bethsura. Judas gathered what men he could and joined battle. The siege was raised, more probably in consequence of the death of Antiochus Epiphanes than because Judas had gained any real victory. The proscription of the Jewish religion was withdrawn and the Temple restored to them. But it was Menelaus who was sent by the king “to encourage” (2 Macc. xi. 32) the Jews, and in the official letters no reference is made to Judas. Such hints as these indicate the impossibility of recovering a complete picture of the Jews during the sovereignty of the Greeks, which the Talmudists regard as the dark age, best left in oblivion.

Judas entered Jerusalem, the citadel of which was still occupied by a Syrian garrison, and the Temple was re-dedicated on the 25th of Kislev (164 B.C.). So “the Pious” achieved the object for which presumably they took up arms. The re-establishment of Judaism, which alone of current religions was intolerant of survival, seems to have excited the jealousy of their neighbours who had embraced the Greek way of life. The Hellenizers had not lost all hope of converting the nation and were indisposed to acquiesce in the concordat. Judas and his zealots were thus able to maintain their prominence and gradually to increase their power. At Joppa, for example, the Jewish settlers—two hundred in all—were invited to go into boats provided in accordance with the common decree of the city.” They accepted the invitation and were drowned. Judas avenged them by burning the harbour and the shipping, and set to work to bring into Judaea all such communities of Jews who had kept themselves separate from their heathen neighbours. In this way he became strong enough to deal with the apostates of Judaea. In 163 Lysias led another expedition against these disturbers of the king’s peace and defeated Judas at Bethschabari. But while the forces were besieging Bethzur and the fortress on Mount Zion, a pretender arose in Antioch, and Lysias was compelled to come to terms—and now with Judas. The Jewish refugees had turned the balance, and so Judas became strategus of Judaea, whilst Menelaus was put to death.

In 162 Demetrius escaped from Rome and got possession of the kingdom of Syria. Jakim, whose name outside religion was Alcimus, waited upon the new king on behalf of the loyal Jews who had hellenized. He himself was qualified to be the legitimate head of a united state, for he was of the tribe of Aaron. Judas and the Asmoneans were usurpers, who owed their title to Lysias. So Alcimus-Jakim was made high priest and Bacchides brought an army to install him in his office. The Assideans made their submission at once. Judas had won for them religious freedom: but the Temple required a descendant of Aaron for priest and he was come. But his first act was to seize and slay sixty of them: so it was clear to Judaism at any rate, if not also to the Assideans who survived, that political independence was necessary if the religion was to be secure. In face of his active opposition Alcimus could not maintain himself
without the support of Bacchides and was forced to retire to Antioch. In response to his complaints Nicanor was appointed governor of Judaea with power to treat with Judas. It appears that the two became friends at first, but fresh orders from Antioch made Nicanor guilty of treachery in the eyes of Judas’s partisans. Warned by the change of his friend’s manner Judas fled. Nicanor threatened to destroy the Temple if the priests would not deliver Judas into his hands. Soon it came to his knowledge that Judas was in Samaria, whither he followed him on a sabbath with Jews pressed into his service.

The day was known afterwards as Nicanor’s day, for he was found dead on the field (Capharsalama) by the victorious followers of Judas (13th of Adar, March 161 B.C.). After this victory Judas made an alliance with the people of Rome, who had no love for Demetrius his enemy, nor any intention of putting their professions of friendship into practice. Bacchides and Alcimus returned meanwhile into the land of Judah; at Elasa Judas fell and the rest fled (1 Matt. ix. 48). Bacchides occupied Judaea and made a chain of forts. Jonathan, who succeeded his brother Judas, was captain of a band of fugitive outlaws. But on the death of Alcimus Bacchides retired and Jonathan with his followers settled down beyond the range of the Syrian garrisons. The Hellenizers still enjoyed the royal favour and Jonathan made no attempt to dispossess them. After an interval of two years they tried to capture him and failed. This failure seems to have convinced Bacchides that it would be well to recognize Jonathan and to secure a balance of parties. In 148 Jonathan began to rule as a judge in Michmas and he destroyed the godless out of Israel—so far, that is, as his power extended. In 143 Alexander Balas withdrew Jonathan from his allegiance to Demetrius by the offer of the high-priesthood. He had already made Jerusalem its capital and fortified the Temple mount: the Syrian garrisons had already been withdrawn with the exception of those of the Akra and Bethzur. In 147 Jonathan’s mission to the governor of Coele-Syria, who had espoused the cause of Demetrius. The fugitives took sanctuary in the temple of Dagon at Azotus. “But Jonathan burned the temple of Dagon and those who fled into it.” After the death of Balas he laid siege to the Akra; and “the apostates, who hated their own nation,” appealed to Demetrius. Jonathan was summoned to Antioch, made his peace and apparently relinquished his attempt in return for the addition of three Samaritan districts to his territory. Later, when the people of Antioch rose against the king, Jonathan despatched a force of 3000 men who played a notable part in the merciless suppression of the insurrection. 1 Maccabees credits them with 100,000 victims. Trypho, the regent of Antiochus VI., put even greater political power into the hands of Jonathan and his brother Simon, but finally seized Jonathan on the pretext of a conference. Simon was thus left to consolidate what had been won in Palestine for the Jews, and the family whose head he had become. The weakness of the king enabled him to demand and to secure immunity from taxation. The Jewish aristocracy became peers of the Seleucid kingdom. Simon was declared high priest: Rome and Sparta rejoiced in the elevation of their friend and ally. In the hundred and seventieth year (142 B.C.) the yoke of the heathen was taken away from Israel and the people began to date their legal documents “in the first year of Simon the great high priest and commander and leader of the Jews.” The popular verdict received official and formal sanction. Simon was declared by the Jews and the priests their governor and high priest for ever, until there should arise a faithful prophet. The garrison of the Akra had been starved by a close blockade into submission, and beyond the boundaries of Judaea “he took Joppa for a haven and made himself master of Gaza and Bethzur.”

20. John Hyrcanus and the Sadducees.—But in 138 B.C. Antiochus Sidetes entered Seleucia and required the submission of all the petty states, which had taken advantage of the weakness of preceding kings. From Simon he demanded an indemnity of 1000 talents for his oppression and invasion of non-Jewish territory: Simon offered 100 talents. At length Antiochus appeared to enforce his demand in 134. Simon was dead (135 B.C.) and John Hyrcanus had succeeded his father. The Jewish forces were driven back upon Jerusalem and the city was closely invested. At the feast of tabernacles of 132 Hyrcanus requested and Antiochus granted a week’s truce. The only hope of the Jews lay in the clemency of their victorious suzerain, and it did not fail them. Some of his advisers urged the demolition of the nation on the ground of their exclusiveness, but he sent a sacrifice and won thereby the name of “Pious.” In subsequent negotiations he accepted the disarmament of the besieged and a tribute as conditions of peace, and in response to their entreaty left Jerusalem without a garrison. When he went on his last disastrous campaign, Hyrcanus led a Jewish contingent to join his army, partly perhaps a troop of mercenaries (for Hyrcanus was the first of the Jewish kings to hire mercenaries, with the treasure found in David’s tomb). After his death Hyrcanus took advantage of the general confusion to extend Jewish territory with the countenance at Rome. He destroyed the temple of Gerizim and compelled the Idumaeans to submit to circumcision and embrace the laws of the Jews on pain of deportation.

In Jerusalem and in the country, in Alexandria, Egypt and Cyprus, the Jews were prosperous (Jos. Ant. xiii. 284). This prosperity and the apparent security of Judaism led to a breach between Hyrcanus and his spiritual directors, the Pharisees. His lineage was (in the opinion of one of them at least) of doubtful purity; and so it was his duty to lay down the high-priesthood and be content to rule the nation. That one man should hold both offices was indeed against the example of Moses, and could only be admitted as a temporary concession to necessity. Hyrcanus could not entertain the proposal that he should resign the sacred office to which he owed much of his authority. The allegation against his mother was false: the Pharisee who retained it was guilty of no small offense. A Sadducean friend advised Hyrcanus to ask the whole body of the Pharisees to prescribe the penalty. Their leniency, which was notorious, alienated the king or probably furnished him with a pretext for breaking with them. The Pharisees were troublesome counsellors and doubtless allies for an ambitious prince. They were all-powerful with the people, but Hyrcanus with his mercenaries was independent of the people, and the wealthy belonged to the sect of the Sadducees. The suppression of the Pharisaic ordinances and the punishment of those who observed them led to some disturbance. But Hyrcanus “was judged worthy of the three great privileges, the rule of the nation, the high-priestly dignity, and prophecy.” This verdict suggests that the Sadducees, with whom he allied himself, had learned to affect some show of Judaism in Judaea. If the poor were ardent nationalists who would not intermingle with the Greeks, the rich had long outgrown and now could humour such prejudices; and the title of their party was capable of being reconciled to any rate of the national ideal of righteousness, i.e. Sadaqah.

The successor of Hyrcanus (d. 105) was Judas Aristobulus, “the friend of the Greeks,” who first assumed the title of king. According to Strabo he was a courteous man and in many ways useful to the Jews. His great achievement was the conquest of a part of Iturea, which he added to Judaea and whose inhabitants he compelled to accept Judaism.

The Sadducean nobility continued in power under his brother and successor Alexander Janneus (103-78); and the breach between the king and the mass of the people widened. But Salome Alexandra, his brother’s widow, who released him from prison on the death of her husband and married him, was connected with the Pharisees through her brother Simon ben Shetach. If his influence or theirs dictated her policy, there is no evidence of any objection to the union of the secular power with the high-priesthood. The party may have had a Saught, that Jannaeus was likely to bring the dynasty to an end. His first action was to besiege Ptolemais. Its citizens appealed to Ptolemy Lathyrus, who had been driven from the throne of Egypt by his mother Cleopatra and was reigning in Cyprus. Alexander raised the siege, made peace with Ptolemy and secretly sent to Cleopatra
for help against her son. The result of this double-dealing was that his army was destroyed by Ptolemy, who advanced into Egypt leaving Palestine at the mercy of Cleopatra. But Cleopatra's generals were Jews and by their protests prevented him from annexing it. Being thus freed from fear on the side of Ptolemy, Alexander continued his desultory campaigns across the Jordan and on the coast without any apparent policy and with indifferent success. Finally, when he officiated as high priest at the feast of tabernacles he roused the fury of the people by a derisive breach of the Pharisaic ritual. They cried out that he was unworthy of his office, and pelted him with the citrons which they were carrying as the Law prescribed. Alexander summoned his mercenaries, and 6000 Jews were killed before he set out on his disastrous campaign against an Arabian king. He returned a fugitive to find the nation in armed rebellion. After six years of civil war he appealed to them to state the conditions under which they would lay aside their hostility. They replied by demanding his death and called in the Syrians. But when the Syrians chased him into the mountains, 6000 Jews went over to him and, with their aid, he put down the rebellion. Eight hundred Jews who had held a fortress against him were crucified; 8000 Pharisees fled to Egypt and remained there. Offering an ineffectual resistance to the passage of the Syrian troops, Alexander was driven back by Aretas, king of Arabia, against whom they had marched. His later years brought him small victories over isolated cities.

On his deathbed it is said that Alexander advised his wife to reverse this policy and rely upon the Pharisees. According to the Talmud, he warned her "to fear neither the Pharisees nor their opponents but the hypocrites who do the deed of Zimri and claim the reward of Phineas:" the warning indicates his justification of his policy in the matter of the crucifixions. In any case the Pharisees were predominant under Alexander, who became queen (58-60) under her husband's will. Hyrcanus her elder son was only high priest, as the stricter Pharisees required. All the Pharisaic ordinances which Hyrcanus had abolished were reaffirmed as binding. Simon ben Shatach stood beside the queen; the exiles were restored and among them his great colleague Jehudah ben Tabai. The great saying of each of these rabbis is concerned with the duties of a judge; the selection does justice to the importance of the Sanhedrin, which was filled with Pharisees. The legal reforms which they introduced tended for the most part to mercy, but the Talmud refers to one case which is an exception: false witnesses were condemned to suffer the penalty due to their victim, even if he escaped. This ruling may be interpreted as part of a campaign directed against the counsellors of Alexander or as an instance of their general principle that intention is equivalent to commission in the eye of the Law. The queen interposed to prevent the execution of those who had counselled the crucifixion of the rebels and permitted them to withdraw with her younger son Aristobulus to the fortresses outside Jerusalem. Against their natural desire for revenge may be set the fact that the Pharisees did much to improve the status of women among the Jews.

On the death of Alexander (60 B.C.) Aristobulus succeeded the succession of Hyrcanus. When their forces met at Jericho, Hyrcanus, finding that the bulk of his following deserted to Aristobulus, fled with those who remained to the tower Antonia and seized Aristobulus's wife and children as hostages for his own safety. Having this advantage, he was able to abduct in favour of Aristobulus and to retire into private life. But he was not able to save his friends, who were also the enemies of the reigning king. In fear of reprisals Antipas (or Antipater), the Idumaean, his counsellor, played on the fears of Hyrcanus and persuaded him to buy the aid of the Nabataean Arabs with promises. Aristobulus could not withstand the army of Aretas; he was driven back upon Jerusalem and there besieged. The Jews deserted to the victorious Hyrcanus; only the priests remained loyal to their accepted king; many fled to Egypt.

Pompey (65 B.C.). Both brothers appealed to this new tribunal and Aristobulus bought a verdict in his favour. The siege was raised. Aretas retired from Judaea; and Aristobulus pursued the retreating army. But, when Pompey himself arrived at Damascus, Antipater, who pulled the strings and exploited the claims of Hyrcanus, realized that Rome and not the Arabs, who were cowed by the threats of Scaurus, was the ruler of the East. To Rome, therefore, he must pay his court. Others shared this conviction: Strabo speaks of embassies from Egypt and Judaea bearing presents—one deposited in the temple of Jupiter Cephalinus bore the inscription of Alexander, the king of the Jews. From Judaea there were three embassies pleading, for Aristobulus, for Hyrcanus, and for the nation, who would have no king at all but their God.

Pompey deferred his decision until he should have inquired into the state of the Nabataeans, who had shown themselves to be capable of dominating the Jews in the absence of the Roman army. In the interval Aristobulus provoked him by his display of a certain impatience. The people had no responsible head, of whom Rome could take cognisance: so Pompey decided in favour of Hyrcanus and humoured the people by recognizing him, not as king, but as high priest. Antipater remained secure, in power if not in place. The Roman supremacy was established: the Jews were once more one of the subject states of Syria, now a Roman province. Their national aspirations had received a contemptuous acknowledgment, when their Temple had been desecrated by the entry of a foreign conqueror.

Aristobulus himself had less resolution than his partisans. When he repented of his attempted resistance and treated with Pompey for peace, his followers threw themselves into Jerusalem, and, when the faction of Hyrcanus resolved to open the gates, into the Temple. There they held out for three months, succumbing finally because in obedience to the Law (as interpreted since the time of Antiochus Epiphanes) they would only defend themselves from actual assault upon the sabbath day. The Romans profited by this inaction to push on the siege-without provoking resistance by actual assaults until the very end. Pompey finally took the stronghold by choosing the day of the fast, when the Jews abstain from all work, that is the sabbath (Strabo). Dios Cassius calls it the day of Cronos. On this bloody sabbath the priests showed a devotion to their worship which matched the inaction of the fighting men. Though they saw the enemy advancing upon them sword in hand they remained at worship untroubled and were slaughtered as they poured libation and burned incense, for they put their own safety second to the service of God. And there were Jews among the murderers of the 12,000 Jews who fell.

The Jews of Palestine thus became once more a subject state, stripped of their conquests and confined to their own borders. Aristobulus and his children were conveyed to Rome to grace their conqueror's triumphal procession. But his son Alexander escaped during the journey, gathered some force, and overran Judaea. The Pharisees decided that they could not take action on either side, since the elder son of Alexander was directed at Jerusalem, and the younger at Damascus; and the people had an affection for such Asmonean princes as dared to challenge the Roman domination of their ancestral kingdom. The civil war was renewed; but Aulus Gabinius, the proconsul, soon crushed the pretender and set up an aristocracy in Judaea with Hyrcanus as guardian of the Temple. The country was divided into five districts with five synods; and Josephus asserts that the people welcomed the change from the monarchy. In spite of this, Aristobulus (56 B.C.) and Alexander (55 B.C.) found loyalists to follow them in their successive raids. But Antipater found supplies for the army of Gabinius, who, despite Egyptian and Parthian distractions, restored order according to the will of Antipater. M. Crassus, who succeeded him, plundered the Temple of its gold and the treasure (54 B.C.) which the Jews of the dispersion had contributed for its maintenance. It is said that Eleazar, the priest who guarded the treasure, offered Crassus the golden beam as ransom for the whole, knowing, what no one else knew, that it was mainly composed of wood. So Crassus departed to
Parthia and died. When the Parthians, elated by their victory over Crassus (53 B.C.) advanced upon Syria, Cassius opposed them. Some of the Jews, presumably the partisans of Aristobulus, were ready to co-operate with the Parthians. At any rate Antipater was ready to aid Cassius with advice; Taricheae was taken and 30,000 Jews were sold into slavery (51 B.C.). In spite of this vigorous coercion Cassius came to terms with Alexander, before he returned to the Euphrates to hold it against the Parthians.

Two years later Julius Caesar made himself master of Rome and despatched the captive Aristobulus with two legions to win Judaea (49 B.C.). But Pompey's partisans were beforehand with him: he was taken off by poison and got no so much as a burial in his fatherland. At the same time his son Alexander was beheaded at Antioch by Pompey's order as an enemy of Rome. After the defeat and death of Pompey (48 B.C.) Antipater transferred his allegiance to Caesar and demonstrated its value during Caesar's Egyptian campaign. He carried with him the Arabs and the princes of Syria, and through Hycranus he was able to transform the hostility of the Egyptian Jews into active friendliness. These services, which incidentally illustrate the solidarity and unity of the Jewish nation and the respect of the communities of the dispersion for the metropolis, were recognized and rewarded. Before his assassination in 44 B.C. Julius Caesar had confirmed Hycranus in the high-priesthood and added the title of ethnarch. Antipater had been made a Roman citizen and procurator of the reunited Judaea. Further, as confederates of the senate and people of Rome, the Jews had received accession of territory, including the port of Joppa and, with other material privileges, the right of observing their religious customs not only in Palestine but also in Alexandria and elsewhere. Idumaean or Phillinite of Ascalon, Antipater had displayed the capacity of his adoptive or adopted nation for his own profit and theirs. And when Cassius died Suetonius notes that he was mourned by foreign nations, especially by the Jews of Alexandria.

In the midst of all this civil strife the Pharisaees and all who were preoccupied with religion found it almost impossible to discern what they should do to please God. The people whom they directed were called out to fight, at the bidding of an alien, for this and that foreigner who seemed most powerful and most likely to succeed. In Palestine few could command leisure for meditation; as for opportunities of effective intervention in affairs, they had none, it would seem, once Alexander was dead.

There is a story of a priest named Onias preserved both by Josephus and in the Talmud, which throws some light upon the indecision of the religious in the period just reviewed. When Aretas intervened in the interest of Hyrcanus and defeated Aristobulus, the usurper of his brother's inheritance, the people accepted the verdict of battle, sided with the victor's client, and joined in the siege of Jerusalem. The most reputable of the Jews fled to Egypt; but Onias, a righteous man and dear to God, who had hidden himself, was discovered by the besiegers. He had a name for power in prayer; for once in a drought he prayed for rain and God had heard his prayer. His captors now required of him that he should put a curse upon Aretas, the king of the Arabs. Onias, speaking to his captors and said: 'O God, king of the universe, since these who stand with me are thy people and the besieged are thy priests, I pray thee that he hearken not to those against these, nor accomplish what they devise against those.' So he prayed—and the wicked Jews stoned him.

Unrighteous Jews were in the ascendant. There were only Asmonaeans princes, degenerate and barely titular sons of Levi, to serve as the grandees of the state; and they were at feud and both relied upon foreign aid. The righteous could only flee or hide, and so wait dreaming of the mercy of God past and to come. As yet our authorities do not permit us to follow them to Egypt with any certainty, but the Psalms of Solomon express the mind of one who survived to see Pompey the Great brought low. Although Pompey had spared the temple treasure, he was the embodiment of the power of Rome, which was not always so considerably exercised. And so the destruction of Judaea (40 B.C.) the Jews feared that the pride of the dragon might be humbled and God shewed him the dead body lying upon the waves—and there was none to bury it. As one of those who fear the Lord in truth and in patience, he looks forward to the punishment of all sinners who oppress the righteous and profane the sanctuary. For the sins of the rulers God had rejected his people; but the remnant could not but inherit the promises, which belong to the chosen people. For the Lord is faithful unto those who walk in the righteousness of his commandments (xiv. 1): in the exercise of their freewill and with God's help they will attain salvation. As God's servant, Pompey destroyed their rulers and every wise councilor: soon the righteous and sinless king of David's house shall reign over them and over all the nations (xviii.).

31. Hycranus the Great.—After the departure of Caesar, Antipater warned the adherents of Hycranus against taking part in any revolutionary attempts, and his son Herod, who, in spite of his youth, had been appointed governor of Galilee, dealt summarily with Hezekiah, the robber captain who was overrunning the adjacent part of Syria. The gratitude of the Syrians brought him to the knowledge of Sextus Caesar the governor of Syria; but his action inspired the chief men of the Jews with apprehension. Complaint was made to Hycranus that Herod had violated the law which prohibited the execution of even an evil man, unless he had been first condemned to death by the Sanhedrin. At the same time the mothers of the murdered men came to the Temple to demand vengeance. So Herod was summoned to stand his trial. He came in answer to the summons—but attended by a bodyguard and protected by the word of Sextus Caesar. All the Sanhedrin only Samasæ of righteous men and therefore superior to 'dare to speak. Being a Pharisee he faced the facts of Herod's power and warned the tribunal of the event, just as later he counselled the people to receive him, saying that for their sins they could not escape him. Herod put his own profit above the Law, acting after his kind, and he also was God's instrument. The effect of the speech was to goad the Sanhedrin into condemning Herod: Hycranus postponed their decision and persuaded him to flee. Sextus Caesar made him lieutenant-governor of Coele Syria, and only his father restrained him from returning to wreak his revenge upon Hycranus.

It is to be remembered that, in this and all narratives of the life of Herod, Josephus was dependent upon the history of Herod's client, Cleopatra of Parthia, and was himself a supporter of law and order. The action of the Sanhedrin and the presence of the women suppliants in the Temple suggest, if they do not prove, that this Hezekiah who harassed the Syrians was a Jewish patriot, who could not acquiesce and wait with Samasæ.

Malichus also, the murderer or reputed murderer of Antipater, appears to have been a partisan of Hycranus, who had a zeal for Judaism. When Cassius demanded a tribute of 700 talents from Palestine, Antipater set Herod, Phasael and this Malichus, his enemy, to collect it. Herod thought it prudent to secure the favour of Rome by the sufferings of others. But some cities defaulted, and they were apparently among those assigned to Malichus. If he had been lenient for their sakes or in the hope of damaging Antipater, he was disappointed; for Cassius sold four cities into slavery and Hycranus made up the deficit. Soon after this (43 B.C.) Malichus succeeded, it is said, in poisoning Antipater as he dined with Hycranus, and was assassinated by Herod's braves.

After the departure of Cassius, Antipater being dead, there was confusion in Judaea. Antigonus, the son of Aristobulus, made a raid and was with difficulty repulsed by Herod. The prince of Tyre occupied part of Galilee. When Antony assumed the dominion of the East after the defeat of Cassius at Philippi, an embassy of the Jews, amongst other embassies, approached him in Bithynia and accused the sons of Antipater as usurpers of the power which rightly belonged to Hycranus. Another approached him at Antioch. But Hycranus was well content to forgo the title to political power, which he could not exercise in practice, and Antony had been a friend of Antipater. So Herod and Phasael continued to be virtually kings of the Jews; Antony's court required large remittances and Palestine was not exempt.

In 40 B.C. Antony was absent in Egypt or Italy; and the Parthians swept down upon Syria with Antigonus in their train. Hycranus and Phasael were trapped; Herod fled by way of Egypt to Rome. Hycranus, who was Antigonus' only rival, was mutilated and carried to Parthia. So he could no more be
high priest, and his life was spared only at the intercession of the Parthian Jews, who had a regard for the Asmonean prince. Thus Antigonus succeeded his uncle as “King Antigonus” in the Greek and “Mattathiah the high priest” in the Hebrew by grace of the Parthians.

The senate of Rome under the influence of Antony and Octavian ratified the claims of Herod, and after some delay lent him the armed force necessary to make them good. In the hope of healing the breach, which his success could only aggravate, and for love, he took to wife Mariamne, grandniece of Hycanus. Galilee was pacified, Jerusalem taken and Antigonus beheaded by the Romans. From this point to the end of the period the Jews were dependents of Rome, free to attend to their own affairs, so long as they paid taxes to the subordinate rulers, Herodian or Roman, whom they detested equally. If some from time to time dared to hope for political independence their futility was demonstrated. One by one the descendants of the Asmoneans were removed. The national hope was relegated to an indefinite future and to another sphere. At any rate the Jews were free to worship their God and to study his law: their religion was respected by the Greeks and indeed established.

This development of Judaism was eminently to the mind of the rulers; and Herod did much to encourage it. More and more it became identified with the synagogue, in which the Law was expounded: more and more it became a matter for the individual and his private life. This was so even in Palestine—the land which the Jews hoped to possess—and in Jerusalem itself, in which the Temple stood. Herod had put down Jewish rebels and Herod appointed the high priests. In his appointments he was careful to avoid or to suppress any person who, being popular, might legitimize a rebellion by heading it. The Pharisees, who regarded his rule as an inevitable penalty for the sins of the people, he encouraged. Pollio the Pharisee and Samaes his disciple were in special honour with him, Josephus says, when he re-entered Jerusalem and put to death the leaders of the faction of Antigonus. How well their teaching served his purpose is shown by the sayings of two rabbis who, if not identical with these Pharisees, belong to their period and their party. Shemaiah said, “Love work and hate lordship and make not thyself known to the government.” Abtalion said, “Ye wise, be guarded in your words: perchance ye may incur the debt of exile.” Precepts such as these could hardly fail to effect some modification of the reckless zeal of the Galileans in the pupils of the synagogue. Many if not all of the professed rabbis had travelled outside Palestine: some were even members of the dispersion, like Hillel the Babylonian, who with Shammay forms the second of the pairs. Through them the experience of the dispersion was brought to bear upon the Palestinian Jews. Herod’s nominees were not the men to extend the prestige of the high-priesthood at the expense of these rabbis: even in Jerusalem the synagogue became of more importance than the Temple. Hillel also inculcated the duty of making converts to Judaism. He said, “Be of the disciples of Aaron, loving peace, and pursuing peace, loving mankind and bringing them nigh to the Law.” But even he reckoned the books of Daniel and Esther as canonical, and these were dangerous food for men who did not realize the full power of Rome.

So long as Herod lived there was no insurrection. Formally he was an orthodox Jew and set his face against intermarriage with the uncircumcised. He was also ready and able to protect the Jews of the dispersion. But that ability was largely due to his whole-hearted Hellenism, which was shown by the Greek cities which he founded in Palestine and the buildings he erected in Jerusalem. In its material embodiments Greek civilization became as much a part of Jewish life in Palestine as it was in Alexandria or Antioch; and herein the rabbis could not follow him.

When all the Jewish people swore to be loyal to Caesar and the king’s policy, the Pharisees—above 6,000—refused to swear. The king imposed a fine upon them, and the wife of Pheroras—Herod’s brother—paid it on their behalf. In return for her kindness, being entrusted with foreknowledge by the visitation of God, they prophesied that God had decreed an end of rule for Herod and his line and that the sovereignty devolved upon her and Pheroras and their children.

From the sequel it appears that the prophecy was uttered by one Pharisee only, and that it was in no way endorsed by the party. When it came to the ears of the king he slew the most responsible of the Pharisees and every member of his household who accepted what the Pharisee said. An explanation of this unwarrantable generalization may be found in the fact that the incident is derived from a source which was unfavourable to the Pharisees: they are described as a Jewish section of men who pretend to set great store by the exactitude of the ancestral tradition and the laws in which the deity delights—as dominant over women-folk—and as sudden and quick in quarrel.

Towards the end of Herod’s life two rabbis attempted to uphold by physical force the cardinal dogma of Judaism, which prohibited the use of images. Their action is intelligible enough. Herod was stricken with an incurable disease. He had sinned against the Law; and at last God had punished him. At last to law-abiding Jews might and must assert the majesty of the outraged Law. The most conspicuous of the many symbols and signs of his transgression was the golden eagle which he had placed over the great gate of the Temple; its destruction was the obvious means to adopt for the quickening and assertion of Jewish principles.

By their labours in the education of the youth of the nation, these rabbis, Judas and Matthias, had endeared themselves to the populace and had gained influence over their disciples. A report that Herod was dead co-operated with their exhortations to send the iconoclasts to their appointed work. And so they went to earn the rewards of their practical piety from the Law. If they died, death was inevitable, the rabbis said, and no better death would they ever find. Moreover, their children and kindred would benefit by the good name and fame belonging to those who died for the Law. Such is the account which Josephus gives in the Antiquities; in the Jewish War he represents the rabbis and their disciples as looking forward to greater happiness for themselves after such a death. But Herod was not dead yet, and the instigators and the agents of this sacrilege were burned alive.

32. The Settlement of Augustus.—On the death of Herod in 4 B.C. Archelaus kept open house for mourners as the Jewish custom, which reduced many Jews to beggary, prescribed. The people petitioned for the punishment of those who were responsible for the execution of Matthias and his associates and for the removal of the high priest. Archelaus temporized; the loyalty of the people no longer constituted a valid title to the throne; his succession must first be sanctioned by Augustus. Before he departed to Rome on this errand, which was itself an insult to the nation, there were riots in Jerusalem at the Passover which he needed all his soldiery to put down. When he presented himself before the emperor—apart from rival claimants of his own family—there was an embassy from the Jewish people who prayed to be rid of a monarchy and rulers such as Herod. As part of the Roman province of Syria and under its governors they would prove that they were not really disaffected and rebellious.

During the absence of Archelaus, who would—the Jews feared—prove his legitimacy by emulating his father’s ferocity, and to whom their ambassadors preferred Antipas, the Jews of Palestine gave the lie to their protestations of loyalty and peaceableness. At the Passover the pilgrims attacked the Roman troops. After hard fighting the procurator, whose cruelty provoked the attack, captured the Temple and robbed the treasury. On this the insurgents were joined by some of Herod’s army and besieged the Romans in Herod’s palace. Elsewhere the occasion tempted many to play at being king; Judas, son of Hezekiah, in Galilee; Simon, one of the king’s slaves, in Perea. Most notable of all perhaps was the shepherd Athonares, who assumed the pomp of royalty and employed his four brothers as captains and satraps in the war which he waged upon Romans and king’s men alike—not even Jews escaped him unless they brought him contributions.
Order was restored by Varus the governor of Syria in a campaign which Josephus describes as the most important war between that of Pompey and that of Vespasian.

At length Augustus summoned the representatives of the nation and Nicholas of Damascus, who spoke for Archelaus, to plead before him in the temple of Apollo. Augustus apportioned Herod's dominions among his sons in accordance with the provisions of his latest will. Archelaus received the lion's share: for ten years he was ethnarch of Idumaea, Judaea and Samaria, with a yearly revenue of 600 talents. Antipas became tetrarch of Galilee and Perea, with a revenue of 200 talents. Philip, who had been left in charge of Palestine pending the decision and had won the respect of Varus, became tetrarch of Batanaea, Trachonitis and Auranitis, with 100 talents. His subjects included only a sprinkling of Jews. Up to his death (A.D. 34) he did nothing to forfeit the favour of Rome. His coins bore the heads of Augustus and Tiberius, and his government was worthy of the best Roman traditions—he succeeded where procurators had failed. His capital was Caesarea Philippi, where Pan had been worshipped from ancient times, and where Augustus had a temple built by Herod the Great.

33. Archelaus. He had counselled Archelaus to deal gently with his subjects. But there was an outstanding feud between him and them; and his first act as ethnarch was to remove the high priest on the ground of his sympathy with the rebels. In violation of the Law he married a brother's widow, who had already borne children, and in general he showed himself so fierce and tyrannical that the Jews joined with the Samaritans to accuse him before the emperor. Archelaus was summoned to Rome and banished to Gaul; his territory was entrusted to a series of procurators (A.D. 6–41), among whom was an apostate Jew, but none with any pretension even to a semi-legitimate authority. Each procurator represented not David but Caesar. The Sanhedrin had its police and powers to safeguard the Jewish religion; but the procurator had the appointment of the high priests, and no capital sentence could be executed without his sanction.

34. The Procurators.—So the Jews of Judaea obtained the settlement for which they had pleaded at the death of Herod; and some of them began to regret it at once. The first procurator Coponius was accompanied by P. Suberius Quirinius, legate of Judaea—so who came to organize the new Roman province. As a necessary preliminary a census (A.D. 6–7) was taken after the Roman method, which did not conform to the Jewish Law. The people were abronted, but for the most part acquiesced, under the influence of Joazar the high priest. But Judas the Galilean, with a Pharisee named Sadduc (Sadduk), endeavoured to incite them to rebellion in the name of religion. The result of this alliance between a revolutionary and a Pharisee was the formation of the party of Zealots, whose influence—according to Josephus—brought about the great revolt and so led to the destruction of Jerusalem in 70. So far as this influence extended, the Jewish community was threatened with the danger of suicide, and the distinction drawn by Josephus between the Pharisees and the Zealots is a valid one. Not all Pharisees were prepared to take such action, in order that Israel might "tread on the neck of the eagle" (as is said in The Assumption of Moses). So long as the Law was not deliberately outraged and so long as the worship was established, most of the religious leaders of the Jews were content to wait.

It seems that the Zealots made their stand in Galilee than in Judaea, so that the terms Galilean and Zealot are practically interchangeable. In Galilee the Jews predominated over the heathen and their ruler Herod Antipas had some sort of claim upon their allegiance. His marriage with the daughter of the Arabian king Aretas (which was at any rate in accordance with the general policy of Augustus) seems to have preserved his territory from the incursions of her people, so long as he remained faithful to her. He conciliated his subjects by his deference to the observances of Judaism, and—the case is probably typical of his policy—he joined in protesting, when Pilate set up a votive shield in the palace of Herod within the sacred city.

He seems to have served Tiberius as an official scrutineer of the imperial officials and he commemorated his devotion by the foundation of the city of Tiberias. But he repudiated the daughter of Aretas in order to marry Herodias and so set the Arabians against him. Disaster overtook his forces (A.D. 36) and Tiberius, his patron, died before the Roman power was brought in full strength to his aid. Caligula was not predisposed to favour the followers of Tiberius; and Antipas, having petitioned him for the title of king at the instigation of Herodias, was banished from his tetrarchy and (apparently) was put to death in 39.

Antipas is chiefly known to history in connexion with John the Baptist, who reproached him publicly for his marriage with Herodias. According to the earliest authority, he seems to have imprisoned John to save him from the vengeance of Herodias. But—whatever his motive—Antipas certainly consented to John's death. If the Fourth Gospel is to be trusted, John had already recognized and acclaimed Jesus of Nazareth as the Messiah for whom the Jews were looking. By common consent of Christendom, John was the forerunner of the founder of the Christian Church. It was, therefore, during the reign of Antipas, and partly if not wholly under his territory, that the Gospel was preached by the Galilean or prophet whom Christendom came to regard as the one true Christ, the Messiah of the Jews. Josephus' history of the Jews contains accounts of John the Baptist and Jesus, the authenticity of which has been called in question for plausible but not entirely convincing reasons. However this may be, the Jews who believed Jesus to be the Christ play no great part in the history of the Jews before 70, as we know it. Many religious teachers and many revolutionaries were crucified within this period; and the early Christians were outwardly distinguished from other Jews only by their scrupulous observance of religious duties.

The crucifixion of Jesus was sanctioned by Pontius Pilate, who was procurator of Judaea A.D. 26–36. Of the Jews under his predecessors little enough is known. Speaking generally, they seem to have avoided giving offence to their subjects. But Pilate so conducted affairs as to attract the attention not only of Josephus but also of Philo, who represents for us the Jewish community of Alexandria. Pilate inaugurated his term of office by ordering his troops to enter Jerusalem at night and to take their Jewish prisoners with them. He was ordered to remove standards in the Roman armies: those which bore the image of the emperor, and therefore constituted a breach of the Jewish Law, had hitherto been kept aloof from the holy city. On learning of this, the Jews repaired to Caesarea and besought Pilate to remove these offensive images. Pilate refused; and, when they persisted in their petition for six days, he surrounded them with soldiers and threatened them with instant death. They protested that they would rather die than dare to transgress the wisdom of the laws; and Pilate yielded. But he proceeded to expend the temple treasure upon an aqueduct for Jerusalem; and some of the Jews regarded the devotion of sacred money to the service of man as a desecration. Pilate came up to Jerusalem and dispersed the petitioners by means of disguised soldiers armed with clubs. So the revolt was put down, but the excessive zeal of the soldiers and Pilate's obstinate adherence to his policy widened the breach between Rome and the stricter Jews. But the death of Sejanus in 31 set Tiberius free from prejudice against the Jews; and, when Pilate put up the votive shields in Herod's palace at Jerusalem, the four sons of Herod came forward to demand that they be allowed to remove them. In 35 he dispersed a number of Samaritans, who had assembled near Mt Gerizim at the bidding of an impostor, in order to see the temple vessels buried there by Moses. Complaint was made to Vitellius, then legate of Syria, and Pilate was sent to Rome to answer for his shedding of innocent blood. At the passover of 36 Vitellius came to Jerusalem and pacified the Jews by two concessions: he remitted the taxes on fruit sold in the city, and he restored to their custody the high priest's vestments, which Herod Archelaus and the Romans had kept in the tower Antonia. The vestments had been stored there since the time...
of the first high priest named Hyrcanus, and Herod had taken them over along with the tower, thinking that his possession of them would deter the Jews from rebellion against his rule. At the same time Vitellius vindicated the Roman supremacy by degrading Caiaphas from the high-priesthood, and appointing a son of Annas in his place. The motive for this change does not appear, and we are equally ignorant of the cause which prompted his transference of the priesthood from his nominee to another son of Annas in 37. But it is quite clear that Vitellius was concerned to reconcile the Jews to the authority of Rome. When he marched against Aretas, his army with their standards did not enter Judaea at all; but he himself went up to Jerusalem for the feast and, on receipt of the news that 'Tiberius' was dead, administered to the Jews the oath of allegiance to Caligula.

35. Caligula and Agrippa I.—The accession of Caligula (A.D. 37-41) was hailed by his subjects generally as the beginning of the Golden Age. The Jews in particular had a friend at court. Agrippa, the grandson of Herod the Great, was an avowed partizan of the new emperor and had paid penalty for a premature avowal of his preference. But Caligula's favour, though lavished upon Agrippa, was not available for pious Jews. His foible was omnipotence, and he aped the gods of Greece in turn. In the provinces and even in Italy his subjects were ready to acknowledge his divinity—with the sole exception of the Jews. So we learn something of the Palestinian Jews and more of the Jewish community in Alexandria. The great world (as we know it) took small note of Judaism even when Jews converted its women to their faith; but now the Jews as a nation refused to bow before the present god of the civilized world. The new Catholicism was promulgated by authority and accepted with deference. Only the Jews protested: they had a notion of the deity which Caligula at all events did not fulfil.

The people of Alexandria seized the opportunity for an attack upon the Jews. Images of Caligula were set up in the synagogues, an edict deprived the Jews of their rights as citizens, and finally the governor authorized the mob to sack the Jewish quarter, as if it had been a conquered city (38). Jewsesses were forced to eat pork and the elders were scourged in the theatre. But Agrippa had influence with the emperor and secured the degradation of the governor. The people and the Jews remained in a state of civil war, until each side sent an embassy (40) to wait upon the emperor. The Jewish embassy was headed by Philo, who has described its fortunes in a tract dealing with the divine punishment of the persecutors. Their opponents also had secured a friend at court and seem to have prevented any effective measure of redress. While the matter was still pending, news arrived that the emperor had commanded Publius Petronius, the governor of Syria, to set up his statue in the temple of Jerusalem. On the intervention of Agrippa the order was countermanded, and the assassination of the emperor (41) effectively stopped the desecration.

36. Claudius and the Procurators.—Claudius, the new emperor, restored the civic rights of the Alexandrian Jews and made Agrippa I. king over all the territories of the tribe. Here was once more a king of Judaea, and a king who observed the tradition of the Pharisees and protected the Jewish religion. There is a tradition in the Talmud which illustrates his popularity. As he was reading the Law at the feast of tabernacles he burst into tears at the words "Thou mayest not set a stranger over thee which is not thy brother"; and the people cried out, "Fear not, Agrippa; thou art our brother." The fact that he began to build a wall round Jerusalem may be taken as further proof of his patriotism. But the fact that he summoned five vassal-kings of the empire to a conference at Tiberias suggests rather a policy of self-aggrandisement. Both projects were prohibited by the emperor on the intervention of the legate. In 44 he died. The Christian records treat his death as an act of divine vengeance upon the persecutor of the Christian Church.

The Jews prayed for his recovery and lamented him. The Gentile soldiers exulted in the downfall of his dynasty, which they signalized after their own fashion. Claudius intended that Agrippa's young son should succeed to the kingdom; but he was overruled by his advisers, and Judea was taken over once more by Roman procurators. The success of Agrippa's brief reign had revived the hopes of the Jewish nationalists, and concessions only retarded the inevitable insurrection.

Cuspius Fadus, the first of these procurators, purged the land of bandits. He also attempted to regain for the Romans the custody of the high priest's vestments; but the Jews appealed to the emperor against the revival of this advertisement of their servitude. The emperor granted the petition, which indeed the procurator had permitted them to make, and further transferred the nomination of the high priest and the supervision of the temple from the procurator to Agrippa's brother, Herod of Chalcis. But these concessions did not satisfy the hopes of the people. During the government of Fadus, Theudas, who claimed to be a prophet and whom Josephus describes as a wizard, persuaded a large number to take up their possessions and follow him to the Jordan, saying that he would cleave the river asunder with a word of command and so provide them with an easy crossing. A squadron of cavalry despatched by the procurator took them alive, cut off the head of Theudas and brought it to Jerusalem.

Under the second procurator Tiberius Alexander, an apostate Jew of Alexandria, nephew of Philo, the Jews suffered from a great famine and were relieved by the queen of Adiabene, a proselyte to Judaism, who purchased corn from Egypt. The famine was perhaps interpreted by the Zealots as a punishment for their acquiescence in the rule of an apostate. At any rate Alexander crucified two sons of Simon the Galilene, who had headed a revolt in the time of the census. They had presumably followed the example of their father.

Under Vespasian Cumanus (48-52) the mutual hatred of Jews and Romans, Samaritans and Jews, found vent in insults and bloodshed. At the passover, on the fourth day of the feast, a soldier mounting guard at the porches of the Temple provoked an uproar, which ended in a massacre, by indecent exposure of his person. Some of the rebels intercepted a slave of the emperor on the high-road near the city and robbed him of his possessions. Troops were sent to pacify the country, and in one village a Tiberius found a copy of Moses' laws and tore it up in public with jeers and blasphemies. At this the Jews fled to Caesarea, and were only restrained from a second outbreak by the execution of the soldier. Finally, the Samaritans attacked certain Galileans who were (as the custom was) travelling through Samaria to Jerusalem for the passover. Cumanus was bribed and refused to avenge the death of the Jews who were killed. So the Galileans with some of the lower classes of 'the Jews' allied themselves with a 'robber' and burned some of the Samaritan villages. Cumanus armed the Samaritans, and, with them and his own troops, defeated these Jewish marauders. The leading men of Jerusalem prevailed upon the rebels who survived the defeat to disperse. But the quarrel was referred first to thelegate of Syria and then to the emperor. The emperor was still disposed to conciliate the Jews; and, at the instance of Agrippa, son of Agrippa I., Cumanus was banished.

37. Felix and the Revolutionaries.—Under Antonius Felix (52-60) the revolution went on. The country, Josephus says, was full of "robbers" and "wizards." The high priest was murdered in the Temple by pilgrims who carried daggers under their cloaks. Wizards and impostors persuaded the multitude to follow them into the desert, and an Egyptian, claiming to be a prophet, led his followers to the Mount of Olives to see the walls of Jerusalem fall at his command. Such deceivers, according to Josephus, did no less than the murderers to destroy the happiness of the city. Their hands were cleaner but their thoughts were more impious, for they pretended to divine inspiration.

Felix the procurator—a king, as Tacitus says, in power and in mind a slave—tried in vain to put down the revolutionaries. The "chief-robber" Eleazar, who had plundered the country for twenty years, was caught and sent to Rome; countless robbers of less note were crucified. But this severity cemented the alliance of religious fanatics with the physical-force party and induced the ordinary citizens to join them, in spite of the punishments.
which they received when captured. Agrippa II received a kingdom—first Chalcis, and then the tetrarchy of Philip and Lysanias—but, though he had the oversight of the Temple and the nomination of the high priest, and enjoyed a reputation for knowledge of Jewish customs and questions, he was unable to check the growing power of the Zealots. His sister Drusilla had broken the Law by her marriage with Felix; and his own notorious relations with his sister Berenice, and his coins which bore the images of the emperors, were an open affront to the conscience of Judaism. When Felix was recalled by Nero in 60 the nation was divided against itself, the Gentiles within its gates were watching for their opportunity, and the chief priests robbed the lower priests with a high hand.

In Caesarea there had been for some time trouble between the Jewish and the Syrian inhabitants. The Jews claimed that the city was theirs, because King Herod had founded it. The Syrians admitted the fact, but insisted that it was a city for Greeks, as its temples and statues proved. Their rivalry led to street-fighting: the Jews had the advantage in respect of wealth and bodily strength, but the Greek party had the assistance of the soldiers who were stationed there. On one occasion Felix sent troops against the victorious Jews; but neither this nor the scourge and the prison, to which the leaders of both factions had been consigned, deterred them. The quarrel was therefore referred to the emperor Nero, who finally gave his decision in favour of the Syrians or Greeks. The result of this decision was that the synagogue at Caesarea was insulted on a Sabbath and the Jews left the city taking their books of the Law with them. So—Josephus says—the war began in the twelfth year of the reign of Nero (A.D. 66).

Josephus and the Zealots.—Simultaneously with this massacre the citizens of Caesarea slaughtered the Jews who still remained there; and throughout Syria Jews effected—and suffered—reprisals. At length the governor of Syria approached the centre of the disturbance in Jerusalem, but retreated after burning down a suburb. In the course of his retreat he was attacked by the Jews and fled to Antioch, leaving them his engines of war. Some prominent Jews fled from Jerusalem—as from a sinking ship—to join him and carried the news to the emperor. The rest of the pro-Roman party were forced or persuaded to join the rebels and prepared for war on a grander scale. Generals were selected by the Sanhedrin from the aristocracy, who had tried to keep the peace and still hoped to make terms with Rome. Ananus the high priest, their leader, remained in command at Jerusalem; Galilee, where the first attack was to be expected, was entrusted to Josephus, the historian of the war. The revolutionary leaders, who had already taken the field, were superseded.

Josephus set himself to make an army of the inhabitants of Galilee, many of whom had no wish to fight, and to strengthen the strongholds. His organization of local government and his efforts to maintain law and order brought him into collision with the Zealots and especially with John of Giscala, one of their leaders. The people, whom he had tried to conciliate, were roused against him; John sent assassins and finally procured an order from Jerusalem for his recall. In spite of all this Josephus held his ground and by force or craft put down those who resisted his authority.

In the spring of 67 Vespasian, who had been appointed by Nero to crush the rebellion, advanced from his winter quarters at Antioch. The inhabitants of Sepphoris—whom Josephus had judged to be so eager for the war that he left them to build their wall for themselves—received a Roman garrison at their own request. Joined by Titus, Vespasian advanced into Galilee with three legions and the auxiliary troops supplied by Agrippa and other petty kings. Before his advance the army of Josephus fled. Josephus with a few stalwarts took refuge in Tiberias, and sent a letter to Jerusalem asking that he should be relieved of his command or supplied with an adequate force to continue the war. Hearing that Vespasian was preparing to besiege Jotapata, a strong fortress in the hills, which was held by other fugitives, Josephus entered it just before the road approaching it was made passable for the Roman horse and foot. A deserter announced his arrival to Vespasian, who rejoiced (Josephus says) that the cleverest of his enemies had thus voluntarily imprisoned himself. After some six weeks' siege the place was stormed, and its
exhausted garrison were killed or enslaved. Josephus, whose pretences had postponed the final assault, hid in a cave with forty men. His companions refused to permit him to surrender and were resolved to die. At his suggestion they cast lots, and the first man was killed by the second and so on, until all were dead except Josephus and (perhaps) one other. So Josephus saved them from the sin of suicide and gave himself up to the Romans. He had prophesied that the place would be taken—as it was—on the forty-seventh day, and now he prophesied that both Vespasian and his son Titus would reign over all mankind. The prophecy saved his life, though many desired his death, and the rumour of it produced general mourning in Jerusalem. By the end of the year (67) Galilee was in the hands of Vespasian, and John of Giscala had fled. Agrrippa celebrated the conquest at Caesarea with festivities which lasted twenty days.

In accordance with ancient custom Jerusalem welcomed the fugitive Zealots. The result was civil war and famine. Ananus incited the people against these robbers, who arrested, imprisoned and murdered prominent friends of Rome, and arrogated to themselves the right of selecting the high priest by lot. The Zealots took refuge in the Temple and summoned the Idumaeans to their aid. Under cover of a storm, they opened the city-gates to their allies and proceeded to murder Ananus the high priest, and, against the verdict of a formal tribunal, Zacharias the son of Baruch in the midst of the Temple. The Idumaeans left, but John of Giscala remained master of Jerusalem.

40. The Fall of Jerusalem.—Vespasian left the rebels to consume one another and occupied his army with the subjugation of the country. When he had isolated the capital and was preparing to besiege it, the news of Nero's death reached him at Caesarea. For a year (June 68–June 69) he held his hand and watched events, until the robber-bands of Simon Bar-Giora (son of the proselyte) required his attention. But, before Vespasian took action to stop his raids, Simon had been invited to Jerusalem in the hope that he would act as a counterpoise to the tyrant John. And so, when Vespasian was proclaimed emperor in fulfilment of Josephus' prophecy, and deputed the command to Titus, there were three rivals at war in Jerusalem—Eleazar, Simon and John. The temple sacrifices were still offered and worshippers were admitted; but John's catapults were busy, and priest and worshippers at the altar were killed, because Eleazar's party occupied the inner courts of the Temple. A few days before the passover of 70 Titus advanced upon Jerusalem, but the city was too strong and too nearly surrounded to admit those who wished to worship God. John of Giscala introduced some of his own men, fully armed under their garments, and so got possession of the Temple. Titus pressed the attack, and the two factions joined hands at last to repel it. In spite of their desperate sallies, Jerusalem was taken by a wall, and its people, whose numbers were increased by those who had come for the passover, were hemmed in to starve. The famine affected all alike—the populace, who desired peace, and the Zealots, who were determined to fight to the end. At last John of Giscala portioned out the sacred wine and oil, saying that they who fought for the Temple might fearlessly use its stores for their sustenance. Steadily the Romans forced their way through wall after wall, until the Jews were driven back to the Temple and the daily sacrifices ceased to an end on open ground. In July the last, the temple-gates were burned. According to Josephus, Titus decided to spare the Temple, but—whether this was so or not—on the 10th of August it was fired by a soldier after a sortie of the Jews had been repelled. The legions set up their standards in the temple-court and hailed Titus as emperor.

Some of the Zealots escaped with John and Simon to the upper city and held it for another month. But Titus had already earned the triumph which he celebrated at Rome in 71. The Jews, wherever they might be, continued to pay the temple-tax; but now it was devoted to Jupiter Capitoline. The Romans had taken their holy place, and the Law was all that was left to them.

41. From A.D. 70 to A.D. 135.—The destruction of the Temple carried with it the destruction of the priesthood and all its power. The priests existed to offer sacrifices, and by the Law no sacrifice could be offered except at the Temple of Jerusalem. Thenceforward the remnant of the house of David was deposed; and Vespasian consecrated a church rather than a nation or a state, and the Pharisees exercised an unchallenged supremacy. With the Temple and its believers perished the Sanhedrnon in which the Sadducees had ruled. The Pharisees and Zealots or Zealots who had appealed to the arm of flesh were exterminated. Only the teachers of the Law survived to direct the nation and to teach those who remained loyal Jews, how they should render to Caesar what was enjoined to Caesar, and to God what was enjoined to God. Here and there hot-headed Zealots rose up to repeat the errors and the disasters of their predecessors. But their fate only served to deepen the impression already stamped upon the general mind of the people. The Temple was destroyed in the year 69—twenty years after the Jews of the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to worship for some time after it had been destroyed. This was still, as always was the case, a time which was both beneficent and disastrous. Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants to the throne.

In Egypt and in Cyrene fugitive Zealots endeavoured to continue their rebellion against the emperor, but there also with disastrous results. The doors of the Temple in Egypt were closed, and its sacrifices which had been offered for 243 years were prohibited. Soon, however, Vespasian opened the temple of the local Neronian cult and the temple of Isis. The temple of the Dispersion was not permitted to be used as a holy house, and the priests of all religions—except the Jews—were without a temple. In A.D. 70 the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to worship in the temple of the Dispersion. There was still, as always was the case, a time which was both beneficent and disastrous. Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants to the throne.

Early Christian writers assert that he proceeded to search out and to execute all descendants of David who might conceivably come forward as claimants to the throne.

Under John and by Zaccai (q.v.) the Pharisees established themselves at Jamnia. A new Sanhedrin was formed there under the presidency of a ruler, who received yearly dues from all Jewish communities. The scribes through the synagogues preserved the national spirit and directed it towards the religious life which was prescribed by Scripture. The traditions of the elders were tested, and the new teaching was spread. The temple of Jerusalem was not allowed to be used as a holy house, and the priests of all religions—except the Jews—were without a temple. In A.D. 70 the Dispersion had learned to supplement the Temple by the synagogue, and even the Jews of Jerusalem had not been free to worship in the temple of the Dispersion. **BIBLIOGRAPHY.** The most comprehensive of modern books dealing with the period is Emil Schürer, *Geschichte des Judischen Volkes im Zeitalter Jesu Christi* (3 vols., Leipzig, 1901 fols.). Exception has been taken to a certain lack of sympathy with the Jews, especially the rabbis, which has been detected in the author. But at least the book remains an indispensable storehouse of references to ancient and modern authorities. An earlier edition was translated into English under the title *History of the Jewish People* (Edinburgh, 1890, 1891). A shorter history is Eusebius' *Historia Ecclesiastica* (pp. 131-40, 137-40). Both are indispensable. A modern historical study, *Israel's Schurer* (1904), is perhaps the least dependent upon Schürer and attempts more than others to interpret the fragmentary evidence available. Dr R. H. Charles has done much by his editions to restore to its proper place in connexion with Jewish history the *Testaments of the Twelve Patriarchs*, *The Book of Jubilees*, Enoch, &c. But Schürer gives a complete bibliography to which it must suffice to refer. For the Sanhedrin see *Syndicium.* (J. H. A. II.)

III.—From the Dispersion to Modern Times

47. The Later Empire. —With the failure in 1135 of the attempt led by Barcochebas to free Judaea from Roman domination a new era begins in the history of the Jews. The direct consequence of the failure was the annihilation of political nationality. Large numbers fell in the actual fighting. Judaism succumbed as soon as the incredible figure of 600,000, plus besides the incalculable number who succumbed to famine, disease and fire (Dio-Xiphilin lxxix. 11-13). Jerusalem was rebuilt by Hadrian, orders to this effect being given during the emperor's first journey through Syria in 130, the date of his foundations at Gaza, Tiberias and Petra (Reinach, *Textes relatifs au Judaisme*, p. 198). The new city was named Aelia Capitolina, and on the site of the temple of Jehovah there arose another temple dedicated to Jupiter. To Eusebius the erection of a temple of Venus over the sepulchre of Christ was an act of mockery against the Christian religion. Rome had been roused to unwoeful fury, and the truculence of the rebels was matched by the cruelty of their masters. The holy city was barred against the Jews; they were excluded, under pain of death, from approaching within view of the walls. Hadrian's policy in this respect was matched later on by the edict of the caliph Omar (c. 68), who, like his Roman prototype, prevented the Jews from settling in the capital of their ancient country. The death of Hadrian and the accession of Antoninus Pius (138), however, gave the dispersed people of Israel a breathing-space. Roman law was by no means intolerant to the Jews. Under the constitution of Caracalla (198-217) all inhabitants of the Roman empire enjoyed the civil rights of the *Cives Romani* (Scherer, *Die Rechtverhältnisse der Juden*, p. 16).

Moreover, a spiritual revival mitigated the crushing effects of material ruin. The synagogue had become a firmly established institution, and the personal and social life of the masses had come under the control of communal law. The dialectic of the school proved stronger than the edge of the sword to destroy. *Pharisais Judaism*, put to the severest test to which a religious system has ever been subject, showed itself able to control and idealize life in all its phases. Whatever question may be possible as to the force or character of Pharisaism in the time of Christ, there can be no doubt that it became both all-pervading and ennobling among the successors of Aqiba (q.v.t.), himself one of the martyrs to the faith of Hananiah (q.v.). After the overthrow of the Jewish nationality, the Mishnah was practically completed, and by this code of rabbinic law—and law is here a term which includes the social, moral and religious as well as the ritual and legal phases of human activity—the Jewish people were organized into a community, living more or less autonomously under the Sanhedrin or *Syndicium* (q.v.t.) and its officials.

Judah the prince, the patriarch or nasi who edited the Mishnah, died early in the 3rd century. With him the importance of the Palestinian patriarchate attained its zenith. Gamaliel II. of Jamnia (Jabne Yehez) had been raised to this dignity a century before, and, as members of the house of Hillel and thus descendants of David, the patriarchs enjoyed almost royal authority. Their functions were political rather than religious, though their influence was by no means purely secular.

They were often on terms of intimate friendship with the emperors, who scarcely interfered with their jurisdiction. As late as Theodosius I. (379-395) the internal affairs of the Jews were formally committed to the patriarchs, and Honorius (404) authorized the collection of the patriarch's tax (*aurum coronarium*), by which a revenue was raised from the Jews of the diocese.

Under Theodosius II. (408-450) the patriarchate was finally abolished after a régime of three centuries and a half (Graetz, *History of the Jews*, Eng. trans. vol. ii. ch. xxii.), though ironically enough the last holder of the office had been for a time elevated by the emperor to the rank of prefect. The real turning-point had been reached earlier, when Christianity became the state religion under Constantine I. in 312.

Religion under the Christian emperors became a significant source of discrimination in legal status, and non-conformity might reach so far as to produce complete loss of rights. The laws concerning the Jews had a repressive and preventive object; the repression of Judaism and the prevention of inroads of Jewish influences into the state religion. The Jews were thrust into a position of isolation, and the Code of Theodosius and other authorities characterize them by the epithet *rabbinism.* In *Codex Theodosianus* (533) the Jews are *horribilis,* i.e., feared, barred from holding public office, their community as a goddess, dangerous sect (*secta nefaria, ferialis*), their religion a superstition, their assemblies for religious worship a blasphemy (*sacriigitas coetus*) and a contagion (Scherer, *op. cit.* pp. 637-638). Their synagogues were seized and their law courts were closed: *sinagogas castra et iudiciaria* (sacrilegi causa) was blocked, and a definite decision was issued. But the admission of Christians into the Jewish fold was punished by confiscation of goods (337), the erection of new synagogues was arrested by Theodosius II. (419) under penalty of a tax of ten times the value of the building, and the construction of places of worship was prohibited (425). A similar penalty attached to intermarriage between Jews and Christians, and an attempt was made to nullify all Jewish marriages which were not celebrated in accordance with Roman law. Under *Theodosianus* (527-535) the Jews were held by his predecessor and his successor, Theodosius II., to be *innullis* (nullo), i.e., null, and *aurum coronarium* (379-395) was the first to therefor directly in the religious institutions of the Jewish people. In 553 he interdicted the use of the Talmud (which had then not long been completed), and the Byzantine emperors of the 8th and 9th centuries passed even more intolerant regulations. As regards civil law, Jews were at first allowed to settle disputes between Jew and Jew before their own courts, but Justinian denied them to and heretics the right to appear as witnesses in the public courts against orthodox Christians. To Constantine V. (911-959) goes back the Jewish form of oath which in its later development regarded the Jews and Christians as belonging to *separate communities* (sacrilegi causa). The Jews were therefore held to be *separate peoples,* and their law courts were barred from the position of *equity* in their own and other courts. Justinian gave the finishing touch by proclaiming in 537 the Jews absolutely ineligible for any honour whatsoever ("honore fruanturo nullo").

48. Judaism in Babylonia. —The Jews themselves were during this period engaged in building up a system of isolation on their own side, but they treated Roman law with greater hospitality than it meted out to them. The Talmud shows the influence of that law in many points, and may justly be compared to it as a monument of codification based on great principles. The Palestinian Talmud was compiled in the 4th century, but the better known and more influential version was compiled in Babylon, about 500. The land which, a millennium before, had been a prison for the Jews, became a place of refuge for them. For a long time it formed their second fatherland. Here, far more than on Palestinian soil, was built the enduring edifice of rabbinism. The population of the southern part of Mesopotamia the strip of land enclosed between the Tigris and the Euphrates was, according to Graetz, mainly Jewish; while the district extending for about 70 m. on the east of the Euphrates, from Nehardea in the north to Sura in the south, became a new Palestine with Nehardea for its Jerusalem. The Babylonian Jews were practically independent, and the exarch (*rostgalath* or prince of the captivity) was an official who ruled the community as a vassal of the Persian throne. The exarch claimed, like the Palestinian patriarch, descent from the royal house of David, and exercised most of the functions of
government. Babylonia had risen to supreme importance for Jewish life at about the time when the Mishnah was completed. The great rabbinic academies at Sura and Nehardea, the former of which retained something of its dominant rôle till the 11th century, had been founded, Sura by Abba Arika (q.v.) (c. 219), but Nehardea, the more ancient seat of the two, famous in the 3rd century for its association with Abba Arika’s renowned contemporary Samuel, lost its Jewish importance in the age of Mahomet.

To Samuel of Nehardea (q.v.) belongs the honour of formulating the principle which made it possible for Jews to live under alien laws. Jeremiah had admonished his exiled brothers: “Seek ye the peace of the city whither I have caused you to be carried away captive, and pray unto the Lord for it: for in the peace thereof shall ye have peace” (Jer. xxix. 7). It was now necessary to go farther, and the rabbis proclaimed a principle which was as influential with the synagogue as “Give unto Caesar that which is Caesar’s and to the Church.” The law of the government is law” (Rabba Qama 113 b.), said Samuel, and ever since it has been a religious duty for the Jews to obey and accommodate themselves as far as possible to the laws of the country in which they are settled or reside. In 259 Odenathus, the Palmyrene adventurer whose memory has been eclipsed by that of his wife Zenobia, laid Nehardea waste for the time being, and in its neighbourhood arose the academy of Pumbedita (Pompeditha) which became a new focus for the intellectual life of Israel in Babylonia. These academies were organized on both scholastic and popular lines; their constitution was democratic. An outstanding feature was the Kalah assembly twice a year (in Elul at the close of the summer, and in Adar at the end of the winter), when there were gathered together vast numbers of outside students of the most heterogeneous character as regards both age and attainments. Questions received from various quarters were discussed and the final decision of the Kalah was signed by the Rish-Mitibah, the rabbinic leader of the general assembly, who was only second in rank to the Rish-Mitibah, or president of the scholastic sessions. Thus the Babylonian academies combined the functions of specialist law-schools, universities and popular parliaments. They were a unique product of rabbinism; and the authors of the system were also the compilers of its literary expression, the Talmud.

44. Judaism in Islam.—Another force now appears on the scene. The new religion inaugurated by Mahomet differed in its theory from the Roman Catholic Church. The Church, it is true, in council after council, passed decisions unfriendly to the Jews. From the synod at Elvira in the 4th century this process began, and it was continued in the West-Gothic Church legislation, in the Lateran councils (especially the fourth in 1215), and in the council of Trent (1563). The anti-social tendency of these councils expressed itself in the infliction of the badge, in the compulsory domicile of Jews within ghettos, and in the erection of formidable barriers against all intercourse between church and synagogue. The protective instinct was responsible for much of this interference with the natural impulse of men of various creeds towards mutual esteem and forbearance. The church, it was conceived, needed defence against the synagogue at all hazards, and the fear that the latter would influence and dominate the former was never absent from the minds of medieval ecclesiastics. But though this defensive zeal led to active persecution, still in theory Judaism was a tolerated religion wherever the Church had sway, and many papal bulls of a friendly character were issued throughout the middle ages (Scherer, p. 32 seq.).

Islam, on the other hand, had no theoretic place in its scheme for tolerated religions, its principle was fundamentally intolerant. Where the mosque was erected, there was no room for church or synagogue. The caliph Omar initiated in the 7th century a code which required Christians and Jews to wear peculiar dress, denied them the right to hold state offices or to possess land, inflicted a poll-tax on them, and while forbidding them to enter mosques, refused them the permission, but new places of worship for themselves. Again and again these ordinances were repeated in subsequent ages, and intolerance for infidels is still a distinct feature of Mahomedan law. But Islam has often shown itself milder in fact than in theory, for its laws were made to be broken. The medieval Jews on the whole lived, under the crescent, a fuller and freer life than was possible to them under the cross. Mahomedan Babylonia (Persia) was the home of the gaonate (see GAON), the central authority of religious Judaism, whose power transcended that of the secular exilarchate, for it influenced the synagogue far and wide, while the exilarchate was local. The gaonate enjoyed a practical tolerance remarkable when contrasted with the letter of Islamic law. And as the Bagdad caliphate tended to become more and more supreme in Islam, so the gaonate too shared in this increased influence. Not even the Qaraite schism was able to break the power of the geonim. But the dispersion of the Jews was proceeding in directions which carried masses from the Asiatic inland to the Mediterranean coasts and to Europe. The second dispersion of the Jews had begun in the Hellenistic period, but it was after the Barcochebas war that it assumed great dimensions in Europe. There were Jews in the Byzantine empire, in Rome, in France and Spain at very early periods, but it is with the Arab conquest of Spain that the Jews of Europe began to rival in culture and importance their brethren of the Persian gaonate. Before this date the Jews had been learning the rôle they afterwards filled, that of the chief promoters of international commerce. Already under Charlemagne this development is noticeable; in his generous treatment of the Jews this Christian emperor stood in marked contrast to his contemporary the caliph Harun al-Rashid, who persecuted Jews and Christians with equal vigour. But by the 10th century Judaism had received from Islam something more than persecution. It caught the contagion of poetry, philosophy and science. The schismatic Qaraite initiated or rather necessitated a new Hebrew philology, which later on produced Qimhi, the great Saadiah founded a Jewish philosophy, the statesman Hasdai introduced a new Jewish culture—and all this under Mahomedan rule. It is in Spain that above all the new spirit manifested itself. The distinctive feature of the Spanish-Jewish culture was its comprehensiveness. Literature and arts, science and statecraft, poetry and medicine, these various expressions of human nature and activity were so harmoniously balanced that they might be found in the possession of one and the same individual. The Jews of Spain attained to high places in the service of the state from the time of the Moorish conquest in 711. From Hasdai ibn Shaprit in the 10th century and Samuel the nagid in the 11th the line of Jewish scholar-statesmen continued till we reach Isaac Abrabanel in 1492, the date of the expulsion of the Jews from Spain. This last-named event synchronized with the discovery of America; Columbus being accompanied by at least one Jewish navigator. While the Spanish period of Jewish history was thus brilliant from the point of view of public service, it was equally notable on the literary side. Hebrew religious poetry was revived for synagogue hymnology, and partly in imitation of Arabian models, a secular Hebrew poetry was developed in metre and rhyme. The new Hebrew Psalms found its first important exponent in Kalir, who was not a Spaniard. But it is to Spain that we must look for the best of the medieval poets of the synagogue, greatest among them being Ibn Gabirol and Halevi. So, too, the greatest Jew of the middle ages, Maimonides, was a Spaniard. In him culminates the Jewish expression of the Spanish-Moorish culture; his writings had an influence on European scholasticism and contributed significant elements to the philosophy of Spinoza. But the reconquest of Andalusia by the Christians associated towards the end of the 15th century with the establishment of the Inquisition, introduced a spirit of intolerance which led to the expulsion of the Jews and Moors. The consequences of this blow were momentous; it may be said to inaugurate the ghetto period. In Spain Jewish life had participated in the general life, but the expulsion—while it dispersed...
JEWS

the Spanish Jews in Poland, Turkey, Italy and France, and thus in the end contributed to the Jewish emancipation at the French Revolution—for the time drove the Jews within their own confines and barred them from the outside world.1

46. In France, Germany, England, Italy.—In the meantime Jewish life had been elsewhere subjected to other influences which produced a result at once narrower and deeper. Under Charlemagne, the Jews, who had begun to settle in Gaul in the time of Caesar, were more than tolerated. They were allowed to hold land and were encouraged to become—what their ubiquity qualified them to be—the merchant princes of Europe. The reign of Louis the Pious (814–846) was, as Graetz puts it, "a golden era for the Jews of his kingdom, such as they had never enjoyed, and were destined never again to enjoy in Europe"—prior, that is, to the age of Mendelssohn. In Germany at the same period the feudal system barred the Jews from holding land, and though there was as yet no material persecution, they suffered moral injury by being driven exclusively into finance and trade. Nor was there any widening of the general horizon such as was witnessed in Spain. The Jewries of France and Germany were thus thrown upon their own cultural resources. They rose to the occasion. In Mainz there settled in the 10th century Gershom, the "light of the exile," who, about 1000, published his ordinance forbidding polygamy in Jewish law as it had long been forbidden in Jewish practice. This ordinance may be regarded as the beginning of the Synodal government of Judaism, which was a marked feature of medieval life in the synagogues of northern and central Europe from the 12th century. Soon after Gershom's death, Rashi (1040–1106) founded at Troyes a new school of learning. If Maimonides represented Judaism on its rational side, Rashi was the expression of its traditions.

French Judaism was thus in a sense more human if less humane than the Spanish variety; the latter produced thinkers, statesmen, poets and scientists; the former, men within whom the "true" Talmud was a passion, men of robust because of more naive and concentrated piety. In Spain and North Africa persecution created that strange and significant phenomenon Maranism or crypto-Judaism, a public acceptance of Islam or Christianity combined with a private fidelity to the rites of Judaism. But in England, France and Germany persecution altogether failed to shake the courage of the Jews, and martyrdom was born in preference to ostensible apostasy. The crusades subjected the Jews to this ordeal. The evil was wrought, not by the regular armies of the cross who were inspired by noble ideals, but by the undisciplined mobs which, for the sake of plunder, associated themselves with the genuine enthusiasts. In 1096 massacres of Jews occurred in many cities of the Rhineland. During the second crusade (1145–1147) Bernard of Clairvaux heroically protested against similar inhumanities. The third crusade, famous for the participation of Richard I., was the occasion for bloody riots in England, especially in York, where 150 Jews immolated themselves to escape baptism. Economically and socially the crusades had disastrous effects upon the Jews (see J. Jacobs, Jewish Encyclopedia, iv. 379). Socially they suffered by the outburst of religious animosity. One of the worst forms taken by this ill-will was the oft-revived myth of ritual murder (q.v.), and later on when the Black Death devastated Europe (1348–1449) the Jews were the victims of an odious charge of well-poisoning. Economically the results were also injurious. "Before the crusades the Jews had practically a monopoly of trade in Eastern products, but the closer connexion between Europe and the East brought about by the crusades raised up a class of merchant traders among the sale of goods by Jews became frequent " (op. cit.). After the second crusade the German Jews fell into the class of servi camerae, which at first only implied that they enjoyed the immunity of imperial servants, but afterwards made of them slaves and pariahs. At the personal whim of rulers, whether royal or of lower rank, the Jews were expelled from states and principalities and were reduced to a condition of precarious uncertainty as to what the morrow might bring forth. Pope Innocent III. gave strong impetus to the repression of the Jews, especially by ordaining the wearing of a badge. Popular animosity was kindled by the enforced participation of the Jews in public disquisitions. In 1306 Philip IV. expelled the Jews from France, nine years later Louis X. recalled them for a period of twelve years. Such vicissitudes were the ordinary lot of the Jews for several centuries, and it was their own inner life—the pure life of the home, the idealism of the synagogue, and the belief in ultimate Messianic redemption—that saved them from utter demoralization and despair. Curiously enough in Italy—and particularly in Rome—the external conditions were better. The popes themselves, within their own immediate jurisdiction, were often far more tolerant than their bulls issued for foreign communities, and Torquemada was less an expression than a distortion of the papal policy. In the early 15th century the age of Dante, the new spirit of the Renaissance made Italian rulers the patrons of art and literature, and the Jews to some extent shared in this gracious change. Robert of Aragon—vicar-general of the papal states—in particular encouraged the Jews and supported them in their literary and scientific ambitions. Small coteries of Jewish minor poets and philosophers were formed, and men like Kalonymos and Immanuel—Dante's friend—shared the versatility and culture of Italy. But in Germany there was no echo of this brighter note. Persecution was elevated into a system, a poll-tax was exacted, and the rabble was allowed (notably in 1336–1337) to give full vent to its fury. Following on this came the Black Death with its terrible consequences in Germany; even in Poland, where the Jews had previously enjoyed considerable rights, extensive massacres took place.

In effect the Jews became outlaws, but their presence being often financially necessary, certain officials were permitted to "hold Jews" who were liable to all forms of arbitrary treatment on the side of their "owners." The Jews had been among the first to appreciate the commercial advantages of permitting the loan of money on interest, but it was the policy of the Church that drove the Jews into money-lending as a characteristic trade. Restrictions on their occupations were everywhere common, and as the Church forbade Christians to engage in usury, this was the only trade open to the Jews. The excessive demands made upon the Jews forbade a fair rate of interest. "The Jews were unwilling sponges by means of which a large part of the subjects' wealth found its way into the royal exchequer" (Abrahams, Jewish Life in the Middle Ages, ch. xii.). Hence, though this procedure made the Jews intensely obnoxious to the peoples, they became all the more necessary to the rulers. A favourable form of tolerance was to grant a permit to the Jews to remain in the state for a limited term of years; their continuance beyond the specified time was illegal and they were therefore subject to sudden banishment. Thus a second expulsion of the Jews of France occurred in 1304. Early in the 15th century John Hus—under the inspiration of Wycliffe—initiated at Prague the revolt against the Roman Catholic Church. The Jews suffered in the persecution that followed, and in 1420 all the Austrian Jews were thrown into prison. Martin V. published a favourable bull, but it was ineffectual. The darkest days were nigh. Pope Eugenius (1442) issued a fiercely intolerant missive; the Franciscan John of Capistrano moved the masses to activity by his eloquent denunciations; even Casimir IV. revoked the privileges of the Jews in Poland, when the Turkish capture of Constantinople (1453) offered a new asylum for the hunted Jews of Europe. But in Europe itself the catastrophe was not arrested. The Inquisition in Spain led to the expulsion of the Jews (1492), and this event involved not only the latter but the whole of the Jewish people. "The Jews everywhere felt as if the temple had again been destroyed" (Graetz). Nevertheless, the result was not all evil. If fugitives are for the next half-century to be met with in all parts of Europe, yet, especially in the Levant, there grew up thriving Jewish
communities, often founded by Spanish refugees. Such incidents as the rise of Joseph Nasi (q.v.) to high position under the Turkish government as duke of Naxos mark the coming change. The reformation as such had no favourable influence on Jewish fortunes in Christian Europe, though the championship of the cause of toleration by Reuchlin had considerable value. But the age of the ghetto (q.v.) had set in too firmly for immediate amelioration to be possible. It is to Holland and to the 17th century that we must turn for the first real steps towards Jewish emancipation.

47. Period of Emancipation.—The ghetto, which had prevailed more or less rigorously for a long period, was not formally prescribed by the papacy until the beginning of the 16th century. The same century was not ended before the prospect of liberty dawned on the Jews. Holland from the moment that it joined the union of Utrecht (1579) deliberately set its face against religious persecution (Jewish Encyclopedia, i. 537). Maranos, fleeing to the Netherlands, were welcomed; the immigrants were wealthy, enterprising and cultured. Many Jews, who had been compelled to conceal their faith, now came into the open. By the middle of the 17th century the Jews of Holland had become of such importance that Charles II. of England (then in exile) entered into negotiations with the Amsterdam Jews (1656). In that same year the Amsterdam community was faced by a serious problem in connexion with Spinoza. They brought themselves into notoriety by excommunicating the philosopher—an act of weak self-defence on the part of men who had themselves but recently been admitted to the country, and were timorous of the suspicion that they shared Spinoza's then execrated views. It is more than a mere coincidence that this step was taken during the absence in England of one of the ablest and most notable of the Amsterdam rabbis. At the time, Menasseh ben Israel (q.v.) was in London, on a mission to Cromwell. The Jews had been expelled from England by Edward I., after a sojourn in the country of rather more than two centuries, during which they had been the licensed and oppressed money-lenders of the realm, and had—through the special exchanger of the Jews—been used by the sovereign as a means of extorting a revenue from his subjects. In the 17th century a considerable number of Jews had made a home in the English colonies, where from the first they enjoyed practically equal rights with the Christian settlers. Cromwell, upon the inconclusive termination of the conference summoned in 1655 at Whitehall to consider the Jewish question, tacitly assented to the return of the Jews to this country, and at the restoration his action was confirmed. The English Jews “genuinely substituted for the personal protection of the crown, the sympathy and confidence of the nation” (L. Wolf, Menasseh ben Israel's Mission to Cromwell, p. lxxv.). The city of London was the first to be converted to the new attitude. “The wealth they brought into the country, and their fruitful commercial activity, especially in the colonial trade, soon revealed them as an indispensable element of the prosperity of the city. As early as 1665, Sir Joseph Child, the master of the Mint, the English company, pleaded for their naturalization on the score of their commercial utility. For the same reason the city found itself compelled at first to concur at their illegal representation on 'Change,' and then to violate its own rules by permitting them to act as brokers without previously taking up the freedom. At this period they controlled more of the foreign and colonial trade than all the other alien merchants in London put together. The momentum of their commercial enterprise and stalwart patriotism proved irresistible. From the exchange to the city council chamber, thence to the aldermanic court, and eventually to the mayorality itself, were inevitable stages of an emancipation to which their large interests in the city and their high character entitled them. Finally the city of London—not only as the converted champion of religious liberty but as the convinced apologist of the Jews—sent Baron Lionel de Rothschild to knock at the door of the unconverted House of Commons as parliamentary representative of the first city in the world” (Wolff, loc. cit.).

The pioneers of this emancipation in Holland and England were Sephardic (or Spanish) Jews—descendants of the Spanish exiles. In the meantime the Ashkenazic (or German) Jews had been working out their own salvation. The chief effects of the change were not felt till the 18th century. In England emancipation was of democratic origin and concerned itself with practical questions. On the Continent, the movement was more aristocratic and theoretical; it was part of the intellectual renaissance which found its most striking expression in the principles of the French Revolution. Throughout Europe the 18th century was less an era of stagnation than of transition. The condition of the European Jews seems, on a superficial examination, abject enough. But, excluded though they were from most trades and occupations, confined to special quarters of the city, disabled from sharing most of the amenities of life, the Jews nevertheless were gradually making their escape from the ghetto and from the moral degeneration which it had caused. Some ghettos (as in Moravia) were actually not founded till the 18th century, but the careful observer can perceive clearly that at that period the ghetto was a doomed institution. In the "dark ages" Jews enjoyed neither rights nor privileges; in the 18th century they were still without rights but they had privileges. A grotesque feature of the time in Germany and Austria was the class of court Jews, such as the Oppenheims, the personal favourites of rulers and mostly their victims when their usefulness had ended. These men often rendered great services to their fellow-Jews, and one of the results was the growth in Jewish society of an aristocracy of wealth, where previously there had been an aristocracy of learning. Even more important was another privileged class—that of the Schutz-Jude (protected Jew). Where there were no rights, privileges had to be bought. While the court Jews were the favourites of kings, the protected Jews were the protégés of town councils. Corruption is the frequent concomitant of privilege, and thus the town councils often connived for a price at the presence in their midst of Jews whose admission was illegal. Many Jews found it possible to evade laws of domicile by residing in one place and trading in another. Nor could they be effectually excluded from the fairs, the great markets of the 18th century. The Sephardic Jews in all these respects occupied a superior position, and they merited the partiality shown to them. Their personal dignity and the vast range of their colonial enterprises were in striking contrast to the retail traffic of the Ashkenazim and their degenerate bearing and speech. Peddling had been forced on the latter by the action of the guilds which were still powerful in the 18th century on the Continent. Another cause may be sought in the Cossack assaults on the Jews at an earlier period. Crowds of wanderers were to be met on every road; Germany, Holland and Italy were full of Jews who, pack on shoulder, were seeking a precarious livelihood at a time when peddling was neither lucrative nor safe. But underneath all this were signs of a great change. The 18th century has a goodly tale of Jewish artists in metal-work, makers of pottery, and (wherever the guilds permitted it) artisans and wholesale manufacturers of many important commodities. The last attempts at exclusion were wirily fought about. Nor could they be effectually excluded from the fairs, the great markets of the 18th century. Such strange enactments as the Familie-Gesetze, which prohibited more than one member of a family from marrying, broke up families by forcing the men to emigrate. In 1781 Dohm pointed to the fact that a Jewish father could seldom hope to enjoy the happiness of living with his children. In that very year, however, Joseph II. initiated in Austria a new era for the Jews. This Austrian reformation was so typical of other changes elsewhere, and so expressive of the previous disabilities of the Jews, that, even in this rapid summary, space must be spared for some of the details supplied by Graetz. “By this new departure (9th of October 1781) the Jews were permitted to learn handicrafts, arts and sciences, and with certain restrictions to devote themselves to agriculture. The doors of the universities and academies, hitherto closed to them, were thrown open. . . . An ordinance of November 2 enjoined that the Jews were everywhere considered fellow-men, and all excesses against them were

to be avoided. The Leibzoll (body-tax) was also abolished, in addition to the special law-taxes, the passport duty, the night-duty and all similar imposts which had stamped the Jews as outcasts, for they were now (Dec. 19) to have equal rights with the Christian inhabitants. The Jews were not, indeed, granted complete citizenship, and their residence and public worship in Vienna and other Austrian cities were circumscribed and even penalized. "But Joseph II. annulled a number of vexatious, restrictive regulations, such as the compulsory wearing of beards, the prohibition against going out in the forenoon on Sundays or holidays, or frequenting public pleasure resorts. The emperor even permitted Jewish wholesale merchants, notables and their sons, to wear swords (January 2, 1782), and especially insisted that Christians should behave in a friendly manner towards Jews."

48. The Mendelssohn Movement.—This notable beginning to the removal of "the ignomy of a thousand years" was causally connected with the career of Moses Mendelssohn (1729-1786; q.v.). He found on both sides an unreasidness for approximation: the Jews had sunk into apathy and degeneration, the Christians were still moved by hereditary antipathy. The failure of the hopes entertained of Sabbatai Zebi (q.v.) had plunged the Jewries of the world into despair. This Smyrnan pretender not only proclaimed himself Messiah (c. 1650) but he was accepted in that rôle by vast numbers of his brethren. At the moment when Spinoza was publishing a system which is still a dominating note of modern philosophy, this other son of Israel was capturing the very heart of Jewry. His miracles were reported and eagerly believed everywhere; "from Poland, Hamburg and Amsterdam treasures poured into his court; in the Levant young men and maidens prophesied before him; the Persian Jews refused to till the fields. 'We shall pay no more taxes,' they said, 'our Messiah is come.'" The expectation that he would lead Israel in triumph to the Holy Land was doomed to end in disappointment. Sabbatai lacked one quality without which enthusiasm is ineffective: he failed to believe in himself. At the critical moment he embraced Islam to escape death, and though he was still believed in by many — it was not Sabbatai himself but a phantom resemblance that had assumed the turban — his meteoric career did but colour the sky of the Jews with deeper blackness. Despite all this, one must not fall into the easy error of exaggerating the degeneration into which the Jewries of the world fell from the middle of the 17th till the middle of the 18th century. For Judaism had organized itself; the Shulkhan aruch of Joseph Qaro (q.v.), printed in 1562 within a decade of its completion, though not accepted without demands Pardesi Jews refused to till the fields. Sabbatai lacked one quality without which enthusiasm is ineffective: he failed to believe in himself. At the critical moment he embraced Islam to escape death, and though he was still believed in by many — it was not Sabbatai himself but a phantom resemblance that had assumed the turban — his meteoric career did but colour the sky of the Jews with deeper blackness. Despite all this, one must not fall into the easy error of exaggerating the degeneration into which the Jewries of the world fell from the middle of the 17th to the middle of the 18th century. For Judaism had organized itself; the Shulkhan aruch of Joseph Qaro (q.v.), printed in 1562 within a decade of its completion, though not accepted without demands for it, was a definite code of Jewish life. If in more recent times progress in Judaism has implied more or less of revolt against the rigors and fetters of Qaro's code, yet for 250 years it was a powerful safeguard against demoralization and stagnation. No community living in full accordance with that code could fail to reach a high moral and intellectual level.

It is truer to say that on the whole the Jews began at this period to abandon as hopeless the attempt to find a place for themselves in the general life of their country. Perhaps they even ceased to desire it. Their children were taught without any regard to outside conditions, they spoke and wrote a jargon, and their whole training, both by what it included and by what it excluded, tended to produce isolation from their neighbours. Moses Mendelssohn, both by his career and by his propaganda, for ever put an end to these conditions; he was more than any other man. Born in the ghetto of Dessau, he was not of the ghetto. At the age of fourteen he found his way to Berlin, where Frederick the Great, inspired by the spirit of Voltaire, held the maxim that "to oppress the Jews never brought prosperity to any government." Mendelssohn became a warm friend of Lessing, the hero of whose drama Nathan the Wise was drawn from the Dessau Jew. Mendelssohn's Phaede, on the immortality of the soul, brought the author into immediate fame, and the simple home of the "Jewish plate" was sought by many of the leaders of Gentile society in Berlin. Mendelssohn's translation of the Pentateuch into German with a new commentary by himself and others introduced the Jews to more modern ways of thinking. Two results emanated from Mendelssohn's work. A new school of scientific study of Judaism emerged, to be dignified by the names of Leopold Zunz (q.v.), H. Graetz (q.v.) and many others. On the other hand Mendelssohn by his pragmatic conception of religion (specially in his Jerusalem) weakened the belief of certain minds in the absolute truth of Judaism, and thus his own grandchildren (including the famous musician Felix Mendelssohn-Bartholdy) as well as later Heine, Börne, Gans and Neander, embraced Christianity. Within Judaism itself two parties were formed, the Liberals and the Conservatives, and as time went on these tendencies definitely organized themselves. Holdheim (q.v.) and Geiger (q.v.) led the reform movement in Germany and at the present day the effects of the movement are widely felt in America on the Liberal side and on the opposite side in the work of the neo-orthodox school founded by S. R. Hirsch (q.v.). Modern seminaries were established first in Breslau by Zacharias Frankel (q.v.) and later in other cities. Brilliant results accrued from all this participation in the general life of Germany. Jews, engaged in all the professions and pursuits of the age, came to the front in many branches of public life, claiming such names as Riesser (d. 1863) and Lasker in politics, Auerbach in literature, Rubinstein and Joachim in music, Traube in medicine, and Lazarus in psychology. Especially famous have been the Jewish linguists, pre-eminent among them Theodor Benfey (1806-1881), the pioneer of modern comparative philology; and the Greek scholar and critic Jakob Bernays (1834-1881).

49. Effect of the French Revolution.—In close relation to the German progress in Mendelssohn's age, events had been progressing in France, where the Revolution did much to improve the Jewish condition, thanks largely to the influence of Mirabeau. In 1807 Napoleon convoked a Jewish assembly in Paris. Though the decisions of this body had no binding force on the Jews generally, yet in some important particulars its decrees represent principles widely adopted by the Jewish community. They proclaim the acceptance of the spirit of Mendelssohn's reconstitutions of the Jews to modern life. They assert the citizenship and patriotism of Jews, their determination to accommodate themselves to the present as far as they could while retaining loyalty to the past. They declare their readiness to adapt the law of the synagogue to the law of the land, as for instance in the question of marriage and divorce. No Jew, they decided, may perform the ceremony of marriage unless civil formalities have been fulfilled; and divorce is allowed to the Jews only if and so far as it is confirmatory of a legal divorce pronounced by the civil law of the land. The French assembly did not succeed in obtaining formal assent to these decisions (except from Frankfort and Holland), but they gained the practical adhesion of the majority of Western and American Jews. Napoleon, after the report of the assembly, established the consistorial system which remained in force, with its central consistory in the capital, until the recent separation of church and state. Many French Jews acquired fame, among them the ministers Crémieux (1796-1879), Fould, Gondechaux and Raynal; the archaeologists and philologians Oppert, Halévy, Mintz, the Dernourens, Darmesteters and Reinachs; the musicians Halévy, Waldeufel and Meyerbeer; the authors and dramatists Catulle Mendès and A. d'Ennery, and many others, among them several distinguished occupants of civil and military offices.

50. Modern Italy.—Similar developments occurred in other countries, though it becomes impossible to treat the history of the Jews, from this time onwards, in general outline. We must direct our attention to the most important countries in such detail as space permits. And first as to Italy, where the Jews in a special degree have identified themselves with the national life. The revolutions of 1848, which greatly affected the position of the Jews in several parts of Europe, brought considerable gain to the Jews of Italy. During the war against Austria in the year named, Isaac Pesaro Marogonato was finance minister in Venice. Previously to this date the Jews were still confined to the ghetto, but in 1859, in the Italy united under Victor
Emanuel II., the Jews obtained complete rights, a privilege which was extended also to Rome itself in 1870. The Italian Jews devoted themselves with ardour to the service of the state. Isaac Artom was Cavour's secretary, L'Olper a counsellor of Mazzini.

"The names of the Jewish soldiers who died in the cause of Italian liberty were placed among those of their Christian fellow soldiers on the monuments erected in their honour" (Jewish Encyclopedia, vii. 10). More recently men like Wollemberg, Ottolenghi and Luzzatti rose to high positions as ministers of state. Most noted of recent Jewish scholars in Italy was S. D. Luzzatto (q.v.).

51. Austria.—From Italy we may turn to the country which so much influenced Italian politics, Austria, which had founded the system of "Court Jews" in 1518, had expelled the Jews from Vienna as late as 1790, when the synagogue of that city was converted into a church. But economic laws are often too strong for civil vagaries or sectarian fanaticism, and as the commerce of Austria suffered by the absence of the Jews, it was impossible to exclude the latter from the fairs of the provinces from the markets of the capital. As has been pointed out above, certain protected Jews were permitted to reside in places where the expulsion of the Jews had been decreed. But Maria Theresa (1740-1780) was distinguished for her enmity to the Jews, and in 1744 made a futile attempt to secure their expulsion from Bohemia.

"In 1760 she issued an order that all unbearded Jews should wear a yellow badge on their left arm" (Jewish Encyclopedia, ii. 330). The most petty limitations of Jewish commercial activity continued; thus at about this period the community of Prague, in a petition, "complain that they are not permitted to buy victuals in the market before a certain hour, vegetables not before 9 and cattle not before 11 o'clock; to buy fish is sometimes altogether prohibited; Jewish druggists are not permitted to buy victuals at the same time with Christians" (op. cit.). So, too, with taxation. It was exorbitant and vexatious. To pay for rendering inoperative the banishment edict of 1744, the Jews were taxed 3,000,000 florins annually for ten years. In the same year it was decreed that the Jews should pay "a special tax of 40,000 florins for the right to import their citrons for the feast of booths." Nevertheless, Joseph II. (1780-1790) inaugurated a new era for the Jews of his empire. Soon after his accession he abolished the distinctive Jewish dress, abrogated the poll-tax, admitted the Jews to military service and their children to the public schools, and in general opened the era of emancipation by the Tolerantpatent of 1782. This enlightened policy was not continued by the successors of Joseph II. Under Francis II. (1792-1835) economic and social restrictions were numerous. Agriculture was again barred; indeed the Vienna congress of 1815 practically restored the old discriminations against the Jews. As time went on, a more progressive policy intervened, the special form of Jewish oath was abolished in 1846, and in 1848, as a result of the revolutionary movement in which Jews played an active part, legislation took a more liberal turn. Francis Joseph I. ascended the throne in that year, and though the constitution of 1849 recognized the principle of religious liberty, an era of reaction supervened, especially when "the concordat of 1855 delivered Austria altogether into the hands of the clericals."

But the day of medieval intolerance had passed, and in 1867 the new constitution "abolished all disabilities on the ground of religious differences," though anti-Semitic manipulation of the law by administrative authority has led to many instances of intolerance. Many Jews have been members of the Reichsrath, some have risen to the rank of general in the army, and Austrian Jews have contributed their quota to learning, the arts and literature. Löw, Jellinek, Kaufmann, as scholars in the Jewish field; as poets and novelists, Kompert, Franzos, L. A. Frankl; the pianist Moscheles, the dramatist Mosenthal, and the actor Sonnenthal, the mathematician Spitzer and the chess-player Steinitz are some of the most prominent names. The law of 1890 makes it "compulsory for every Jew to be a member of the congregation of the district in which he resides, and so gives to every congregation the right to tax the individual members" (op. cit.). A similar obligation prevails in parts of Germany. A Jew can avoid the communal tax only by formally declaring himself as outside the Jewish community. The Jews of Hungary shared with their brethren in Austria the same alternations of expulsion and recall. By the law "De Judaeis" passed by the Diet in 1791 the Jews were accorded protection, but half a century passed before their tolerated condition was regularized. The "toleration-tax" was abolished in 1846. During the revolutionary outbreak of 1848, the Jews suffered severely in Hungary, but as many as 20,000 Jews are said to have joined the army. Kossuth succeeded in granting them temporary emancipation, but the suppression of the War of Independence led to an era of royal autocracy which, while it advanced Jewish culture by enforcing the establishment of modern schools, retarded the obtaining of civic and political rights. As in Austria, so in Hungary, these rights were granted by the constitution of 1867. But one step remained. The Hungarian Jews did not consider themselves fully emancipated until the Synagogue was "duly recognized as one of the legally acknowledged religions of the country." This recognition was granted by the law of 1895-1896. In the words of Büchler (Jewish Encyclopedia, vi. 503): "Since their emancipation the Jews have taken an active part in the political, industrial, scientific and artistic life of Hungary. In all these fields they have achieved prominence. They have also founded great religious institutions. Their progress has not been arrested even by anti-Semitism, which first developed in 1883 at the time of the Tisza-Eslar accusation of ritual murder."

52. Other European Countries.—According to M. Caimi the present Jewish communities of Greece are divisible into five groups: (1) Arta (Epirus); (2) Chalceis (Euboia); (3) Athens (Attica); (4) Volo, Larissa and Trikala (Thessaly); and (5) Corfu and Zante (Ionian Islands). The Greek constitution admits no religious disabilities, but anti-Semitic riots in Corfu and Zante in 1891 caused much distress and emigration. In Spain there has been of late a more liberal attitude towards the Jews, and there is a small congregation (without a public synagogue) in Madrid. In 1858 the edict of expulsion was repealed. Portugal, on the other hand, having abolished the Inquisition in 1821, has since 1826 allowed Jews freedom of religion, and there are synagogues in Lisbon and Faro. In Holland the Jews were admitted to political liberty in 1796. At present more than half of the Dutch Jews are concentrated in Amsterdam, being largely engaged in the diamond and tobacco trades. Among famous names of recent times foremost stands that of the artist Josef Israels. In 1875 was consecrated in Amsterdam the synagogue which is still the most noted Jewish edifice in Europe. Belgium granted full freedom to the Jews in 1815, and the community has since 1868 been organized on the state consistorial system, which till recently also prevailed in France. It was not till 1874 that full religious equality was granted to the Jews of Switzerland. But there has been considerable interference (ostensibly on humanitarian grounds) with the Jewish method of slaughtering animals for food (Shehitah) and the method was prohibited by a referend in 1893. In the same year a similar enactment was passed in Saxony, and the subject is a favourite one with anti-Semites, who have enlisted on their side some scientific authorities, though the bulk of expert opinion is in favor of Shehitah (see Dembo, Das Schlachten,1894). In Sweden the Jews have all the rights which are open to non-Lutherans; they cannot become members of the council of state. In Norway there is a small Jewish settlement (especially in Christiania) who are engaged in industrial pursuits and enjoy complete liberty. Denmark has for long been distinguished for its liberal policy towards the Jews. Since 1814 the latter have been eligible as magistrates, and in 1849 full equality was formally ratified by Copen-

The story of the Jews in Russia and Rumania remains a black spot on the European record. In Russia the Jews are more numerous and more harshly treated than in any other part of the world. In the remotest past Jews were settled in much of the
the territory now included in Russia, but they are still treated as aliens. They are restricted to the pale of settlement which was first established in 1791. The pale now includes fifteen governments, and under the May laws of 1892 the congregation of the Jewish population, the denial of free movement, and the exclusion from the general rights of citizens were rendered more oppressive than ever before. The right to leave the pale is indeed granted to merchants of the first gild, to those possessed of certain educational diplomas, to veteran soldiers and to certain classes of skilled artisans. But these concessions are unfavourably interpreted and much extortion results. Despite a huge emigration of Jews from Russia, the congregation within the pale is the cause of terrible destitution and misery. Fierce massacres occurred in Nizhny-Novgorod in 1882, and in Kishinev in 1903. Many other pogroms have occurred, and the condition of the Jews has been reduced to one of abject poverty and despair. Much was hoped from the duma, but this body has proved bitterly opposed to the Jewish claim for liberty. Yet in spite of these disabilities there are amongst the Russian Jews many enterprising contractors, skilful doctors, and successful lawyers and scientists. In Rumania, despite the Berlin Treaty, the Jews are treated as aliens, and but a small number have been naturalized in every direction.

53. Oriental Countries.—In the Orient the condition of the Jews has been much improved by the activity of Western organizations, of which something is said in a later paragraph. Modern schools have been set up in many places, and Palestine has been the scene of a notable educational and agricultural revival, while technical schools—such as the agricultural college near Jaffa and the schools of the alliance and the more recent Bezaled in Jerusalem—have been established. Turkey has always on the whole tolerated the Jews, and much is hoped from the new régime. In Morocco the Jews, who until late in the 19th century were often persecuted, are still confined to a mellah (separate quarter), but at the coast-towns there are prosperous Jewish communities mostly engaged in commerce. In other parts of the same continent, in Egypt and in South Africa, many Jews are engaged continuously in all industrial and financial pursuits. Recently a mission has been sent to the Falashas of Abyssinia, and much interest has been felt in such outlying branches of the Jewish people as the Black Jews of Cochin and the Bene Israel community of Bombay. In Persia Jews are often the victims of popular outbursts as well as of official extortion, but there are fairly prosperous communities at Bushire, Isfahan, Teheran and Kashan (in Shiraz they are in low estate). The recent advent of constitutional government may improve the condition of the Jews.

54. The United Kingdom.—The general course of Jewish history in England has been indicated above. The Jews came to England at least as early as the Norman Conquest; they were expelled from Bury St. Edmunds in 1190, after the massacres at the coronation of Richard I.; they were required to wear badges in 1218. At the end of the 12th century was established the "exchequer of the Jews," which chiefly dealt with suits concerning money-lending, and arranged a "continual flow of money from the Jews to the royal treasury," and a so-called "parliament of the Jews" was summoned in 1241; in 1275 was enacted the statute de Judaisco which, among other things, permitted the Jews to hold land. But this concession was illusory, and as the statute prevented Jews from engaging in finance—the only occupation which had been open to them—it was a prelude to their expulsion in 1290. There were few Jews in England from that date till the Commonwealth, but Jews settled in the American colonies earlier in the 17th century, and rendered considerable services in the advancement of English commerce. The Whitehall conference of 1655 marks a change in the status of the Jews in England itself, for though no definite results emerged it was clearly defined by the judges that there was no legal obstacle to the return of the Jews. Charles II. in 1664 continued Cromwell's tolerant policy. No serious attempt towards the emancipation of the Jews was made till the Naturalization Act of 1753, which was, however, immediately repealed. Jews no longer attached to the Synagogue, such as the Herschels and Disraeis, attained to fame. In 1830 the first Jewish emancipation bill was brought in by Robert Grant, but it was not till the legislation of 1858-1860 that Jews obtained full parliamentary rights. In other directions progress was more rapid. The office of sheriff was thrown open to Jews in 1835 (Moses Montefiore, sheriff of London was knighted in 1837); Sir I. L. Goldsmid was made a baronet in 1841, Baron Lionel de Rothschild was elected to Parliament in 1847 (though he was unable to take his seat), Alderman (Sir David) Salomons became lord mayor of London in 1853 and Francis Goldsmid was made a Q.C. in 1858. In 1873 Sir George Jessel was made a judge, and Lord Rothschild took his seat in the House of Lords as the first Jewish peer in 1886. A fair proportion of Jews have been elected to the House of Commons, and Mr Herbert Samuel rose to cabinet rank in 1909. Sir Matthew Nathan has been governor of Hong-Kong and Natal, and among Jewish statesmen in the colonies Sir Julius Vogel and V. L. Solomon have been prime ministers (Hymanson: A History of the Jews in England, p. 342). It is unnecessary to remark that in the British colonies the Jews everywhere enjoy full citizenship. In fact, the colonies emancipated the Jews earlier than did the mother country. Jews were settled in Canada from the time of Wolfe, and a congregation was founded at Montreal in 1768, and since 1832 Jews have been entitled to sit in the Canadian parliament. There are some thriving Jewish agricultural colonies in the same dominion. In Australia the Jews from the first were welcomed on perfectly equal terms. The oldest congregation is that of Sydney (1817); the Melbourne community dates from 1844. Reverting to incidents in England itself, in 1870 the abolition of university tests removed all restrictions on Jews at Oxford and Cambridge, and both universities have since elected Jews to professorships and other posts of honour. The communal organization of English Jewry is somewhat inchoate. In 1841 an independent reform congregation was founded, and the Spanish and Portuguese Jews have always maintained their separate existence with a Haham as the ecclesiastical head. In 1870 was founded the United Synagogue, which is a metropolitan organization, and the same remark applies to the more recent Federation of Synagogues. The chief rabbi, who is the ecclesiastical head of the United Synagogue, has also a certain amount of authority over the provincial and colonial Jewries, but this is nominal rather than real. The provincial Jewries, however, participate in the election of the chief rabbi. At the end of 1909 was held the first conference of Jewish ministers in London, and from this is expected some more systematic organization of scattered communities. Anglo-Jewry is rich, however, in charitable, educational and literary institutions; chief among these respectively may be named the Jewish board of guardians (1850), the Jews' college (1853), and the Jewish historical society (1893). Besides the distinctions already noted, English Jews have risen to note in theology (C. G. Montefiore), in literature (Israel Zangwill and Alfred Sutro), in art (S. Hart, R.A., and S. J. Solomon, R.A.) in music (Julius Benedict and Frederick Hymen Cowen). More than 1000 English and colonial Jews participated as active combatants in the South African War. The immigration of Jews from Russia was mainly responsible for the ineffective yet oppressive Aliens Act of 1905. (Full accounts of Anglo-Jewish institutions are given in the Jewish Year-Book published annually since 1893.)

55. The American Continent.—Closely parallel with the progress of the Jews in England has been their steady advancement in America. Jews made their way to America early in the 16th century, settling in Brazil prior to the Dutch occupation. Under Dutch rule they enjoyed full civil rights. In Mexico and Peru they fell under the ban of the Inquisition. In Surinam the Jews were treated as British subjects; in Barbadoes, Jamaica and New York they are found as early as the first half of the 17th century. During the War of Independence the Jews of America took a prominent part on both sides, for under the British rule many had risen to wealth and high social position. After the Declaration of Independence, Jews are found all over America, where they
have long enjoyed complete emancipation, and have enormously increased in numbers, owing particularly to immigration from Russia. The American Jews bore their share in the Civil War (7038 Jews were in the two armies), and have always identified themselves closely with national movements such as the emancipation of Cuba. They have attained to high rank in all branches of the public service, and have shown most splendid instances of far-sighted and generous philanthropy. Within the Synagogue the reform movement began in 1825, and soon won many successes, the central conference of American rabbis and Union College (1875) at Cincinnati being the instruments of this progress. At the present time orthodox Judaism is also again acquiring its due position and the Jewish theological seminary of America was founded for this purpose. In 1908 an organization, inclusive of various religious sections, was founded under the description the Jewish community of New York. There have been four Jewish members of the United States senate, and about 30 of the national House of Representatives. Besides filling many diplomatic offices, a Jew (O. S. Straus) has been a member of the cabinet. Many Jews have filled professorial chairs at the universities, others have been judges, and in art, literature (there is a notable Jewish publication society), industry and commerce have rendered considerable services to national culture and prosperity. American universities have owed much to Jewish generosity, a foremost benefactor of these (as of many other American institutions) being Jacob Schiff. Such institutions as the Gratz and Dropsie colleges are further indications of the splendid activity of American Jews in the educational field. The Jews of America have also taken a foremost place in the succour of their oppressed brethren in Russia and other parts of the world. (Full accounts of American Jewish institutions are given in the American Jewish Year-Book, published annually since 1890.)

56. Anti-Semitism.—It is saddening to be compelled to close this record with the statement that the progress of the European Jews received a serious check by the rise of modern anti-Semitism in the last quarter of the 19th century. While in Russia this took the form of actual massacre, in Germany and Austria it assumed the shape of social and civic ostracism. In Germany Jews are still rarely admitted to the rank of officers in the army, university posts are very difficult of access, Judaism and its doctrines are denounced in medieval language, and a tone of hostility prevails in many public utterances. In Austria, as in Germany, anti-Semitism is a factor in the parliamentary elections. The legend of ritual murder (q.v.) has been revived, and every occasion is seized on for the inculcation of hatred among the Christians. In France Edmond Adolphe Drumont led the way to a similar animosity, and the popular fury was fanned by the Dreyfus case. It is generally felt, however, that this recrudescence of anti-Semitism is a passing phase in the history of culture (see ANTI-SEMITISM).

57. The Zionist Movement.—The Zionist movement (see ZIONISM), founded in 1895 by Theodor Herzl (q.v.) was in a sense the outcome of anti-Semitism. Its object was the foundation of a Jewish state in Palestine, but though it aroused much interest it failed to attract the majority of the emancipated Jews, and the movement has of late been transforming itself into a mere effort at colonization. Most Jews not only confidently believe that their own future lies in progressive development within the various nationalities of the world, but they also hope that a similar consummation is in store for the as yet unemancipated branches of Israel. Hence the Jews are in no sense internationally organized. The influence of the happier communities has been exercised on behalf of those in a worse position by individuals such as Sir Moses Montefiore (q.v.) rather than by societies or leagues. From time to time incidents arise which appeal to the Jewish sympathies everywhere and joint action ensues. Such incidents were the Damascus charge of ritual murder (1840), the forcible baptism of the Italian child Mortara (1858), and the Russian pogroms at various dates. But all attempts at an international union of Jews, even in view of such emergencies as these, have failed. Each country has its own local organization for dealing with Jewish questions. In France the Alliance Israélite (founded in 1860), in England the Anglo-Jewish Association (founded in 1871), in Germany the Hilfsverein der deutschen Juden, and in Austria the Israelisitische Allianz zu Wien (founded 1872). In America the American Jewish Committee (founded 1906), and similar organizations in other countries deal only incidentally with political affairs. They are concerned mainly with the education of Jews in the Orient, and the establishment of colonies and technical institutions. Baron Hirsch (q.v.) founded the Jewish colonial association, which has undertaken vast colonizing and educational enterprises, especially in Argentina, and more recently the Jewish territorial organization has been started to found a home for the oppressed Jews of Russia. All these institutions are performing a great regenerative work, and the tribulations and disappointments of the last decades of the 19th century were not all loss. The gain consists in the rooting of the Jewish consciousness to more virile efforts towards a double end, to succour the persecuted and ennoble the ideals of the emancipated.

58. Statistics.—Owing to the absence of a religious census in several important countries, the Jewish population of the world can only be given by inferential estimate. The following approximate figures are taken from the American Jewish Year-Book for 1909-1910 and are based on similar estimates in the English Jewish Year-Book, as well as from various official reports and publications. The reports of the Alliance Israélite Universelle According to these estimates the total Jewish population of the world in the year named was approximately 11,500,000. Of this total there were in the British Empire (580,000), in the United States (5,215,000), in France (6,257,000), in Germany (6,077,000, of whom 400,000 were in Prussia), Turkey (463,000, of whom some 78,000 resided in Palestine), Rumania (250,000), Morocco (105,000) and Holland (106,000). Others of the more important totals are: France, 95,000; Algeria, 63,000 and Tins (62,000); Italy, 59,000; Egypt 39,000; Bulgaria 36,000; Argentine Republic 30,000; Tripoli 19,000; Turkistan and Afghanistan 14,000; Switzerland and Belgium each 12,000; Mexico 9000; Greece 8000; Servia 6000; Senegal and the Ivory Coast 5000; and the Russian (Falashas) each 3000; Spain and Portugal 2500; China and Japan 2000. There are also Jews in Curaçao, Surinam, Luxemburg, Norway, Peru, Crete and Venezuela; but in none of these does the Jewish population much exceed 1000.

JEWSBURY, GERALDINE ENDOR (1812-1880), English writer, daughter of Thomas Jewsbury, a Manchester merchant, was born in 1812 at Measham, Derbyshire. Her first novel, Zoe: the History of Two Lives, was published in 1845, and was followed by The Half Sisters (1848), Marian Wilthers (1851), Constance Herberi (1853), The Sorrows of Gentility (1856), Right or Wrong (1859). In 1859 she was invited by Charles Dickens to write quarterly articles for the Dictionary of the World and contributed to the Athenaeum and other journals and magazines. It is, however, mainly on account of her friendship with Thomas Carlyle and his wife that her name is remembered. Carlyle described her, after their first meeting in 1841, as “one of the most interesting young women I have seen for years; clear delicate sense and courage looking out of her small sylph-like figure.” From this time till Mrs Carlyle’s death in 1866, Geraldine Jewsbury was the most intimate of her friends. The selections from Geraldine Jewsbury’s letters to Jane Welsh Carlyle (1802, ed. Mrs Alexander Ireland) prove how confidential were the relations
JEW'S EARS—JHABUA

between the two women for a quarter of a century. In 1854 Miss Jewsbury removed from Manchester to London to be near her friend. To her Carlyle turned for sympathy when his wife died, and at his request she wrote down some "biographical anecdotes" of Mrs Carlyle's childhood and early married life. Carlyle's comment was that "few or none of these narratives are correct in details, but there is a certain mythical truth in all or most of them;" and he added, "the Geraldine accounts of her (Mrs Carlyle's) childhood are substantially correct." He accepted them as the groundwork for his own essay on "Jane Welsh Carlyle," with which they were therefore incorporated by Froude when editing Carlyle's Reminiscences. Miss Jewsbury was consulted by Froude when he was preparing Carlyle's biography, and her recollection of her friend's confessions confirmed the suspicion that Carlyle had on one occasion used physical violence towards his wife. Miss Jewsbury further informed Froude that the secret of the domestic troubles of the Carlyles lay in the fact that Carlyle had been "one of those persons who ought never to have married," and that Mrs Carlyle had at one time contemplated having her marriage legally annulled (see My Relations with Carlyle, by James Anthony Froude, 1903). The endeavour had been made to seduce Miss Jewsbury's husband, and bury in relation to this matter, but there seems to be no sufficient ground for doubting that she accurately repeated what she had learnt from Mrs Carlyle's own lips. Miss Jewsbury died in London on the 23rd of September 1880.

JEW'S EARS, the popular name of a fungus, known botanically as *Hirneola auricula-judae*, so called from its shape, which somewhat resembles a human ear. It is very thin, flexible, flesh-coloured to dark brown, and one to three inches broad. It is common on branches of elder, which it often kills, and is also found on elm, willow, oak and other trees. It was formerly prescribed as a remedy for dropsy.

JEW'S HARP, or Jew's Trot (Fr. guimbarde, O. Fr. trompe, gronde; Ger. Mundharmonica, Maultrommel, Brummelsen; Ital. arcca-pensieri or spassa-pensiero), a small musical instrument of percussion, known for centuries all over Europe. "Jew's trumpet" is the older name, and "trump" is still used in parts of Great Britain. Attempts have been made to derive "Jew's" from "jaws" or Fr. jou, but, though there is no apparent reason for associating the instrument with the Jews, it is certain that "Jew's" is the original form (see the New English Dictionary and C. B. Mount in Notes and Queries (Oct. 23, 1897, p. 322). The instrument consists of a slender tongue of steel riveted at one end to the base of a pear-shaped steel loop; the other end of the tongue, left free and passing out between the two branches of the frame, terminates in a sharp bend at right angles, to enable the player to depress it by an elastic blow and thus set it vibrating while firmly pressing the branches of the frame against his teeth. The vibrations of the steel tongue produce a compound sound composed of a fundamental and its harmonics. By using the cavity of the mouth as a resonator, each harmonic in succession can be isolated and reinforced, giving the instrument the compass shown. The lower harmonics of the series cannot be obtained, owing to the limited capacity of the resonating cavity. The black notes on the stave show the scale which may be produced by using two harps, one tuned a fourth above the other. The player on the Jew's harp, in order to isolate the harmonics, frames his mouth as though intending to pronounce the various vowels. At the beginning of the 19th century, when much energy and ingenuity were being expended in all countries upon the invention of new musical instruments, the Maultrommel, re-christened Mundharmonica (the most rational of all its names), attracted attention in Germany. Heinrich Scheibler devised an ingenious holder with a handle, to contain five Jew's harps, all tuned to different notes; by holding one in each hand, a large compass, with duplicate notes, became available; he called this complex Jew's harp *Deut* and with it played themes with variations, marches, Scotch reels, &c. Other virtuosi, such as Eulenstein, a native of Württemberg, achieved the same result by placing the variously tuned Jew's harps upon the table in front of him, taking them up and setting them down as required. Eulenstein created a sensation in London in 1827 by playing on no fewer than sixteen Jew's harps. In 1828 Sir Charles Wheatstone published an essay on the technique of the instrument in the Quarterly Journal of Science. (K.S.)

JEZEBEL (Heb. יְזֶבֶל, perhaps an artificial form to suggest "un-exalted," a divine name or its equivalent would naturally be expected instead of the first syllable), wife of Ahab, king of Israel (1 Kings xxvi. 31), and mother of Athaliah, in the Bible. Her father Eth-baai (Ithobal, Jos., contra Ap. i. 18) was king of Tyre and priest of the goddess Astarte. He had usurped the throne and was the first important Phoenician king after Hiram (see PHOENICIA). Jezebel, a true daughter of a priest of Astarte, showed herself hostile to the worship of Yahweh, and to his prophets whom she relentlessly pursued (1 Kings viii. 7-13; see ELIJAH). She is represented as a woman of wicked character, and became notorious for the part she took in the matter of Naboth's vineyard. When the Jezeelite 2 shellik refused to sell the family inheritance to the king, Jezebel treacherously caused him to be arrested on a charge of treason, and with the help of false witnesses he was found guilty and condemned to death. For this the prophet Elijah pronounced a solemn curse upon Ahab and Jezebel, which was fulfilled when Jehu, who was anointed king at Elisha's instigation, killed the son Jehoram, massacred all the family, and had Jezebel destroyed (1 Kings xxii.; 2 Kings ix. 11-25). What is told of her comes from sources written under the influence of strong religious bias; among the exaggerations must be reckoned 1 Kings xvii. 13, which is inconsistent with xix. 18 and xxii. 6. A literal interpretation of the reference to Jezebel's idolatry (2 Kings ix. 32) has made her name a byword for a false prophetess in Rev. ii. 20. Her name is often used in modern English as a synonym for an abandoned woman or one who paints a false face. (S. A.C.)

JEZREEL (Heb. גְזֵרֵא, "God sows"), the capital of the Israelite monarchy under Ahab, and the scene of stirring Biblical events (1 Sam. xxix. 1; 1 Kings xxii.; 2 Kings ix. 21-27). The name was also applied to the great plain (Esdraelon) dominated by the city ("valley of Jezerel," Josh. xvii. 6, &c.). The site has never been lost, and the present village Zerqin retains the name radically unchanged. In Greek (e.g. Judith) the name appears under the form Ἑζρεᾶ; it is Stradella in the Bordeaux Pilgrim, and to the Crusaders the place was known as Porsum Gerinun. The modern stone village stands on a bare rocky knoll, 500 ft. above the broad northern valley, at the north extremity of a long ledge, terminating in steep cliffs, forming part of the chain of Mt Gilboa. The buildings are modern, but some scanty remains of rock-hewn wine presses and a few scattered sarcophagi mark the antiquity of the site. The view over the plains is fine and extensive. It is vain now to look for Ahab's palace or Naboth's vineyard. The vault mentioned in 1 Sam. xxix. 1 is merely the site of the modern *Aiôn el Mêlîyûya*, north of the village, a shallow pool of good water full of small fish, interspersed between black basalt boulders; or more probably the copious Aid Jâlad.

A second city named Jezerel lay in the hill country of Judah, somewhere near Hebron (Josh. xv. 50). This was the native place of David's wife Abinom (1 Sam. xxv. 43).

JHABUA, a native state of Central India, in the Bhopawar agency. Area, with the dependency of Ratanmal, 1356 sq. m.

1 See Allg. musik. Ztg. (Leipzig, 1816), p. 506, and Beilage 5, where the construction of the instruments is described and illustrated and the system of notation shown in various pieces of music.

2 According to another tradition Naboth lived at Samaria (xxi. 1 [LXX.], 18 seq.; cf. xxii. 38). A similar confusion regarding the king's home appears in 2 Kings x. 11 compared with vi. 17.
JHALAWAR—JHANSI

Pop. (1901), 80,889. More than half the inhabitants belong to the aboriginal Bhils. Estimated revenue, £7000; tribute, £1000. Manganese and opium are exported. The chief, whose title is raja, is a Rajput of the Rathor clan, descended from a branch of the Jodhpur family. Raja Udai Singh was invested in 1868 with the powers of administration.

The town of Jhawra (pop. 3354) stands on the bank of a lake, and is surrounded by a mud wall. A dispensary and a guest-house were constructed to commemorate Queen Victoria's Diamond Jubilee in 1897.

JHALAWAR, a native state of India, in the Rajputana agency, pop. (1901), 90,175; estimated revenue, £26,000; tribute, £2000. Area, 510 sq. m. The ruling family of Jhalawar belongs to the Jhal clan of Rajputs, and their ancestors were petty chiefs of Halward in the district of Jhalawar, in Kathiawar. About 1706 one of the younger sons of the head of the clan left his country with his son to try his fortunes at Delhi. At Kotah he left his son Madhu Singh, who soon became a favourite with the maharaja, and received from him an important post, which became hereditary. On the death of one of the Kotah rajas (1771), the country was left to the charge of Zalim Singh, a descendant of Madhu Singh. From that time Zalim Singh was the real ruler of Kotah. He brought it to a wonderful state of prosperity, and under his administration, which lasted over forty-five years, the Kotah territory was respected by all parties. In 1838 it was resolved, with the consent of the chief of Kotah, to dismember the state, and to create the new principality of Jhalawar as a separate provision for the descendants of Zalim Singh. The districts then severed from Kotah were considered to represent one-third (£120,000) of the income of Kotah; by treaty they acknowledged the supremacy of the British, and agreed to pay an annual tribute of £2000. Madan Singh received the title of maharaja rana, and was placed on the same footing as the other chiefs in Rajputana. He died in 1845. An adopted son of his successor took the name of Zalim Singh and in 1875 on becoming chief of Jhalawar. He was a minor and was not invested with governing powers till 1884. Owing to his maladministration, his relations with the British government became strained, and he was finally deposed in 1896, "on account of persistent misgovernment and proved unfitness for the powers of a ruling chief." He went to live at Benares, on a pension of £2000; and the administration was placed in the hands of the British resident. After much consideration, the government resolved in 1897 to break up the state, restoring the greater part to Kotah, but forming the two districts of Shahabad and the Chaumha into a new state, which came into existence in 1899, and of which Madhu Singh, a descendant of the original Zalim Singh, was appointed chief.

The chief town is Patan, or Jhalarapatan (pop. 7935), founded close to an old site by Zalim Singh in 1766, by the side of an artificial lake. It is the centre of trade, the chief exports of the state being opium, oil-seeds and cotton. The palace is at the cantonment or chhaoni, 4 m. north. The ancient site near the town was occupied by the city of Chandrawati, said to have been destroyed in the time of Aurangzeb. The finest feature of its remains is the temple of Sitasalewir Mahadeva (c. 600).

JHANG, a town and district of British India, in the Multan division of the Punjab. The town, which forms one municipality with the newer and now more important quarter of Maghiana, is about 3 m. from the right bank of the river Chenab. Founded by Malik Khan, a Sial chieftain, in 1462, it has formed the capital of a Mahomedan state. Pop. (1901), 24,382. Maghiana has manufactures of leather, soap and metal ware.

The District of Jhang extends along both sides of the Chenab, including its confluences with the Jhelum and the Ravi. Area, 3726 sq. m. Pop. (1901), 378,605, showing an apparent decrease of 13% in the decade, due to the creation of the district of Lyallpur in 1904. But actually the population increased by 13% on the old area, owing to the opening of the Chenab canal and the colonization of the tract irrigated by it. Within Jhang many thousands of acres of government waste have been allotted to colonists, who are reported to be flourishing.

A branch of the North-Western railway enters the district in this quarter, extending throughout its entire length. The Southern Jech Doab railway serves the south. The principal industries are the ginning, pressing and weaving of cotton.

Jhang contains the ruins of Shorkot, identified with one of the towns taken by Alexander. In modern times the history of Jhang centres in the famous clan of Sials, who exercised an extensive sway over a large tract between Shahpur and Multan, with little dependence on the imperial court at Delhi, until they finally fell before the all-absorbing power of Ranjit Singh. The Sials of Jhang are Mahomedans of Rajput descent, whose ancestor, Rai Shankar of Daranagar, emigrated early in the 13th century from the Gangetic Doab. In the beginning of the 19th century Maharaja Ranjit Singh invaded Jhang, and captured the Sial chieftain's territory. The latter recovered a small portion afterwards, which he was allowed to retain on payment of a yearly tribute. In 1847, after the establishment of the British agency at Lahore, the district came under the charge of the British government; and in 1848 Ismail Khan, the Sial leader, rendered important services against the rebel chiefs, for which he received a pension. During the Mutiny of 1857 the Sial leader again proved his loyalty by serving in person on the British side. His pension was afterwards increased, and he obtained the title of khun bahadur, with a small jagir for life.

JHANSI, a city and district of British India, in the Allahabad division of the United Provinces. The city is the capital of the Indian Midland railway system, whence four lines diverge to Agra, Cawnpore, Allahabad and Bhopal. Pop. (1901), 55,724. A stone fort crowns a neighbouring rock. Formerly the capital of a Maharta principality, which lapsed to the British in 1853, it was during the Mutiny the scene of disaffection and massacre. It was then made over to Gwalior, but has been taken back in exchange for other territory. Even when the city was within Gwalior, the civil headquarters and the cantonment were at Jhansi Naobadh, under its walls. Jhansi is the principal centre for the agricultural trade of the district, but its manufactures are small.

The District of Jhansi was enlarged in 1891 by the incorporation of the former district of Lalitpur, which extends farther into the hill country, almost entirely surrounded by native states. Combined area, 928 sq. m. Pop. (1901), 1,616,750 showing a decrease of 10% in the decade, due to the results of famine. The main line and branches of the Indian Midland railway serve the district, which forms a portion of the hill country of Bundelkhand, sloping down from the hills of the Vindhyan range to the plains of Bheelaw and the Betwa. The extreme south is composed of parallel rows of long and narrow-ridged hills. Through the intervening valleys the river flows down imputuously over ledges of granite or quartz. North of the hilly region, the rocky granite chains gradually lose themselves in clusters of smaller hills. The northern portion consists of the level plain of Bundelkhand, distinguished for its deep black soil, known as mar, and admirably adapted for the cultivation of cotton. The district is intersected or bounded by three principal rivers—the Pahuj, Betwa and Dhasan. The district is much cut up, and portions of it are insulated by the surrounding native states. The principal crops are millets, cotton, oil-seeds, pulses, wheat, gram and barley. The destructive kans grass has proved as great a pest here as elsewhere in Bundelkhand. Jhansi is especially exposed to blights, droughts, floods, hailstorms, epidemics, and their natural concomitant—famine.

Nothing is known with certainty as to the history of this district before the period of Chandel rule, about the 11th century of our era. To this epoch must be referred the artificial reservoirs and architectural remains of the hilly region. The Chandels were succeeded by their servants the Khangars, who built the fort of Karar, lying just outside the British border. About the 14th century the Bundelas poured down upon the plains, and gradually spread themselves over the whole region which now bears their name. The Mahomedan governors were constantly making irruptions into the Bundela country; and in
1732 Chhatar Sal, the Bundela chieftain, called in the aid of the Maharratas. They came to his assistance with their accustomed promptitude, and were rewarded on the raja's death in 1734, by the bequest of one-third of his dominions. Their general founded the city of Jhansi, and peopled it with inhabitants from Orchha state. In 1806 British protection was promised to the Maharrata chief, and in 1817 the peshwa ceded to the East India Company all his rights over Bundelkhand. In 1853 the raja died childless, and his territories lapsed to the British. The Jhansi state and the Jalaun and Chanderi districts were then formed into a superintendency. The widow of the raja considered herself aggrieved because she was not allowed to adopt an heir, and because the slaughter of cattle was permitted in the Jhansi territory. Reports were spread which excited the religious prejudices of the Hindus. The events of 1857 accordingly found Jhansi ripe for mutiny. In June a few men of the 12th native infantry seized the fort containing the treasure and magazine, and massacred the European officers of the garrison. Everywhere the usual anarchic quarrels rose among the rebels, and the country was plundered mercilessly. The rani put herself at the head of the rebels, and died bravely in battle. It was not till November 1858, after a series of sharp contests with various guerilla leaders, that the work of reorganization was fairly set at foot.

**Jhelum, or Jehlam (Hydaspe of the Greeks), a river of northern India.** It is the most westerly of the "five rivers" of the Punjab. It rises in the north-east of the Kashmir state, flows through the city of Srinagar and the Wular lake, enters British territory in the Jhelum district. Thence it flows through the plains of the Punjab, forming the boundary between the Jech Doab and the Sind Sagar Doab, and finally joins the Chenab at Timmu after a course of 450 miles. The Jhelum colony, in the Shahpur district of the Punjab, formed on the example of the Chenab colony in 1901, is designed to contain a total irrigable area of 1,13,000 acres. The Jhelum canal is a smaller work than the Chenab canal, but its silt is noted for its fertilizing qualities. Both projects have brought great prosperity to the cultivators.

**Jhelum, or Jehlam, a town and district of British India, in the Rawalpindi division of the Punjab.** The town is situated on the right bank of the river Jhelum, here crossed by a bridge of the North-Western railway, 103 m. N. of Lahore. Pop. (1901), 14,951. It is a modern town with river and railway trade (principally in timber from Kashmir), boat-building and canyons for a cavalry and four infantry regiments.

The **District of Jhelum** stretches from the river Jhelum almost to the Indus. Area, 2813 sq. m. Pop. (1901), 951,442, shows an increase of 2% in the decade. Salt is quarried at the Mayo mine in the Salt Range. There are two coal-mines, the only ones worked in the province, from which the North-Western railway obtains part of its supply of coal. The chief centre of the salt trade is Pind Dadan Khan (pop. 13,770). The district is crossed by the main line of the North-Western railway, and also traversed along the south by a branch line. The river Jhelum is navigable throughout the district, which forms the south-eastern portion of a rugged Himalayan spur, extending between the Indus and Jhelum to the borders of the Sind Sagar Doab. Its scenery is very picturesque, although not of so wild a character as the mountain region of Rawalpindi to the north, and is lighted up in places by smiling patches of cultivated valley. The backbone of the district is formed by the Salt Range, a treble line of parallel hills running in three long forks from east to west throughout its whole breadth. The range rises in bold precipices, broken by gorges, clothed with brushwood and traversed by streams which are at first pure, but soon become impregnated with the saline matter over which they pass. Between the line of hills lies a picturesque table-land, in which the beautiful little lake of Kallar Kahar nestles amongst the minor ridges. North of the Salt Range, the country extends upwards in an elevated plateau, diversified by countless ravines and fissures, until it loses itself in tangled masses of Rawalpindi mountains. In this rugged tract cultivation is rare and difficult, the soil being choked with saline matter. At the foot of the Salt Range, however, a small strip of level soil lies along the banks of the Jhelum, and is thickly dotted with prosperous villages. The drainage of the district is determined by a low central watershed running north and south at right angles to the Salt Range. The waters of the western portion find their way into the Sohan, and finally into the Indus; those of the opposite slope collect themselves into small torrents, and empty themselves into the Jhelum.

The history of the district dates back to the semi-mythical period of the Mahabharata. Hindu tradition represents the Salt Range as the refuge of the five Pandava brethren during the period of their exile, and every salient point in its scenery is connected with some legend of the national heroes. Modern research has fixed the site of the conflict between Alexander and Porus as within Jhelum district, although the exact point at which Alexander effected the passage of the Jhelum (or Hydaspe) is disputed. After this event, we have little information with regard to the condition of the district until the Mahomedan conquest brought back literature and history to Upper India. The Janjuas and Jats, who now hold the Salt Range and its northern plateau respectively, appear to have been the earliest inhabitants. The Ghakkars seem to represent an early wave of conquest from the east, and they still inhabit the whole eastern slope of the district; while the Awans, who now cluster in the western plain, are apparently later invaders from the opposite quarter. The Ghakkars were the dominant race at the period of the first Mahomedan incursions, and long continued to retain their independence. During the flourishing period of the Mogul dynasty, the Ghakkar chieftains were prosperous and loyal vassals of the house of Baber; but after the collapse of the Delhi Empire Jhelum fell, like its neighbours, under the sway of the Sikhs. In 1765, Guljar Singh defeated the last independent Ghakkar prince, and reduced the wild mountaineers to subjection. His son succeeded to his dominions, until 1810, when he fell before the irresistible power of Ranjit Singh. In 1849 the district passed, with the rest of the Sikh territories, into the hands of the British.

**Jhering, Rudolf von (1818-1892), German jurist, was born on the 22nd of August 1818 at Aurich in East Friesland, where his father practiced as a lawyer. Young Jhering entered the university of Heidelberg in 1836 and, after the fashion of German students, visited successively Göttingen and Berlin. G. F. Puchta, the author of Geschichte des Rechts bei dem römischen Volke, alone of all his teachers appears to have gained his admiration and influenced the bent of his mind. After graduating doctor juris, Jhering established himself in 1844 at Berlin as privatdocent for Roman law, and delivered public lectures on the Geist des römischen Rechts, the theme which may be said to have constituted his life's work. In 1845 he became an ordinary professor at Basel, in 1846 at Rostock, in 1849 at Kiel, and in 1851 at Giessen. Upon all these seats of learning he left his mark; beyond any other of his contemporaries he animated the dry bones of Roman law. The German juristic world was still under the dominating influence of the Savigny cult, and the older school looked askance at the daring of the young professor, who essayed to adapt the old to new exigencies and to build up a system of natural jurisprudence. This is the keynote of his famous work, Geist des römischen Rechts auf den verschiedenen Stufen seiner Entwicklung (1852-1865), which for originality of conception and lucidity of scientific reasoning placed its author in the forefront of modern Roman jurists. It is no exaggeration to say that in the second half of the 19th century the reputation of Jhering was as high as that of Savigny in the first. Their methods were almost diametrically opposed. Savigny and his school represented the conservative, historical tendency. In Jhering the philosophical conception of jurisprudence, as a science to be utilized for the further advancement of the moral and social interests of mankind, was predominant. In 1868 Jhering accepted the chair of Roman Law at Vienna, where his lecture-room was crowded, not only with regular students but...**
with men of all professions and even of the highest ranks in the official world. He became one of the lions of society, the Austrian emperor conferring upon him in 1872 a title of hereditary nobility. But to a mind constituted like his, the social functions of the Austrian metropolis became wearisome, and he gladly exchanged its brilliant circles for the repose of Göttingen, where he became professor in 1873. In this year he had read at Vienna before an admiring audience a lecture, published under the title of Der Kampf um's Recht (1872; Eng. trans., Battle for Right, 1884). Its success was extraordinary. Within two years it attained twelve editions, and it has been translated into twenty-six languages. This was followed a few years later by Der Zweck im Recht (2 vols., 1877-1883). In these two works is clearly seen Jhering's individuality. The Kampf um's Recht shows the firmness of his character, the strength of his sense of justice, and his judicial method and logic: "to assert his rights is the duty that every responsible person owes to himself." In the Zweck im Recht is perceived the bent of the author's intellect. But perhaps the happiest combination of all his distinctive characteristics is to be found in his Jurisprudenz des täglichen Lebens (1870; Eng. trans., 1904). A great feature of his lectures was his so-called Praktika, problems in Roman law, and a collection of these with hints for solution was published as early as 1847 under the title Civilrechtsfälle ohne Entscheidungen. In Göttingen he continued to work until his death on the 17th of September 1892. A short time previously he had been the centre of a devoted crowd of friends and former pupils, assembled at Wilhelmshöhe near Cassel to celebrate the jubilee of his doctorate. Almost all countries were worthy represented, and this pilgrimage affords an excellent illustration of the extraordinary fascination and enduring influence that Jhering commanded. In appearance he was of middle stature, his face clean-shaven and of classical mould, lit up with vivacity and beaming with good nature. He was perhaps seen at his best when dispensing hospitality in his own house. With him died the best beloved and the most talented of Roman-law professors of modern times. It was said of him by Professor Adolf Merkel in a memorial address, R. v. Jhering (1893), that he belonged to the happy class of persons to whom Goethe's lines are applicable: "Was ich in der Jugend gewünscht, das habe ich im Alter die Fülle," and this may justly be said of him, though he did not live to complete his Geist des römischen Rechts and his Rechtsgeschichte. For this work the span of a single life would have been insufficient, but what he has left to the world is a monument of vigorous intellectual power and stamps Jhering as an original thinker and unrivalled exponent (in his peculiar interpretation) of the spirit of Roman law.

Among others of his works, all of them characteristic of the author and sparkling with wit, may be mentioned the following: Beiträge zur Lehre von Besitz, first published in the Jahrbücher für die Dogmatik des heutigen römischen und deutschen Privat-rechts, and then separately: Der Besitzwille, and an article entitled "Besitz" in the Handwörterbuch der Staatswissenschaften (1891), which aroused at the time much controversy, particularly on account of the opposition manifested to Savigny's conception of the subject. See also Scherz und Ernst in der Jurisprudenz (1886); Das Schuldmoment im römischen Privat-recht (1867); Das Trinkgold (1882); and among the papers he left behind him his Vorgeschichte der Internationale, a fragment, has been published by v. Ehrenberg (1894). See for an account of his life also M. de Long, Rudolf v. Jhering (1888); and Rudolf von Jhering (1893). (P. A. A.)

JIBITOS, a tribe of South American Indians, first met with by the Franciscans in 1676 in the forest near the Huallaga river, in the Peruvian province of Loreto. After their conversion they settled in villages on the western bank of the river.

JIBUTI (Djibouti), the chief port and capital of French Somaliland, in 11° 35' N., 43° 10' E. Jibuti is situated at the entrance to and on the southern shore of the Gulf of Tadjura about 150 m. S.W. of Aden. The town is built on a horseshoe-shaped peninsula partly consisting of mud flats, which are spanned by causeways. The chief buildings are the governor's palace, customs-house, post office, and the terminal station of the railway to Abyssinia. The houses in the European quarter are built of stone, are flat-roofed and provided with verandas. There is a good water supply, drawn from a reservoir about 25 m. distant. The harbour is land-locked and capacious. Ocean steamers are able to enter it at all states of wind and tide. Adjoining the mainland is the native town, consisting mostly of roughly made wooden houses with well thatched roofs. In it is held a large market, chiefly for the disposal of live stock, camels, cattle, &c. The port is a regular calling-place and also a coaling station for the steamers of the Messageries Maritimes, and there is a local service to Aden. Trade is confined to coaling passing ships and to importing goods for and exporting goods from southern Abyssinia via Harrar, there being no local industries. (For statistics see SOMALILAND, French.) The inhabitants are of many races—Somali, Danakil, Gallas, Armenians, Jews, Arabs, Indians, besides Greeks, Italians, French and other Europeans. The population, which in 1900 when the railway was building was about 15,000, had fallen in 1907 to some 5000 or 6000, including 300 Europeans. Jibuti was founded by the French in 1888 in consequence of its superiority to Obok both in respect to harbour accommodation and in nearness to Harrar. It has been the seat of the governor of the colony since May 1896. Order is maintained by a purely native police force. The port is not fortified.

JICARILLA, a tribe of North American Indians of Athapascan stock. Their former range was in New Mexico, about the headwaters of the Rio Grande and the Pecos, and they are now settled in a reservation on the northern border of New Mexico. Originally a scourge of the district, they are now subdued, but remain uncivilized. They number some 800 and are steadily decreasing. The name is said to be from the Spanish jicara, a basket tray, in reference to their excellent basketwork.

JIDDA (also written JEDDAH, JIDDAA, DJEDDEH), a town in Arabia on the Red Sea coast in 21° 28' N. and 30° 10' E. It is of importance mainly as the principal landing place of pilgrims to Mecca, from which it is about 46 m. distant. It is situated in a low sandy plain backed by a range of hills 10 m. to the east, with higher mountains behind. The town extends along the beach for about a mile, and is enclosed by a wall with towers at intervals, the seaward angles being commanded by two forts, in the northern of which are the prison and other public buildings. There are three gates, the Medina gate on the north, the Mecca gate on the east, and the Yemen gate (rarely opened) on the south; there are also three small posterns on the west side, the centre one leading to the quay. In front of the Mecca gate is a rambling street with shops along both sides, and an open market place; before the Medina gate are the Turkish barracks, and beyond them the holy place of Jidda, the tomb of "our mother Eve," surrounded by the principal cemetery.

The town is a walled enclosure said to represent the dimensions of the body, about 200 paces long and 15 ft. broad. At the head is a small ejection where gifts are deposited, and rather more than halfway down a whitewashed dome encloses a small dark chapel within which is the black stone known as El Surrah, the navel. The grave of Eve is mentioned by Edrisi, but except the black stone nothing bears any aspect of antiquity (see Burton's Pilgrimage, vol. ii.).

The sea face is the best part of the town; the houses there are lofty and well built of the rough coral that crops out all along the shore. The streets are narrow and winding. There are two mosques of considerable size and a number of smaller ones. The outer suburbs are merely collections of brushwood huts. The bazaars are well supplied with food-stuffs imported by sea, and fruit and vegetables from Taif and Wadi Fatima. The water supply is limited and brackish; there are, however, two sweet wells and a spring 7 m. from the town, and most of the houses have cisterns for storing rain-water. The climate is hot and damp, but fever is not so prevalent as at Mecca. The harbour though inconvenient of access is well protected by coral reefs; there are, however, no wharves or other dock facilities and cargo is landed in small Arab boats, sambuks.

The governor is a Turkish kaimakam under the vall of Hejaz, and there is a large Turkish garrison; the sharif of Mecca, however, through his agent at Jidda exercises an authority
practically superior to that of the sultan’s officials. Consulates
are maintained by Great Britain, France, Austria, Russia, Holland, Belgium and Persia. The permanent population
is estimated at 20,000, of which less than half are Arabs, and of
these a large number are foreigners from Yemen and Hadramut,
the remainder are negroes and Somali with a few Indian and
Greek traders.

Jidda is said to have been founded by Persian merchants in the
caliphate of Othman, but its great commercial prosperity dates
from the beginning of the 15th century when it became the centre
of trade between Egypt and India. Down to the time of
Burchhardt (1815) the Suez ships went no farther than Jidda,
where they were met by Indian vessels. The introduction of
steamers deprived Jidda of its place as an emporium, not only
for Indian goods but for the products of the Red Sea, which
formerly were collected here, but are now largely exported
direct by steamer from Hodeida, Suakin, Jibuti and Aden.
At the same time it gave a great impulse to the pilgrim traffic
which is now regarded as the annual harvest of Jidda. The
average number of pilgrims arriving by sea exceeds 50,000, and in
1903–1904 the total came to 74,500. The changed status of the
port is shown in its trade returns, for while its exports decreased
from £250,000 in 1880 to £235,000 in 1904, its imports in the
latter year amounted to over £1,400,000. The adverse balance of
trade is paid by a very large export of specie, collected from
the pilgrims during their stay in the country.

**JIG,** a brisk lively dance, the quick and irregular steps
of which have varied at different times and in the various countries
in which it has been danced (see DANCE). The music of the
“jig,” or such as is written in its rhythm, is in various times and
has been used frequently to finish a suite, e.g. by Bach and
Handel. The word has usually been derived from or connected
and Italian words are now chiefly used of the dance or dance
rhythm, and in this sense have been taken by etymologists as
adapted to the English “jig,” which may have been originally
an onomatopoeic word. The idea of jumping, jenkck movement
has given rise to many applications of “jig” and its
derivative “jigger” to mechanical and other devices, such as
the machine used for separating the heavier metal-bearing portions
from the lighter parts in ore-dressing, or a tackle consisting of
a double and single block and fall. &c. The word “jigger,”
across profits of the West Indian chigo, is also used as the name
of a species of flea, the *Sarcopsylla penetrans,* which burrows and
lays its eggs in the human foot, generally under the toe nails,
and causes great swelling and irritation (see FLEA).

**JIJAD** (also written *Jehad, Jahad, Djejad,*), an Arabic word
of which the literal meaning is an effort or a contest. It is used
to designate the religious duty inculcated in the Koran on the
followers of Mahomet to wage war upon those who do not accept
the doctrines of Islam. This duty is laid down in five suras—
all of these suras belonging to the period after Mahomet had
established his power. Conquered peoples who will neither
lay down their arms nor pay a poll-tax (jizya) are to be put to the
sword. (See further MAHOMMEDAN INSTITUTIONS.) By
Mahomedan commentators the commands in the Koran are
not interpreted as a general injunction on all Moslems constantly
to make war on the infidels. It is generally supposed that the
order for a general war can only be given by the caliph (an
office now claimed by the sultans of Turkey). Mahomedans
who do not acknowledge the spiritual authority of the Ottoman
sultan, such as the Persians and Moors, look to their own rulers
for the proclamation of a jihad; there has been in fact no
universal warfare by Moslems on unbelievers since the early days
of Mahomedanism. Jihads are generally proclaimed by all
persons who claim to be mahdis, e.g. Mahomed Aghmad (the
Sudanese mahdi) proclaimed a jihad in 1882. In the belief of
Moslems every one of their number slain in a jihad is taken
straight to paradise.

**JIMENES** (or *XIMENES*) DE CISNEROS, FRANCISCO (1436–1517), Spanish cardinal and statesman, was born in 1436 at
Torrelaguna in Castile, of good but poor family. He studied at
Alcalá de Henares and afterwards at Salamanca; and in 1459,
having entered holy orders, he went to Rome. Returning to
Spain in 1465, he brought with him an “expectative” letter from
the pope, in virtue of which he took possession of the archbishopship
of Ubeda in the diocese of Toledo in 1473. Carillo, arch-
bishop of Toledo, opposed him, and on his obstinate refusal to
give way threw him into prison. For six years Jimenes held
out, and at length in 1480 Carillo restored him to his benefice.
This Jimenes exchanged almost at once for a chaplaincy at
Siguenza, under Cardinal Mendoza, bishop of Siguenza, who
shortly appointed him vicar-general of his diocese. In that position
Jimenes won golden opinions from ecclesiastical and laymen;
and he seemed to be on the sure road to distinction among the
secular clergy, when he abruptly resolved to become a monk.
Throwing up all his benefices, and changing his baptismal name
Gonzales for that of Francisco, he entered the Franciscan
 monastery of San Juan de los Reyes, recently founded by Fer-
dinand and Isabella at Toledo. Not content with the ordinary
sorrows and pleasures of the novitiate, he added voluntary austerities. He
lay on the bare ground, wore a hair-shirt, doubled his fasts,
and scourged himself with much fervour; indeed throughout his
whole life, even when at the acme of his greatness, his private life
was most rigorously ascetic. The report of his sanctity brought
crowds to confess to him; but from them he retired to the lonely
monastery of Our Lady of Castañar; and he even built with his
own hands a rude hut in the neighbouring woods, in which he
lived at times as an anchorite. He was afterwards guardian of
a monastery at Salceda. Meanwhile Mendoza (now archbishop
of Toledo) had not forgotten him; and in 1492 he recommended
him to Isabella as her confessor. The queen sent for Jimenes,
was pleased with him, and to his great reluctance forced the
office upon him. The post was politically important, for
Isabella submitted to the judgment of her father-confessor not
only her private affairs but also matters of state. Jimenes’s
severe sanctity soon won him considerable influence over Isabella;
and thus it was that he first emerged into political life. In
1494 the queen’s confessor was appointed provincial of the order
of St Francis, and at once set about reducing the laxity of the
conventual to the strictness of the observantine Franciscans.
Intense opposition was continued even after Jimenes became
archbishop of Toledo. The general of the order himself came from
Rome to interfere with the archbishop’s measures of reform,
but the stern inflexibility of Jimenes, backed by the influence of
the queen, subdued every obstacle. Cardinal Mendoza had died
in 1495, and Isabella had secretly procured a papal bull nominating
her confessor to his diocese of Toledo, the richest and most
powerful in Spain, second perhaps to no other dignity of the Roman
Church save the papacy. Long and sincerely Jimenes strove
to evade the honour; but his *nolo episcopari* was after six months
overcome by a second bull ordering him to accept consecration.
With the primacy of Spain was associated the lofty dignity of high chancellor of Castile; but Jimenes still maintained his
lively life, and, although a message from Rome required him
not to wear a style befitting his rank, the outward pomp only
concealed his private asceticism. In 1499 Jimenes accompanied
the court to Granada, and there eagerly joined the mild and
pious Archbishop Talavera in his efforts to convert the Moors.
Talavera had begun with gentle measures, but Jimenes preferred
to proceed by haranguing the *fakirs,* or doctors of religion,
and loading them with gifts. Outwardly the latter method was
successful; in two months the converts were so numerous that
they had to be baptized by aspersion. The indignation of the
unconverted Moors swelled into open revolt. Jimenes was
besieged in his house, and the utmost difficulty was found in
quieting the city. Baptism or exile was offered to the Moors
as a punishment for rebellion. The majority accepted baptism;
and Isabella, who had been momentarily annoyed at her
archbishop’s impudence, was satisfied that he had done good
service to Christianity.

On the 24th of November 1504 Isabella died. Ferdinand at
once resigned the title of king of Castile in favour of his daughter
Joan and her husband the archduke Philip, assuming instead
JIND—JINGO

that of regent. Philip was keenly jealous of Ferdinand's pretensions to the regency; and it required all the tact of Jimenes to bring about a friendly interview between the princes. Ferdinand finally retired from Castile; and, though Jimenes remained, his political weight was less than before. The sudden death of Philip in September, 1506, quite overset the already tottering intellect of his wife; her son and heir Charles was still a child; and Ferdinand was at Naples. The nobles of Castile, mutually jealous, agreed to entrust affairs to the archbishop of Toledo, who, moved more by patriotic regard for his country's welfare than by special friendship for Ferdinand, strove to establish the final influence of that king in Castile. Ferdinand did not return till August, 1507, and he brought a cardinal's hat for Jimenes. Shortly afterwards, the new cardinal of Spain was appointed grand inquisitor-general for Castile and Leon.

The next great event in the cardinal's life was the expedition against the Moorish city of Oran in the north of Africa, in which his religious zeal was supported by the prospect of the political and material gain that would accrue to Spain from the possession of such a position. A preliminary expedition, equipped, like that which followed, at the expense of Jimenes, captured the port of Mers-el-Kebir in 1505; and in 1509 a strong force, accompanied by the cardinal in person, set sail for Africa, and in one day the wealthy city was taken by storm. Though the army remained to make fresh conquests, Jimenes returned to Spain, and occupied himself with the administration of his diocese, and in endeavouring to recover from the regent the expenses of his Oran expedition. On the 28th of January, 1516, Ferdinand died, leaving Jimenes as regent of Castile for Charles (afterwards Charles V.), then a youth of sixteen in the Netherlands. Though Jimenes at once took firm hold of the reins of government, and ruled in a determined and even autocratic manner, the haughty and turbulent Castilian nobility and the jealous intriguing Flemish councilors of Charles combined to render his position peculiarly difficult; while the evils consequent upon the unlimited demands of Charles for money threw much undeserved odium upon the regent. In violation of the laws, Jimenes acceded to Charles's desire to be proclaimed king; he secured the person of Charles's younger brother Ferdinand; he fixed the seat of the court at Madrid; and he established a standing army by drilling the citizens of the great towns. Immediately on Ferdinand's death, Adrian, dean of Louvain, afterwards pope, produced a commission from Charles appointing him regent. Jimenes admitted him to a nominal equality, but took care that neither he nor the subsequent commissioners of Charles ever had any real share of power. In September, 1517, Charles landed in the province of Asturias, and Jimenes hastened to meet him. On the way, however, he fell ill, not without a suspicion of poison. While thus feeble, he received a letter from Charles coldly thanking him for his services, and giving him leave to retire to his diocese. A few hours after this virtual dismissal, which some, however, say the cardinal never saw, Francisco Jimenes died at Riaza, on the 8th of November, 1517.

Jimenes was a statesman, a bishop, and a hero; and, imbued with the spirit of the Inquisition, he lived and died in that creed, without a break in his duties, with the conviction that it was his mission to bring about the conversion of the world. In the midst of a corrupt clergy his morals were irreproachable. He was liberal to all, and founded and maintained very many beneficent institutions in his diocese. His whole time was devoted either to the state or to religion; his only recreation was in theological or scholastic discussion. Perhaps one of the most noteworthy points about the cardinal is the advanced period of life at which he entered upon the stage where he was to play such leading parts. Whether his abrupt change from the secular to the regular clergy was the fervid outcome of religious enthusiasm or the far-seeing move of a wily schemer has been disputed; but the constant austerity of his life, his unvarying superiority to small personal aims, are arguments for the former alternative that are not to be met by merely pointing to the actual honours and power he at last attained.

In 1500 was founded, and in 1508 was opened, the university of Alcalá de Henares, which, fostered by Cardinal Jimenes, at whose sole expense it was raised, attained a great pitch of outward magnificence and internal worth. At one time 7000 students met within its walls. In 1586 the university was transferred to Madrid, and the costly buildings were left vacant. In the hopes of supplanting the romances generally found in the hands of the young, Jimenes caused to be published religious treatises by himself and others. He also undertook the establishment of the Mozarab Academy at Toledo, in which it was to be used. But his most famous literary service was the printing at Alcalá (in Latin Complutum) of the Complutensian Polyglott, the first edition of the Christian Scriptures in the original tongues. In this work, it is said to have expended half a million of ducats, the cardinal was aided by the celebrated Stunica (D. Lopez de Zúñiga), the Greek scholar Nuñez de Guzman (Piniana), the Hebraist Vergara, and the humanist Nebrija, by a German printer, Denzel, and 360 other composers, of whom Zamora edited the Targum to the Pentateuch. The other Targums are not included. In the Old Testament Jerome's version stands between the Greek and Hebrew. The synagoge and the Eastern church, as the preface expresses it, are set like the thieves in this side and on that with Jesus (that is, the Roman Church) in the midst. The text occupies five volumes, and a sixth contains a Hebrew lexicon, &c. The work commenced in 1502. The New Testament was finished in January, 1514, and the whole in April, 1516. It was dedicated to Leo X., and was reprinted in 1522 by the Antwerp firm of Plantin, after revision by Benito Arias Montano at the expense of Philip II. The second edition is known as the Biblia Regia or Papalina. A work by Alvaro Gomez de Castro, De Rebus Gestis Francisci Ximenes (Ulfio, 1569, Alcalá), is the quary whence have come the materials for biographies of Jimenes—in Spanish by Robles (1604) and Quintanilla (1633); in French by Baudier (1654), Marsollier (1670), and Hefele (1844, translated into English by Canon Dalton, 1860) and Have- lange (1845); and in English by Barrett (1813). See also Prescott's Ferdinand and Isabella, Reine des Deux Mondes (May 1841) and Mem. de l'Acad. d'hist. de Madrid, vol. iv.

JIND, a native state of India, within the Punjab. It ranks as one of the Cis-Sutlej states, which came under British influence in 1809. The territory consists of three isolated tracts, amid British districts. Total area 1,253, sq. m. Pop. (1901), 282,003, showing a decrease of 1% in the decade. Estimated gross revenue £109,000; there is no tribute. Grain and cotton are exported, and there are manufactures of gold and silver ornaments, leather and wooden wares and cloth. The chief, whose title is raja, is a Sikh of the Sidhu Jat clan and of the Phulkian family. The principality was founded in 1763, and the chief was recognized by the Mogul emperor in 1768. The dynasty has always been famous for its loyalty to the British, especially during the Mutiny, which has been rewarded with accessions of territory. In 1857 the raja of Jind was actually the first man, European or native, who took the field against the mutineers; and his contingent collected supplies in advance for the British troops marching upon Delhi, besides rendering excellent service during the siege. Raja Ram Singh succeeded as a minor in 1881, and was granted full powers in 1890. During the Tirah expedition of 1897–98 the Jind imperial service infantry specially distinguished themselves. The town of Jind, the former capital, has a station on the Southern Punjab railway, 80 m. N.W. of Delhi. H. P., 1,807. The present capital and residence of the raja since 1827 is Sangrur; pop. (1901), 11,852.

JINGO, a legendary empress of Japan, wife of Chūai, the 14th mikado (101–200). On her husband's death she assumed the government, and fitted out an army for the invasion of Korea (see JAPAN, § 9). She returned to Japan completely victorious after three years' absence. Subsequently her son Ojen Tenno, afterwards 15th mikado, was born, and later was canonized as Hachiman, god of war. The empress Jingo ruled over Japan till 270. She is still worshipped.

As regards the English oath, usually "By Jingo," or "By the living Jingo," the derivation is doubtful. The identification with the name of Gingolph or Gengulphus, a Burgundian saint who was martyred on the 17th of May 760, was a joke on the part of R. H. Barham, author of the Ingoldsby Legends. Some explain the word as a corruption of Jainko, the Basque name for God. It has also been derived from the Persian jang (war), St Jingo being the equivalent of the Latin god of war, Mars; and is even explained as a corruption of "Jesus, Son of God," Jen-go.
support of the Basque derivation it is alleged that the oath was first common in Wales, to aid in the conquest of which Edward I. imported a number of Basque mercenaries. The phrase does not, however, appear in literature before the 17th century, first as conjurer's jargon. Motteux, in his "Rabelais," is the first to use "by jingo," translating par dieu. The political use of the word as indicating an aggressive patriotism (Jingoism) originated in 1877 during the weeks of national excitement preceding the despatch of the British Mediterranean squadron to Gallipoli, thus frustrating Russian designs on Constantinople. While the public were on the tipoe of expectation as to what policy the government would pursue, a bellicose music-hall song with the refrain "We don't want to fight, but by Jingo if we do," &c., was introduced in London, and singer known as "the great MacDermott," and instantly became very popular. Thus the war-party came to be called Jingo, and Jingoism has ever since been the term applied to those who advocate a national policy of arrogance and pugnacity.

For a discussion of the etymology of Jingo see Notes and Queries, (August 25, 1894), 8th series, p. 149.

**JINN (Djinn)**, the name of a class of spirits (genii) in Arabian mythology. They are the offspring of fire, but in their form and the propagation of their kind they resemble human beings. They do not eat, drink, or sleep, and are invisible to the naked eye. The Jinn are considered to have built the pyramids. Their central home is the mountain Kaf, and they manifest themselves to men under both animal and mortal form and become invisible at will. There are good and evil jinn, and in these each case reach the extremes of beauty and ugliness.

**JIREČEK, JOSEF** (1825–1888), Czech scholar, was born at Vysoké Myto in Bohemia on the 9th of October 1825. He entered the Prague bureau of education in 1850, and became minister of the department in the Hohenwart cabinet in 1871. His efforts to secure equal educational privileges for the Slav nationalities in the Austrian dominions brought him into disfavour with the German element. He became a member of the Bohemian Landtag in 1871, and a delegate to the Slav national congresses. In 1875 he was admitted to the royal Bohemian academy of sciences. He died in Prague on the 25th of November 1888.

His brother **HERMENEGILD JIREČEK**, Ritter von Samakow (1827–1890), Bohemian juriscconsult, who was born at Vysoké Myto on the 13th of April 1827, was also an official in the education department.

Among his important works on Slavonic law were Codex juris bohemiae (11 parts, 1867–1892), and a Collection of Slav Folk-Law (Czech, 1886), Slav Law in Bohemia and Moravia down to the 14th Century (Czech, 3 vols. 1863–1873).

**JIREČEK, KONSTANTIN JOSEF** (1834–1904), son of Josef, taught history at Prague. He entered the Hungarian service in 1870, and in 1881 became minister of education at Sofia. In 1885 he was made professor of universal history in Czech Prague, and in 1893 professor of Slavonic antiquities at Vienna.

The bulk of Konstantin's writings deal with the history of the southern Slavs and their literature. They include a History of the Bulgars (Czech and German, 1876), The Principality of Bulgaria (1891), Travels in Bulgaria (Czech, 1888), &c.

**JIZAKH**, a town of Russian Central Asia, in the province of Samarkand, on the Transcaspian railway, 71 m. N.E. of the city of Samarkand. Pop. (1897), 16,641. As a fortified port of Bokhara it was captured by the Russians in 1866.

**JOAB** (Heb. "Yah[weh] is a father "), in the Bible, the son of Zeruiah, David's sister (1 Chron. ii. 16). His brothers were Asahel and Abishai. All three were renowned warriors and played a prominent part in David's history. Abishai on one occasion saved the king's life from a Philistine giant (2 Sam. xxii. 17), and Joab as warrior and statesman was directly respon-

**JINN—JOACHIM OF FLORIS**

Of the many prophetic and polemical works that were attributed to Joachim in the 13th and following centuries, only those enumerated in his will can be regarded as absolutely authentic. These are the Concordia novi et veteris Testamenti (first printed at Venice in 1519), the Expositio in Apocalypse (Venice, 1527), the Politiam (Venice, 1527), and the "ordo Florisprandi," the "Institutio," the "Libellus," and the "De uniate Triunostis." The last of these works, which was condemned by the Lateran council in 1215 as containing an erroneous
It is impossible to enumerate here all the works attributed to Joachim. Some served their avowed object with great success, being adopted even by the Latin pope Clement III. Two of these, Joachim as orthodox and forbidding anyone to injure his disciples.

Among the most widely circulated were the commentaries on Jeremiah, Isaiah and Ezekiel, the Vaticinium pontificum and the Sacramentations, fragments of which circulated in anti-papal polemic among the revolted Franciscans in their hope of an approaching triumph. This opinion, as is, the first age begins with Abraham, but the period of imitation with the first man Adam. The initiation period of the third age begins with St. Benedict, while the actualization of God becomes centres of Joachimism, the Church. 

Joachim divided the history of humanity, past, present and future, into three periods, which, in his Exposition in Apocalypsin (bk. i. ch. 5), he defines as the age of the Law, or of the Father; the age of the Gospel, or of the Son; and the age of the Spirit, which begins with the advent of Christ. While each of these ages is a period of incubation, or initiation, the first age begins with Abraham, but the period of initiation with the first man Adam. The initiation period of the third age begins with St. Benedict, while the actualization of God becomes centres of Joachimism, the Church.

Joachim divided the history of humanity, past, present and future, into three periods, which, in his Exposition in Apocalypsin (bk. i. ch. 5), he defines as the age of the Law, or of the Father; the age of the Gospel, or of the Son; and the age of the Spirit, which begins with the advent of Christ. While each of these ages is a period of incubation, or initiation, the first age begins with Abraham, but the period of initiation with the first man Adam. The initiation period of the third age begins with St. Benedict, while the actualization of God becomes centres of Joachimism, the Church.

JOACHIM II.—JOACHIM, JOSEPH

JOACHIM II. (1505-1571), surnamed Hector, elector of Brandenburg, the elder son of Joachim I., elector of Brandenburg, was born on the 13th of January 1505. Having passed some time at the court of the emperor Maximilian I., he married in 1524 a daughter of George, duke of Saxony. In 1532 he led a contingent of the imperial army on a campaign against the Turks; and soon afterwards, having lost his first wife, married Hedwig, daughter of Sigismund I., king of Poland. He became elector of Brandenburg on his father's death in July 1535, and undertook the government of the old and middle marks, while the new mark passed to his brother John. Joachim took a prominent part in imperial politics as an advocate of peace, though with a due regard for the interests of the house of Habsburg. He attempted to make peace between the Protestants and the emperor Charles V. at Frankfurt in 1539, and subsequently at other places; but in 1542 he led the German forces on an unsuccessful campaign against the Turks. When the war broke out between Charles and the league of Schmalkalden in 1546 the elector at first remained neutral; but he afterwards sent some troops to serve under the emperor. With Maurice, elector of Saxony, he persuaded Philip, landgrave of Hesse, to surrender to Charles after the imperial victory at Mühlberg in April 1547, and pledged his word that the landgrave would be pardoned. But, although he felt aggrieved when the emperor declined to be bound by this promise, he refused to join Maurice in his attack on Charles. He supported the Interim, which was issued from Augsburg in May 1548, and took part in the negotiations that resulted in the treaty of Passau (1552), and the religious peace of Augsburg (1555). In domestic politics he sought to consolidate and strengthen the power of his house by treaties with neighboring princes, and succeeded in securing the bishoprics of Brandenburg, Havelberg and Lebus. Although brought up as a strict adherent of the older religion, he showed signs of wavering soon after his accession, and in 1559 allowed free entrance to the reformed teaching in the electorate. He took the communion himself in both kinds, and established a new ecclesiastical organization in Brandenburg, but retained much of the ceremonial of the Church of Rome. His position was not unlike that of Henry VIII. in England, and may be partly explained by a desire to replenish his impoverished exchequer with the wealth of the Church (see BRANDENBURG). After the peace of Augsburg the elector mainly confined his attention to Brandenburg, where he showed a keener desire to further the principles of the Reformation. By his luxurious habits and his lavish expenditure in public buildings, he incurred a great mass of debt, which was partly discharged by alienating parts of the land in return for important concessions. He cast covetous eyes upon the archbishopric of Magdeburg and the bishopric of Halberstadt, of both which he secured for his son Frederick in 1551. When Frederick died in the following year, the elector's son Sigismund obtained the two sees; and on Sigismund's death in 1566 Magdeburg was secured by his nephew, Joachim Frederick, afterwards elector of Brandenburg. Joachim, who was a prince of generous and cultured tastes, died at Königsberg on the 3rd of January 1571, and was succeeded by his son, John George. In 1850 a statue was erected to his memory at Spandau.

JOACHIM, JOSEPH (1831-1907), German violinist and composer, was born at Kitteke, near Prensburg, on the 28th of June 1831, the son of Jewish parents. His family moved to Budapest when he was two years old, and he studied there under Serwaczynski, who brought him out at a concert when he was only eight years old. Afterwards he learnt from the elder Hellemsberger and Joseph Böhm in Vienna, the latter instructing him in the management of the bow. In 1843 he went to Leipzig to enter the newly founded conservatorium. Mendelssohn, after testing his musical powers, pronounced that the regular training of a music school was not needed, but recommended that he should receive a thorough general education in music from Ferdinand David and Moritz Hauptmann. In 1844 he visited England, and made his first appearance at Drury Lane Theatre, where his playing of Ernst's fantasia on Otello made a great sensation; he also played Beethoven's concerto at a Philharmonic concert conducted by Mendelssohn. In 1847-1849 and 1852 he revisited England, and after the foundation of the popular concerts in 1859, up to 1890, he played there regularly in the latter part of the season. On Liszt's invitation he accepted the post of Konzertmeister at Weimar, and was there from 1850 to 1853. This brought Joachim into close contact with the advanced school of German musicians, headed by Liszt; and he was strongly tempted to give his allegiance to what was beginning to be called the “music of the future”; but his artistic convictions forced him to separate himself from the movement, and the tact and good taste he displayed in the difficult moment of explaining his position to Liszt afford one of the finest illustrations of his character.

His acceptance of a similar post at Hanover brought him into a different atmosphere, and his playing at the Düsseldorf festival of 1853 procured him the intimate friendship of Robert Schumann. His introduction of the young Brahms to Schumann was a famous incident of this time. Schumann and Brahms collaborated with Albert Dietrich in a joint sonata for violin and piano, as a welcome on his arrival in Düsseldorf. At Hanover he was königlicher Konzertdirektor from 1853 to 1858, when he made Berlin his home. He married in 1863 the mezzo soprano singer, Amalie Weiss, who died in 1899. In 1869 Joachim was appointed head of the newly founded königliche Hochschule für Musik in Berlin. The famous “Joachim quartet” was started in the Berlin Akademie in the following year. Of his later life, continually occupied with public performances, there is little to say except that he remained, even in a period which saw the rise of numerous violinists of the finest technique, the acknowledged master of all. He died on the 15th of August 1907.

Besides the consummate manual skill which helped to make him famous in his youth, Joachim was gifted with the power of interpreting the greatest music in absolute perfection: while Bach, Mozart, Beethoven and Brahms were masters, whose works he played with a degree of insight that has never been approached, he was no less supreme in the music of Mendelssohn and Schumann; in short, the whole of the classical repertory has become identified with his playing. No survey of Joachim's artistic career would be complete which omitted mention of his absolute freedom from technical mannerism, his dignified bearing, and his gentlemanly character. His devotion to the highest ideals, combined with a certain austerity and massivity of style, brought against him an accusation of coldness from admirers of a more effusive temperament. But the answer to this is given by the depth and variety of expression which his mastery of the resources of his instrument put at his command. His biographer (1858), Andreas Moser, expressed his essential characteristic in the words, “He plays the violin, not for its own sake, but in the service of an ideal.”

As a composer Joachim did but little in his later years, and the works of his earlier life never attained the public success which, in the opinion of many, they deserve (see Music). They undoubtedly have a certain austerity of character which does not appeal to every hearer; but they are full of beauty of a grave and dignified kind; and in such things as his “Hungarian concerto” for his own instrument the utmost degree of difficulty is combined with great charm of melodic treatment. The “romance” in B flat for violin and the variations for violin and orchestra are among his finest things, and the noble overture in memory of Kleist, as well as the scene for mezzo soprano from Schiller's Demetrius, show a wonderful degree of skill in orchestration as well as originality of thought. Joachim's place in musical history as a composer can only be properly appreciated in the light of his intimate relations with Brahms, with whom he studiously refrained from putting himself into independent rivalry, and to whose work as a composer he gave the co-operation of one who might himself have ranked as a master.
JOAN—JOAN OF ARC

There are admirable portraits of Joachim by G. F. Watts (1886) and by J. S. Sargent (1904), the latter presented to him on the 16th of May 1904, at the celebration of the sixtieth anniversary of his first appearance in England.

JOAN, a mythical female pope, who is usually placed between Leo IV. (847–855) and Benedict III. (855–858). One account has it that she was born in England, another in Germany of English parents. After an education at Cologne, she fell in love with a Benedictine monk and fled with him to Athens disguised as his wife. She was eventually received by the abbot of Joannes Arcus (John of England), and entered the priesthood, eventually receiving a cardinal's hat. She was elected pope under the title of John VIII., and died in child-birth during a papal procession.

A French Dominican, Steven of Bourbon (d. c. 1261) gives the legend in his Seven Gifts of the Holy Spirit. He is believed to have derived it from an earlier writer. More than a hundred authors began to treat the subject associated with the name of Joan of Arc. Its explosion was first seriously undertaken by David Blondel, a French Calvinist, in his Éclaircissement de la question si une femme a été assise au siège papal de Rome (1647); and De Joanna Papissa (1657). The refutation was completed by Johann Dollinger in his Papiisten des Mittelalters (1863; Eng. trans. 1872).

JOAN OF ARC, more properly JEANNET D'ARC, afterwards known in France as JEANNE D'ARC1 (1411–1431), the "Maid of Orleans," was born between 1410 and 1412, the daughter of Jacques D'Arc, peasant proprietor, of Domrémy, a small village in the Vosges, partly in Champagne and partly in Lorraine, and of his wife Isabeau, of the village of Vounton, who from having made a pilgrimage to Rome had received the usual surname of Romée. Although her parents were in easy circumstances, Joan never learned to read or write, and received her sole religious instruction from her mother, who taught her to recite the Pater Noster, Ave Maria, and Credo. She sometimes guarded her father's flocks, but at her trial in 1431 she strongly resented being referred to as a shepherd girl. In all household work she was specially proficient, her skill in the use of the needle not being excelled (she said) by that of any matron even of Rouen. In her childhood she was noted for her abounding physical energy; but her vivacity, so far from being tainted by any coarseness or untidiness, was the direct outcome of an abnormally sensitive nervous temperament. Towards her parents her conduct was uniformly exemplary, and the charm of her unsullied kindness made her a favourite in the village. As she grew to womanhood she became inclined to silence, and spent much of her time in solitude and prayer. She repelled all attempts of the young men of her acquaintance to win her favour; and while active in the performance of her duties, and apparently finding her life quite congenial, inwardly she was engrossed with thoughts reaching far beyond the circle of her daily concerns.

At this time, through the alliance and support of Philip of Burgundy, the English had extended their conquest over the whole of France north of the Loire in addition to their possession of Guienne; and while the infant Henry VI. of England had in 1422 been proclaimed King of France at his father's grave at St Denis, Charles the dauphin (still uncrowned) was forced to watch the slow progress of the English in his kingdom. At the dauphin's instance his younger brother, the king of England, had favoured Henry V. of England, the husband of his daughter Catherine; and under Charles VI. a visionary named Marie d'Avignon declared that France was being ruined by a woman and would be restored by an armed virgin from the marches of Lorraine. To what extent this idea worked in Joan is doubtful. In Geoffrey of Monmouth's tract, De prospetis Merlini, there is a reference to an ancient prophecy of the enchantner Merlin concerning a virgin ex nemore canuto, and it appears that this nemen canutoi had been identified in folk-lore with the oak wood of Domrémy. Joan's knowledge of the prophecy does not, however, appear till 1420; and already before that, from 1424, according to her account at her trial, she had become imbued with sense of having a mission to free France from the English. She heard the voices of St Michael, St Catherine and St Margaret urging her on. In May 1428 she tried to obtain from Robert de Baudricourt, governor of Vaucouleurs, an introduction to the dauphin, saying that God would send him aid, but she was rebuffed. When, however, in September the English (under the earl of Salisbury) invested Orleans, the key to the south of France, she renewed her efforts with Baudricourt, her mission being to relieve Orleans and crown the dauphin at Reims. By persistent importunity, the effect of which was increased by the simplicity of her demeanour and her calm assurance of success, she at last prevailed on the governor to grant her request; and in February 1429, accompanied by six men-at-arms, she set out on her perilous journey to the court of the dauphin at Chinon. At first Charles refused to see her, but popular feeling in her favour induced his advisers to persuade him after three days to grant her an interview. She is said to have persuaded him of the divine character of her commission by discovering him though disguised in the crowd of his courtiers, and by reassuring him regarding his secret doubts as to his legitimacy. An English letter was impressed on her knowledge of a secret prayer, which (he told Dunois) could only be known to God and himself. Accordingly, after a commission of doctors had reported that they had found in her nothing of evil or contrary to the Catholic faith, and a council of matrons had reported on her chastity, she was permitted to set forth with an army of 4000 or 5000 men designed for the relief of Orleans. At the head of the army she rode clothed in a coat of mail, armed with an ancient sword, said to be that with which Charles Martel had vanquished the Saracens, the hiding-place of which, under the altar of the parish church of the village of Ste Catherine de Fierbois, the "voices" had revealed to her; she carried a white standard of her own design embroidered with lilies, and having on the one side the image of God seated on the clouds and holding the world in His hand, and on the other a representation of the Annunciation. Joan succeeded in entering Orleans on the 20th of April 1429, and through the vigorous and unremitting sallies of the French the English gradually became so discouraged that on the 8th of May they raised the siege. It is admitted that her extraordinary pluck and sense of leadership were responsible for this result. In a single week (June 12 to 19), by the capture of Jargeau and Beaugency, followed by the great victory of Patay, where Talbot was taken prisoner, the English were driven beyond the Loire. With some difficulty the dauphin was then persuaded to set out towards Reims, which he entered with an army of 12,000 men on the 16th of July, Troyes having yielded on the way. On the following day, holding the sacred banner, Joan stood beside Charles at his coronation in the cathedral.

The king then entered into negotiations with a view to detaching Burgundy from the English cause. Joan, at his importunity, remained with the army, but the king played her false when she attempted the capture of Paris; and after a failure on the 8th of September, when Joan was wounded,2 her troops were disbanded. Joan went into Normandy to assist the duke of Alençon, but in December she was arrested, and on the 20th she and her family were enrolled with the name of de Dieu. Unrewarded by such honours, she rode away from the court in March, to assist in the defence of Compiègne against the duke of Burgundy; and on the 24th of May she led an unsuccessful sortie against the besiegers, when she was surrounded and taken prisoner. Charles, partly perhaps on account of his natural indulence, partly on account of the intrigues at the court, made no effort to effect her ransom, and never showed any sign of interest in her fate. By means of negotiations instigated and prosecuted with great perseverance by the university of Paris and the Inquisition, and through the persistent scheming of Pierre Cauchon, the bishop of Beauvais—a Burgundian partisan, who, chased from his own see, hoped to obtain the archbishopric of Rouen—she was sold in November by John of Luxembourg and Burgundy to the English, who on the 3rd of January 1431, at the instance of the

JOANNA I. OF NAPLES

J. J. Bourrasé, Miracles de Madame Sainte Kathérine de Fiorbo (1858, trans. by A. Lang); Boucher de Molandon and A. de Beauvais, L'Armée anglaise vaincue par Jeanne d'Arc (1892); R. P. Agnello, S.J., La Vraie Jeanne d'Arc. For the "false Pucelle" see Lang's article in his Valet's Tragedy (1903). Of the numerous debates and poems of which Joan of Arc has been the subject, mention can only be made of Die Jungfrau von Orleans of Schiller, and of the Joan of Arc of Soutey. A drama in verse by Jules Barbier was set to music by C. Gounod (1873). (J. T. S. *; H. C.)

JOANNA (c. 1327-1382), queen of Naples, was the daughter of Charles duke of Calabria (d. 1326), and became sovereign of Naples in succession to her grandfather King Robert I. Her first husband was Andrew, son of Charles Robert, King of Hungary, who, like the queen herself was a member of the house of Anjou and whose professional life was spent in the civil service of Philip the Fair, her husband, and with his wife's connivance, and at once Joanna married Louis, son of Philip prince of Taranto. King Louis of Hungary then came to Naples to avenge his brother's death, and the queen took refuge in Provence—which came under her rule at the same time as Naples—purchasing pardon from Pope Clement VI. by selling to him the town of Avignon, then part of her dominions. Having returned to Naples in 1352 after the departure of Louis, Joanna lost her second husband in 1362, and married James, king of
JOANNA II. OF NAPLES—JOB

Majorca (d. 1375), and later Otto of Brunswick, prince of Taranto. The queen had no sons, and as both her daughters were dead she made Louis I. duke of Anjou, brother of Charles V. of France, her heir. This proceeding so angered Charles, duke of Durazzo, who regarded himself as the future king of Naples, that he seized the city. Joanna was captured and was put to death at Aversa on the 22nd of May 1382. The queen was a woman of intellectual tastes, and was acquainted with some of the poets and scholars of her time, including Petrarch and Boccaccio.

See Crivelli, Della prima e della seconda Giovanna, regina di Napoli (1832); G. Battaglia, Giovanna I., regina di Napoli (1835); W. St. C. Baddeley, Queen Joanna I. of Naples (1893); Saccopatti, Giovanna I. di Napoli (1903); and Francesca M. Steele, The Beautiful Queen Joanna I. of Naples (1910).

JOANNA II. (1371–1455), queen of Naples, was descended from Charles II. of Anjou through his son John of Durazzo. She had been married to William, son of Leopold III. of Austria, and at the death of her brother King Ladislaus in 1414 she succeeded to the Neapolitan crown. Her life had always been very dissolute, and although now a widow of forty-five, she chose as her lover Pandolfo Alpo, a youth of twenty-six, whom she made sovereign of Naples. He and the constable Muzzio Attendolo Sforza completely dominated her, and the turbulent barons wished to provide her with a husband who would be strong enough to break her favourites yet not make himself king. The choice fell on James of Bourbon, a relative of the king of France, and the marriage took place in 1415. But James at once declared himself king, had Alpo killed and Sforza imprisoned, and kept his wife in a state of semi- confinement; this led to a counter-insurrection on the part of the barons, who forced James to liberate Sforza, renounce his kingship, and eventually to quit the country. The queen now sent Sforza to re-establish her authority in Rome, whence the Neapolitans had been expelled after the death of Ladislaus; Sforza entered the city and obliged the condottiere Braccio da Montone, who was defending it in the pope's name, to depart (1416). But when Oddo Colonna was elected pope as Martin V., he allied himself with Joanna, who promised to give up Rome, while Sforza returned to Naples. The latter found, however, that he had lost all influence, and the queen was completely dominated by her new lover Giovanni (Sergianni) Caracciolo. Hoping to re-establish his position and crush Caracciolo, Sforza favoured the pretensions of Louis III. of Anjou, who wished to obtain the succession of Naples at Joanna's death, a course which met with the approval of the pope. Joanna refused to adopt Louis owing to the influence of Caracciolo, who hated Sforza; she appealed for help instead to Alphonsus of Aragon, promising to make him her heir. War broke out between Joanna and the Aragonese on one side and Louis and Sforza, supported by the pope, on the other. After much fighting by land and sea, Alphonso entered Naples, and in 1422 peace was made. But dissensions broke out between the Aragonese and Catalans and the Neapolitans, and Alphonso had Caracciolo arrested; whereupon Joanna, fearing for her own safety, invoked the aid of Sforza, who with difficulty carried her off to Aversa. There she was joined by Louis whom she adopted as her successor instead of the ungrateful Alphonso. Sforza was accidentally drowned, but when Alphonso returned to Spain, leaving only a small force in Naples, the Angevins with the help of a Genoese fleet recaptured the city. For a few years there was peace in the kingdom, but in 1432 Caracciolo, having quarrelled with the queen, was seized and murdered by his enemies. Internal disorders broke out, and Gian Antonio Orsini, prince of Taranto, led a revolt against Joanna in Apulia; Louis of Anjou died while conducting a campaign against the rebels (1434), and Joanna herself died on the 11th of February 1435, after having appointed her son René her successor. Weak, foolish and dissolute, she made her reign one long scandal, which reduced the kingdom to the lowest depths of degradation. Her perpetual intrigues and her political incapacity made Naples a prey to anarchy and foreign invasions, destroying all sense of patriotism and loyalty both in the barons and the people.

JOASH, or JEROASH (Heb. יְרוּאָשׁ, Yahweh is strong, or hath given it, the name of two kings of Palestine in the Bible.

1. Son of Ahaziah (see Jehoram, 2) and king of Judah. He obtained the throne by means of a revolt in which Athaliah (q.v.) perished, and his accession was marked by a solemn covenant, and by the overthrow of the temple of Baal and of its priest Mattan (Baalaz). In this the priest Jehoiada (who must have connived at the act as regent) took the leading part. The account of Joash's reign is not from a contemporary source (2 Kings xi. 4–xii. 16), and 2 Chronicles adds several new details, including a tradition of a conflict between the king and priests after the death of Jehoiada (xxii. 11; xxiv. 3, 15 sqq.).

At an unsteady period, the Arameans under Hazael captured Gath, and Jerusalem only escaped by buying off the enemy (2 Kings xiii. 17 sqq.). This may perhaps be associated with the Aramean attacks upon Israel (2 below), but the tradition recorded in 2 Chron. xxiv. 23 sqq. differs widely and cannot be wholly rejected. The kingdom perished in a conspiracy, the origin of which is not clear; it may have been for his attack upon the priests, it was scarcely for the course he took to save Jerusalem. He was succeeded by his son Amaziah, whose moderation in averting his father's death receives special mention. After defeating the Edomites, Amaziah turned his attention to Israel.

2. Son of Jehoahaz and king of Israel. Like his grandfather Jehu, he enjoyed the favour of the prophet Elisha, who promised him a deliverance in case Amaziah at Rehob (Ras el-Arba) attacked Damascus (1 Kings xx. 32–35).

The cities which had been taken from his father by Hazael the father of Ben-hadad were recovered (cf. 1 Kings xx. 34, time of Ahab) and the relief gained by Israel from the previous blows of Syria prepared the way for its speedy extension of power. When challenged by Amaziah of Judah, Joash uttered the famous fable of the thistle and cedar (for another example see Judg. ix. 8–15; see also Abimelech), and a battle was fought at Beth-shean, in which Israel was completely successful. An obscure statement in 2 Chron. xxv. 13 would show that this was not the only conflict; at all events, Amaziah was captured, the fortifications of Jerusalem were partially destroyed, the treasures of the Temple and palace were looted, and hostages were carried away to Samaria. According to one statement, Amaziah survived the disaster fifteen years, and lost his life in a conspiracy; but there is a gap in the history of Judah which the narratives do not enable us to fill (1 Kings xv. 1; see xiv. 17, 23). See further Uzziah; Jeroboam (2); and Jews.

JOB.

The book of Job (Heb. Job, Gr. Ἰαββῶ, the book, the most splendid creation of Hebrew poetry, is so called from the name of the man whose history and afflictions and sayings form the theme of it.

Contents.—As it now lies before us it consists of five parts. 1. The prologue, in prose, ch. i.–ii., describes in rapid and dramatic steps the history of this man, his prosperity and greatness corresponding with the right goodness; 2. The trial of his goodness, which is drawn out under the operation of the affliction of God, through the suggestion suggested by the Satan, the minister of this aspect of God's providence, that his godliness is selfish and only the natural return for unexampled prosperity, and the insinuation that if stripped of his prosperity he would be base. It is in two parts, two groups of these suspicions bring down two severe calamities on Job, one depriving him of children and possessions alike, and the other throwing the man himself under a painful malady. In spite of these afflictions Job retains his integrity and ascribes no wrong to God. Then is described the advent of Job's three friends—Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite—who, having heard of Job's calamities, come to comfort with him. 2. The body of the book, in poetry, begins with the three speeches, ch. iii.–xii., in which the history of Job's afflictions and the relation of external evil to the righteousness of God and the conduct of men are brilliantly discussed. This part, after Job's passionate outburst in ch. iii., is divided into three groups, the first and last of which contain each of the friends, and three by Job, one in reply to each of theirs (ch. iv.–xiv.; xv.–xxii.; xxiii.–xxxii.). Although in the last cycle the

1That the murder of Zechariah the son of Jehoiada (2 Chron. l.) is referred to in Matt. xxiii. 35. Luke xi. 51 is commonly held; but see Cheyne, Ency. Bib. col. 5373.
third speaker Zophar fails to answer (unless his answer is to be found in ch. xxvii.). Job, having driven his opponents from the field, carries his reply through a series of discourses in which he dwells in pathetic words upon his early prosperity, contrasting it with his present desolate condition. He revives with a solemn reprobation of all the offences that might be suggested against him, and a challenge to God to appear and put His hand to the charge which He had against him and for which He afflicted him. 3. Elihu, the representative of a young and zealous mind, who has come to the scene to intervene to express his dissatisfaction with the manner in which both Job and his friends conducted the cause, and offers what is in some respects a new solution of the question (xxviii.-xxxii.). 4. Another answer in which Job, in reply to God’s double challenge, refers to the riddle of his life, the Lord answers Job out of the whirlwind. The divine speaker does not condescend to refer to Job’s individual problem, but in a series of ironical intergoings asks him, as he thinks, the obvious questions. He leaves Job to ponder over the mysteries of the origin and subsistence of the world, the phenomena of the atmosphere, the instincts of the creatures that inhabit the desert, and, as he judges God’s conduct of the world amiss, invites him to seize the reins, gird himself with the thunder and quell the rebellious forces of evil in the universe (xxxviii.-xlii.). 6. Job is humbled and abashed, lays his hand upon his mouth, and repents his hasty words in dust and ashes. No solution of his problem is vouchsafed; but God Himself effects that which neither the man’s own thoughts of God nor the representations of the friends could accomplish: he had heard of him with the hearing of the ear without effect, but now his eye sees Him. This is the profoundest religious deepening that the epiclematic type of revelation can altogether accomplish. It describes Job’s restoration to a prosperity double that of his former, his family felicity and long life.

**Design.**—With the exception of the episode of Elihu, the connexion of which with the original form of the poem may be doubtful, all five parts of the book are essential elements of the work as it came from the hand of the first author, although some parts of the second and fourth divisions may have been expanded by later writers. The idea of the composition is to be derived not from any single element of the book, but from the teaching and movement of the whole piece. Job is unquestionably the hero of the work, and in his ideas and his history combined we may assume that Job’s author himself was speaking and teaching. The discussion between Job and his friends of the problem of suffering occupies two-thirds of the book, or, if the space occupied by Elihu be not considered, nearly three-fourths, and in the direction which the author causes this discussion to take we may see revealed the main didactic purpose of the book. When the three friends, the representatives of former theories of providence, are reduced to silence, we may be certain that it was the author’s purpose to discredit the ideas which they represent. Job himself offers no positive contribution to the doctrine of evil; his position is negative, merely antagonistic to that of the friends. This negative position, voluntarily maintained by him has the effect of clearing the ground, and the author himself supplies in the prologue the positive truth, when he communicates the real explanation of his hero’s calamities, and teaches that they were a trial to the right and the wrong. It was therefore the author’s main purpose in his work to widen men’s views of the providence of God and set before them a new view of suffering. This purpose was, in all probability subordinate to some wider practical design. No Hebrew writer is merely a poet or a thinker. He is always a teacher. He has men before him in their relations to God, and usually not men in their individual relations, but members of the family of Israel, the people of God. It is consequently scarcely to be doubted that the book has a national scope. The author considered his new truth regarding the meaning of affliction as of national interest, and as the truth then needful for the heart of his people. But the teaching of the book is only half its contents. It contains also a history—deep and inexplicable affliction, a great moral struggle, and a victory. The author meant his new truth to inspire new conduct, new faith, and new hopes. In Job’s sufferings, undeserved and inexplicable to him, yet capable of an explanation most consistent with the goodness and righteousness of God, and casting honour upon his faithful servants; in his despair bordering on unbelief, at least overcome; and in the happy issue of his afflictions—in all this Israel may see itself, and from the sight take courage, and forecast its own history. Job, however, is not to be considered Israel, the righteous servant of the Lord, under a feigned name; he is no mere parable (though such a view is found as early as the Talmud); and he and his history have both elements of reality in them. It is these elements of reality common to him with Israel in affliction, common even to him with humanity as a whole, confined within the straitened limits set by its own ignorance, wounded to death by the mysterious sorrows of life, tortured by the uncertainty whether its cry finds an entrance into God’s ear, alarmed and paralysed by the irreconcilable discrepancies which it seems to discover between its necessary thoughts of Him and its experience of Him in His providence, and faint with longing that it might come into His place, and behold him, not girt with His majesty, but in human form, as one looketh upon his fellow—it is these elements of truth that make the history of Job instructive to Israel in the times of affliction when it was set before them, and to men of all races in all ages. It would probably be a mistake, however, to imagine that the author consciously stepped outside the limits of his nation and assumed a human position antagonistic to it. The chords he touches vibrate through all humanity—but this is because Israel is the religious kernel of humanity, and because from Israel’s heart the deepest religious music of mankind is heard, whether of pathos or of joy.

Two threads requiring to be followed, therefore, run through the book—one the discussion of the problem of evil between Job and his friends, and the other the varying attitude of Job’s mind towards God, the first being subordinate to the second. Both Job and his friends are conscious of the problem of evil, ignorant of the true cause of their calamities—Job strong in his sense of innocence, and the friends armed with their theory of the righteousness of God, who giveth to every man according to his work. With the psychical instinct the double thread of Job by and by altogether lose his self-control first when his three friends came to visit him. His brecavisms and his malady he bore with a steady courage, and his wife’s direct instigations to godlessness he repelled with a fierce and firm resistance. The old man and his associates of his happiness came to see him, and when he read in their looks and in their seven days’ silence the depth of his own misery, his self-command deserted him, and he broke out into a cry of despair, cursing his days and crying for death (xxi.). Job had somewhat misinterpreted the demeanour of his friends. It was not all pity that he expressed. Along with their pity they had also brought their theology, and they trusted to heal Job’s malady with their theology. If Job’s days were indeed days of calamity, he should have found them on the sovereign remedy of this in the high teaching, the events of God’s providence, that it was no longer a specific in his case. His violent impatience, however, and the double solution of his affihions in their attitude and in their language, only served to confirm the view of his sufferings which their theory of evil had already suggested to his friends. And thus commences the high debate which continues through twenty-nine chapters.

The three friends of Job came to the consideration of his history with the principle that calamity is the result of evil-doing, as prosperity is the reward of righteousness. Suffering is not an accident or a spontaneous growth of the soil; man is born into trouble as the sparks fly upwards; there is in human life a tendency to evil which draws down upon men the chastisements of God (v. 6). The principle is thus enunciated by Eliphaz, from whom the other speakers take their cue; where there is suffering there has been sin in the sufferer. Not so with Job. He is himself innocent of sin, and his case gives insight into his character. Suffering is not always punitive; it is sometimes disciplinary, designed to wean the good man from his sin. If he sees in his suffering the monition of God and turns from his evil, and brings to the faithful and the godly whatever present estate more prosperous than his first. If he murmurs or resists, he can only perish under the multiplying chastisements which his impatience will provoke. Now this principle is far from being a general one of the book, and the friends are far from always adhering to it. They are wrong in supposing that it would cover the wide providence of God. The principle is the fundamental idea of moral government, the expression of the natural conscience, a principle common more or less directly to all the great religions of the world. It is the expression of the common mind, because all religious ideas are more prominent and simple there— not suggested to Israel first by the law, but found and adopted by the law, though it may be sharpened by it. It is the fundamental principle when the Greeks meant religion, the advantage of the wisdom of philosophy of the Hebrews more than of either. Speculation among the Hebrews had a simpler task before it than it had in the West or in the farther East. The Greek philosopher began his operations upon the sum of things; he threw the universe into his crucible at once. His object was to effect some analysis of it, so
that he could call one element cause and another effect. Or, to vary the figure, his endeavour was to pursue the streams of tendency which he could observe till he reached at last the central spring which sent them all forth. God, a single cause and explanation, was the object of that phenomenon which revealed the mind and the operations of the Man of whom he did not know, but a recognition on all hands of God whom he knew. The great primary idea to his mind was that of God, a Being wholly just, doing all. And the world was little more than the phenomenon which revealed the mind and the operations of God. Consequently the nature of the world as known to him and the course of events formed a perfect equation. The idea of what God was in Himself was in complete harmony with what he knew of the individual human lives, and in the history of nations. The philosophy of the wise did not go behind the origin of sin, or refer it to the freedom of man; but, sin existing, and God being in immediate personal contact with the world, every event was a direct expression of His moral will and energy; calumny fell on wickedness, and success attended right-doing. This view of the moral harmony between the nature of God and the events of providence in the fortunes of men and nations is the view of the Hebrew wisdom in its oldest form, during what might be called the period of principles, to which belong Prov. x. seq.; and this is the position maintained by Job's three friends. And the significance of the book in the history of Hebrew thought is that its heroes begin where Job ends. The first section was definitely over, closing the long period when this was merely subject to questionings, and makes a new positive addition to the doctrine of evil.

Job's friends came directly from the hand of God, and also that God afflicted those whom He held guilty of sins. But his conscience denied the imputation of guilt, whether insinuated by his friends or implied in God's chastisement of him. Hence he was constrained to a conflict with the doctrine of God. Whether Job appeared to his friends nothing else but impurity; while theirs was to him mere falsehood and the special pleading of sycophants on behalf of God because He was the strongest. Within these two iron walls his soul was making its way, and striving after a magnificent brilliancy, if not of argument, of illustration. A certain advance indeed is perceptible. In the first series of speeches (iv.-xiv.), the key-note of which is struck by Elihaph, the oldest and most conservative of the three friends, it is recognized that Job is a wretched man, and that God is a just God, and that Job should recognize it and use it for the purpose for which it was sent. In the second (xxv.-xxx.) the terrible fate of the sinner is emphasized, and Job is fully charged with having been thrown in by all the speakers in the first series, are absent. Job's demeanour under the consolations offered him afforded little hope of his repentance. In the third series (xlii. seq.) the friends cast about for another idea and finally charge him with having done all he could to deserve his misfortune. Their armoury was now exhausted is shown by the brevity of the second speaker, and the failure of the third (at least in the present text) to answer in any form. In reply Job disdains for a time to touch the incidents of Satan's accusations, but at length, in touching the pathos of the defection of his friends, who were like the winter torrents looked for in vain by the perspiring caravan in the summer heat; he meets with bitter scorn their constant cry that Job has been outwitted by God. The Righteous man, by asking: How can one be righteous with God? what can human weakness, however innocent, do against infinite might and subtlety? they are righteous whom an omnipotent and perverse will thinks fit to consider so; he falls into hopeless woe over the universal misery of man, who has a weary campaign of life appointed him; then, rising up in the strength of his conscience, he upbraids the Almighty with his misuse of his power and his indiscriminate tyranny—righteous and inscrutable. He asks, with tears in his eyes; how can an innocent man be shared by the author of the book. It is remarkable that the attitude which we imagine it would have been so easy for Job to assume, namely, while holding fast his integrity, to fall back upon the friends; and to employ the imposing and eloquent descriptions in his speeches, is just the attitude which is taken up in ch. xxvii. It is far from certain, however, that this chapter is an integral part of the original book.
human nature and the rich endowments of His providence, only as
the means of exercising His mad and immoral cruelty in the time to
come. When the Semitic skin of Job is scratched, we find a modern
pessimist beneath. Others in later days have brought the keen sensi-
tivity and frame of mind of our modern age together, and asked with
Job to whom at last this has to be referred. Towards the end of the
cycle a star of heavenly light seems to rise on the horizon; the thought
seizes the sufferer's mind that man might not only consider that God
might be pleased to do this, but that He might be pleased to do it
simply because it is His will. Is this not the mind of Job? Is this not
the idea that he must judge that it was familiar to himself.
In the second cycle the thought of a future reconciliation with God
is more firmly grasped. That satisfaction or at least composure
which, when we observe calamities that we cannot morally account for,
may come to us in the way of a great scheme moving according to general
laws, and that it does not always truly reflect the relation of God to the individual. Job reached in the only
way possible to a Semitic mind. He drew a distinction between
an outer God whom events obey, putting him in His anger, and an
inner God whose heart was with him, who was aware of his innocence;
and he appeals from God to God, and beseeches God to plead
Himself that he shall receive justice from God (xvi. 19; xvii. 3).
And he draws his conclusion: I do not deny that God can
cause him rise that he avows his assurance that He will yet appear to
do him justice before men, and that he shall see Him with his own eyes,
no more estranged but on his side, and for this moment he faints
with joy (xxv. 8).
After this expression of faith Job's mind remains calm, though
he ends by firmly charging God with perverting his right, and demand-
ing to know the cause of his afflictions (xxvii. seq.; xxxi. 35, where
whence his eloquence had to the words that follow has given way
has written it)
Answer to this demand the Divine voice answers
Job out of the tempest: "Who is this that darkeneth counsel by
words without knowledge?" The word "counsel" intimates to Job
Job. He is being with him, with him in language and in substance. His
comprehension of man; and to impress this is the purpose of the
Divine speeches. The speaker does not enter into Job's particular
case; there is not a word tending to unravel his riddle; his mind is
directed more toward the large questions of the relationship of God
to his own words and those of his friends are but re-echoed, but it is by God
Itself who now utters them. Job is in immediate nearness to the
majesty of heaven, wise, unfathomable, ironical over the littleness
of man, and he is absolved; God Himself effects what neither the man's

1 This remarkable passage reads thus: "But I know that my
redeemer liveth, and afterwards he shall arise upon the dust, and after
my skin, even this body, is destroyed, without my flesh shall I see God;
whom I shall see for myself, and mine eyes shall behold, and not as a
stranger; my reins within me are consumed with longing."
The redeemer who liveth and shall arise or stand upon the earth is God
whose concern with his own soul and interests in the flow of the
exegesis was greatly affected by the translation of Jerome, who,
departing from the Itala, rendered: "In novissimo die terrar
surructurus sum... et rursum circumdabat pelle mea et in carne mea
opinabat." The word "counsel" brings out two questions: whether:
(a) Job looks for this manifestation of God to him while he is
still alive, or (b) after death, and therefore in the sense of a spiritual
vision and union with God in another life; that is, whether, the
word "counsel" implies that God will still be present with him in the
relatively only, of the extreme effects of his disease upon him, or
literally, of the separation of the body in death. A third view which
assumes that the words rendered without my flesh, which run literally "out of my flesh," mean looking out from my flesh,
that is, clothed with a new body, and finds the idea of the repetition,
repeated, perhaps imports more into the language than it will
fairly bear. In favour of (a) may be added the consistent refusal
of Job throughout to entertain the idea of a restoration in this life;
the exegesis of Ewald, which, though the word looks as if it implied
in death, and that Sheol, the place into which deceased persons
descended and where they remained, cut off from all life with God,
might be overleapt. On this account the theory of Ewald, which
more accurately expresses the truth of the passage is not at variance
considering its purpose to be to teach that the riddles of this life
shall be solved and its inequalities corrected in a future life, appears
one-sided. The point of the passage does not lie in any distinction
which it draws between this life and a future life; it lies in the assu-
ance which Job expresses that God, who even now knows his inno-
cence, will vindicate it in the future, and that, though estranged
now, He will at last take him to His heart.
Integrity.—Doubts whether particular portions of the present
book belonged to the original form of it have been raised by many.
M. L. De Wette expressed himself as follows: "It appears to us
that the present book of Job has not all flowed from one pen.
As many books of the Old Testament have been several times
written over, so has this also" (Ersch and Gruber, Ency., sect.
ii. vol. viii.). The judgment formed by De Wette has been
adhered to more or less by most of those who have studied the
book. Questions regarding the unity of such books as this are
difficult to settle; there is not unanimity among scholars
regarding the idea of the book, and consequently they differ as
to what parts are in harmony or conflict with unity; and it is
dangerous to apply modern ideas of literary composition and
artistic unity to the works of antiquity and of the East.
The book of Job has certainly received frequent
treatment in the Old Testament; and there is no likelihood that
all efforts in this direction have been preserved to us. It is
probable that the book of Job was but a great effort amidst
or after many smaller. It is scarcely to be supposed that one
with such poetic and literary power as the author of chap.
iii. xxxvi., would embody the work of any other writer
in his own. If there be elements in the book which must be
pronounced foreign, they have been inserted in the work of the
author by a later hand. It is not unlikely that our present book
may, in addition to the great work of the original author, contain
some fragments of the thoughts of other religious minds upon
the same question, and that these, instead of being loosely
appended, have been fitted into the mechanism of the first work.
Some of these fragments may have originated at first quite
independently of our book, while others may be expansions and
insertions that never existed separately. At the same time it is
scarcely safe to throw out any portion of the book merely because
it seems to us out of harmony with the unity of the main part
of the poem, or unless several distinct lines of consideration conspire
to point it out as an extraneous element.

The arguments against the originality of the prologue— as,
that it is written in prose, that the name Yahweh appears in it, that
sacrifice is referred to, and that there are inconsistencies between it
and the body of the book—are of little weight. There must have
been some introduction to the poem explaining the circumstances
of Job, otherwise the poetical dispute would have been unintelligible,
for the four principal characters of the poem, Job, Satan, his
poets, in which he and his friends figured as they do here would have been
understood. And there is no trace of any other prologue or intro-
duction having ever existed. The prologue, too, is an essential
element in the development of the work, and the defense of the doctrine
of suffering, for which the discussion in the poem prepares the way.
The interspersion of prose and poetry is common in Orientals works containing similar discussions; the reference to
sacrifice, while using the name Yahweh freely himself, puts the patriarchal
Divine names into the mouth of Job and his friends because he regards
them as belonging to the patriarchal age and to a country
outside of Israel, but this is certainly not a certainty awkwardness for the writer appears perhaps from his allowing the
name Yahweh to slip in once or twice (xii, 9, cf. xxvii. 28) in familiar
phrases in the body of the poem. The discrepancies, such as Job's
refusal to refer to God as a grand father (v. 26), while it is
doubtful, and to his servants, are trivial, and even if real imply
nothing in a book admittedly poetical and not historical. The
objections to the epilogue are equally unimportant—as that the
Satan does not maintain his objections. Satan objects to the poet's
with the main idea of the poem—that earthly felicity does not
follow righteousness. The epilogue confirms the teaching of the
poem when it gives the divine sanction to Job's doctrine regarding
God's dealing with the wicked and the just, and all that is
unimportant. The reference to the suffering of Job in his latter
years is not the intention of the poem to teach that earthly felicity does not
follow righteousness; its purpose is to correct the exclusiveness
with which the friends of Job maintained that principle. The
exile of Satan in the book of Job has been considered by some
men of the Old Testament to assign to the Satan any such personal
importance or independence of power as that he should be called
before the court to receive the hitches that accompanied his own
discomfiture. The Satan, though he here appears with the begin-
ings of a malevolent will of his own, is but the instrument of the
sitting providence of God. His work was to try; that done he

425

JOB
disappeared, his personality being too slight to have any place in the result. Much graver are the suspicions that attach to the speeches of Elihu. Most of those who have studied the book carefully hold that the character of this young man was cast too late, and, though introduced at a considerably later time, the piece is one of the most interesting parts of the book; both the person and the thoughts of Elihu are marked by a strong individuality. This individuality has been so frequently observed that the anchormen's part of the book, by far most passed a very severe judgment on Elihu: he is a buffoon, a boastful youth whose shallow intermediating is only to be explained by the fewness of his years, the incarcration of folly, or even the Satan himself gone a-miming. Some moderns on the other hand have regarded him as the incarnation of the voice of God or even of God himself. The main objections to the connection of the episode of Elihu with the original book are: that the prologue and epilogue in the book are entirely out of the character of Job, that he occupies virtually the same position as the friends; that his speeches destroy the dramatic effect of the divine manifestation by introducing a lengthened break between Job's challenge and the answer of God; that the language and style of the piece are marked by an excessive mannerism, too great to have been created by the author of the rest of the poem; that the allusions to the rest of the book are so minute as to betray a reader rather than a hearer; and that the views regarding sin, and especially the scandal of the author by the irreverence of Job, indicate a religious advance which marks a later age. The position taken by Elihu is almost that of a critic of the book. Regarding the origin of afflictions he is, in the first place, a man of great force and ability, although he is full of the more frequent sinfulness of man than on actual sins, and his reprobation of Job's position is even greater than theirs. His anger was kindled against Job because he made himself righteous before God, and against his friends because they were his equals. His whole object was to refute Job's charge of injustice against God. What is novel in Elihu, therefore, is not his position but his arguments. These do not lack cogency, but betray a kind of thought different from that of the author of the book. He is only the advocate of the justice of God, and it is certain that the speech of Elihu is shorter than any other in the book, belonging perhaps to a more reverential age, it appeared that the language and bearing of Job had scarcely been sufficiently reproduced by the original speakers, and that the religious reason, apart from any theophany, could suggest arguments sufficient to condemn such demeanour on the part of any man. (For an able though hardly convincing argument for the originality of the discourses of Elihu see Bulte's Commentary.)

In some respects Job is a poem, or at least a book, which has become familiar to all who have any knowledge of the Old Testament, and to some extent it is difficult to separate what is original from what is derived. This is especially the case in regard to some other portions of the book, particularly ch. xxvii. 7-xxviii. In the latter part of ch. xxvii. Job seems to go over to the camp of his opponents and expresses sentiments in complete contradiction to his former views. The reason of this is perhaps that Job himself in the speeches of Zophar. Others, as Hitzig, believe that Job is parodving the ideas of the friends; while others, like Ewald, consider that he is recanting his former excesses, and making such a modification as to reconcile himself to God and to carry his presence on evil. None of these opinions is quite satisfactory, though the last probably expresses the view with which the passage was introduced, whether it be original or not. The meaning of ch. xxviii. can only be that "Wisdom," that is, the theoretical comprehension of wisdom, is unattainable by man, whose only wisdom is the fear of the Lord or practical piety. But to bring Job to the feeling of this truth was just the purpose of the theophany and the divine speeches; and, if Job had reached it at all through his own reflection, the theophany becomes an irrelevancy. It is difficult, therefore, to find a place for these two chapters in the original work. The hymn on Wisdom is a most exquisite poem, which probably originated separately, and was brought into the book as an appendix or an argument to those that which suggests the speeches of Elihu. Objections have also been raised to the descriptions of leviathan and behemoth (ch. xi. 15-xlii.). Regarding these they may be enough to say that in meaning these passages are in line with the rest of the book, and the genius of the whole arises from the same source; though there is a breadth and detail in the style unlike the sharp, short, ironical touches otherwise characteristic of this part of the poem. (Other longer passages, the originality of which has been called in question, are: Job xiv. 17 seq.; xxiii. 8 seq.; xxiv. 9, 18-24; xxvi. 5-14. On these see the commentary referred to above.)

Date.—The age of such a book as Job, dealing only with principles and having no direct references to historical events can be fixed only approximately. Any conclusion can be reached only by an induction founded on matters which do not affect perfect certainty, such as the comparative development of certain moral ideas in different ages, the pressing claims of certain problems for solution at particular epochs of the history of Israel, and points of contact with other writings of which the age may with some certainty be determined. The Jewish tradition that the book is Mosaic, and that the idea it is a production of the desert, written in another tongue and translated into Hebrew, was not even a shadow of probability. The book is a genuine outcome of the religious life and thought of Israel, the product of a religious knowledge and experience that were possible among no other people. That the author lays the scene of the poem outside his own nation and in the patriarchal age is a proceeding common to him with other dramatic writers, who find for their play their principles in a region removed from the present, where they are not hampered by the obtrusive forms of actual life, but are free to mould occurrences into the moral form that their ideas require. It is the opinion of some scholars, e.g. Delitzsch, that the book belongs later the age of Solomon. It cannot be earlier than this age, for Job (xxvii. 17) traverses the ideas of Ps. viii. in a manner which shows that this hymn was well known. To infer the date from a comparison of literary coincidences and allusions is however a very delicate operation. For, first, owing to the unity of thought and language which prevades the Old Testament, in which, regarded merely as a national literature, it differs from all other national literatures, we are apt to be deceived, and to take mere similarities for literary allusions and quotations; and, secondly, even when we are sure that there is dependence, it is often uncommonly difficult to decide which is the original source. The reference to Job in Ezek. xiv. 14 is not to our book, but to the man (a legendary figure) who was afterwards made the hero of it. The affinities on the other hand between Job and Isa. xi.-xiv. are very close. The date, however, of this part of Isaiah is uncertain, though it cannot have received its final form, if it be composite, long before the return. Between Job iii. and Jer. iv. 14 seq. there are no longer any literary conceptions. But the judgment of different minds differs on the question which passage is dependent on the other. The language of Jeremiah, however, has a natural pathos and genuineness of feeling in it, somewhat in contrast with the elaborate poetical finish of Job's words, which might suggest the originality of the former.

The tendency among recent scholars is to put the book of Job not earlier than the 5th century B.C. There are good reasons for putting it in the 4th century. It stands at the beginning of the era of Jewish philosophical inquiry—its affinities are with Proverbs, Ecclesiastes, Ecclesiastes, and the Wisdom of Solomon, a body of writings that belongs to the latest period of pre-Christian Jewish literary development (see Wisdom Literature). Its points of connexion with Isa. xi.-xiv. relate only to the problem of the suffering of the righteous, and that is later than the Isaiah passage appears from the fact that this latter is national and ritual in scope, while Job is universal and ethical.

The book of Job is not literal history, though it reposes on historical tradition. To this tradition belong probably the name of Job and his country, and the names of his three friends, and perhaps also many other details impossible to specify particularly. The view that the book is entirely a literary creation with no basis in historical tradition is as old as the Talmud (Baba Bathra, xv. 1), in which a rabbi is cited who says: Job was not, and was not created, but is an allegory. This view is supported by Hengstenberg and others. But pure poetical creations on so extensive a scale are not probable in the East and at so early an age.

Author. — The author of the book is wholly unknown. The religious life of Israel was at certain periods very intense, and at those times the spiritual energy of the nation expressed itself almost impersonally, so that it might not feel itself to be and were specifically forgotten in name by others. Hitzig conjectures that the author was a native of the north on account of the free criticism of providence which he allows himself. Others, on account of some affinities with the prophet Amos, infer that he belonged to the south of Judah, and this is supposed to account
for his intimate acquaintance with the desert. Ewald considers that he belonged to the exile in Egypt, on account of his minute acquaintance with that country. But all these conjectures localize an author whose knowledge was not confined to any locality, who was a true child of the East and familiar with life and nature in every country there, who was at the same time a true Israelite and felt that the earth was the Lord's and all the good thereof, and whose sympathies and thought took in all God's works.

JOBST, or JODOCUS (c. 1350-1411), margrave of Moravia, was a son of John Henry of Luxembourg, margrave of Moravia, and grandson of John, the blind king of Bohemia. He became margrave of Moravia on his father's death in 1375, and he never was an unscrupulous character enabled him to amass a considerable amount of wealth; while his ambition led him into constant quarrels with his brother Procop, his cousins, the German king Wenceslaus and Sigismund, margrave of Brandenburg, and others. By taking advantage of their difficulties he won considerable power, and the record of his life is one of warfare and treachery, followed by broken promises and transitory reconciliations. In 1385 and 1388 he purchased Brandenburg from Sigismund, and the duchy of Luxemburg from Wenceslaus; and in 1397 he also became possessed of upper and lower Lusatia. For some time he had entertained hopes of the German throne and had negotiated with Wenceslaus and others to this end. When, however, King Rupert died in 1410 he maintained at first that there was no vacancy, as Wenceslaus, who had been deposed in 1400, was still king; but changing his attitude, he was chosen German king at Frankfurt on the 1st of October 1410 in opposition to Sigismund, who had been elected a few days previously. Jobst however was never crowned, and his death on the 17th of January 1411 prevented hostilities between the rival kings.

JOBS' TEARS, in botany, the popular name for Coix Lachryma-Jobi, a species of grass, of the tribe maydœae, which also includes the maize (see GRASSES). The seeds, or properly fruits, are contained singly in a stony involucrum or bract, which does not open until the enclosed seed germinates. The young involucrum surrounds the female flower and the stalk supporting the spike of male flowers, and when ripe has the appearance of bluish-white porcelain. Being shaped somewhat like a large drop of fluid, the form has suggested the name. The fruits are esculent, but the involucres are the part chiefly used, for making necklaces and other ornaments. The plant is a native of India, but is now widely spread throughout the tropical zone. It grows in marshy places; and is cultivated in China, the fruit having a supposed value as a diuretic and anti-phtisis. It was cultivated by John Gerard, author of the famous Herball, at the end of the 16th century, and is still cultivated in Asia.

JOCASTA, or Iocasta (Iokaste; in Homer, Ἐπικάστα), in Greek legend, wife of Laius, mother (afterwards wife) of Oedipus (q.v.), daughter of Meneceus, sister (or daughter) of Creon. According to Homer (Od. xi. 271) and Sophocles (Oed. Tyr. 1241), on learning that Oedipus was her son she immediately hanged herself; but in Euripides (Phoenissae, 1455) she stabs herself over the bodies of her sons Eteocles and Polynices, who had slain each other in single combat before the walls of Thebes.

JOCKEY, a professional rider of race-horses, now the current usage (see HORSE-RACING). The word is by origin a diminutive of "Jack," the Northern or Scots colloquial equivalent of the name "John" (cf. Jack). A familiar instance of the use of the word as a name is "Jockey of Norfolk" in Shakespeare's Richard III. v. 3, 304. In the 16th and 17th centuries the word was applied to horse-dealers, posillons, itinerant minstrels and vagabonds, and thus frequently bore the meaning of a cunning trickster, a "sharp," whence "to jockey," to outwit, or "do" a person out of something. The current usage is found in John Evelyn's Diary, 1670, when it was clearly well known. George Borrow's attempt to derive the word from the gipsy chukni, a heavy whip used by horse-dealing gipsies, has no foundation.

JODELLE, ÉTIENNE, seigneur de Limodin (1532-1573), French dramatist and poet, was born in Paris of a noble family. He attached himself to the poetic circle of the Pléiade (see DAURAT) and proceeded to apply the principles of the reformers to dramatic composition. Jodelle aimed at creating a classical drama which should be in every respect different from the moralities and solisies that then occupied the French stage. His first play, Cléopâtre captive, was represented before the court at Reims in 1553. Jodelle himself took the title rôle, and the cast included his friends Remy Belleau and Jean de la Pérusse. The failure of the play's success the friends organized a little fête at Arcueil when a large bouquet of flowers was led in procession and presented to the author. It was so exaggerated by the enemies of the Ronsardists into a renewal of the pagan rites of the worship of Bacchus. Jodelle wrote two other plays, Eugène, a comedy satirizing the superior clergy, had less success than it deserved. Its preface poured scorn on Jodelle's predecessors in comedy, but in reality his own methods are not so very different from theirs. Didon se sacrant, a tragedy which follows Virgil's narrative, appears never to have been represented. Jodelle died in poverty in July 1573. His works were collected the year after his death by Charles de la Mothe. They include a quantity of miscellaneous verse dating chiefly from Jodelle's youth. The intrinsic value of his tragedies is small. Cléopâtre is lyric rather than dramatic. Throughout the five acts of the piece nothing actually happens. The death of Antony is announced by his ghost in the first act; the story of Cleopatra's suicide is related, but not represented, in the fifth. Each act is terminated by a chorus which moralizes on such subjects as the instability of fortune and the judgments of heaven on human pride. But the play was the starting-point of French classical tragedy, and was soon followed by the Médée (1553) of Jean de la Pérusse and by The Rose (1561) of André de Rivaudeau. Jodelle was a rapid writer, but fond of and fond of dissipation. His friend Ronsard said that his published poems gave no adequate idea of his powers.

Jodelle's works are collected (1868) in the Pléiade française des Charles Marty-Laveaux. The prefatory notice gives full information of the sources of Jodelle's biography, and La Mothe's criticism is reprinted in its entirety.

JODHPUR, or MARWAR, a native state of India, in the Rajputana agency. Area, 34,963 sq. m. Pop. (1901), 1,935,565, showing a decrease of 23% in the decade, due to the results of famine. Estimated revenue, £7,373,600; tribute, £14,000. The general aspect of the country is that of a sandy plain, divided into two unequal parts by the river Luni, and dotted with picturesque conical hills, attaining in places an elevation of 3000 ft. The river Luni is the principal feature in the physical aspects of Jodhpur. One of its head-streams rises in the sacred lake of Pushkar in Ajmere, and the main river flows through Jodhpur in a south-westery direction till it is finally lost in the marshy ground at the head of the Kunn of Cutch. It is fed by numerous tributaries and occasionally overflows its banks, and five crops of wheat and barley being grown on the cultivated soil. Its water is, as a rule, saline or brackish, but comparatively sweet water is obtained from wells sunk at a distance of 20 or 30 yds. from the river bank. The famous salt-lake of Sambhar is situated on the borders of Jodhpur and Jaipur, and two smaller lakes of the same description lie within the limits of the state,
from which large quantities of salt are extracted. Marble is mined in the north of the state and along the south-east border.

The population consists of Rathor Rajputs (who form the ruling class), Brāhmans, Charsans, Bhāts, Mahajans or traders, and Jats. The Charsans, a sacred race, hold large religious grants of land, and enjoy peculiar immunities as traders in local produce. The Bhāts are by profession genealogists, but also engage in trade. Mārwāris traders are an entering class to be found throughout the length and breadth of India.

The principal crops are millets and pulses, but wheat and barley are largely produced in the fertile tract watered by the Lūnī river. The manufactures comprise leather boxes and brass utensils; and turbans and sarfs and a description of embroidered silk knotted thread are specialties of the country.

The rājputā belongs to the Rathor clan of Rājputūs. The family chronicles relate that after the downfall of the Rathor dynasty of Kanaūj in 1194, Sivaji, the grandson of Jī Chánd, the last king of Kanaūj, entered Mārwār on a pilgrimage to Dwarka, and on halting at the town of Pāli he and his followers settled there to protect the Brāhmān community from the constant raids of marauding bands. The rājput chief thus laid the foundation of the state, but it was not till the time of Rāo Chánda, the tenth in succession from Sivaji, that Mārwār was actually conquered. His grandson Jodha founded the city of Jodhpur, which he made his capital. In 1561 the country was invaded by Akbar, and the chief was forced to submit, and to send his son as a mark of homage to take service under the Mogul emperor. When this son Udālī Singh succeeded to the chiefship, he gave his sister Jodhāi in marriage to Akbar, and was rewarded by the restoration of most of his former possessions. Udālī Singh's son, Gaj Singh, held high service under Akbar, and conducted successful and unassailing Auranzbe invaded Mārwār in 1679, plundered Jodhpur, sacked all the large towns, and commanded the conversion of the Rathors to Mahomedanism. This cemented all the Rathor clouts into a bond of union, and a triple alliance was formed by the three states of Jodhpur, Udālīpur and Jaipur, to throw off the Mahomedan yoke. One of the conditions of this alliance was that the chiefs of Jodhpur and Jaipur should retain the privilege of marriage with the Udālīpur family, which they forfeited by contracting alliances with the Mogul emperors, on the understanding that the offspring of Udālīpur princesses should succeed to the state in preference to all other children of the Rathors. Tormented by this stipulation, he passed through many generations, and led to the invitation of Maharrāt help from the rival aspirants to power, and finally to the subjection of all the Rathor states to the Mahrattās. Jodhpur was conquered by Sindhia, who levied a tribute of £60,000, and took from it the fort and town of Ajmēre. Internecine disputes and succession wars disturbed the peace of the early years of the century, until in January 1818 Jodhpur was taken under British protection. In 1839 the misgovernment of the rājā led to an insurrection which compelled the interference of the British. In 1843, the chief having died without a son, and without having adopted an heir, the nobles and state officials were left to select a successor from the nearest of kin. Their choice fell upon Rājā Takhī Singh, chief of Ahmednagar. This chief, who did good service during the Mutiny, died in 1873. Mahrārā Jaiswāt Singh, who died in 1896, was a very enlightened ruler. His brother, Sir Pertas Singh (g.o.), conducted the administration until his nephew, Sardar Singh, came of age in 1898. The imperial service cavalry formed part of the reserve brigade during the Tirah campaign.

The state maintains a railway running to Bikanir, and there is also a branch railway into Sind. Gold, silver and copper money is coined. The state emblems are a jhau or sprig of seven branches and a khanda or sword. Jodhpur practically escaped the plague, but it suffered more severely than any other part of Rajputana from the famine of 1899-1900. In February 1900 more than 110,000 persons were in receipt of famine relief.

The city of Jodhpur is 64 m. by rail N.W. of Mārwār junction, on the Rajputana railway. Pop. (1901), 60,437. It was built by Rāo Jodha in 1459, and from that time has been the seat of government. It is surrounded by a strong wall nearly 6 m. in extent, with seventy gates. The fort, which stands on an isolated rock, contains the Mahrārā's palace, a large and handsome building, completely covering the crest of the hill on which it stands, and overlooking the city, which lies several hundred feet below. The city contains palaces of the mahārāj, and town residences of the thākurs or nobles, besides numerous fine temples and tanks. Building stone is plentiful and close at hand, and the architecture is solid and handsome. Three miles north of Jodhpur are the ruins of Mandor, the site of the ancient capital of the Parhar princes of Mārwār, before its conquest by the Rathors. Mills for grinding flour and crushing grain have been erected on the spot to give employment to the unemployed. The college is affiliated to the B.A. standard of the Allahabad university. To the Hesown hospital a wing for eye diseases was added in 1898, and the Jaswant hospital for women is under an English lady doctor.

JOEL. The second book among the minor prophets in the Bible is entitled The word of Yahweh that came to Joel the son of Pāthu'el, or, as the Septuagint, Latin, Syriac and other versions read, Bethuel. Nothing is recorded as to the date or occasion of the prophecy. Most Hebrew prophecies contain pointed references to the foreign politics and social relations of the nation at the time. In the book of Joel there are only scanty allusions to Phoenicians, Philistines, Egypt and Edom, couched in terms applicable to very different ages, while the prophet's own people are exhorting to repentance without specific reference to any of those national sins of which other prophets speak. The occasion of the prophecy, described with great force of rhetoric, is no known historical event, but a plague of locusts, perhaps repeated in successive seasons; and even here there are features in the description which have led many expositors to seek an allegorical interpretation. The most remarkable part of the book is the eschatological picture with which it closes; and the way in which the plague of locusts appears to be taken as foreshadowing the final judgment—the great day or assize of Yahweh, in which Israel's enemies are destroyed—is so unique as greatly to complicate the exegetical problem. It is not therefore surprising that the most various views are still held as to the date and meaning of the book. Allegorists and literalists still contend over the first and still more over the second chapter, and, while the largest number of recent interpreters accept Credner's view that the prophecy was written in the reign of Josiah of Judah (853-796 B.C.), a powerful school of critics (including A. B. Davidson) follow the view suggested by Vatke (Bib. Theol. p. 462 seq.), and reckon Joel among the post-exilic prophets. Other scholars give yet other dates: see the particulars in the elaborate work of Merx. The followers of Credner are literalists; the opposite school of moderns includes some literalists (as Duhm), while others (like Hilgenfeld, and in a modified sense Merx) adopt the old allegorical interpretation which treats the locusts as a figure for the enemies of Jerusalem.

There are cogent reasons for placing Joel either earlier or later than the great series of prophets extending from the time when the Chaldean, Assyrian and Medo-Persian empires dominated the Babylonian exile. In Joel the enemies of Israel are the nations collectively, and among those specified by name neither Assyria nor Chaldæa finds a place. This circumstance might, if it stood alone, be explained by placing Joel with Zephaniah in the brief interval between the decline of the empire of Nineveh and the advance of the Babylonians. But it is further obvious that Joel has no part in the internal struggle between spiritual Yahweh-worship and idolatry which occupied all the other prophets from the time of the Assyrian invasion. He presupposes a nation of Yahweh-worshippers, whose religion has its centre in the temple and priesthood of Zion, which is indeed conscious of sin, and needs forgiveness and an outpouring of the Spirit, but is not visibly divided, as the kingdom of Judah was between the adherents of spiritual prophecy and a party whose national worship of Yahweh involved them no fundamental separation from the surrounding nations. The book, therefore, must have been written before the ethico-spiritual and the popular conceptions of Yahweh came into conscious antagonism, or else after the fall of the state and the restoration of the community of Jerusalem to religious rather than political existence had decided...
the contest in favour of the prophets, and of the Law in which their teaching was ultimately crystallized.

The considerations which have given currency to an early date for Joel are of various kinds. The absence of all mention of one great opponent, Assyria, who dominated the scene so impressively during the 7th century B.C., is a strong argument. Again, the invasion of Assyria might be inverted with much greater probability, and numerous points of contact between Joel and other parts of the Old Testament (e.g. Joel ii. 2, Exod. x. 14; Joel ii. 3, Ezek. xxxvi. 35; Joel iii. 10, Mic. iv. 3) make it not incredible that the prophet of Jeshobaddai, whose text or style was perhaps more vivid, might have become familiar with the literature of prophetic thought on the Persian mount. But it is by no means certain that the Assyrian menace, and the dispersion of Israel among the nations, and the allotment of the Holy Land to new occupants, cannot fairly be referred to any calamity less than that of the Assyrian invasion.

It is hardly fair to bring against the poet the later prophet of the captivity, who, like Joel, was a Jew, and lived in Jerusalem: the disparity of Israel is too great. Now it is true that those who take the view of the history from Chronicles, where the kingdom of Ephraim is always treated as a sect outside the true religion, can reconcile this fact with an early date. But in ancient times it was not surprising to have the long history of the nation of the people of Yahweh is wholly inconceivable.

The earliest prophetic books have a quite different standpoint; otherwise indeed the books of northern prophets and historians could have been written into the Jewish canon. Again, the significant fact stand that there is no mention of a king and princes, but only of sheikhs and priests, has a force not to be invalidated by the ingenious reference of the book to the time of Joash's minority and the supposed regency of Jehoahaz. At any rate, the discovery that there was a period before the prophetic conflicts of the 8th century B.C., in which the Assyrians were not yet a menace, is not consistent with history. In fact the old theory of the antiquity of the Levitical legislation, so that in fact all who place the prophetic books in the 8th century B.C. are ultimately subject to this data, is so late a theory that a date for Joel and Amos too late for this theory is a date which the public would not accept.

Joel and Amos stand in one category with the Philistines, as slave dealers, not as armed foes. The idea of Joel is the first appearance of any of the other Blind as early as the time of Amos (i. 6), and continued so till Roman times. Thus, if any inference as to date can be drawn from ch. iii., it must rest on special features of the trade in slaves, which was always an important factor in the economy of the Mediterranean world. In the days of Solomon the slaves collected by the Pharaohs and the king of Tyre were sold as slaves to Edom, and presumably went to Egypt or Arabia. The place they occupy in the history of the Old Testament is the place of the Pharaohs. The E interpolates the following words: "With them the Egyptians were sold to the Mediterranean coasts from a very early date, and Isa. xi. 11-14 already speaks of Israelites captive in these districts as well as in Egypt, Ethiopia and the East. The traffic in this direction has long since ceased, and it is now the old slave trade to Egypt, which is still the chief goal of the maritime slave trade, and in which the Pharaohs played a more and more important part. This is the geographical position that the Pharaohs played in the trade in slaves. The text of Joel is a survey of the history of Shishak a century before Joel.

In the A.V. of ch. iii. it appears that subjection to a foreign power is not a present fact but a thing feared. But the parallelism and v. 19 justify the rendering in margin of R.V. say, "use a byword against them.

The hypothesis of an Arabian Javan, applied to Joel iii. 6 by Cremer, Hitzig, and others, may be viewed as exploded (see Stade, 'Das Volk Javan,' 1880, reprinted in his 'Ahd. Reden u. Ahbbulandten,' 1889, pp. 123-142). The question, however, has to be re-examined; later interpreters, e.g. the LXX translators, may have misunderstood the text of the passages has to be critically treated anew. See Cheyne, 'Traditions and Beliefs of Ancient Israel' (in Gen. x. 2).

Compare Movers, 'Phonistisches Allerthum,' iii. 170 seq.

Joash. From this time down to the last period the Hebrew monarchy was not the enemy of Judah. If the arguments chiefly relied on for an early date are so precarious or can even be turned against their inventors, there are some which make a later date more probable.

It appears from ch. iii. 1, 2, that Joel wrote after the exile. The phrase 'to bring again the captivity' would not alone suffice to prove this, for it is used in a wide sense, and perhaps means the dispersion of Israel after the Babylonian captivity. But the dispersion of Israel among the nations, and the allotment of the Holy Land to new occupants, cannot fairly be referred to any calamity less than that of the Assyrian invasion. With this the whole standpoint of the prophecy agrees. The most important historical point is that after the captivity the kingdom of the people of Yahweh is wholly inconceivable.

The earliest prophetic books have a quite different standpoint; otherwise indeed the books of northern prophets and historians could never have been admitted into the Jewish canon. Again, the significant fact stand that there is no mention of a king and princes, but only of sheikhs and priests, has a force not to be invalidated by the ingenious reference of the book to the time of Joash's minority and the supposed regency of Jehoahaz. At any rate, the discovery that there was a period before the prophetic conflicts of the 8th century B.C., in which the Assyrians were not yet a menace, is not consistent with history. In fact the old theory of the antiquity of the Levitical legislation, so that in fact all who place the prophetic books in the 8th century B.C. are ultimately subject to this data, is so late a theory that a date for Joel and Amos too late for this theory is a date which the public would not accept.

Eastern rhetoric, there is no occasion to seek in this section anything else than literal locusts. Nay, the allegorical interpretation, which takes the locusts to be hostile invaders, breaks through the laws of all reasonable writing, for the poetical hyperbole which compares the invading swarms to an army (ii. 4 seq.) would be inconceivably lame if a literal army was already concealed under the figure of the locusts. Nor could the prophet so far forget himself in his allegory as to speak of a victorious host as entering the conquered city like a thief (ii. 9). The second part of the book is Yahweh's answer to the people's prayer. The answer begins with a promise of deliverance from famine, and of fruitful seasons compensating for the ravages of the locusts. In the new prosperity of the land the union of Yahweh and his people shall be sealed anew, and so the Lord will proceed to pour down further and higher blessings. The aspiration of Moses (Num. xi. 29) and the hope of earlier prophets (Isa. xxxvii. 15, lxx. 21; Jer. xxxi. 33) shall be fully realized in the outpouring of the Spirit on all the Jews and even upon their servants (Isa. lxi. 5 with lvi. 6, 7); and then the great day of judgment, which had seemed to overshadow Jerusalem in the now averted plague, shall be near with a foul breath of blood and fire and darkness. But the terrors of that day are not for the Jews but for their enemies. The worshippers of Yahweh on Zion shall be delivered (cf. Obad. v. 17, whose words Joel expressly quotes in ch. ii. 37), and it is their heathen enemies, assembled before Jerusalem to war against Yahweh, who shall be mowed down in the valley of Jehoshaphat ("Yahweh judgeth") by no human arm, but by heavenly warriors. Thus definitively freed from the profane foot of the stranger (Isa. lii. 1), Jerusalem shall abide a holy city for ever. The fertility of the land shall be such as was long ago predicted in Amos ix. 13, and streams issuing from the Temple, as Ezekiel had described in his picture of the restored Jerusalem (Ezek. xlvi.), shall fertilize the barren Wadi of Acacias. Egypt and Edom, on the other hand, shall be desolate, because they have shed the blood of Yahweh's innocents. Compare the similar predictions against Edom, Isa. xxxiv. 9 seq. (Mal. i. 3), and against Egypt, Isa. xix. 5 seq., Ezek. xxix. Joel's eschatological picture appears indeed to be largely a combination of elements from older unfilled prophecies. Its central feature, the assembling of the nations to judgment, is already found in Zeph. iii. 8, and in Ezekiel's prophecy concerning Gog and Magog, where the wonders of fire and blood named in Joel lii. 30 are also mentioned (Ezek. xxxviii. 22). The other physical features of the great day, the darkening of the lights of heaven, are a standing figure of the prophets from Amos v. 6, viii. 9, downwards. It is characteristic of the prophetic eschatology that images suggested by one prophet are adopted by his successors, and gradually become part of the permanent scenery of the last times; and it is a proof of the late date of Joel that almost his whole picture is made up of such features. In this respect there is a close parallelism, extending to minor details, between Joel and the last chapters of Zechariah.

That Joel's delineation of the final deliverance and glory attaches itself directly to the deliverance of the nation from a present calamity is quite in the manner of the so-called prophetical perspective. But the fact that the calamity which follows so largely is not only and not political is characteristic of the post-exile period. Other prophets of the same age speak much of death and failure of crops, which in Palestine then as now were aggravated by bad government, and were far more serious to a small and isolated community than they could ever have been to the old kingdom. It was indeed by no means impossible that Jerusalem might have been altogether undone by the famine caused by the locusts; and so the conception of these visitants as the destroying army, executing Yahweh's final judgment, is really much more natural than appears to us at first sight, and does not need to be explained away by allegory. The chief argument relied upon by those who still find allegory at least in ch. ii. is the expression ḫaqephōn, "the northerner" [1] [if this rendering is correct], in ii. 20. In view of the other points of

[1] It has been suggested that ḫaqephōn, which is often rather troublesome if rendered "the north," may be a weakened form of šibʿon, a

affinity between Joel and Ezekiel, this word inevitably suggests Gog and Magog, and it is difficult to see how a swarm of locusts could receive such a name, or if they came from the north could perish, as the verse purports, in the desert between the Mediterranean and the Dead Sea. The verse remains a crux interpres, and no exegesis hitherto given can be deemed thoroughly satisfactory; but the interpretation of the whole book must not be made to hinge on a single word in a verse which might be altogether removed without affecting the general course of the prophet's argument.

The whole verse is perhaps the addition of an allegorizing glossator. The prediction in v. 19, that the seasons shall henceforth be fruitful, is given after Yahweh has shown his zeal and pity for Israel, not of course by mere words, but by acts, as appears in verses 20, 21, where the verbs are properly perfects recording that Yahweh hath already done great things, and that vegetation has already revived. In other words, the mercy already experienced in the removal of the plague is taken as a pledge of future grace not to stop short till all God's old promises are fulfilled. In this context v. 20 is out of place. Observe also that in v. 25 the locusts are spoken of in the plain language of chap. i.

See the separate commentaries on Joel by Credner (1831), Winnecke (1872), Marx (1879). The last-named gives an elaborate history of interpretation from the Septuagint down to Calvin, and appends the Ethiopic text edited by Dillmann. Nowack and Marti should also be consulted (see their respective series of commentaries); also G. A. Driver, The Book of Joel (LXX and Targum) (1897). On the language of Joel, see Holzinger, Z. A. T. W. (1880), pp. 89-131. Of older commentaries the most valuable is Pocock's (Oxford, 1691). Bochart's Hierozoian may also be consulted. (W. R. S.; T. K. C.)

JOEL, MANUEL (1826-1890), Jewish philosopher and preacher. After teaching for several years at the Breslau rabbinical seminary, founded by Z. Frankel, he became the successor of Abraham Geiger in the rabbinate of Breslau. He made important contributions to the history of the school of Aqiba (q.v.), as well as to the history of Jewish philosophy, his essays on Ibn Gabirol and Maimonides being of permanent worth. But his most influential work was connected with the relations between Jewish philosophy and the medieval scholasticism. He showed how Albertus Magnus derived some of his ideas from Maimonides and how Spinoza was indebted to the same writer, as well as to Hasdai Crescas. These essays were collected in two volumes of Beiträge zur Geschichte der Philosophie (1876), while another two volumes of Blicke in die Religionsgeschichte (1880-1883) threw much light on the development of religious thought in the early centuries of the Christian era. Equally renowned were Joel's pulpit addresses. Though he was no orator, his appeal to the reason was effective, and in their published form his three volumes of Predigten (issued posthumously) have found many readers. (I. A.)

JOFFRIN, JULES FRANÇOIS ALEXANDRE (1846-1890), French politician, was born at Troyes on the 16th of March 1846. He served in the Franco-German War, was 1890 elected to the Commune, and spent eleven years in England as a political exile. He attached himself to the "possibilist" group of the socialist party, the section opposed to the root-and-branch measures of Jules Guesde. He became a member of the municipal council of Paris in 1884, and vice-president in 1888-1889. Violently attacked by the Boulangists, L'Intransigeant and La France, he won a suit against them for libel, and in 1889 he contested the 18th arrondissement of Paris with General Boulangier, who obtained a majority of over 2000 votes, but was declared ineligible. Joffrin was only admitted to the Chamber after a heated discussion, and continued to be attacked by the nationalists. He died in Paris on the 17th of September 1890.

Current popular corruption of shim'on—ishmael. In Ezek. xxxviii. 15 it is distinctly said that Gog is to come from the recesses of Siphon, "Meshech" and "Tubal" are no hindrance to this view, if the names of the so-called "sons of Japheth" are critically examined. For they, too, as well as Siphon, can be plausibly shown to represent regions of North Arabia. See Cheyne, Traditions and Beliefs of Anc. Israel, on Gen. x. 2-4.
JOGNES—JOHANNESBURG

JOGUES, ISAAC (1607–1646), French missionary in North America, was born at Orleans on the 10th of January 1607. He entered the Society of Jesus at Rouen in 1624, and in 1636 was ordained and sent, by his own wish, to the Huron mission. In 1639 he went among the Tobacco Nation, and in 1641 journeyed to Sault Sainte Marie, where he preached to the Algonquins. Returning from an expedition to Three Rivers he was captured by Mohawks, who tortured him and kept him as a slave until the summer of 1643, when, aided by some Dutchmen, he escaped to the manor of Rensselaerwyck and thence to New Amsterdam. After a brief visit to France, where he was treated with high honour, he returned to the Mohawk country in May 1646 and ratified a treaty between that tribe and the Canadian government. Working among them as the founder of the Mission of the Martyrs, he incurred their enmity, was tortured as a sorcerer, and finally killed at Osserenou, near Auriesville, N.Y.

See Parkman, The Jesuits in North America (1898).

JOHANAN BEN ZACCAI, Palestinian rabbi, contemporary of the Apostles. He was a disciple of Hillel (q.v.), and after the destruction of the Temple Johanan was a member of the Sanhedrin and a skilled controversialist against the Sadducees. He is also reported to have been head of a great school in the capital. In the war with Rome he belonged to the peace party, and finding that the Zealots were resolved on carrying their revolt to its inevitable sequel, Johanan had himself conveyed out of Jerusalem in a coffin. In the Roman camp the rabbi was courteously received, and Vespasian (whose future elevation to the imperial dignity Johanan, like Josephus, is said to have foretold) agreed to grant him any boon he desired. Johanan obtained permission to found a college at Jamnia (Jabneh), which became the centre of Jewish culture. It practically exercised the judicial functions of the Sanhedrin (see Jews, § 40 ad fin.). That chief literary expression of Pharisaism, the Mishnah, was the outcome of the work begun at Jamnia. Johanan solaced his disciples on the fall of the Temple by the double thought that charity could replace sacrifice, and that a life devoted to a religious law could form a fitting continuation of the old theocratic state. “Johanan felt the fall of his people more deeply than anyone else, but—and in this lies his historical importance—he did more than any other to es other...” (Bacher).

See Graetz, History of the Jews (Eng. trans.), vol. ii. ch. xiii.; Weiss, Dor dor ve-doreshai, ii. 30; Bacher, Die Aguda der Tannaim, vol. i. ch. iii. (L. A.)

JOHANNESBURG, a city of the Transvaal and the centre of the Rand gold-mining industry. It is the most populous city and the commercial capital of South Africa. It is built on the southern slopes of the Witwatersrand in 26° 14' S. 28° 23'E., at an elevation of 5764 ft. above the sea. The distances by rail from Johannesburg to the following seaports are: Lourenço Marques, 364 m.; Durban, 493 m.; East London, 650 m.; Port Elizabeth, 714 m.; Cape Town, 957 m. Pretoria is, by rail, 46 m. N. by E.

The town lies immediately north of the central part of the main gold reef. The streets run in straight lines east and west or north and south. The chief open spaces are Market Square in the west and Government Square in the south of the town. Park railway station lies north of the business quarter, and farther north are the Wanderers' athletic sports ground and Joubert's Park. The chief business streets, such as Commissioner Street, Market Street, President Street and Pritchard Street, run east and west. In these thoroughfares and in several of the streets which intersect them are the offices of the mining companies, the banks, clubs, newspaper offices, hotels and shops, the majority being handsome stone or brick buildings, while the survival of some wooden shanties and corrugated iron buildings recalls the early character of the town.

Chief Buildings, &c.—In the centre of Market Square are the market buildings, and at its east end the post and telegraph offices, a handsome block of buildings with a façade 200 ft. long and a tower 156 ft. high. The square itself, a quarter of a mile long, is the largest in South Africa. The offices of the Witwatersrand chamber of mines face the market buildings. The stock exchange is in Marshall Square. The telephone exchange is in the centre of the city, in Von Brandis Square. The law courts are in the centre of Government Square. The Transvaal university college is in Plein Square, a little south of Park station. In the vicinity is St Mary's (Anglican) parish hall (1905–1907), the first portion of a large building planned to take the place of “Old” St Mary's Church, the “mother” church of the Rand, built in 1887. The chief Jewish synagogue is in the same neighbourhood. In Kerk Street, on the outskirts of central Johannesburg, is the Roman Catholic Church of the Immaculate Conception, the headquarters of the vicar apostolic of the Transvaal. North of Joubert's Park is the general hospital, and beyond, near the crest of the hills, commanding the town and the road to Pretoria, is a fort built by the Boer government and now used as a goal. On the hills, some 3 m. E.N.E. of the town, is the observatory, built in 1903. Johannesburg has several theatres and buildings adapted for public meetings. There is a race-course 2 m. south of the town under the control of the Johannesburg Turf Club.

The Suburbs.—North, east and west of the city proper are suburbs, laid out on the same rectangular plan. The most fashionable are to the east and north—Jeppestown, Belgravia, Doornfontein, the Berea, Hillbrow, Parktown, Yeoville and Belle- vue. Braamfontein (with a large cemetery) lies north-west and Fordsburg due west of the city. At Fordsburg are the gas and electric light and power works, and north of Doornfontein there is a large reservoir. There are also on the Rand, and dependent on the gold-mining, three towns possessing separate municipalities—Germiston and Boksburg (q.v.), respectively 9 m. and 15 m. E. of Johannesburg, and Krugersdorp (q.v.), 21 m. W.

The Mines and other Industries.—South, east and west of the city are the gold mines, indicated by tall chimneys, battery houses and the compounds of the labourers. The bare veld is dotted with these unsightly buildings for a distance of over fifty miles. The mines are worked on the most scientific lines. Characteristic of the Rand is the fine white dust arising from the crushing of the ore, and, close to the batteries, the incessant din caused by the stamps employed in that operation. The compounds in general, especially those originally made for Chinese labourers, are well built, comfortable, and fulfil every hygienic requirement. Besides the buildings, the compounds include wide stretches of veld. To enter and remain in the district, Kaffirs require a monthly pass for which the employer pays 2s. (For details of gold-mining, see Gold.) A railway traverses the Rand, going westward past Krugersdorp to Klerksdorp and thence to Kimberley, and eastward past Springs to Delagoa Bay. From Springs, 25 m. E. of Johannesburg, is obtained much of the coal used in the Rand mines.

The mines within the mineral area produce nearly half the total gold output of Transvaal. The other industries of Johannesburg include brewing; printing and bookbinding, timber sawing, flour milling, iron and brass founding, brick making and the manufacture of tobacco.

Health, Education and Social Conditions.—The elevation of Johannesburg makes it, despite its nearness to the tropics, a healthy place for European habitation. Built on open undulating ground, the town is, however, subject to frequent dust storms and to considerable variations in the temperature. The nights in winter are frosty and snow falls occasionally. The average day temperature in winter is 53° F., in summer 75°; the average annual rainfall is 28 in. The death-rate among white inhabitants averages about 17 per thousand. The principal causes of death, both among the white and coloured inhabitants, are diseases of the lungs—including miners' phthisis and pneumonia—diarrhoea, dysentery and enteric. The death-rate among young children is very high.

Education is provided in primary and secondary schools maintained by the state. In the primary schools education is
JOHANNISBERG—JOHN

free but not compulsory. The Transvaal university college, founded in 1904 as the technical institute (the change of title being made in 1906), provides full courses in science, mining, engineering and law. In 1906 Alfred Beit (q.v.) bequeathed £200,000 towards the cost of erecting and equipping university buildings.

In its social life Johannesburg differs widely from Cape Town and Durban. The white population is not only far larger but more cosmopolitan, less stationary and more dependent on a single industry; it has few links with the past, and both city and citizens bear the marks of youth. The cost of living is much higher than in London or New York. House rent, provisions, clothing, and value of property are all dear, and more than counterbalance the lowness of rates. The customary unit of expenditure is the three-pound-bit "tickey." Sanitary and Other Services.—There is an ample supply of water to the town and mines, under a water board representing all the Rand municipalities and the mining companies. A waterborne sewerage system began to be introduced in 1906. The general illuminant is electricity, and both electrical and gas services are owned by the municipality. The tramway service, opened in 1891, was taken over by the municipality in 1904. Up to 1906 the trams were horse-drawn; in that year electric cars began running. Rickshaws are also a favourite means of conveyance. The police force is controlled by the government.

Area, Government and Rateable Value.—The city proper covers about 6 sq. m. The municipal boundary extends in every direction some 5 m. from Market Square, encloses about 82 sq. m. and includes several of the largest mines. The local government is carried on by an elected municipal council, the franchise being restricted to white British subjects (men and women) who rent or own property of a certain value. In 1908 the rateable value of the municipality was £36,466,644, the rate 2½d. in the £, and the town debt £5,500,000.

Population.—In 1887 the population was about 3000. By the beginning of 1890 it had increased to over 25,000. A census taken in July 1896 showed a population within a radius of 3 m. from Market Square of 102,978, of whom 50,907 were whites. At the census of April 1904 the inhabitants of the city proper numbered 99,022, the population within the municipal area being 155,642, of whom 83,563 were whites. Of the white inhabitants, 33½% were of British origin, 51,629 were males, and 31,734 females. Of persons aged sixteen or over, the number of males was almost double the number of females. The coloured population increased from 7000 in 1896 to 9500 in 1906. It is estimated that 5000 coolies, 600 Chinese, 1000 Arabs, and 1000 Europeans were employed in the mines of the Transvaal. A census taken in August 1906 gave the following result: whites 95,162; natives and coloured 27,781; Asiatics 6780—total 120,877.

History.—Johannesburg owes its existence to the discovery of gold in the Witwatersrand reefs. The town, named after Johannes Rissik, then surveyor-general of the Transvaal, was founded in September 1886, the first buildings being erected on the part of the reef where are now the Ferry and Kemmer mines. These buildings were found to cover valuable ore, and in December following the Boer government marked out the site of the city proper, and possession of the plots was given to purchasers on the 1st of January 1887. The exploitation of the mines led to a rapid development of the town during the next three years. The year 1890 was one of great depression following the exhaustion of the surface ore, but the provision of better machinery and cheaper coal led to a revival in 1891. In 1893 the leading mines had proved their dividend-earning capacity, and in 1895 there was a great "boom" in the shares of the mining companies. The linking of the town to the seaports by railways during 1892–1895 gave considerable impetus to the gold-mining industry. Material prosperity was accompanied, however, by political, educational and other disadvantages, and the desire of the Johannesburgers—most of whom were foreigners or "Uitlanders"—to remedy the grievances under which they suffered led, in January 1896, to an abortive rising against the Boer government (see TRANSVAAL: History). One result of this movement was a slight advance in municipal self-government.

Since 1887 the management of the town had been entrusted to a nominated sanitary board, under the chairmanship of the mining commissioner appointed by the South African Republic. In 1890 elected members had been admitted to this board, but at the end of 1897 an elective stadsraad (town council) was constituted, though its functions were strictly limited. There was a great development in the mining industry during 1897–1898 and 1899, the value of the gold extracted in 1898 exceeding £15,000,000, but the political situation grew worse, and in September 1899, owing to the imminent of war between the Transvaal and Great Britain, the majority of the Uitlanders fled from the city. Between October 1899, when war broke out, and the 31st of May 1900, when the city was taken by the British, the Boer government worked certain mines for their own benefit. After a period of military administration and of government by a nominated town council, an ordinance was passed in June 1903, providing for elective municipal councils, and in December following the first election to the new council took place. In 1905 the town was divided into wards. In that year the number of municipal voters was 23,383. In 1909 the proportional representation system was adopted in the election of town councillors.

During 1901–1903, while the war was still in progress or but recently concluded, the gold output was comparatively slight. The difficulty in obtaining sufficient labour for the mines led to a successful agitation for the importation of coolies from China (see TRANSVAAL: History). During 1904–1906 over 50,000 coolies were brought to the mines, a greatly increased output being the result, the value of the gold extracted in 1905 exceeding £20,000,000. Notwithstanding the increased production of gold, Johannesburg during 1905–1907 passed through a period of severe commercial depression, the result in part of the unsettled political situation. In June 1907 the repatriation of the Chinese coolies began; it was completed in February 1910.

An excellent compilation, entitled Johannesberg Statistics, dealing with almost every phase of the city's life, is issued monthly (since January 1905) by the town council. See also the Post Office Directory, Transvaal (Johannesburg, annually), which contains specially prepared maps, and the annual reports of the Johannesburg chamber of commerce. For the political history of Johannesburg, see the bibliography under TRANSVAAL.

JOHANNISBERG, a village of Germany, in the Prussian province of Hesse-Nassau, in the Rheingau, on the right bank of the Rhine, 6 m. S. of Rüdesheim by railway. The place is mainly celebrated for the beautiful Schloss which crowns a hill above the town. From the Rhine valley is surrounded by vineyards yielding the famous Johannisberger wine. The Schloss, built in 1757–1759 by the abbots of Fulda on the site of a Benedictine monastery founded in 990, was bestowed, in 1807, by Napoleon upon Marshal Kellermann. In 1814 it was given by Francis, emperor of Austria, to Prince Metternich, in whose family it still remains.

JOHN (Heb. יוחנן, "Yohanan, " Yahwah has been gracious," Gr. Ἰωάννης, Lat. Ioannes, Ital. Giovanni, Span. Juan, Port. João, Fr. Jean, Ger. Johannes, Johann [abbr. Hans], Gael. Ian, Pol. and Czech Jan, Hung. János), a masculine proper name common in all Christian countries, its popularity being due to its having been borne by the "Beloved Disciple" of Christ, St John the Evangelist, and by the forerunner of Christ, St John the Baptist. It has been the name of twenty-two popes—the style of Popes John XXII. and XXIII. being due to an error in the number assumed by John XXI. (q.v.)—of many sovereigns, princes, &c. The order followed in the biographical notices below is as follows: (1) the Apostle, (2) the Baptist, (3) popes, (4) Roman emperors, (5) kings; John of England first, in the rest in the alphabetical order of their countries, (6) other sovereign princes, (7) non-sovereign princes, (8) saints, (9) architects, &c. These princes who are known by a name in addition to John (John Albert, &c.) will be found under the article JOHN, GOSPEL OF.

JOHN, the Apostle, in the Bible, was the son of Zebedee, a Galilean fisherman, and Salome. It is probable that he was born at Bethsaida, where along with his brother James he followed
JOHN THE BAPTIST 433

his father's occupation. The family appears to have been in easy circumstances; at least we find that Zebedee employed hired servants, and that Salome was among those women who contributed to the maintenance of Jesus (Mark ii. 20, xv. 40, 41, xvi. 1). John's "call" to follow our Lord occurred simultaneously with that addressed to his brother, and shortly after that addressed to the brothers Andrew and Simon Peter (Mark i. 19, 20). John speedily took his place among the twelve apostles, sharing with James the title of Boanerges ("sons of thunder," perhaps strictly "sons of anger," i.e. men readily angered), and became a member of that inner circle to which, in addition to his brother, Peter alone belonged (Mark v. 37, ix. 2, xiv. 33). John appears throughout the synoptic record as a zealous, fiery Jew-Christian. It is he who indignantly complains to Jesus, "We saw one casting out devils in Thy name, and he followeth not us," and tells Him, "We forbade him" for that reason (Mark ix. 38); and who, with his brother, when a Samaritan village will not receive Jesus, asks Him, "Wilt thou that we command fire to come down from heaven and consume them?" (Luke ix. 54). The book of Acts confirms this tradition.

After the departure of Jesus, John appears as present in Jerusalem with Peter and the other apostles (i. 13); is next to Peter the most prominent among those who bear testimony to the fact of the resurrection (iii. 12-26, iv. 13, 10-22); and is sent with Peter to Samaria, to confirm the newly converted Christians there (viii. 14, 23). St Paul tells us similarly that when, on his second visit to Jerusalem, "James," the Lord's brother, "and Cephas and John, who were considered pillars, perceived the grace that was given unto me, they gave to me and Barnabas the right hand of fellowship, that we should go unto the heathen, and they unto the circumcision" (Gal. ii. 9). John thus belonged in 40-47 to the Jewish-Christian school; but we do not know whether to the stricter group of James or to the milder group of Peter (ibid. ii. 11-14).

The subsequent history of the apostle is obscure. Polycrates, bishop of Ephesus (in Euseb., H. E. iii. 37, v. 24), attests in 194 that John "who lay on the bosom of the Lord rests at Ephesus," but previously in this very sentence he has declared that "Philip, one of the twelve apostles rests in Hierapolis," although Eusebius (doubtless rightly) identifies this Philip not with the apostle but with the deacon-evangelist of Acts xx. 8. Polycrates also declares that John was a priest wearing the περικλήν (gold plate) that distinguished the high-priestly mitre. Irenaeus in various passages of his writings, 181-191, holds a similar tradition. He says that John lived up to the time of Trajan and published his gospel in Ephesus, and identifies the apostle with John the disciple of the Lord, who wrote the Apocalypse under Domitian, whom Irenaeus's teacher Polycarp had known personally and of whom Polycarp had much to tell. These traditions are accepted and enlarged by later authors, Tertullian adding that John was banished to Patmos after he had miraculously survived the punishment of immerision in burning oil. As it is evident that legend was busy with John as early as the time of Polycrates, the real worth of these traditions requires to be tested by an examination of their ultimate source. This inquiry has been pressed upon scholars since the apostolic authorship of the Apocalypse or of the Fourth Gospel, or of both these works, has been disputed. (See JOHN, GOSPEL OF, and REVELATION, BOOK OF.)

The question has not been strictly one between advanced and conservative criticism, for the Tübingen school recognized the Apocalypse as apostolic, and found in it a confirmation of John's residence in Ephesus. On the other hand, Lützelerberg (1840), Th. Keim (Jesus v. Naz., vol. i., 1867), J. H. Scholten (1872), H. J. Holtzmann (esp. in Eiol. in d. N. T., 3rd ed., 1902), and other recent writers, wholly reject the tradition. It has had able defenders in Stetit (Stud. u. Krit., 1868), Hilgenfeld (Eiol., 1875) and Lightfoot (Essays on Supernatural Religion, collected 1889). W. Sanday (Criticism of Fourth Gospel, 1905) makes passing admissions eloquent as to the strength of the negative position; whilst amongst Roman Catholic scholars, A. Loisy (Le mme. En., 1903) stands with Holtzmann, and Th. Calmes (Ess. salon S. Jean, 1904, 1906) and L. Duchesne (Hist. anc. de l'Egl., 1906) exhibit, with papal approbation, the inconclusiveness of the conservative arguments.

The opponents of the tradition lay weight on the absence of positive evidence before the latter part of the 2nd century, especially in Papias and in the epistles of Ignatius and of Irenaeus's authority, Polycarp. They find it necessary to assume that Irenaeus mistook Polycarp; but this is not a difficult task, since already Eusebius (c. 310-313) is compelled to point out that Papias testifies to two Johns, the Apostle and a presbyter, and that Irenaeus is mistaken in identifying those two Johns, and in holding that Papias had seen John the Apostle (H. E. iii. 39, 5, 2). Irenaeus tells us, doubtless correctly, that Papias was "the companion of Polycarp"; this fact alone would suffice, given his two mistakes concerning Papias, to make Irenaeus decide that Polycarp had seen John the Apostle. The chronicler George the Monk (Hammartolus) in the 9th century, and an epitome dating from the 7th or 8th century but probably based on the Chronicle of Philip of Side (c. 430), declare, on the authority of the second book of Papias, that John the Zebedean was killed by Jews (presumably in 60-70). Adolf Harnack, Chr. d. altcr. Lit. (1857), pp. 656-686, rejects the assertion; but the number of scholars who accept it as correct is distinctly on the increase. (F. v. H.)

JOHN THE BAPTIST, in the Bible, the "forerunner" of Jesus Christ in the Gospel story. By his preaching and teaching he evidently made a great impression upon his contemporaries (cf. Josephus, Ant. xviii., § 5). According to the birth-narrative embodied in Luke i. and ii., he was born in "a city of Judah" in "the hill country" (possibly Hebron) of priestly parentage. His father Zacharias was a priest "of the course of Abijah," and his mother Elizabeth, who was also of priestly descent, was related to Mary, the mother of Jesus, whose senior John was by six months. This narrative of the Baptist's birth seems to embody some very primitive features, Hebraic and Palestinian in character, and possibly at one time independent of the Christian tradition. In the apocryphal gospels John is sometimes made the subject of special miraculous experiences (e.g. in the Protevangelium Jacobi, ch. xii., where Elizabeth fleeing from Herod's assassins cried: "Mount of God, receive a mother with her child," and suddenly the mountain was divided and received her).

In his 30th year (15th year of the emperor Tiberius, A.D. 25-26) John began his public life in the "wilderness of Judaea," the wild district that lies between the Kidron and the Dead Sea, and particularly in the neighbourhood of the Jordan, where multitudes were attracted by his eloquence. The central theme of his preaching was, according to the Synoptic Gospels, the nearness of the coming of the Messianic kingdom, and the consequent urgency for preparation by repentance. John was evidently convinced that he himself had received the divine commission to bring to a close and complete the prophetic period, by inaugurating the Messianic age. He identified himself with the "voice" of Isa. xi. 3. Noteworthy features of his preaching were its original and prophetic character, and its high ethical tone, as shown even in his satirical denunciation of trust in mere racial privileges (Matt. iii. 9). John, it is likely, the true import of the baptism which he administered to those who accepted his message and confessed their sins. It was an act symbolizing moral purification (cf. Ezek. xxxvi. 25; Zech. xiii. 1) by way of preparation for the coming "kingdom of heaven," and implied that the Jew so baptized no longer rested in his privileged position as a child of Abraham. John's appearance, costume and habits of life, together with the tone of his preaching, all suggest the prophetic character. He was popularly regarded as a prophet, more especially as a second Elijah. His preaching awoke a great popular response, particularly amongst the masses of the people, "the people of the land." He had disciples who fasted (Mark ii. 18, &c.), who visited him...
JOHN (POPEs)

regularly in prison (Matt. xi. 2, xiv. 12), and to whom he taught special forms of prayer (Luke v. 35, xi. 1). Some of these afterwards became followers of Christ (John i. 37). John's activity indeed had far-reaching effects. It profoundly influenced the Messianic movement depicted in the Gospels. The preaching of Jesus shows traces of this, and the Fourth Gospel (as well as the Synoptists) displays a marked interest in connecting the Johannine movement with the beginnings of Christianity. The fact that after the lapse of a quarter of a century there were Christians in Ephesus who accepted John's baptism (Acts xviii. 13, xix. 3) is highly significant. This influence also persisted in later times. Christ's estimate of John (Matt. xi. 7 seq.) was a very high one. He also pointedly alludes to John's work and the people's relation to it, in many sayings and parables (sometimes in a tone of irony). The duration of John's ministry cannot be determined with certainty: it terminated in his imprisonment in the fortress of Machæerus, to which he had been committed by Herod Antipas, whose incestuous marriage with Herodias, the Baptist had sternly rebuked. His execution cannot with safety be placed later than A.D. 28.

In the church calendar this event is commemorated on the 29th of August. According to tradition he was buried at Scipholin (now St. Peter's). (G. H. Boë, vol. i. 539.)

JOHN I., pope from 523 to 526, was a Tuscan by birth, and was consecrated pope on the death of Hormisdas. In 525 he was sent by Theodoric at the head of an embassy to Constantinople to obtain from the emperor Justinian toleration for the Arians; but he succeeded so imperfectly in his mission that Theodoric on his return, suspecting that he had acted only half-heartedly, threw him into prison, where he shortly afterwards died, Felix IV. succeeding him. He was enrolled among the martyrs, his day being May 27.

JOHN II., pope from 533 to 535, also named Mercurius, was elevated to the papal chair on the death of Boniface II. During his pontificate a decree against simony was engraved on marble and placed before the altar of St. Peter's. At the instance of the emperor Justinian he adopted the proposition unus de Trinitate passus est in carne as a test of the orthodoxy of certain Scythian monks accused of Nestorian tendencies. He was succeeded by Agapetus I.

JOHN III., pope from 561 to 574, successor to Pelagius, was descended from a noble Roman family. He is said to have been successful in preventing an invasion of Italy by the recall of the deposed exarch Narses, but the Lombards still continued their incursions, and, especially during the pontificate of his successor Benedict II., inflicted great miseries on the province.

JOHN IV., pope from 640 to 642, was a Dalmatian by birth, and succeeded Severinus after the papal chair had been vacant four months. While he adhered to the repudiation of the Monothelitic doctrine by Severinus, he endeavoured to avoid the connexion of Honorius I. with the heresy. His successor was Theodorus I.

JOHN V., pope from 685 to 686, was a Syrian by birth, and on account of his knowledge of Greek had in 680 been named papal legate to the sixth ecumenical council at Constantinople. He was the successor of Benedict II., and after a pontificate of little more than a year, passed chiefly in bed, was followed by Conon.

JOHN VI., pope from 701 to 705, was a native of Greece, and succeeded to the papal chair two months after the death of Sergius II. He assisted the exarch Theophylact, who had been sent into Italy by the emperor Justinian II., and prevented him from using violence against the Romans. Partly by persuasion and partly by means of a bribe, John succeeded in inducing Giulf, duke of Benevento, to withdraw from the territories of the empire.

JOHN VII., pope from 705 to 707, successor of John VI., was also of Greek nationality. He seems to have acceded to the request of the emperor Justinian II. that he should give his sanction to the decrees of the Quinisext or Trullan council of 692. There are several monuments of John in the church of St. Maria Antiqua at the foot of the Palatine hill; others were formerly in the chapel of the Virgin, built by him in the basilica of St. Peter. He was succeeded by Sisinnius.

JOHN VIII., pope from 782 to 882, successor of Adrian II., was a Roman by birth. His chief aim during his pontificate was to defend the Roman state and the authority of the Holy See at Rome from the Saracens, and from the nascent feudalism which was represented outside by the dukes of Spoleto and the marquises of Tuscany and within by a party of Roman nobles. Events, however, were so fatally opposed to his designs that no sooner did one of his schemes begin to realize itself in fact than it was shattered by an unlooked-for chance. To obtain an influential alliance against his enemies, he agreed in 875, after death had deprived him of his natural protector, the emperor Louis II., to bestow the imperial crown on Charles the Bald; but that monarch was too much occupied in France to grant him much effectual aid, and about the time of the death of Charles he found it necessary to come to terms with the Saracens, who were only prevented from entering Rome by the promise of an annual tribute. Carloman, the opponent of Charles's son Louis, soon after invaded northern Italy, and, securing the support of the bishops and counts, demanded from the pope the imperial crown. John attempted to temporize, but Lambert, duke of Spoleto and other partisan of Charles the Fat, partly from unscrupulous, partly from natural inability, gave him also no effectual aid, and the last years of John VIII. were spent chiefly in hurling vain anathemas against his various political enemies. According to the annalist of Fulda, he was murdered by members of his household. His successor was Marinus.

JOHN IX., pope from 898 to 900, not only confirmed the judgment of his predecessor Theodore II. in granting Christian burial to Formosus, but at a council held at Ravenna decreed that the records of the synod which had condemned him should be burned. Finding, however, that it was advisable to cement the ties between the empire and the papacy, John gave unhesitating support to Lambert in preference to Arnulf, and also induced the council to determine that henceforth the consecration of the popes should take place only in the presence of the imperial legates. The sudden death of Lambert shattered the hopes which this alliance seemed to promise. John was succeeded by Benedict IV.

JOHN X., pope from 914 to 928, was deacon at Bologna when he attracted the attention of Theodore, the wife of Theophylact, the most powerful man of Charles the Fat, partly from unscrupulous, partly from natural inability, gave him also no effectual aid, and the last years of John VIII. were spent chiefly in hurling vain anathemas against his various political enemies. According to the annalist of Fulda, he was murdered by members of his household. His successor was Landolfo.

JOHN XI., pope from 929 to 931, was a citizen of Rome, and was consecrated pope by the emperor Otto I. when the latter was at Ravenna. John II. attempted to secure him against temporal enemies through a close alliance with Theophylact and Alberic, marquis of Camerino, then governor of the duchy of Spoleto. In December 915 he granted the imperial crown to Berengar, and with the assistance of the forces of all the princes of the Italian peninsula he took the field in person against the Saracens, over whom he gained a
great victory on the banks of the Garigliano. The defeat and death of Berengar through the combination of the Italian princes, again frustrated the hopes of a united Italy, and after witnessing several years of anarchy and confusion John persevered through the intrigues of Marozia, daughter of Theodora. His successor was Leo VI.

JOHN XIII., pope from 965 to 972, was descended from a noble Roman family, and at the time of his election as successor to Leo VIII. was bishop of Narni. He had been somewhat inconsistent in his relations with his predecessor Leo, but his election was confirmed by the emperor Otto, and his submissive attitude towards the imperial power was so distasteful to the Romans that they expelled him from the city. On account of the threatening procedure of Otto, they permitted him shortly afterwards to return, upon which, with the sanction of Otto, he took savage vengeance on those who had formerly opposed him. Shortly after holding a council along with the emperor at Ravena in 967, he gave the imperial crown to Otto II. at Pavia in the presence of the latter; and in 968 he also crowned Theophano as empress immediately before her marriage. On his death in the same year he was followed by Benedict VI.

JOHN XIV., pope from 983 to 984, successor to Benedict VII., was born at Pavia, and before his elevation to the papal chair was imperial chancellor of Otto II. Otto died shortly after his election, when Boniface VII., on the strength of the popular feeling against the new pope, returned from Constantinople and placed John in prison, where he died either by starvation or poison.

JOHN XV., pope from 985 to 996, generally recognized as the successor of Boniface VII., the pope John who was said to have ruled for four months after John XIV., being now omitted by the best authorities. John XV. was succeeded by Leo VI., his nephew but presbyter. At the time he mounted the papal chair Crescentius was patriarch of Rome, but, although his influence was on this account very much hampered, the presence of the empress Theophano in Rome from 982 to 991 restrained also the ambition of Crescentius. On her departure the pope, whose venality and nepotism had made him very unpopular with the citizens, died of fever before the arrival of Otto III., who elevated his own kinsman Bruno to the papal dignity under the name of Gregory V.

JOHN XVI., pope or antipope from 997 to 998, was a Calabrian Greek by birth, and a favourite of the empress Theophano, from whom he had received the bishopric of Placentia. His original name was Philagathus. In 995 he was sent by Otto III. on an embassy to Constantinople to negotiate a marriage with a Greek princess. On his way back he either accidentally or at the special request of Crescentius visited Rome. A little before his return, the end of 996, had been compelled to flee from the city; and the wise and ambitious Greek had no scruple in accepting the papal tiara from the hands of Crescentius. The arrival of Otto at Rome in the spring of 998 put a sudden end to the teachorous compact. John sought safety in flight, but was discovered in his place of hiding and brought back to Rome, where after enduring cruel and ignominious tortures he was immured in a dungeon.

JOHN XVII., whose original name was Sicco, succeeded Silvester II. as pope in June 1003, but died less than five months afterwards.

JOHN XVIII., pope from 1003 to 1009, was, during his whole pontificate, the mere creature of the patriarch John Crescentius, and ultimately he abdicated and retired to a monastery, where he died in 1009.

JOHN XIX., pope from 1024 to 1033, succeeded his brother Benedict VIII., both being members of the powerful house of Tusculum. He merely took orders to enable him to ascend the papal chair, having previously been a consul and senator. He displayed his freedom from ecclesiastical prejudices, if also his utter ignorance of ecclesiastical history, by agreeing, on the payment of a large bribe, to grant the patriarch of Constantinople the title of an ecumenical bishop, but the general indignation which the proposal excited throughout the church compelled him almost immediately to withdraw from his agreement. On the death of the emperor Henry II. in 1024 he gave his support to Conrad II., who along with his consort was crowned with great pomp at St. Peter's in Easter of 1027. John died in 1033, in the full possession of his dignities. A successor was found for him in his nephew Benedict IX., a boy of only twelve years of age.

(L. D.*)}

JOHN XXI. (Pedro Giuliano-Rebulo), pope from the 8th of September 1276 to the 20th of May 1277 (should be named John XX., but there is an error in the reckoning through the insertion of an antipope), a native of Portugal, educated for the church, became archdeacon and then archbishop of Braga, and so ingratiated himself with Gregory X. at the council of Lyons (1274) that he was taken to Rome as cardinal-bishop of Frascati, and succeeded Gregory after an interval of twenty days. As pope he excommunicated Alphonso III. of Portugal for interfering with episcopal elections and sent legates to the imperial court, which was still at war. He also excommunicated the popes and all affection for the monks awakened the distrust of a large portion of the clergy. His life was brought to a premature close through the fall of the roof in the palace he had built at Viterbo. His successor was Nicholas III.

John XXI. has been identified since the 14th century, most probably correctly, with Petrus Hispanus, a celebrated Portuguese physician and philosopher, author of several medical works—notably the curious Liber de oculo, trans. into German and well edited by A. M. Berger (Munich, 1899), and of a popular textbook in logic, the Summulae logicae. John XXI. is constantly referred to as a magician by ignorant chroniclers.
JOHN (POPE)

JOHN XXII, pope from 1316 to 1334, was born at Cahors, France, in 1220. His original name was Jacques Duèse, and he came either of a family of petty nobility or else of well-to-do middle-class parents, and was not, as has been popularly supposed, the son of a shoemaker. He began his education with the Dominicans at Cahors, subsequently studied law at Montpellier, and law and medicine in Paris, and finally taught at Cahors and Toulouse. At Toulouse he became intimate with the bishop Louis, son of Charles II., king of Naples. In 1300 he was elevated to the episcopal see of Fréjus by Pope Boniface VIII. at the instance of the king of Naples, and in 1308 was made chancellor of Naples by Charles, retaining this office under Charles's successor, Robert of Anjou. In 1316 Pope Clement V. summoned Jacques to Avignon and instructed him to advise upon the affair of the Templars and also upon the question of condemning the memory of Boniface VIII. Jacques decided on the legality of suppressing the order of the Templars, holding that the pope would be serving the best interests of the church by pronouncing its suppression; but he rejected the condemnation of Boniface as a sacrilegious affront to the church and a monstrous abuse of the lay power. On the 23rd of December 1312 Clement appointed him cardinal-bishop of Porto, and it was while cardinal of Porto that he was elected pope, on the 7th of August 1316. Clement had died in April 1314, but an assembly of cardinals was summoned to elect his successor, and Jacques was chosen as his successor. As the two-thirds majority requisite for an election could not be obtained, the cardinals separated, and it was not until the 28th of June 1316 that they reassembled in the cloister of the Dominicans at Lyons, and then only in deference to the pressure exerted upon them by Philip V. of France. After deliberating for more than a month they elected Robert of Anjou's candidate, Jacques Duèse, who was crowned on the 5th of September, and on the 2nd of October arrived at Avignon, where he remained for the rest of his life.

More jurist than theologian, John defended the rights of the papacy with rigorous zeal and as rigorous logic. For the restoration of the papacy to its old independence, which had been so gravely compromised under his immediate predecessors, and for the execution of the vast enterprises which the papacy deemed useful for its prestige and for Christendom, considerable sums were required; and to raise the necessary money John burdened Christian Europe with new taxes and a complicated fiscal system, which was fraught with serious consequences. For he found when he returned from a very small fraction of the sums thus acquired, and at his death his private fortune amounted to scarce a million florins. The essentially practical character of his administration has led many historians to tax him with avarice, but later research on the fiscal system of the papacy of the period, particularly the joint work of Samaré and Mallot, enables us very sensibly to modify the severe judgment passed on John by Gregorovius and others.

John's pontificate was continually disturbed by his conflict with Louis of Bavaria and by the theological revolt of the Spiritual Franciscans. In October 1314 Louis of Bavaria and Frederick of Austria had each been elected German king by the divided electors. Louis was gradually recognized by the whole of Germany, especially after his victory at Mühldorf (1322), and gained numerous adherents in Italy, where he supported the Visconti, who had been condemned as heretics by the pope. John affected to ignore the successes of Louis, and on the 8th of October 1323 forbade his recognition as king of the Romans. After demanding a respite, Louis abruptly appealed at Nuremberg from the future sentence of the pope to a general council (December, 1323). The conflict then had a very small doctrinal character. The doctrine of the rights of the lay monopoly sustained by Occam and John of Paris, by Marsilius of Padua, John of Jandun and Leopold of Bamberg, was affirmed by the jurists and theologians, penetrated into the parlements and the universities, and was combated by the upholders of papal absolutism, such as Alvaro Pelayo and Alonzo Trinoño. Excommunicated on the 21st of March 1324, Louis retired by appealing for a second time to a general council, which was held on the 22nd of May 1324, and accused John of being an enemy to the peace and the law, stigmatizing him as a heretic on the ground that he opposed the principle of evangelical poverty as professed by the strict Franciscans. From this moment Louis appeared in the character of the natural ally and even the protector of the Spirituals against the persecution of the pope. On the 11th of July 1324 the pope laid under an interdict the places where Louis or his adherents resided, but this bull had no effect in Germany. Equally futile was John's declaration (April 3, 1327) that Louis had forfeited his crown and abdicated hisesy by granting protection to Marsilius of Padua. Having reconciled himself with Frederick of Austria, Louis penetrated into Italy and seized Rome on the 7th of January 1328, with the help of the Roman Ghibellines led by Sciarra Colonna. After mentioning himself in the Vatican, Louis got himself crowned by the deputies of the Roman people; instituted proceedings for the deposition of John, whom the Roman people, displeased by the spectacle of the papacy abandoning Rome, declared to have forfeited the pontificate (April 18, 1328); and finally caused a Minorite friar, Pietro Rainalducci da Corvara, to be elected pope under the name of Nicholas V. John preached a plenary crusade against Louis, who burned the pope's effigy at Pisa and in Ancona. Soon, however, Louis felt his power waning, and in Rome, at the beginning of 1329, he was unable to wreak his vengeance. Physical pressure, the antipope was abandoned by the Romans and handed over to John, who forced him to make a solemn submission with a halter round his neck (August 15, 1330). Nicholas was condemned to perpetual imprisonment, and died in obscurity at Avignon; while the Roman people submitted to King Robert, who governed the church through his vicars. In 1317, in execution of a bull of Clement V., the royal vicariate in Italy had been conferred by John on Robert of Anjou, and this appointment was renewed in 1322 and 1324, with threats of excommunication against any one who should seize the vicariate of Italy without the authorization of the pope. One of John's last acts was his decision to separate Italy from the Empire, but this bull was of no avail and fell into oblivion. After his death, however, the interdict was not removed from Germany, and the resistance of Louis and his theologians continued.

A violent manifestation of this resistance took place in connexion with the accusation of heresy brought against the pope. On the third Sunday in Advent 1329, and afterwards in public assemblies, John had preached that the souls of those who had died were not thereby released from purgatory, but referred to a state of purgatorial suffering, to which he denominated sub altari Dei, and do not enjoy the beatific vision (visio facte ad faciem) of the Lord until after the Last Judgment and the Resurrection; and he had even instructed a Minorite friar, Gautier of Dijon, to collect the passages in the Fathers which were in favour of this doctrine. On the 27th of December 1331 a Dominican, Thomas of England, preached against this doctrine at Avignon itself and was thrown into prison. When news of this affair had reached Paris, the pope sent the general of the Minorites, Gerard Odonis, accompanied by a Dominican, to sustain his doctrine in that city, but King Philip VI., perhaps at the instigation of the refugee Spirituals in Paris, referred the question to the faculty of theology, which, on the 2nd of January 1333, declared that the souls of the blessed were elevated to the beatific vision immediately after death; the faculty, nevertheless, were of opinion that the pope should have propounded his erroneous doctrine only "rectando," and not "determinando, asserendo, seu eligendo." The king notified this decision to the pope, who assembled his consistory in November 1333, and gave a haughty reply. The theologians in Louis's following council of 1334, after having pronounced the papal absolutism already denounced as of "the new heretic, Jacques de Cahors," and reiterated with increasing insistency their demands for the convocation of a general council to try the pope. John appears to have retracted shortly before his death, which occurred on the 4th of December 1334.1

1 On the 20th of January 1336 Pope Benedict XII. pronounced a long judgment on this point of doctrine, a judgment which he declared had been included by John in a bull which death had prevented him from sealing.
JOHN (POPE)

John had kindled very keen animosity, not only among the upholders of the independence of the lay power, but also among the upholders of absolute religious poverty, the exalted Franciscans. Clement V., at the council of Vienne, had attempted to bring back the Spirituals to the common rule by concessions; John, on the other hand, in the bull Quorundam exigit (April 13, 1317), adopted an uncompromising and absolute attitude, and by the bull Gloriosam ecclesiæm (January 23, 1318) condemned the protests which had been raised against the bull Quorundam by a group of seventy-four Spirituals and conveyed to Avignon by the monk Bernard Déllicieux. Shortly afterwards four Spirituals were burned at Marseilles. These were immediately hailed as martyrs, and in the eyes of the exalted Franciscans at Naples and in Sicily the south of France the pope was regarded as antichrist. In the bull Sancta Romana et universa ecclesiæ (December 26, 1318) John definitely excommunicated them and condemned their principal book, the Postil (commentary) on the Apocalypse (February 8, 1320). The bull Quia nonsanquam (March 26, 1322) deposed the truce ruled by the pope, and the bull Cum inter nonnullos (November 12, 1323) condemned the proposition which had been admitted at the general chapter of the Franciscans held at Perugia in 1322, according to which Christ and the Apostles were represented as possessing no property, either personal or common. The minister general, Michael of Cesena, though opposed to the exaggerations of the Spirituals, joined with them in protesting against the condemnation of the fundamental principle of evangelical poverty, and the agitation gradually gained ground. The pope, by the bull Quia quorundam (November 10, 1344), cited Michael to appear at Avignon at the same time as Occam and Bonagratia. All three fled to the court of Louis of Bavaria (May 25, 1328), while the majority of the Franciscans made submission, and elected a general entirely devoted to the pope. But the resistance, aided by Louis and merged as it now was in the cause sustained by Marsilius of Padua and John of Jandun, became daily bolder. Treatises on poverty appeared on every side; the party of Occam clamoured with increasing imperiousness for the condemnation of John by a general council; and the Spirituals, confounded in the persecution with the Beghards and with Fraticelli of every description, maintained themselves in the south of France in spite of the reign of terror instituted in that region by the Inquisition.

JOHN XXIII. (Baldassare Cossa), pope, or rather anti-pope from 1410 to 1415, was born of a good Neapolitan family, and began by leading the life of a corsair before entering the service of the Church under the pontificate of Boniface IX. His abilities, which were mainly of an administrative and military order, were soon rewarded by the cardinal's hat and the legation of Bologna. On the 20th of June 1408 he and seven of his colleagues broke away from Gregory XII., and together with six cardinals of the obedience of Avignon, who had in like manner separated from Benedict XIII., they agreed to aim at the assembling of a general council, setting aside the two rival pontiffs, an expedient which they considered would put an end to the great schism of the Western Church, but which resulted in the election of yet a third pope. This act was none the less decisive for Baldassare Cossa's future. Alexander V., the first pope elected at Pisa, was not perhaps, as has been maintained, merely a man of straw put forward by the ambitious cardinal of Bologna; but he reigned only ten months, and on his death, which happened rather suddenly on the 4th of May 1410, Baldassare Cossa succeeded him. Whether the latter had bought his electors by money and promises, or owed his success to his dominant position in Bologna, and to the support of Florence and of Louis II. of Anjou, he seems to have received the unanimous vote of all the seventeen cardinals gathered together at Bologna (May 17). He took the name of John XXIII., and France, England, and part of Italy and Germany recognized him as head of the Catholic church.

The struggle in which he and Louis II. of Anjou engaged with Ladislaus of Durazzo, king of Sicily, and Gregory XII.'s chief protector in Italy, at first went in John's favour. After the brilliant victory of Roccasecca (May 19, 1411) he had the satisfaction of dragging the standards of Pope Gregory and King Ladislaus through the streets of Rome. But the dispersion of Louis of Anjou's troops and his carelessness, together with the lack of success which attended the preaching of a crusade in Germany, France and England, finally decided John XXIII. to abandon the French claimant to the throne of Sicily; he recognized Ladislaus, his former enemy, as king of Naples, and Ladislaus did not fail to salute John XXIII. as pope, abandoning Gregory XII. (June 15, 1412). This was a fatal step: John XXIII. was trusting in a dishonest and insatiable prince; he would have acted more wisely in remaining the ally of the weak but loyal Louis of Anjou. However, it seemed desirable that the reforms announced by the council of Pisa, which the popes set up by this synod seemed in no hurry to carry into effect, should be further discussed in the new council which it had been agreed should be summoned about the spring of 1412. But John was anxious that this council should be held in Rome, a city where he alone was master; the few pretates and ambassadors who very slowly gathered there held only a small number of sessions, in which John again condemned the writings of Wycliffe. John was attacked by the representatives of the various nations and reproached even for his private conduct, but endeavoured to extricate himself from this uncomfortable position by gratifying their desires, if not by reforming abuses. It is, however, only fair to add that he took various half-measures and gave many promises which, if they had been put into execution, would have confirmed or completed the reforms inaugurated at Pisa. But on the 3rd of March 1413 John adjourned the council of Rome till December, without even fixing the place where the next session should be held. It was held at Constance in Germany, and John could only have resigned himself to accepting such an uncertain meeting-place because he was forced by distress, isolation and fear to turn towards the head of the empire. Less than a year after the treaty concluded with Ladislaus, the king entered into a compact with Rome (June 8, 1413), which he sacked, expelling John, to whom even the Florentines did not dare to throw open their gates for fear of the king of Sicily. Sigismund, king of the Romans, not only extorted, it is said, a sum of 50,000 florins from the pontiff in his extremity, but insisted upon his summoning the council at Constance (December 9). It was in vain that, on the death of Ladislaus, which took place unexpectedly (August 6, 1414), John was inspired with the idea of breaking his compact with Sigismund and returning to Rome, at the same time appealing to Louis of Anjou. It was too late. The cardinals forced him towards Germany by the most direct road, without allowing him to go by way of Avignon as he had projected, in order to make plans with the princes of France.

On the 5th of November 1414 John opened the council of Constance, where, on Christmas Day, he received the homage of the head of the empire, but where his lack of prestige, the defection of his allies, the fury of his adversaries, and the general sense of the necessity for union soon showed only too clearly how small was the chance of his retaining the tiara. He had to take a solemn oath to abdicate if his two rivals would do the same, and this concession, which was not very sincere, gained him for the last time the honour of seeing Sigismund prostrate at his feet (March 2, 1415). But on the night of the 20th–21st of March, having donned the garments of a layman, with a cross-bow slung at his side, he succeeded in making his escape
from Constance, accompanied only by a single servant, and took refuge first in the castle of Schauffhausen, then in that of Laufenburg, then at Freiburg-im-Breisgau, and finally at Briach, whence he hoped to reach Alsace, and doubtless ultimately Avignon, under the protection of an escort sent by the duke of Burgundy. The news of the pope's escape was received at Constance with an extraordinary outburst of rage, and, led by the subversive decrees of the 4th and 5th sessions, which proclaimed the superiority of the council over the pope. Duke Frederick of Austria had hitherto sheltered John's flight; but, laid under the ban of the empire, attacked by powerful armies, and feeling that he was courting ruin, he preferred to give up the pontiff who had trusted to him. John was brought back to Freiburg (April 27), and there in vain attempted to appease the wrath which he had aroused by more or less vague promises of resignation. His trial, however, was already beginning. The three cardinals whom he charged with his defence hastily declined this compromising task. Seventy-four charges were drawn up, only twenty of which were set aside after the witnesses had been heard. The accusation of having poisoned Alexander V. and his doctor at Bologna was not maintained. But enough deeds of immorality, tyranny, ambition and simony were found to justify the sentence. He was suspended from his functions as pope on the 14th of May 1415, and deposed on the following 29th of May.

However irregular this sentence may have been from the canonical point of view (for the accusers do not seem to have actually proved the crime of heresy, which was necessary, according to most scholars of the period, to justify the deposition of a sovereign pontiff), the condemned pope was not long in confirming it. Baldassare Cossa, now as humble and resigned as he had before been energetic and tenacious, on his transference to the castle of Rudolfzell admitted the wrong which he had done by his flight, refused to bring forward anything in his defence, acquiesced entirely in the judgment of the council which he declared to be infallible, and, finally, as an extreme precaution, ratified motu proprio the sentence of deposition, declaring that he freely and willingly renounced any rights which he might still have in the papacy. This fact has subsequently been often quoted against those who have appealed to the events of 1415 to maintain that a council can depose a pope whom it does not declare illiberal ecclesia.

Cossa kept his word never to appeal against the sentence which stripped him of the pontificate. He was held prisoner for three years in Germany, but in the end bought his liberty from the count palatine. He used this liberty only to go to Florence, in 1419, and throw himself on the mercy of the legitimate pope. Martin V. appointed him cardinal-bishop of Tusculum, a dignity which Cossa only enjoyed for a few months. He died on the 22nd of December 1419, and all visitors to the Baptistry at Florence may admire, under its high baldacchino, the sombre figure sculptured by Donatello of the deposed pontiff, who had at least the merit of bowing his head under his chastisement, and of contributing by his passive resignation to the extinction of the series of popes which sprang from the council of Pisa. (N.V.)

JOHN I. (925-976), surnamed Tzimisces, East Roman emperor, was born of a distinguished Cappadocian family. After helping his uncle Nicephorus Phocas (q.v.) to obtain the throne and to restrain the empire's eastern provinces he was deprived of his command by an intrigue, upon which he retaliated by conspiring with Nicephorus' wife Theophania to assassinate him. Elected ruler in his stead, John proceeded to justify his usurpation by the energy with which he repelled the foreign invaders of the empire. In a series of campaigns against the newly established Russian power (970-973) he drove the enemy out of Thrace, crossed Mt Haemus and besieged the fortress of Dorystolon on the Danube. In several hard-fought battles he broke the strength of the Russians so completely that they left him master of eastern Bulgaria. He further secured his northern frontier by transplanting to Thrace some colonies of Paulicians whom he suspected of sympathising with their Saracen neighbours in the east. In 974 he turned against the Abbasid empire and easily recovered the inland parts of Syria and the middle reaches of the Euphrates. He died suddenly in 976 on his return from his second campaign against the Saracens. John's surname was apparently derived from the Armenian ʻishemshik (red boot).

JOHN II. (1088-1143), surnamed Comnenus and also Kalojannes (John the Good), East Roman emperor, was the eldest son of the East Roman emperor Alexius, whom he succeeded in 1118. On account of his mild and just reign he has been called the Byzantine Marcus Aurelius. By the personal purity of his character he effected a notable improvement in the manners of his age, but he displayed little vigour in internal administration or in extirpating the long-standing corruptions of the government. Nor did his various successes against the Hungarians, Servians and Seljuk Turks, whom he pressed hard in Asia Minor and proposed to expel from Jerusalem, add much to the stability of his empire. He was accidentally killed during a wild-boar hunt on Mt Taurus, on the 8th of April 1143.

See E. Gibbon, The Decline and Fall of the Roman Empire, vi. 228 seq. (ed. Bury, 1896).

JOHN III. (1193-1254), surnamed Vatatzes and also Ducas, East Roman emperor, earned for himself such distinction as a soldier that in 1222 he was chosen to succeed his father-in-law Theodore I. Lascaris. He reorganized the remnant of the East Roman empire, and by his administrative skill made it the strongest and richest principality in the Levant. He purchased by secret treaty the frontier of the Turks, he set himself to recover the European possessions of his predecessors. While his fleet harassed the Latins in the Aegean Sea and extended his realm to Rhodes, his army, reinforced by Frankish mercenaries, defeated the Latin emperor's forces in the open field. Though unsuccessful in a siege of Constantinople, which he undertook in concert with the Bulgarians (1235), he obtained supremacy over the despotats of Thessalonica and Epirus. The ultimate recovery of Constantinople by the Rhomaic emperors is chiefly due to his exertions.

JOHN IV. (c. 1250-1300), surnamed Lascaris, East Roman emperor, son of Theodore II. His father dying in 1258, Michael Palaeologus conspired shortly after to make himself regent, and in 1261 dethroned and blinded the boy monarch, and imprisoned him in a remote castle, where he died a long time after.

See E. Gibbon, The Decline and Fall of the Roman Empire, vi. 459-466 (ed. Bury, 1896); A. Melarakes, "Istoria tov Basileioy tov Nicula (Athens, 1898), pp. 491-528.

JOHN V. or VI. (1332-1391), surnamed Palaeologus, East Roman emperor, was the son of Andronicus III, whom he succeeded in 1341. At first he shared his sovereignty with his father's friend John Cantacuzene, and after a quarrel with the latter was practically superseded by him for a number of years (1347-1355). His reign was marked by the gradual dissolution of the imperial power through the rebellion of his son Andronicus and by the encroachments of the Ottomans, to whom in 1381 John acknowledged himself tributary, after a vain attempt to secure the help of the popes by submitting to the supremacy of the Roman Church.

See E. Gibbon, The Decline and Fall of the Roman Empire, vi. 495 seq. vii. 38 seq. (ed. Bury, 1896); E. Pears, The Destruction of the Greek Empire, pp. 70-96 (1903).

JOHN VI. or V. (c. 1392-1383), surnamed Cantacuzene, East Roman emperor, was born at Constantinople. Connected with the house of Palaeologus on his mother's side, on the accession of Andronicus III. (1328) he was entrusted with the supreme administration of affairs. On the death of the emperor in 1341, Cantacuzene was left regent, and guardian of his son John Palaeologus, who was but nine years of age. Being suspected
JOHN PALAEOLOGUS VI.—JOHN OF ENGLAND

by the empress and opposed by a powerful party at court, he rebelled, and got himself crowned emperor at Didymoteichos in Thrace, while John Palaeologus and his supporters maintained themselves at Constantinople. The civil war which ensued lasted six years, during which the rival parties called in the aid of the Servians and Turks, and engaged mercenaries of every description. It was only by the aid of the Turks, with whom he made a disgraceful bargain, that Cantacuzene brought the war to a termination favourable to himself. In 1347 he entered Constantinople in triumph, and forced his opponents to an arrangement by which he became joint emperor with John Palaeologus and sole administrator during the minority of his colleague. During this period, the empire, already broken up and reduced to the narrowest limits, was assailed on every side. There were wars with the Genoese, who had a colony at Galata and had money transactions with the court; and with the Servians, who were at that time establishing an extensive empire on the north-western frontiers; and there was a hazardous alliance with the Turks, who made their first permanent settlement in Europe, at Callipolis in Thrace, towards the end of the reign (1354). Cantacuzene was too ready to invoke the aid of foreign powers in his European campaigns, and as he had no money to pay them, this gave them a ready pretext for seizing upon a European town. The financial burdens imposed by him had long been disabling to his subjects, and a strong party had always favoured John Palaeologus. Hence, when the latter entered Constantinople at the end of 1354, his success was easy. Cantacuzene retired to a monastery (where he assumed the name of Joasaph Christodulos) and occupied himself in literary labours. He died in the Peloponessus and was buried by his sons at Mysithra in Laconia. His History in four books deals with the years 1320–1356. Really an apology for his own actions, it needs to be read with caution; fortunately it can be supplemented and corrected by the work of a contemporary, Nicephorus Gregoras. It possesses the merit of being well arranged and homogeneous, the incidents being grouped round the chief actor in the person of the author, but the information is defective on matters with which he is not directly concerned.

Cantacuzene was also the author of a commentary on the first five books of Aristotle's Ethicis, and of several controversial theological treatises, one of which (Against Mohammedanism) is printed in Migne (Patrologia Graeca, cl. iv.). History, ed. pr. by J. Pontanus (1603); in Bonn, Corpus scriptorium hist. Byz. ed. by J. Schopen (1824); 1838; 1854. Genealogie d'Alphonse de Poitiers, Cantacuzene, homme d'état et historien (1845); E. Gibbon, Decline and Fall, ch. xliii.; and C. Krumbach, Geschichte der byzantinischen Literatur (1897).

JOHN VI. or VII. (1390–1445), surnamed Palaeologus, East Roman emperor, son of Manuel II., succeeded to the throne in 1435. To secure protection against the Turks he visited the pope and consented to the union of the Greek and Roman churches, which was ratified at Florence in 1439. The union failed of its purpose, but by his prudent conduct towards the Ottomans he succeeded in holding possession of Constantinople, and in 1452 withstood a siege by Sultan Muralid. See Turner: History; and also E. Gibbon, The Decline and Fall of the Roman Empire, v. i. 97–107 (ed. Bury, 1866); E. Pears, The Destruction of the Greek Empire, pp. 115–130 (1903).

JOHN (1167–1216), king of England, the youngest son of Henry II. by Eleanor of Aquitaine, was born at Oxford on the 24th of December 1167. He was given at an early age the nickname of Lackland because, unlike his elder brothers, he received no appanage in the continental provinces. But his future was a subject of anxious thought to Henry II. When only five years old John was betrothed (1173) to the heiress of Maurienne and Savoy, a principality which, as dominating the chief routes from France and Burgundy to Italy, enjoyed a consequence out of all proportion to its area. Later, when this plan had fallen through, he was endowed with castles, revenues and lands on both sides of the channel; the vacant earldom of Cornwall was reserved for him (1175); he was betrothed to Isabella the heiress of the earldom of Gloucester (1176); and he was granted the lordship of Ireland with the homage of the Anglo-Irish baronage (1177). Henry II. even provoked a civil war by attempting to transfer the duchy of Aquitaine from the hands of Richard Coeur de Lion to those of John (1183). In spite of the incapacity which he displayed in this war, John was sent a little later to govern Ireland (1185); but he returned in a few months covered with disgrace, having alienated the loyal chiefs by his childish insolence and entirely failed to defend the settlers from the hostile septs. Remaining henceforth at his father's side he was treated with the utmost indulgence. But he joined with his brother Richard and the French king Philip Augustus in the great conspiracy of 1189, and the discovery of his treason broke the heart of the old king (see Henry II.).

Richard on his accession confirmed John's existing possessions; married him to Isabella of Gloucester; and gave him, besides other grants, the entire revenues of six English shires; but excluded him from any share in the regency which was appointed to govern England during the third crusade; and only allowed him to live in the kingdom because urged to this concession by his mother. Soon after the king's departure for the Holy Land it became known that he had designated his nephew, the young Arthur of Brittany, as his successor. John at once began to intrigue against this regent, and in the firm of securing England for himself. He picked a quarrel with the unpopular chancellor William Longchamp (q.v.), and succeeded, by the help of the barons and the Londoners, in expelling this minister, whose chief fault was that of fidelity to the absent Richard. Not being permitted to succeed Longchamp as the head of the administration, John next turned to Philip Augustus for help. A bargain was struck; and when Richard was captured by Leopold, duke of Austria (December 1192), the allies endeavoured to prevent his release, and planned a partition of his dominions. They were, however, unable to win either English or Norman support and their schemes collapsed with Richard's return (March 1194). He magnanimously pardoned his brother, and they lived on not unfriendly terms for the next five years. On his deathbed Richard, reversing his former arrangements, caused his barons to swear fealty to John (1199), although the hereditary claim of Arthur was by the law of primogeniture undoubtedly superior.

England and Normandy, after some hesitation, recognized John's title; the attempt of Anjou and Brittany to assert the rights of Arthur ended disastrously by the capture of the young prince at Mirebeau in Poitou (1202). But there was no part of his dominions in which John inspired personal devotion. Originally accepted as a political necessity, he soon came to be detested by the people as a tyrant and despised by the nobles for his cowardice and sloth. He inherited great difficulties—the feud with France, the dissensions of the continental provinces, the growing indifference of England to foreign conquests, the discontent of all his subjects with a strict executive and severe taxation. But he cannot be acquitted of personal responsibility for his misfortunes. Astute in small matters, he had no breadth of view or foresight; his policy was continually warped by his passions or caprices; he flattered vices of the most sordid kind with a cynical indifference to public opinion, and shocked an age which was far from tender-hearted by his ferocity to vanquished enemies. He treated his most respectable supporters with base ingratitude, reserved his favour for unscrupulous adventurers, and gave a free rein to the licence of his mercenaries. While possessing considerable gifts of mind and a latent fund of energy, he seldom acted or reflected until the favourable moment had passed. Each of his great humiliations followed as the natural result of crimes or blunders. By his divorce from Isabella of Gloucester he offended the English baronage (1200); by his marriage with Isabella of Angoulême, the betrothed of Hugh of Lusignan, he gave an opportunity to the discontented Poitevins for invoking French assistance and to Philip Augustus for pronouncing against him a sentence of forfeiture. The murder of Arthur (1203) ruined his cause in Normandy and Anjou; the story that the court of the peers of France condemned him for the murder is a fable, but no legal process was needed to convince men of his guilt. In the later quarrel with Innocent III. (1207–1213; see Langton,
JOHN OF ARAGON—JOHN OF BOHEMIA

Stephen) he prejudiced his case by proposing a worthless favourite for the primacy and by plundering those of the clergy who bowed to the pope's sentences. Threatened with the desertion of his barons he drove all whom he suspected to desputation by his terrible severity towards the Braose family (1210); and by his continued misgovernment irrevocably estranged the lower classes. When submission to Rome had somewhat improved his position he squandered his last resources in a new and unsuccessful war with France (1214), and enraged the feudal classes by new claims for military service and scutages. The barons were consequently able to exact, in Magna Carta (June 1215), much more than the redress of legitimate grievances; and the people allowed the crown to be placed under the control of an oligarchical committee. When once the sovereign power had been thus divided, the natural consequence was civil war and the intervention of the French king, who had long watched for some such opportunity. John's struggle against the barons and Prince Louis (1216), after his king's death of April 1216, was the most memorable episode of his career. But the calamitous situation of England at the moment of his death, on the 19th of October 1216, was in the main his work; and while he lived a national reaction in favour of the dynasty was out of the question.

John's second wife, Isabella of Angoulême (d. 1246), who married her former lover, Hugh of Lusignan, after the English king's death, bore the king two sons, Henry III. and Richard, earl of Cornwall; and three daughters, Joan (1230-1238), wife of Alexander II., king of Scotland, Isabella (d. 1241), wife of the emperor Frederick II., and Eleanor (d. 1274), wife of William Marshal, earl of Pembroke, and then of Simon de Montfort, earl of Leicester. John had also two illegitimate sons, Richard and Oliver, and a daughter, Joan or Joanna, who married Llewelyn I. ab Iorwerth, prince of North Wales, and who died in 1236 or 1237.

Annotations.—The chief chronicles for the reign are Gervase of Canterbury's Gestas regnum, Roll of Coggeshall's Chronic, Walter of Coventry's Mirabilia, Roger of Wendover's Flores historiarum, the Annals of Burton, Dunstaple and Margam—all these in the Rolls Series. The French chronicler of the so-called "Anonyme de Béthune" (Bocquet, Recueil des historiens de la France, vol. xxiv.), the Histoire des ducs de Normandie et des rois d'Angleterre (ed. F. Michel, Paris, 1840) and the metrical biography of William the Marshal (Histoire de Guillaume le Maréchal, ed. Paul Meyer, 4 vols., Paris, 1841, &c.) throw valuable light on certain episodes. H. W. Sweetman's Calendar of Documents relating to Ireland, vol. i. (Rolls Series); W. H. Bliss's Calendar of Entries in the Papal Registries, vol. i. (Rolls Series); Pothast's Regesta pontificum, vol. i. (Berlin, 1872); H. H. Bancroft's Rotuli regni Angliae, ser. i., and Rotuli litterarium patantium (Rec. Commission, 1835), and L. Delisle's Catalogue des actes de Philippe Auguste (Paris, 1856) are the most important guides to the documents. Of modern works W. L. Poskitt's English Constitutional History, vol. i. (Oxford, 1867); the same writer's preface to Walter of Coventry, vol. ii. (Rolls Series); Miss K. Norgate's John Lackland (London, 1902); C. Petit-Dutaillis' Étude sur la vie et le règne de Louis VII. (Paris, 1894) and W. S. MacKenzie's Magna Carta (Glasgow, 1905) are also useful. (H. W. C. D.)

JOHN I. (1350-1395), king of Aragon, was the son of Peter IV. and his third wife Eleanor of Sicily. He was born on the 27th of December 1350, and died by a fall from his horse, like his namesake, cousin and contemporary of Castile. He was a man of insignificant character, with a taste for artificial vice.

JOHN II. (1397-1470), king of Aragon, son of Ferdinand I., and of his wife Eleanor of Albuquerque, born on the 20th of June 1307, was one of the most stirring and most unscrupulous kings of the 15th century. In his youth he was one of the infantes (princes) of Aragon who took part in the dissensions of Castile during the minority and reign of John II. Till middle life he was also lieutenant-general in Aragon for his brother and predecessor Alfonso, in whose name he was left in Italy; in his last age he was engaged in incessant conflicts with his Aragonese and Catalan subjects, with Louis XI. of France, and in preparing the way for the marriage of his son Ferdinand with Isabella of Castile, which brought about the union of the crowns. His troubles with his subjects were closely connected with the tragic dissensions in his own family. John was first married to Blanche of Navarre, of the house of Evreux. By right of Blanche he became king of Navarre, and on her death in 1441 he was left in possession of the kingdom for his life. But a son Charles, called, as heir of Navarre, prince of Viana, had been born of the marriage. John from the first regarded his son with jealousy, which after his second marriage with Joan Henriquez, and under her influence, grew into absolute hatred. He endeavoured to deprive his son of his constitutional right to act as lieutenant-general of Aragon during his father's absence. The cause of the son was taken up by the Aragonese, and the king's attempt to join his second wife in the lieutenant-generalship was set aside. There followed a long conflict, with alternations of success and defeat, which was not terminated till the death of the prince of Viana, perhaps by poison given him by his stepmother, in 1461. The Catalans, who had adopted the cause of Charles and who had grievances of their own, called in a succession of foreign pretenders. In conflict with these the last years of King John were spent. He was forced to pawn Roussillon, his possession on the north-east of the Pyrenees to Louis XI., who refused to part with it. In his old age he was blinded by cataract, but recovered his eyesight by the operation of cucumbers. The Catalan revolt was pacified in 1472, but John had war, in which he was generally unfortunate, with his neighbour the French king till his death on the 20th of January 1479. He was succeeded by Ferdinand, his son by his second marriage, who was already associated with his wife Isabella as joint sovereign of Castile.

For the history, see Rivadeneyra, "Cronicas de los reyes de Castilla," Bibliotheca de autores españoles, vols. lxi., lxxvi. (Madrid, 1845, &c.); G. Zurita, Anales de Aragon (Saragossa, 1610). The important registers are Cronicas del rey de Aragon (Rec. K. K., vol. i., February 1330); John II. of Aragon and Castile, ed. H. Prescott's History of the Reign of Ferdinand and Isabella (1854).

JOHN (1306-1346), king of Bohemia, was a son of the emperor Henry VII. by his wife Margaret, daughter of John I., duke of Brabant, and was a member of the family of Luxembourg. Born on the 10th of August 1306, he became count of Luxembourg in 1309, and about the same time was offered the crown of Bohemia, which, after the death of Wenceslas III., the last king of the Premyslides dynasty in 1306, had passed to Henry, duke of Carinthia, under whose weak rule the country was in a very disturbed condition. The emperor accepted this offer on behalf of his son, who married Elizabeth (d. 1330), a sister of Wenceslas, and after Henry's departure for Italy, John was crowned king of Bohemia at Prague in February 1311. Henry of Carinthia was driven from the land, where a certain measure of order was restored, and Moravia was again united with Bohemia. As imperial vicar John represented his father at the diet of Nuremberg in January 1313, and was leading an army to his assistance in Italy when he heard of the emperor's death, which took place in August 1313. John was now a candidate for the imperial throne; but, on account of his youth, his claim was not regarded seriously, and he was persuaded to give his support to Louis, duke of Upper Bavaria, afterwards the emperor Louis the Bavarian. At Eslingen and elsewhere he aided Louis in his struggle with Frederick the Fair, duke of Austria, who also claimed the Empire; but his time was mainly passed in quelling disturbances in Bohemia, where his German followers were greatly disliked and where he himself soon became unpopular, especially among the nobles; or in Luxembourg, the borders of which county he was constantly and successfully striving to extend. Restless, adventurous and warlike, John had soon tired of governing his kingdom, and even discussed exchanging it with the emperor Louis for the Palatinate; and while Bohemia was again relapsing into a state of anarchy, his king was winning fame as a warrior in almost every part of Europe. He fought against the citizens of Metz and against his kinsman, John III., duke of Burgundy; he led the Teutonic knights of the Teutonic Order against the heathen in Lithuania and Pomerania and promised Pope John XXII. to head a crusade; and claiming to be king of Poland he attacked the Poles and brought Silesia under his rule. He obtained Tirol by marrying his son, John Henry, to Margaret Maultasch, the heiress of the county, assisted the emperor to defeat and capture Frederick the Fair at the battle of Mühlhofen in 1322, and was alternately at peace and at war with the dukes
of Austria and with his former foe, Henry of Carinthia. He was a frequent and welcome visitor to France, in which country he had a personal and hereditary interest; and on several occasions his prowess was serviceable to his brother-in-law King Charles IV., and to Charles's successor Philip VI., whose son John, afterwards King John II., married a daughter of the Bohemian king. Soon after the battle of Mühldorf, the relations between John and the emperor became somewhat strained, partly owing to the king's growing friendship with the Papacy and with France, and partly owing to territorial disputes. An agreement, however, was concluded, and John undertook his invasion of Italy, which was perhaps the most dazzling of his exploits. Invited by the citizens of Brescia, he crossed the Alps with a meagre following in 1331, quickly received the homage of many of the cities of northern Italy, and soon found himself the ruler of a great part of the peninsula. But his soldiers were few and his enemies were many, and a second invasion of Italy in 1333 was followed by the dissipation of his dreams of making himself king of Lombardy and Tuscany, and even of supplanting Louis on the imperial throne. The fresh trouble between king and emperor, caused by this enterprise, was intensified by a quarrel over the lands left by Henry of Carinthia, and still later by the interference of Louis in Tirol; and with bewildering rapidity John was alloying himself with the kings of Hungary and Poland, fighting against the emperor and his Austrian allies, defending Bohemia, governing Luxembourg, visiting France and negotiating with the pope. About 1340 the king was overtaken by blindness, but he continued to lead an active life, successfully resisting the attacks of Louis and his allies, and campaigning in Lithuania. In 1346 he made a decisive move against the emperor. Acted in union with Pope Clement VI. he secured the formal deposition of Louis and the election of his own son Charles, margrave of Moravia, as German king, or king of the Romans, in July 1346. Then journeying to help Philip of France against the English, he fought at the battle of Crécy, where his heroic death on the 26th of August 1346 was a fitting conclusion to his adventurous life.

John was a chivalrous and romantic personage, who enjoyed a great reputation for valour both before and after his death; but as a ruler he was careless and extravagant, interested only in his kingdom when seeking relief from his constant pecuniary embarrassments. After the death of his first wife, who bore him two sons, Charles, afterwards the emperor Charles IV., and John Henry (d. 1375), and who had been separated from her husband for some years, the king married Beatrice (d. 1383), daughter of Louis I., duke of Bourbon, by whom he had a son, Wenceslas (d. 1383). According to Camden the crest or badge of three ostrich feathers, with the motto Ich dien, borne by the prince of Wales was originally that of John of Bohemia and was first assumed by Edward the Black Prince after the battle of Crécy. There is no proof, however, that this badge was ever worn by John—it certainly was not his crest—and its origin must be sought elsewhere.

JOHN I. (1358–1390), king of Castile, was the son of Henry II., and of his wife Joan, daughter of John Manuel of Villena, head of a younger branch of the royal house of Castile. In the beginning of his reign he had to contend with the hostility of John of Gaunt, who claimed the crown by right of his wife Constance, daughter of Peter the Cruel. The king of Castile finally bought off the claim of his English competitor by arranging a marriage between his son Henry and Catherine, daughter of John of Gaunt, in 1357. Before this date he had been in constant conflict with Portugal which had in alliance with John of Gaunt. His first quarrel with Portugal was settled by his marriage, in 1382, with Beatriz, daughter of the Portuguese king Ferdinand. On the death of his father-in-law in 1383, John endeavoured to enforce the claims of his wife, Ferdinand's only child, to the crown of Portugal. He was resisted by the national sentiment of the people, and was utterly defeated at the battle of Aljubarrota, on the 14th of August 1385. King John was killed at Alcalá on the 9th of October 1390 by the fall of his horse, while he was riding in a fantasia with some of the light horsemen known as the farfanes, who were mounted and equipped in the Arab style.

JOHN II. (1405–1454), king of Castile, was born on the 6th of March 1405, the son of Henry III. of Castile and of his wife Catherine, daughter of John of Gaunt. He succeeded his father on the 25th of December 1406 at the age of a year and ten months. It was one of the many misfortunes of Castile that the long reign of John II.—forty-nine years—should have been granted to one of the most incapable of her kings. John was amiable, weak and dependent on those about him. He had no taste except for ornament, and no serious interest except in amusements, verse-making, hunting and tournaments. He was entirely under the influence of his favourite, Alvaro de Luna, till his second wife, Isabella of Portugal, obtained control of his feeble will. At her instigation he threw out his elder and able favourite, a meaness which is said to have caused him well-deserved remorse. He died on the 20th of July 1454 at Valladolid. By his second marriage he was the father of Isabella "the Catholic."

JOHN I. (b. and d. 1316), king of France, son of Louis X. and Clemente, daughter of Charles Martel, who claimed to be king of Hungary, was born, after his father's death, on the 15th of November 1316, and only lived seven days. His uncle, afterwards Philip V. has been accused of having caused his death, or of having substituted a dead child in his place; but nothing was ever proved. An impostor calling himself John I., appeared in Provence, in the reign of John II., but he was captured and died in prison.

JOHN II. (1319–1364), surnamed the Good, king of France, son of Philip VI. and Jeanne of Burgundy, succeeded his father in 1350. At the age of 13 he married Bona of Luxembourg, daughter of John, king of Bohemia. His early exploits against the English were failures and revealed in the young prince both avarice and stubborn persistence in projects obviously ill-advised. It was especially the latter quality which brought about his ruin. His first act upon becoming king was to order the execution of the constable, Raoul de Brienne. The reasons for this are unknown, but from the secrecy with which it was carried out and the readiness with which the honour was transferred to the king's close friend Charles of La Chesdra, it has been attributed to the influence and ambition of the latter. John surrounded himself with evil counsellors, Simon de Buc, Robert de Lorr, Nicolas Braque, men of low origin who robbed the treasury and oppressed the people, while the king gave himself up to tournaments and festivities. In imitation of the English order of the Garter, he established the knightly order of the Star, and celebrated its festivals with great display. Raids of the Black Prince in Languedoc led to the states-general of 1355, which readily voted money, but sanctioned the right of resistance against all kinds of pillage—a distinct commentary on the incompetence of the king. In September 1356 John gathered the flower of his chivalry and attacked the Black Prince at Poitiers. The utter defeat of the French was made the more humiliating by the capture of their king, who had bravely led the third line of battle. Taken to England to await ransom, John was at first installed in the Savoy Palace, then at Windsor, Hertford, Somerton, and at last in the Tower. He was granted royal state with his captive companions, made a guest at tournaments, and supplied with luxuries imported by him from France. The treaty of Brétigny (1360), which fixed his ransom at 3,000,000 crowns, enabled him to return to France, but although he married his daughter Isabella to Gian Galeazzo Visconti of Milan, for a gift of 600,000 golden crowns, imposed a heavy feudal "aid" on merchandise, John of Gaunt was unable to pay more than 400,000 crowns to Edward III. His son Louis of Anjou, who had been left as hostage, escaped from Calais in the summer of 1363, and John, far in arrears in the payments of the ransom, surrendered himself again "to maintain his royal honour which his son had soldled." He landed in England in January 1364 and was received with great honour, lodged again in the Savoy, and was a
JOHN OF HUNGARY—JOHN III. OF POLAND

frequent guest of Edward at Westminster. He died on the 8th of April, and the body was sent back to France with royal honours.

See Freissart's Chronicles; Duc d'Amales, Notes et documents relatifs à Jean, roi de France, et à sa capitvité (1856); A. Coville, in Lavisio's Histoire du France, vol. iv., and authorities cited there.

JOHN (ZAPOLYA) (1347-1350), king of Hungary, was the son of the palatine Stephen Zapolia and the princess Hedwig of Teschen, and was born at the castle of Szepesvár. He began his public career at the famous Rákós diet of 1505, when, on his motion, the assembly decided that after the death of the reigning king, Wladislaus II., no foreign prince should be elected king of Hungary. Henceforth he became the national candidate for the throne, which his family had long coveted. As far back as 1491 his mother had proposed to the sick king that his daughter Anne should be committed to her care in order, subsequently, to be married to her son; but Wladislaus frustrated this project by contracting a matrimonial alliance with the Habsburgs. In 1510 Zapolia sued in person for the hand of the Princess Anne in vain, and his appointment to the voivody of Transylvania (1511) was with the evident intention of removing him far from court. In 1513, after a successful raid in Turkish territory, he hastened to Buda at the head of 1000 horsemen and renewed his suit, which was again rejected. In 1514 he stamped out the dangerous peasant rising under Dozsa (q.v.) and the internal torments by means of which the rebel leader was slowly done to death were the invention of Zapolia. With the gentry, whose hideous oppression had moved the peasantry to revolt, he was now more than ever popular, and, on the death of Wladislaus II., the second diet of Rákós (1516) appointed him the governor of the infant king Louis II. He now aimed at the dignity of palatine also, but the council of state and the court party combined against him and appointed István Báthory instead (1516). The strife of factions now burst more fiercely than ever at the very time when the presence of the Turk demanded the combination of all the national forces against a common danger. It was entirely due to the dilatoriness and dissensions of Zapolia and Báthory that the great fortress of Belgrade was captured in 1521, a loss which really sealed the fate of Hungary. In 1522 the diet would have appointed both Zapolia and Báthory captains-general of the realm, but the court set Zapolia aside and chose Báthory only. At the diets of Hátvan and Rákós in 1532, Zapolia placed himself at the head of a confederation to depose the palatine and the other great officers of state, but the attempt failed. In the following year, however, the revolutionary Hátvan diet drove out all the members of the council of state and made István Verböczy, the great jurist, and a friend of Zapolia, palatine. In the midst of this hopeless anarchy, Suleiman I., the Magnificent, invaded Hungary with the countess army, and the young king perished on the field of Mohács in a vain attempt to stay his progress, the contradictory orders of Louis II. preventing Zapolia from arriving in time to turn the fortunes of the day. The court party accused him of deliberate treachery on this occasion; but the charge must be pronounced groundless. His younger brother George was killed at Mohács, where he was second commander-in-chief. Zapolia was elected king of Hungary at the subsequent diet of Tokaj (Oct. 14), the election was confirmed by the diet of Székesfehérvár (10th of November), and he was crowned on the following day with the holy crown.

A struggle with the rival candidate, the German king Ferdinand I., at once ensued (see HUNGARY: History) and it was only with the aid of the Turks that king John was able to exhaust his opponent and compel him to come to terms. Finally, in 1538, by force of arms, Ferdinand was deposed as king of Hungary, but secured the right of succession on his death. Nevertheless John broke the compact by bequeathing the kingdom to his infant son John Sigismund under Turkish protection. John was the last national king of Hungary. His merit, as a statesman, lies in his stout vindication of the national independence, though without the assistance of his great minister György Utiesenovich, better known as "Frater George" (Cardinal Martinuzzi q.v.), this would have been impossible. Indirectly he contributed to the subsequent conquest of Hungary by admitting the Turk as a friend.

See Villé et Fraknoi, Ungarn vor der Schlacht bei Mohács (Budapest, 1886); L. Kupelwieser, Die Kämpfe Ungarns mit den Osmanen bis zur Schlacht bei Mohács (Vienna, 1895); Ignace Acadény, History of the Hungarian Realm, vol. i. (Hung.) (Budapest, 1902-1904).

JOHN OF BRENNIE (c. 1348-1357), king of Jerusalem and Latin emperor of Constantinople, was a man of sixty years of age before he began to play any considerable part in history. Destined originally for the Church, he had preferred to become a knight, and in forty years of tournaments and fights he had won himself a considerable reputation, when in 1268 envoys came from the Holy Land to ask Philip Augustus, king of France, to select one of his barons as husband to the heiress, and ruler of the kingdom, of Jerusalem. Philip selected John of Brennie, and promised to support him in his new dignity. In 1270 John married the heiress Mary (daughter of Isabella and John of Montferrat), assuming the title of king in right of his wife. In 1271, after some desultory operations, he concluded a six years' truce with Malik-el-Adil; in 1272 he lost his wife, who left him a daughter, Isabella; soon afterwards he married an Armenian princess. In the fifth crusade (1278-1279) he was a prominent figure. The legate Pelagius, however, claimed the command; and insisting on the advance from Damietta, in spite of the warnings of King John, he refused to accept the favourable terms of the sultan, as the king advised, until it was too late. After the failure of the crusade, King John came to the West to obtain help for his kingdom. In 1293 he met Honorius III. and the emperor Frederick II. at Ferentino, where, in order that he might be connected more closely with the Holy Land, Frederick was betrothed to John's daughter Isabella, now heiress of the kingdom. After the meeting at Ferentino, John went to France and England, finding little consolation; and thence he travelled to Compiègne, where he married a new wife, Berengaria of Castile. After a visit to Germany he returned to Rome (1275). Here he received a demand from Frederick II. (who had now married Isabella) that he should abandon his title and dignity of king, which—so Frederick claimed—had passed to himself along with the heiress of the kingdom. John was now a septuagenarian "king in exile," but he was still vigorous enough to revenge himself on Frederick, by commanding the papal troops which attacked southern Italy during the emperor's absence on the sixth crusade (1288-1299). In 1299 John, now eighty years of age, was invited by the barons of the Latin empire of Constantinople to become emperor, on condition that Baldwin of Courtenay should marry his second daughter and succeed him. For nine years he ruled in Constantinople, and in 1305, with a few troops, he repelled a great siege of the city by Vatases of Nicaea and Azen of Bulgaria. After this last feat of arms, which has perhaps been exaggerated by the Latin chroniclers, who compare him to Hector and the Maccabees, John died in the habit of a Franciscan friar. An aged paladin, somewhat xurious and always penniless, he was a typical knight errant, whose wanderings led him all over Europe, and planted him successively on the thrones of Jerusalem and Constantinople.

The story of John's career must be sought partly in histories of the kingdom of Jerusalem and of the Latin Empire of the East, partly in monographs. Among these, of which R. Rohricht gives a list (Geschichte des Königreichs Jerusalem, p. 609, n. 3), see especially E. de Montarmet, Un chronicle du temps passé (Limoges, 1876 and 1881).

JOHN III. (SLOBIESKI) (1624-1636), king of Poland, was the eldest son of James Sobieski, castellan of Cracow, and Theodora Danilowiczówna, daughter of the Count Chmielnicki. After being educated at Cracow, he made the grand tour with his brother Mark and returned to Poland in 1648. He served against Chmielnicki and the Cossacks and was present at the battles of Beresteczko (1651) and Batoka (1652), but was one of the first to desert his unhappy country when invaded by the Swedes in 1654, and actually assisted them to conquer the Prussian provinces in 1655. He returned to his lawful allegiance
in the following year and assisted Czarniecki in his difficult task of expelling Charles X. of Sweden from the central Polish province of Podolia. Subsequent services to King John Casimir, especially in the Ukraine against the Tatars and Cossacks, he received the grand baton of the crown, or commanderm-in-chief (1668). He had already (1665) succeeded Czarniecki as acting commander-in-chief. Sobieski had well earned these distinctions by his extraordinary military capacity, but he was now to exhibit a less pleasing side of his character. He was in fact a typical representative of the unscrupulous self-seeking Polish magnates of the 17th century who were always ready to sacrifice everything, their country included, to their own private ambition. At the election diet of 1669 he accepted large bribes from Louis XIV, to support one of the French candidates; after the election of Michael Wisniowiecki (June 19, 1669) he openly conspired, again in the French interest, against his lawful sovereign, and that too at the very time when the Turk was ravaging the southern frontier of the republic. Michael was the feeblest monarch the Poles could have placed upon the throne, and Sobieski deliberately attempted to make government of any kind impossible. He formed a league with the prime Prazmowski and other traitors to dethrone the king; when (1670) the plot was discovered and participation in it repudiated by Louis XIV., the traitors sought the help of the elector of Brandenburg against their own justly indignant countrymen. Two years later the same traitors again conspired against the king, at the very time when the Turks had defeated Sobieski's unsupported lieutenant, Luzecki, at Czertwertynska and captured the fortress of Kamieniec (Kametnierz-Podolskiy), the key of south-eastern Poland, while Lemberg was only saved by the valour of Eilias Lancki. The unhappy king did the only thing possible in the circumstances. He summoned the tuszensia pospolit, or national armed assembly; but it failed to assemble in time, whereupon Michael was constrained to sign the disgraceful peace of Buczacz (Oct. 17, 1670). Poland ceded to Turkey all the Ukraine with Podolia and Kamieniec and beyond. Aroused to duty by a series of disasters for which he himself was primarily responsible, Sobieski now hastened to the frontier, and won four victories in ten days. But he could not recover Kamieniec, and when the tuszensia pospolit met at Golenka and ordered an inquiry into the conduct of Sobieski and his accomplices he frustrated all their efforts by summoning a counter-conference to meet at Szczezbreszyn. Powerless to oppose a rebel who was at the same time commander-in-chief, both the king and the diet had to give way, and a compromise was come to whereby the peace of Buczacz was repudiated and Sobieski was given a chance of rehabilitating himself, which he did by his brilliant victory over an immense Turkish host at Khotin (Nov. 10, 1673). The same day King Michael died and Sobieski, determined to secure the throne for himself, hastened to the capital, though Tatar bands were swarming over the frontier and the whole of Podolia was rapacious. Apprehensive at the elective diet of 1674 at the head of 60,000 veterans he overawed every other competitor, and despite the persistent opposition of the Lithuanians was elected king on the 21st of May. By this time, however, the state of things in the Ukraine was so alarming that the new king had to hasten to the front. Assisted by French diplomacy at the Porte (Louis XIV. desiring to employ Poland against Austria), and his own skilful negotiations with the Tatar khan, John III. now tried to follow the example of Vladislaus IV. by leaving the guardianship of the Ukraine entirely in the hands of the Cossacks, while he assembled as many regulars and militiamen as possible at Lemberg, whence he might hasten with adequate forces to defend whichever of the provinces of the Republic might be in most danger. But the appeal of the king was like the voice of one crying in the wilderness, and not one gentleman in a hundred hastened to the assistance of the fatherland. Even at the end of August Sobieski had but 3000 men at his disposal to oppose to 60,000 Turks. Only his superb strategy and the heroic devotion of his lieutenants—notably the converted Jew, Jan Samuel Chrzanso, who held the Ottoman army at bay for eleven days behind the walls of Trenbrowia—enabled the king to remove the pagan yoke from our shoulders; and he returned at his triumph at Cracow on the 14th of February 1676. In October 1676, in his entrenched camp at Zaravno, he with 13,000 men withstood 80,000 Turks for three weeks, and recovered by special treaty two-thirds of the Ukraine, but without Kamieniec (treaty of Zaravno, Oct. 16, 1676).

Having now secured peace abroad Sobieski was desirous of strengthening Poland at home by establishing absolute monarchy; but Louis XIV. looked coldly on the project, and from this time forth the old familiar relations between the republic and the French monarchy were strained to breaking point, though the final rupture did not come till 1682 on the arrival of the Austrian minister, Zerowski, at Warsaw. After resisting every attempt of the French court to draw him into the anti-Habsbourg league, Sobieski signed the famous treaty of alliance with the emperor Leopold against the Turks (March 31, 1683), which was the prelude to the most glorious episode of his life, the relief of Vienna and the liberation of Hungary from the Ottoman yoke. The epoch-making victory of the 12th of September 1683 was ultimately decided by the charge of the Polish cavalry led by Sobieski in person. Unfortunately Poland profited little or nothing by this great triumph, and now that she had broken the back of the enemy she was left to fight the common enemy in the Ukraine with whatever assistance she could obtain from the unwilling and unready Muscovites. The last twelve years of the reign of John III. were a period of unmitigated humiliation and disaster. He now reapplied to the full the harvest of treason and rebellion which he himself had sown so abundantly during the first forty years of his life. A treasonable senate secretly plotting his dethronement, a mutinous diet rejecting the most necessary reforms for fear of "absolutism," ungrateful allies who profited exclusively by his victories—these were his inseparable companions during the remainder of his life. Nay, like a king captured in his own field he lost the battle-field and lost his own home. His last campaign (in 1690) was an utter failure, and the last years of his life were embittered by the violence and the intrigues of his doting and beloved wife, Marya Kazimiera d'Arquen, by whom he had three sons, James, Alexander and Constantine. He died on the 17th of June 1696, a disillusioned and broken-hearted old man.

11th of August 1433, in the forty-eighth year of a reign which had been characterized by great prudence, ability and success; he was succeeded by his son Edward or Duarte, so named out of compliment to Edward III. of England.

See J. P. Oliveira Martins, Os filhos de D. João I. and A vida de Nun Alveires (Lisbon, 2nd ed. 1894).

JOHN II. (1455-1495), the Perfect, king of Portugal, succeeded his father, Alphonso V., in August 1481. His first business was to curtail the overgrown power of his aristocracy; noteworthy incidents in the contest were the execution (1483) of the duke of Braganza for correspondence with Castile, and the murder, by the king's own hand, of the youthful duke of Viseu for conspiracy. This reign was signalized by Bartholomeu Dias's discovery of the Cape of Good Hope in 1488. Maritime rivalry led to disputes between Portugal and Castile until their claims were adjusted by the famous treaty of Tordesillas (June 7, 1494). John II. died, without leaving male issue, in October 1495, and was succeeded by his brother-in-law Emmanuel (Manoel I).

See J. P. Oliveira Martins, O príncipe perfeito (Lisbon, 1895).

JOHN III. (1502-1557), king of Portugal, was born at Lisbon, on the 6th of June 1502, and ascended the throne as successor of his father Emmanuel I. in December 1521. In 1524 he married Catherine, sister-to-be of Emperor Charles V., who shortly afterwards married the infanta Isabella, John's sister. Succeeding to the crown at a time when Portugal was at the height of its political power, and Lisbon in a position of commercial importance previously unknown, John III., unfortunately for his dominions, became subservient to the clerical party among his subjects, with disastrous consequences to the commercial and social prosperity of his kingdom. He died of apoplexy on the 6th of June 1557, and was succeeded by his grandson Sebastian, then a child of only three years.

JOHN IV. (1603-1649), the Fortunate, king of Portugal, was born at Villaviciosa in March 1603, succeeded to the dukedom of Braganza in 1650, and married Luisa de Guzman, eldest daughter of the duke of Medina Sidonia, in 1633. By the unanimous voice of the people he was raised to the throne of Portugal (of which he was held to be the legitimate heir) at the revolution effected in December 1640 against the Spanish king, Philip IV. His accession led to a protracted war with Spain, which only ended with the recognition of Portuguese independence. In 1642 the king of France, Louis XIII., ascended the throne, and to this period belongs the war which began in 1656, and was succeeded by his son Alphonso VI.

JOHN V. (1689-1750), king of Portugal, was born at Lisbon on the 22nd of October 1689, and succeeded his father Pedro II. in December 1706, being proclaimed on the 1st of January 1707. One of his first acts was to intimate his adherence to the Grand Alliance, which his father had joined in 1703. Accordingly his general Das Minas, along with Lord Galway, advanced into Castile, but sustained the defeat of Almanza (April 14). In October 1708 he married Maria Anna, daughter of Leopold I., thus strengthening the alliance with Austria; the series of unsuccessful campaigns which ensued ultimately terminated in a favourable peace with France in 1713 and with Spain in 1715. The rest of his long reign was characterized by royal subservience to the clergy, the kingdom being administered by ecclesiastical persons and for ecclesiastical objects to an extent that gave him the best of rights to the title “Most Faithful King,” bestowed upon him and his successors by a bull of Pope Benedict XIV. in 1748. John V. died on the 31st of July 1750, and was succeeded by his son John VI.

JOHN VI. (1769-1856), king of Portugal, was born at Lisbon on the 13th of May 1769, and received the title of prince of Brazil in 1788. In 1792 he assumed the reins of government in name of his mother Queen Mary I., who had become insane. He had been brought up in an ecclesiastical atmosphere, and, being naturally of a somewhat weak and helpless character, was but ill adapted for the responsibilities he was thus called on to undertake. In 1799 he assumed the title of regent, which he retained until his mother's death in 1816. (For the political history of his regency, see PORTUGAL.) In 1816 he was recognized as king of Portugal but he continued to reside in Brazil; the consequent spread of dissatisfaction resulted in the peaceful revolution of 1820, and the proclamation of a constitutional government, to which he swore fidelity on his return to Portugal in 1822. In the same year, and again in 1823, he had to suppress a rebellion led by his son Dom Miguel, whom he ultimately was compelled to banish in 1824. He died at Lisbon on the 26th of March 1826, and was succeeded by Pedro IV.

JOHN (1801-1873), king of Saxony, son of Prince Maximilian of Saxony and his wife Caroline of Parma (d. 1804), was born at Dresden on the 12th of December 1801. As a boy he took a keen interest in literature and art (also in history, law, and political science), and studied with the greatest ardour classical and German literature (Herder, Schiller, Goethe). He soon began to compose poetry himself, and drew great inspiration from a journey in Italy (1821-1822), the pleasure of which was however darkened by the death of his brother Clemens. In Pavia the prince met with Biagio's edition of Dante, and this gave rise to his lifelong and fruitful studies of Dante. The first part of his German translation of Dante was published in 1828, and in 1833 appeared the complete work, with a valuable commentary, which met with a great success. In 1831 he became a member of the Prussian assembly, and took an exceptionally active part in the constitution of the 4th of September 1831 and especially in the deliberations of the upper chamber, where he worked with unflagging energy and great ability. Following the example of his father, he taught his children in person, and had a great influence on their education. On the 12th of August 1845, during a stay at Leipzig, the prince was the object of hostile public demonstrations, the people holding him to be the head of an alleged ultramontane party at court, and the revolution of 1848 compelled him to interrupt his activities in the upper chamber. Immediately after the suppression of the revolution he resumed his place and took part chiefly in the discussion of legal questions. He was also interested in the amalgamation of the German historical and archaeological societies. On the death of his brother Frederick Augustus II., John became, on the 9th of August 1854, king of Saxony. As king he soon won great popularity owing to his simplicity, graciousness and increasingly evident knowledge of affairs. In his policy as regards the German confederation he was devoted to that of Austria. Though not opposed to the establishment of the federal constitution, he held that its maintenance under the presidency of Austria was essential. This view he supported at the assembly of princes at Frankfort in August and September 1863. He was unable to uphold his views against Prussia, and in the war of 1866 fought on the side of Austria. It was with difficulty that, on the conclusion of peace, Austrian diplomacy succeeded in enabling the king to retain his crown. After 1866 King John gradually became reconciled to the new state of affairs. He entered the North German
The margrave opposed the Interim, issued from Augsburg in May 1548; and he was the leader of the princes who formed a league for the defence of the Lutheran doctrines in February 1550. The alliance of these princes, however, with Henry II., king of France, does not appear to have commended itself to him and after some differences of opinion with Maurice, elector of Saxony, he returned to the emperor's side. His remaining years were mainly spent in the new mark, which he ruled carefully and economically. He added to its extent by the purchase of Beeskow and Storkow, and fortified the towns of Cüstrin and Peitz. He died at Cüstrin on the 13th of January, 1571. His wife Catherine was a daughter of Henry II., duke of Brunswick, and as he left no sons the new mark passed on to his death his nephew John George, elector of Brandenburg.

See Berg, Beiträge zur Geschichte des Markgrafen Johann von Cüstrin (Landsberg, 1903).

JOHN (1371-1410), called the Fearless (Sans Peur), duke of Burgundy, son of Philip the Bold, duke of Burgundy, and Margaret of Flanders, was born at Dijon on the 28th of May, 1371. On the death of his maternal grandfather in 1384 he received the title of count of Nevers, which he bore until his father's death. Though originally destined to be the husband of Catherine, sister of Charles VI. of France, he married in 1385 Margaret, daughter of Duke Albert of Bavaria, an alliance which consolidated his position in the Netherlands. In the spring of 1396 he took arms for Hungary against the Turks and on the 28th of September was taken prisoner by the Sultan Bayezid I. at the bloody battle of Nicopolis, where he earned his surname of "the Fearless." He did not recover his liberty until 1397, and then only by paying an enormous ransom. He succeeded his father in 1404, and immediately found himself in conflict with Louis of Orleans, the young brother of Charles VI. The history of the following years is filled with the struggles between these two princes and with their attempts to seize the authority in the name of the demented king. John endeavoured to strengthen his position by marrying his daughter Margaret to the dauphin Louis, and by betrothing his son Philip to a daughter of Charles VI. Like his father, he looked for support to the popular party, to the tradesmen, particularly the powerful guild of the butchers, and also to the university of Paris. In 1405 he opposed in the royal council a scheme of taxation proposed by the duke of Orleans, which was nevertheless adopted. Louis retaliated by refusing to sanction the duke of Burgundy's projected expedition against Calais, whereupon John quitted the court in chagrin on the pretext of taking up his mother's heritage. He was, however, called back to the council to find that the duke of Orleans and the queen had carried off the Emperor's silver standards in bringing back the dauphin to Paris, and open war seemed imminent between the two princes. But an arrangement was effected in October, 1405, and in 1406 John was made by royal decree guardian of the dauphin and the king's children.

The struggle, however, soon revived with increased force. Hostilities had been resumed with England; the duke of Orleans had squandered the money raised for John's expedition against Calais; and the two rivals broke out into open threats. On the 30th of November, 1407 their uncle, the duke of Berry, brought about a solemn reconciliation, but three days later Louis was assassinated by John's orders in the Rue Barbette, Paris. John at first sought to conceal his share in the murder, but ultimately decided to confess to his uncle, and abruptly left Paris. His vassals, however, showed themselves determined to support him in his struggle against the avengers of the duke of Orleans. The court decided to negotiate, and called upon the duke to return. John entered Paris in triumph, and instructed the Franciscan theologian Jean Petit (d. 1411) to pronounce an apology for the murder. But he was soon called back to his estates by a rising of the people of Liége against his brother-in-law, the bishop of that town. The queen and the Orleans party took every advantage of his absence and had Petit's discourse solemnly refuted. John's victory over the Liégeois at Hasbain on the 23rd of September, 1408, enabled him to return to Paris, where he

JOHN I. (d. 1294), duke of Brabant and Lorraine, surnamed the Victorious, one of the most gifted and chivalrous princes of his time, was the second son of Duke Henry III. and Aleidis of Burgundy. In 1267 his elder brother Henry, being infirm of mind and body, was deposed in his favour. In 1271 John married Margaret, daughter of Louis IX. of France, and on her death in childbirth he took as his second wife (1273) Margaret of Flanders, daughter of Guy de Dampierre. His sister Marie was espoused in 1275 to Philip III. (the Bold) of France, and during the reign of Philip and his son Philip IV. there were close relations of friendship and alliance between Brabant and France. In 1285 John accompanied Philip III. in his expedition against Peter III., king of Aragon, but the duchy of Limburg was the scene of his chief activity and greatest successes. After the death of Walero IV. in 1290 the succession to this duchy was disputed. His heiress, Ermengarde, had married Reinald I. count of Gelderland. She died childless, but her husband continued to rule in Limburg, although his rights were disputed by Count Adolph of Berg, nephew to Walero IV. (see Limburg). Not being strong enough to eject his rival, Adolph sold his rights to John of Brabant, and hostilities broke out in 1283. Harassed by desultory warfare and endless negotiations, and seeing no prospect of holding his own against the powerful duke of Brabant, Reinald made over his rights to Henry III. count of Luxembourg, who was a descendant of Walero III. of Limburg. Henry III. was sustained by the archbishop of Cologne and other allies, as well as by Reinald of Gelderland. The duke of Brabant at once invaded the Rhineland and laid siege to the castle of Woeringen near Bonn. Here he was attacked by the forces of the confederacy on the 5th of June, 1288. After a bloody struggle John of Brabant, though at the head of far inferior numbers, was completely victorious. Limburg was henceforth attached to the duchy of Brabant. John celebrated his conquest by giving his daughter in marriage to Henry of Luxembourg (1291). John the Victorious was a perfect model of a feudal prince in the days of chivalry, brave, adventurous, excelling in every form of active exercise, fond of display, generous in temper. He delighted in tournaments, and was always eager personally to take part in jousts. On the 3rd of May, 1294, on the occasion of some marriage festivities at Bar, he was wounded in the arm in an encounter by Pierre de Baunier, and died from the effects of the hurt.

(2nd ed., Brussels, 1857); K. F. Staalhert, Gesch. v. Jan I. van Brabant en zijne tijdzoek (Brussels, 1861); A. Wauters, Le Duc Jean 1er et le Brabant sous le regne de ce prince (Brussels, 1859).

JOHN, or HANS (1513-1571), margrave of Brandenburg-Cüstrin, was the younger son of Joachim I., elector of Brandenburg, and was born at Tangermünde on the 3rd of August, 1513. In 1541 he became the ruler of the electorate. John inherited the new mark of Brandenburg on his father's death in July 1535. He had been brought up as a strict Catholic, but soon wavering in his allegiance, and in 1538 himself definitely on the side of the Reformers. About the same time he joined the league of Schmalkalden; but before the war broke out between the league and the emperor Charles V. the promises of the emperor had won him over to the imperial side. After the conclusion of the war, the relations between John and Charles became somewhat strained.
JOHN OF SAXONY—JOHN, DON

was reinstated in his ancient privileges. By the peace of Chartres (March 9, 1469) the king absolved him from the crime, and Valentina Visconti, the widow of the murdered duke, and her children pledged themselves to a reconciliation; while an edict of the 27th of December 1409 gave John the guardianship of the dauphin. Nevertheless, a new league was formed against the duke of Burgundy in the following year, principally at the instance of Bernand, count of Armagnac, from whom the party opposed to the Burgundians took its name. The peace of Bicêtre (Nov. 2, 1410) prevented the outbreak of hostilities, insomuch as the parties were enjoined by its terms to return to their estates; but in 1411, in consequence of ravages committed by the Armagnacs in the environs of Paris, the duke of Burgundy was called back to Paris. He relished more than ever on the support of the popular party, which then obtained the reforming *Ordonnance Cabochienne* (so called from Simon Caboche, a prominent member of the gild of the butchers). But the bloodthirsty excesses of the populace brought a change. John was forced to withdraw to Burgundy (August 1413), and the university of Paris and John Gerson once more censured Petit's propositions, which, but for the lavish bribes of money and wines offered by John to the clergy, would have been repudiated at the council of Constance. John's attitude was undecided; he negotiated with the court and also with the English, who had just renewed hostilities with France. Although he talked of helping his sovereign, his troops took no part in the battle of Agincourt (1415), where, however, two of his brothers, Anthony, duke of Brabant, and Philip, count of Nevers, fell fighting for France.

In 1417 John made an attack on Paris, which failed through his loitering at Lagny; but on the 30th of May 1418 a traitor, one Perrinet Leclerc, opened the gates of Paris to the burgundian captain, Villiers de l'Isle Adam. The dauphin, afterwards King Charles VI., fled from the town, and John betook himself to the king, who promised to forget the past. John, however, did nothing to prevent the surrender of Rouen, which had been besieged by the English, and on which the fate of the kingdom seemed to depend; and the town was taken in 1419. The dauphin then decided on a reconciliation, and on the 11th of July the two princes swore peace on the bridge of Pouilly, near Melun. On the ground that peace was not sufficiently assured by the Pouilly meeting, a fresh interview was proposed by the dauphin and took place on the 10th of September 1419 on the bridge of Montereau, when the duke of Burgundy was felled with an axe by Tanneguy du Chatel, one of the dauphin's companions, and done to death by the other members of the dauphin's escort. His body was first buried at Montereau and afterwards removed to the Chartreuse of Dijon and placed in a magnificent tomb sculptured by Juan de la Huerta; the tomb was afterwards transferred to the museum in the *hôtel de ville*.

By his wife, Margaret of Bavaria, he had one son, Philip the Good, who succeeded him; and seven daughters—Margaret, who married in 1404 Louis, son of Charles VI., and in 1423 Arthur, earl of Richmond and afterwards duke of Brittany; Mary, wife of Adolph of Cleves; Catherine, promised in 1410 to a son of Louis of Anjou; Isabella, wife of Olivier de Châtillon, count of Penthèvre; Joanna, who died young; Anne, who married John, duke of Bedford, in 1423; and Agnes, who married Charles I., duke of Bourbon, in 1425.

JOHN (1468–1532), called the Steadfast, elector of Saxony, fourth son of the elector Ernest, was born on the 30th of June 1468. In 1486, when his eldest brother became elector as Frederick III., John received a part of the paternal inheritance and afterwards assisted his kinsman, the German king Maximilian I., in several campaigns. He was an early adherent of Luther, and, becoming elector of Saxony by his brother's death in May 1532, was soon prominent among the Reformers. Having assisted to suppress the rising led by Thomas Munzer in 1525, he helped Philip, landgrave of Hesse, to found the league of Gota, formed in 1526 for the protection of the Reformers. He was active at the diet of Spires in 1526, and the “recess” of this diet gave him an opportunity to reform the church in Saxony, where a plan for divine service was drawn up by Luther. The assertions of Otto von Pack that a league had been formed against the elector and his friends induced John to ally himself again with Philip of Hesse in March 1528, but he restrained Philip from making an immediate attack upon their opponents. He signed the protest against the “recess” of the diet of Spires in 1529, being thus one of the original Protestants, and was actively hostile to Charles V. at the diet of Augsburg in 1530. Having signed the confession of Augsburg, he was alone among the electors in objecting to the election of Ferdinand, afterwards the emperor Ferdinand I., as king of the Romans. He was among the first members of the league of Schmalkalden, assented to the religious peace of Nuremberg in 1532, and died at Schweidnitz on the 16th of August 1532. John was twice married and left two sons and two daughters. His elder son, John Frederick, was created elector of Hesse by the diet of Speyer, 18 June 1526, and John Ernest (d. 1553). He rendered great services to the Protestant cause in its infancy, but as a Lutheran resolutely refused to come to any understanding with other opponents of the older faith.

JOHN, DON (1545–1578), of Austria, was the natural son of the emperor Charles V. by Barbara Blomberg, the daughter of an opulent citizen of Regensburg. He was born in that free imperial city on the 24th of February 1545, the anniversary of his father's birth and coronation and of the battle of Pavia, and was at first confided under the name of Geronimo to foster parents of humble birth, living at a village near Madrid; but in 1554 he was transferred to the charge of Madeleine de Ulloa, the wife of Don Luis de Quijada, and was brought up in ignorance of his parentage at Quijada's castle of Villagarcia not far from Valladolid. Charles V. in a codicil of his will recognized Geronimo as his son, and recommended him to the special care of his cousin John Ernest, elector of Saxony. John Ernest, prince of Parma. With Don Carlos his relations were especially friendly. It had been Philip's intention that John Don should become a monk, but he showed a strong inclination for a soldier's career and the king yielded. In 1568 Don John was appointed to the command of a squadron of 33 galleys, and his first operations were against the Algerian pirates. His next services were (1569–70) against the rebel Moriscos in Granada. In 1571 a nobler field of action was opened to him. The conquest of Cyprus by the Turks had led the Christian powers of the Mediterranean to fear for the safety of the Adriatic. A league between Spain and Venice was effected by the efforts of Pope Pius V. to resist the Turkish advance to the west, and Don John was named admiral of chief of the combined fleets. At the head of 208 galleys, 6 galleasses and a number of smaller craft, Don John encountered the Turkish fleet off Lepanto on the 7th of October 1571, and gained a complete victory. Only forty Turkish vessels effected their escape, and it was computed that 35,000 of their men were slain or captured while 15,000 Christian galleys were released. Unfortunately, through divisions and jealousies between the allies, the fruits of one of the most decisive naval victories in history were to a great extent lost.

This great triumph aroused Don John's ambition and filled his imagination with schemes of personal aggrandizement. He thought of erecting first a principality in Albania and the Morea, and then a kingdom in Tunis. But the conclusion by Venice of a separate peace with the sultan put an end to the
league, and though Don John captured Tunis in 1573, it was again speedily lost. The schemes of Don John found no support in Philip II, who refused to entertain them, and even withheld from his half-brother the title of infante of Spain. At last, however, he was appointed (1576) governor-general of the Netherlands, in succession to Luis de Requesens. The administration of the latter had not been successful, the revolt headed by the prince of Orange had spread, and at the time of Don John’s nomination the Pacification of Ghent appeared to have united the whole of the seventeen provinces of the Netherlands in determined opposition to Spanish rule and the policy of Philip II. The magic of Don John’s name, and the great qualities of which he had given proof, were to recover what had been lost. He was, however, brought into contact with an adversary of a very different calibre from himself. This was William of Orange, whose influence was now supreme throughout the Netherlands. The Pacification of Ghent, which was really a treaty between Holland and Zeeland and the other provinces for the defence of their common interests against Spanish oppression, had been followed by an agreement between the southern provinces, known as the Union of Brussels, which, though maintaining the Catholic religion and the king’s authority, aimed at the expulsion of the Spanish soldiery and officials from the Netherlands. Confronted by the refusal of the states general to accept him as governor unless he assented to the conditions of the Pacification of Ghent, swore to maintain the rights and privileges of the provinces, and to employ only Netherlands in his service, Don John, after some months of fruitless negotiations, saw himself compelled to give way. At Huey on the 12th of February 1577 he signed a treaty, known as the “Perpetual Edict,” in which he complied with these terms. On the 1st of May he made his entry into Brussels, but he found himself governor-general only in name, and the prince of Orange master of the situation. In July he suddenly betook himself to Namur and withdrew his concessions. William of Orange forswore his adherence to Brussels, and gave his support to the archduke Matthias, afterwards emperor, whom the states-general accepted as their sovereign. Meanwhile Philip had sent large reinforcements to Don John under the leadership of his cousin Alexander Farnese. At the head of a powerful force Don John now suddenly attacked the patriot army at Gemblours, where, chiefly by the skill and daring of Farnese, a complete victory was gained on the 31st of January 1578. He could not, however, follow up his success for lack of funds, and was compelled to remain inactive all the summer, chafing with impatience at the cold indifference with which his appeals for the sinews of war were treated by Philip. His health gave way, he was attacked with fever, and on the 1st of October 1578, at the early age of 33, Don John died, heartbroken at the failure of all his soaring ambitions, and at the repeated proofs that he had received of the king his brother’s jealousy and neglect.

Sir J. Stirling Maxwell, Don John of Austria 1547–1575 (1883) and the bibliographies under L. I. A.

JOHN, DON (1620–1679), of Austria, the younger, recognized as the natural son of Philip IV, king of Spain, his mother, Maria Calderon, or Calderona, being an actress. Scandal accused her of a prodigality of favours which must have rendered the paternity of Don John very dubious. He was, however, recognized by the king, received a princely education at Ocaña, and was amply endowed with commanderies in the military orders, and other forms of income. Don John was sent in 1647 to Naples—then in the throes of the popular rising first led by Masaniello—with a squadron and a military force, to support the viceroy. The restoration of royal authority was due rather to the exhaustion of the insurgents and the follies of their French leader, the duke of Guise, than to the forces of Don John. He was next sent as viceroy to Sicily, whence he was recalled in 1651 to complete the pacification of Catalonia, which had been in revolt since 1640. The excesses of the French, whom the Catalans had called in, had produced a reaction, and Don John had not much more to do than to prevent the final siege of Barcelona and the convention which terminated the revolt in October 1652. On both occasions he had played the peacemaker, and this sympathetic part, combined with his own pleasant manners and handsome person with bright eyes and abundant raven-black hair—a complete contrast to the fair complexions of the Habsburgs—made him a popular favourite. In 1656 he was sent to command in Flanders, in combination with the prince of Condé, then in revolt against his own sovereign. At the storming of the French camp at Valenciennes in 1656, Don John displayed brilliant personal courage at the head of a cavalry charge. When, however, he took a part in the leadership of the army at the Dunes in the battle fought against Turenne and the British forces sent over by Cromwell in 1658, he was completely beaten, in spite of the efforts of Condé, whose advice he neglected, and of the hard fighting of English Royalist exiles. During 1661 and 1662 he commanded against the Portuguese in Estremadura. The Spanish troops were ill-appointed, irregularly paid and untrustworthy, but they were superior in numbers and some successes were gained. If Don John had not suffered from the indecisions with Clarendon, who knew him, considered his chief defect, the Portuguese would have been hard pressed. The greater part of the south of Portugal was overrun, but in 1663 the Portuguese were reinforced by a body of English troops, and were put under the command of the Huguenot Schomberg. By him Don John was completely beaten at Estremos. Even now he might not have lost the confidence of his father, if Queen Mariana, mother of the sickly infante Carlos, the only surviving legitimate son of the king, had not regarded the bastard with distrust and dislike. Don John was removed from command and sent to his commandery at Consuegra. After the death of Philip IV. in 1665 Don John became the recognized leader of the opposition to the government of Philip’s widow, the queen regent. She and her favourite, the German Jesuit Nithard, seized and put to death one of his most trusted servants, Don José Malladas. Don John, in return, put himself at the head of a rising of Aragon and Catalonia, which led to the expulsion of Nithard on the 29th of February 1666. Don John was, however, forced to content himself with the viceroyalty of Aragon. In 1677, the queen mother having aroused universal opposition by her shameless favour for Fernando de Valenzuela, Don John was able to drive her from court, and establish himself as prime minister. Great hopes were entertained of his administration, but it proved disappointing and short. Don John died on the 17th of September 1679.

The career of Don John can be followed in J. C. Dunlop’s Memoirs of Spain 1621–1700 (Edin. 1834).

JOHN OF BEVERLEY, ST (d. 721), English bishop, is said to have been born of noble parents at Harpham, in the east riding of Yorkshire. He received his education at Canterbury under Archbishop Theodore, the statement that he was educated at Oxford being of course untrue. He was for a time a member of the Whity community, under St Hilda, and in 687 he was consecrated bishop of Hexham and in 705 was promoted to the bishopric of York. He resigned the latter see in 718, and retired to a monastery which he had founded at Beverley, where he died on the 7th of May 721. He was canonized in 1037, and his feast is celebrated annually in the Roman Church on the 7th of May. Many miracles of healing are ascribed to John, whose pupils were numerous and devoted to him. He was celebrated for his scholarship as well as for his virtues.

The following works are ascribed to John by J. Bale: Pro Luca episcopo, 1544, in Elenchus de episcopis; Epistola ad Herculam, Audeum, et Bertinum; and Epistola ad Hyludam abbatissam. See life by Folkard, based on Bede, in Acta SS. Holland.; and J. Raine’s Fasti eboracenses (1863).

JOHN OF THE CROSS, ST (1542–1591), Spanish mystic, was born at Ontiveros (Old Castle) on the 24th of June 1542. He became a professor at Carmelites in 1564, and was ordained priest at Salamanca in 1567. He met with much opposition in his efforts to introduce the reforms proposed by St Theresa, and was more than once imprisoned. His real name was Juan de Yepes y Álvarez; in religion he was known as Juan de San Matias till 1568, when he adopted the name of Juan de la Cruz.
JOHN OF ASIA—JOHN OF DAMASCUS

448

Broken by persecution, he was sent to the monastery of Ubeba, where he died in 590. His Obras espirituales were published posthumously in 1618. He was beatified in 1674 and canonized on the 27th of December 1726. The symbolism of his prose is frequently obscure, but his lyrical verses are distinguished for their rapturous ecstasy and beauty of expression.

Some of his poems have been translated with great success by Arthur Symons in Images of Good and Evil; the most recent edition of his works, which have been frequently reprinted, is contained in vol. xvi. of the Bibliotheca scriptorum.

JOHN OF ASIA (or of Ephesus), a leader of the Monophysite Syriac-speaking Church in the 6th century, and one of the earliest and most important of Syriac historians. Born at Amid (Diarbekir) about 505, he was there ordained as a deacon in 525 but in 534 we find him in Palestine, and in 535 he was consecrated bishop of Constantinople.

The loss of his writing, whether from the涑 penalty which broke out there in 534 or the furious persecution directed against the Monophysites by Ephraim (patriarch of Antioch 530-544) and Abraham (bishop of Amid c. 520-541). In Constantinople he seems to have early won the notice of Justinian, one of the main objects of whose policy was the consolidation of Eastern Christianity as a bulwark against the heathen power of Persia. John is said by Barhebraeus (Chron. eccl. i. 195) to have succeeded Anthimus as Monophysite bishop of Constantinople, but this is probably a mistake. Anyhow he enjoyed the emperor's favor until the death of the latter in 565 and (as he himself tells us) was entrusted with the administration of the entire revenues of the Monophysite Church. He was also sent, with the rank of bishop, on a mission for the conversion of such heathen as remained in Asia Minor, and informs us that the number of those whom he baptized reached 70,000. He built a large monastery at Tralles on the hills skirting the valley of the Meander, and more than 90 other monasteries. Of the mission to the Nubians which he promoted, though he did not himself visit their country, an interesting account is given in the 4th book of the 3rd part of his History. In 546 the emperor entrusted him with the task of rooting out the secret practice of idolatry in Constantinople and its neighbourhood. But his fortunes changed soon after the accession of Justin II. About 571 Paul of Asia, the orthodox or Chalcedonian patriarch, began (with the sanction of the emperor) a vigorous persecution of the Monophysite Church leaders, and John was among those who suffered most. He gives us a detailed account of his sufferings in prison, his loss of civil rights, &c., in the third part of his History. The latest events recorded are of the date 585, and the author cannot have lived much longer; but of the circumstances of his death nothing is known. His work, called his Ecclesiastical History, which covered more than six centuries, from the time of Julius Caesar to 585, it was composed in three parts, each containing six books. The first part seems to have wholly perished. The second, which extended from Theodosius II to the 7th year of Justin II, was (as F. Nau has recently proved) reproduced in full or in full in John's own words, in the third part of the Chronicle which was till lately attributed to the patriarch Dionysius Telmaharensis, but which is really a redaction of John's History. In it we find much of John's History, in which he had probably incorporated the so-called Chronicle of Joshua the Sylite, considerable portions of which are found in the British Museum MSS. Add. 1467 and 1468, and these have been further enriched by the discoveries of the Otho manuscript in the Vatican Library (R. Ottley, Anecdota descripta, 1853), with a continuation giving an account of the heresies that arose after the time of that writer. The third part, entitled "Εκθεις δευτερη της θεωρων επερευται " ("An Accurate Exposition of the Orthodox Faith of the Later On this he is called the "first of his name" by the Arabic monks and as the "father of the theological system of the church in the time of the fathers and church councils, from the 4th to the 7th century. It thus embodies the finished result of the theological thought of the early Greek Church. Through a number of Latin and Arabic manuscripts, made and paid by the Pisans in the 8th century, it was well known to Peter Lombard and Aquinas, and in this way it influenced the scholastic theology of the West. Another well-known work is the Sacra paralla, a collection of Greek and Latin inscriptions, ascribed by him to John of Damascus and to the fathers. There is much merit in his hymns and "canons" of the latter is very familiar as the hymn "The Day of Resurrection, Earth tell it out abroad." John of Damascus has sometimes been considered as the humanised Chrysostom, but the Church of the East, and of the Greeks," these epithets are appropriate only in a limited sense. The Christological position of John may be summed up in the following description: "He tries to secure the unity of the two arrangement, and the occasional repetition of accounts of the same events are due, as the author himself informs us (i. 50), to the work being almost entirely composed during the times of persecution. The same cause may account for the somewhat slavish Syrian style. The work is full of references to the works of Chrysostom and Philostratus, of which he often speaks without comment, and even of references to the writings of the pseudo-Dionysius. The work is written in the narrow point of view of one to whom Monophysity "orthodoxy" was all-important; it is evidently a faithful reproduction of events as they occurred. This part third was edited by Duval's (1896), and was translated into English by G. F. Fisher, 1896.)
natures by relegating to the divine Logos the formative and controlling agency. It is not a human individual that the Logos assumes, nor is it humanity, or human nature in general. It is rather a potential human individual, a nature not yet developed into a person or organism, which then passes the thirdly one place in the personal Logos through whose union with this potential man, in the womb of Mary, the potential man acquires a concrete reality, an individual existence. He has, therefore, no hypostasis of himself but only in and through the Logos. It is denied that he has of his own the inner static (ἀνωτάτης); it is affirmed that he is ἐν-ὑποστάσει (ἐν-ὑποστάτω). Two natures may form a unity, as the body and soul in man. So man, both soul and body, is brought into unity with the Logos; there being then one hypostasis from the nature of a man. There is an inner change of the divine and human attributes, a communication of the former which desexual the receptive and passive human nature. In Christ the human will has become the organ of the divine will. Thus while John's nature works through and through the Logos, it is denied that he has in the monophasic direction. the Chalcedonian Definition is victorious, but Apollinaris is not overcome; what John gives with the one hand he takes away with the other. On the question of the Ationement he regards the death of Christ as a sacrifice offered to God and not a ransom paid to the devil.

**JOHN OF HAXEM—JOHN OF SALISBURY**

See the notices in John Lydon’s Introduction to his edition of the *Compendium of Scotland* (1891), pp. 55 seq.; *The Scottish Antiquary*, xiii. 111–115 and xv. 1–14. Annotated extracts are given in Gregory Smith’s Specimens of Middle Scots (1902).

**JOHN OF RAVENNA.** Two distinct persons of this name, formerly confused and identified with a third (anonymous) Ravenne in Petrarch’s letters, lived at the end of the 14th and the beginning of the 15th century.

1. A young Ravennase born about 1347, who in 1364 went to live with Petrarch as secretary. In 1367 he set out to see the world and make a name for himself, returned in a state of destitution, but, growing restless again, left his employer for good in 1368. He is not mentioned again in Petrarch’s correspondence, unless a letter “to a certain wanderer” (noso cuadum), congratulating him on his arrival at Rome in 1373, is addressed to him.

2. Son of Conversus (Conversinus, Conversinus). He is first heard of (Nov. 17, 1368) as appointed to the professorship of rhetoric at Florence, where he had for some time held the post of notary at the courts of justice. This differentiates him from (1). He entered (c. 1370) the service of the ducal house of Padua, the Carraras, in which he continued at least until 1404, although the whole of that period was not spent in Padua. From 1375 to 1376 he was a schoolmaster at Belluno, and was dismissed as too good for his post and not adapted for teaching boys. On the 22nd of March 1382, he was appointed professor of rhetoric at Padua. During the struggle between the Carraras and Visconti, he spent five years at Udine (1387–1392). From 1395–1404, he was chancellor of Francesco di Carrara, and is heard of for the last time in 1406 as living at Venice. His history of the Carraras, a tasteless production in barbarous Latin, says little for his literary capacity; but as a teacher he enjoyed a great reputation, amongst his pupils being Vittorino da Feltre and Guarino of Verona.

3. Malpighini (De Malpaghinis), the most important. Born about 1356, he was a pupil of Petrarch from a very early age to 1374. On the 10th of September 1397 he was appointed professor of rhetoric and eloquence at Florence. On the 6th of June 1412, on the re-opening of the studio, which had been shut from 1405 to 1411 owing to the plague, his appointment was renewed for five years, before the expiration of which period he died (May 1417). Although Malpighini left nothing behind him, he did much to encourage the study of Latin; among his pupils was Poggio Bracciolini.

The local documents and other authorities on the subject will be found in E. T. Ketle, Beiträge zur Geschichte und Literatur der italischen Gelehrtenrenaissance, vol. i. (1888); see also G. Voigt, *Die Wiederehebung des klassischen Altertums*, which, however, identifies (1) and (2).

**JOHN OF SALISBURY** (c. 1115–1180), English author, diplomatist and bishop, was born at Salisbury between the years 1115 and 1120. Beyond the fact that he was of Saxon, not of Norman race, and applies to himself the cognomen of *Parvus*, "short," or "small," few details are known regarding his early life; but from his own statements it is gathered that he crossed to France about 1136, and began regular studies in Paris under Abelard, who had there for a brief period re-opened his famous school on Mont St Genève. After Abelard’s retirement, John carried on his studies under Alberich of Reima and Robert of Melun. From 1138 to 1140 he studied grammar and the classics under William of Conches and Richard l’Evêque, the disciples of Bernard of Chartres, though it is still a matter of controversy whether it was in Chartres or not (cf. A. Clevral, *Les Écoles de Chartres au moyen âge*, 1895). Bernard’s teaching was distinguished partly by its pronouncement Platonistic tendency, partly by the stress laid upon literary study of the greater Latin writers; and the influence of the latter feature is noticeable in all John of Salisbury’s works. About 1140 he was at Paris studying theology under Gilbert de la Porre, then under Robert Pullus and Simon of Poissy. In 1148 he resided at...
JOHN OF SWABIA—JOHN, EPISTLES OF

Moïssete la Celle in the diocese of Troyes, with his friend Peter of Celle. He was present at the council of Reims, presided over by Pope Eugenius III., and was probably presented by Bernard of Clairvaux to Theobald, archbishop of Canterbury, at whose court he settled, probably about 1150. Appointed secretary to Theobald, he was frequently sent on missions to the papal see. During this time he composed his greatest works, published almost certainly in 1159, the Politicus, sive de nugis curialium et de vestigiis philosophorum and the Metalegeticus, writings invaluable as storehouses of information regarding the matter and form of scholastic education, and remarkable for their cultivated style and humanist tendency. After the death of Theobald in 1161, John continued as secretary to Thomas Becket, and took an active part in the long disputes between that prince and his sovereign, Henry II. His letters throw light on the constitutional struggle then agitating the English world. With Becket he withdrew to France during the king's displeasure; he returned with him in 1170, and was present at his assassination. In the following years, during which he continued in an influential situation in Canterbury, but with what power and occasion he did not always himself declare, he devoted himself to the Life of Thomas Becket. In 1176 he was made bishop of Chartres, where he passed the remainder of his life. In 1179 he took an active part in the council of the Lateran. He died at or near Chartres on the 23th of October 1180.

John's writings enable us to understand with much completeness the literary and scientific position of the 12th century. His views imply a cultivated intelligence well versed in practical affairs, opposing to the extremes of both nominalism and realism a practical common sense. His doctrine is a kind of utilitarianism, with a strong leaning on the speculative side to the modern literary scepticism of Cicero, for whom he had unbounded admiration. He was a humanist before the Renaissance, surpassing all other representatives of the school of Chartres in his knowledge of the Latin and Greek literature of his day, which he had quite accurately moulded on that of Cicero. Of Greek writers he appears to have known nothing at first hand, and very little in translations. The Timæus of Plato in the Latin version of Chalcidius was known to him as to his contemporaries and predecessors, and probably he had access to translations of the Phaedo and Meno. Of Aristotle he possessed the whole of the Organon in Latin; he is, indeed, the first of the medieval writers of note to whom the whole of the Academy has descended. Of other Aristotelian writings he appears to have known nothing. The connected editions of the works are by J. A. Gille (5, ii. Oxford, 1848), and by Migne, in the Patrologia cursus, vol. 199; neither accurate. The Politicus was edited with notes and introduction by C. R. W. with an old edition of 1862, which is a model of accurate and complete workmanship. See also the article in the Dict. Nat. Bur.

JOHN (1290-1326), surnamed the Parricide, and called also John of Swabia, was a son of Rudolph II. count of Habsburg and Agnes daughter of Ottakar II. king of Bohemia, and consequently a grandson of the German king Rudolph I. Having passed his early days at the Bohemian court, when he came of age he demanded a portion of the family estates from his uncle, the king. When his demands were not granted, and with three companions he formed a plot to murder the king. On the 1st of May 1308 Albert in crossing the river Reuss at Windisch became separated from his attendants, and was at once attacked and killed by the four conspirators. John escaped the vengeance of Albert's sons, and was afterwards found in a monastery at Pisa, where in 1313 he is said to have been visited by the emperor Henry VII., who had placed him under the ban. From this time he vanishes from history. The character of John is used by Schiller in his play Wilhelm Tell.

JOHN, THE EPISTLES OF. The so-called epistles of John, in the Bible, are not epistles in the strict sense of the term, for the first is a homily, and encyclical or pastoral (as has been recognized since the days of Bretschneider and Michaelis), while the other two are brief notes or letters. Nor are they John's, if John means the son of Zedebec. The latter conclusion depends upon the particular hypothesis adopted with regard to the general Johannine problem, yet even when it is held that John the apostle (q.v.) survived to old age in Ephesus, the second and third epistles may be fairly ascribed (with Erasmus, Grotius, Credner, Bretschneider, Reuss, &c.) to John the presbyter, as several circles in the early church held ("Opinio a plerisque tradita," Jerome: De vir. ill. 13). An apostle indeed might call himself a presbyter (cfr. 1 Pet. v. 1). But these notes imply no apostolic claim on the part of the author, and, although their author is anonymous, the likelihood is that their composition by the great Asiatic presbyter John led afterwards to their incorporation in the "instrumentum" of John the apostle's writings, when the prestige of the latter had obscured the former. All hypotheses as to their pseudo-Baptist or composition by different hands may be dismissed. They would never have floated away on the stream of tradition except on the support of some primitive authority. If this was not connected with John the apostle the only feasible alternative is to think of John the presbyter, for Papias refers to the latter in precisely this fashion (Euseb. H. E. iii. 35, 15; sae vaco a. Π. Εἰκεν).

The period of all three lies somewhere within the last decade of the 1st century A.D. (190-200), the latter part of the 2nd. No evidence is available to determine in what precise order they were written, but it will be convenient to take the two smaller notes before the larger. The so-called Second Epistle of John is one of the excommunicating notes occasionally despatched by early Christian leaders to a community (cfr. 2 Cor. v. 9). The presbyter or elder warns a Christian community, figuratively addressed as "the elect lady" (cfr. 13 with 1 Pet. i. 1; v. 13; also the plural of 6, 8, 10 and 13), against some itinerant (cfr. Didache xi. 1-2), teachers who were promulgating advanced Docetic views (7) upon the person of Christ. The note is merely designed to serve (12) until the writer arrives in person. He sends greetings to his correspondents from some community in which he is residing at present (13), and with which they had evidently some connexion.

The third Epistle of John belongs to the κατάσωλον σωτηρίαν (2 Cor. iii. 1) of the early church, like Rom. xvi. It is a private note addressed by the presbyter to a certain Gaius, a member of the same community or house-church (9) as that to which 2 John is written. A local errorist, Diotrephes (9-10) had repudiated the authority of the writer and his party, threatening even to excommunicate Gaius and others from the church (cfr. Abbott's Diatessaron, § 2258). With this opponent the writer promises (10) to deal sharply in person before very long. Meanwhile (14) he despatches the present note, in hearty appreciation of his correspondent's attitude and character.

The allusion in 9 (Ὑψώτητα) refers in all likelihood to the "second" epistle (so Ewald, Wolf, Salmon, &c.). In order to avoid the suggestion that it implied a lost epistle, long was inserted at an early stage in the textual history of the note. Ἑλληστον could be read in 12, Demetrius would be a presbyter; in any case, he is not to be identified with Demas (Chapman), nor is

1 So Selwyn, Christian Prophets (pp. 133-145), Harnack, Heinrici (Das Urchristenthum, 1902, pp. 129 seqq.), and von Soden (History of Early Christian Literature, pp. 445-446), after Renan (L'Église chrétienne, pp. 228-229), and J. T. F. (Christian Life in the Primitive Church, pp. 218 seqq.) and R. Kropf (Das nachapostol. Zeitalter, 1903, pp. 32 seqq., &c.) are among the most recent critics who ascribe all three epistles to the presbyter.

there any reason to suppose (with Harnack) that the note of 9
was written to, and superseded by, him. What the presbyter
is afraid of is not so much that his note would not be read
(Ewald, Harnack), as that it would not be acted upon.
These notes, written originally on small sheets of papyrus,
reveal the anonymous presbyter travelling (so Clem. Alex. Quis
dives salt. xlii.) in his circuit or diocese of churches, and writing
occasional pastoral letters, in which he speaks not only in his
own name but in that of a coterie of like-minded Christians. It
is otherwise with the brochure or manifesto known as the
"first epistle." This was written neither at the request of its
readers nor to meet any definite local emergency, but on the
initiative of its author (i. 4) who was evidently concerned about
the effect produced upon the Church in general by certain
contemporary phases of semi-gnostic teaching. The polemic is
directed against a dualism which developed theoretically into
docetic views of Christ's person (ii. 22, iv. 2, &c.), and practically
to libertinism (ii. 4, &c.). It is natural to think, primarily,
of the churches in Asia Minor as the circle addressed, but all
indications of date or place are absent, except those which may be
inferred from its inner connexion with the Fourth Gospel.
This polemic, which is cut out of the larger document, resembling a series of variations upon one or two favourite themes rather than a carefully constructed melody. Fellowship (κοινωνία) with God and man is its dominant note. After
defining the essence of Christian fellowship (κοινωνία (i. 3), the writer passes on to its conditions (i. 5—ii. 17), under the antithesis of light and darkness. These conditions are twofold: (a) a sense of sin, which leads Christians to a sense of forgiveness through Jesus Christ, and (b) obedience to the supreme law of brotherly love (cf. Ignat. Ad Smyrn. 6). If these conditions are fulfilled, moral darkness is the issue, a darkness which spells ruin to the soul. This prompts the writer to explain the dangers of this darkness (i. 18—26), under the antithesis of truth and falsehood, the immediate peril being a novel heretical view of the person of

1 In his ingenious study (Texte und Untersuchungen, xv. 3), his main contention is adopted by von Dobschütz and Knopf. On this view (for criticism see Belser in the Tübing. Quarto, 1897, pp. 159 seq.), Krüger in Zeitschrift für die wissen. Theologie, 1898, pp. 307-311, and Hilgenfeld; ibid. 316-320), Diotrephes was voicing a successful protest of the local monarchical bishops against the older itinerant authorities (cf. Schmiedel, Encyc. Bibl., 3145-3147). As Willamowitz-Moellenberg (Irenaeus, 1898, pp. 529 seq.) points out, however, not Jewish Christians. On the authority of the writer argues that, as the substitution of ἤγγελος for θεότοκος (ver. 1) ist Schönnered und nicht vom besten Geschmacke, the writer adds το αὐτοῦ το ἅγιον ἀντιθέτητα.

2 Several of these traits were reproduced in the teaching of Cerinthus; others may have been animistic). Cf. the general discussions of the opposition to the Messianic rôle of Jesus had varied adherents. The denial of the Virgin-birth, which also formed part of the system of Cerinthus, was met by anticipation in the stories of Matthew and Luke, which pushed back the idea of the baptism from the baptism to the birth, but the Johannine school evidently preferred to answer this heresy by developing the theory of the Logos, with its implications of pre-existence. On the "sin to death" (v. 16), cf. Jubel. xxii. 22, xxvi. 34 with Karl's Johannstudien (1898), i. 97 seq., and M. Goguel's La Notion johannique de l'esprit (1902), pp. 147-153, for the general theology of the epistle. The conceptions of light and life are best handled by Grill in his Untersuchungen über die Entwicklung des vierten Evangeliums (1911), pp. 321 seq.

3 In Preussens Zeitschrift für die neueste Wissenschaft (1907), pp. 1-8, von Dobschütz tries to show that the present text of ii. 28—iii. 12 indicates a revision or rearrangement of an earlier text. (Ursprünglich der Christianen, Altona, 1808) had already considered that a gnostic editor must have worked over a Jewish Christian document.

4 Dr Alois Wurm's attempt (Die Irrlehrer im ersten Johannebriefe, 1903) to read the references to errrorsosts only in the light of Jewish tradition, and not by analogy with the other Gospels, is supported on the whole by Clemen, in Preussens Zeitschrift (1905), pp. 271-281. There is certainly an anti-Jewish touch, e.g. in the claim of iii. 1 (note the emphatic ἐστι), where one recollects the sayings in the Fourth Gospel (viii. 28, xii. 28). The gnostic idea of the Johannine writer is that the name θεός, that is, the name Θεός Μαρτυροῦσα, comes from καθάρισθαι, καθάρισθαι τούτον; and διακονηθέντος τοῦ ἀνθρώπου, τοῦ λόγου τῆς ἀμαρτίας. (De confl. ling. 28). But the antithesis of John and Cerinthus, unlike that of Paul and Cerinthus (Epist. i. 28.), is too well based in the tradition of the early Church to be dismissed as a later dogmatic reflection, and the internal evidence of this manifesto corroborates it clearly.
whose mission furnishes the proof of God's love as well as the example and the energy of man's (iv. 10 seq.). The same conception of the real humanity of Jesus Christ as essential to faith's being and well-being is worked out in the following paragraph (v. 1-12), while the allusion to eternal life (v. 11-12) leads to the closing recapitulation (v. 13-21) of the homily's leading ideas under this special category.

The curious idea, mentioned by Augustine (Quaest. evang. ii. 39), that the writing was addressed ad Parthos, has been literally taken by several Latin fathers and later writers (e.g. Grotius, Paulus, Hammond), but this title probably was a corruption of ad sparsos (Wetstein, Wegscheider) or of πορτον (Westcott: the Christians addressed as virgin, i.e. free from heresy), if not of παρθενος, as applied in early tradition to John the apostle. The circle for which the homily was meant was probably, in the first instance, that of the Fourth Gospel, but it is impossible to determine whether the epistle preceded or followed the larger treatise. The division of opinion on this point (cf. J. Moffat, Historical New Testament, 1901, p. 534) is serious, but the evidence for either position is purely subjective. There are sound possibilities in style and conception to justify provision for the second. 

The epistle may have been written by a different author from a more popular standpoint, by the author of the gospel, possibly (as some critics hold) by the author of John xxii. But res lubrica, opinio inerita.

It is unsafe to lay much stress upon the apparent reminiscence of iv. 2-3 (or of 2 John 7) in Polycarp, ad Phil. 7 reading ἔλοτρον instead of ὑλούμβων (as Westcott). If, however, a literary citation is assumed, the probability is that Polycarp is quoting from the epistle, not vice versa (as Volkmar contends, in his Ursprung d. unsr. Enghien 47 seq.). But Papias is said by Eusebius (H. E. iii. 39) to have used ἡ ὑλούμβων πορθήματα (ἡ ὑλούμβων πορθήματι, v. 87), i.e. the anonymous tract, which, by the time of Eusebius, had come to be known as 1 John, and we have no reason to suspect or reject this statement, particularly as Justin Martyr, another Asiatic writer, furnishes clear echoes of the epistle (Did. 123). The tract must have been in circulation throughout Asia Minor at any rate before the end of the first quarter of the 2nd century. The terminus a quo is approximately the period of the Fourth Gospel's composition, and it is probable that the epistle was the first to hold, even upon the hypothesis that both dates from the same pen. The aim of each is too special to warrant the conclusion that the epistle was intended to accompany or to introduce the gospel.

JOHN, GOSPEL OF ST.

The fourth and latest of the Gospels, in the Bible, and, next to that of St. Mark, the shortest. The present article will first describe its general structure and more obvious contents; compare it with the Synoptic Gospels; and draw out its leading characteristics and final object. It will then apply the tests thus gained to the narratives special to this Gospel; and point out the book's special difficulties and limits, and its abiding appeal and greatness. And it will finally consider the questions of its origin and authorship.

Analysis of Contents.—The book's chief break is at xiii. 1, the solemn introduction to the feet-washing: all up to here reports Jesus' teaching and the预期 as befitting the beginning of the mystery; hence onwards it pictures the manifestation of His glory to the inner circle of His disciples. These two parts contain three sections each. 1. (i.) Introduces the whole work (i. 1-ii. 11). (a) The prologue, i. 4-18. John declares his Logos, the Word of God, to be very God and was God; and all things were made through Him. (b) In this Logos is Life, and this Life is a Light which, though shining in darkness, cannot be suppressed by it. This true Light became flesh and tabernacled amongst us; and we beheld His glory, as of an Only-Begotten from the Father, full of grace and truth. (c) The Baptist testified concerning Him, the Logos-Light and Logos-Life incarnate; but this Logos alone, who is in the bosom of the Father, is the Father's Son. (ii.) The fourth day's work (i. 9-51). (a) The first three days John proceeds to narrate the events which proclaims Jesus to be the Christ, and sends his own disciples away to Jesus. On the fourth day, Jesus Himself calls Philip and Nathanael. (b) The seventh day's first manifestation of the Incarnate Light's authority; i.e. Jesus works the first great miracle (ii. 1-11). (ii.) Records the manifestations of the Light's and Life's glory and power to friend and foe (ii. 22-vi. 71). (c) Solemn inauguration of the Messianic ministry (ii. 12-iii. 21); cleansing of the Temple and prophecy of His resurrection; discourse to Nicodemus on baptismal regeneration. (d) Three scenes in Judea, Samaria, Galilee respectively (iii. 32-iv. 54): the Baptist's second testimony; Jesus' discourse
with the woman at the well concerning the spiritual, universal character of the new religion; and cure of the ruler's son, the reward of faith in the simple word of Jesus. (f) Manifestation of Jesus as the living life-Logos and its contradiction in Judea, v.: the dual manifestation occurs in the kingdom of God which is already present; the living Bread and its contradiction in Galilee, vi.: multiplication of the loaves; walking on the waters; and His discourse on the holy Eucharist.

(iii) The great conflict between the New Light and the old darkness (vii.-xii.). (k) Self-manifestation of the Logos-Light in the Temple (vii. 1-x. 39). Journey to the feast of tabernacles; invitation to the soul a to come to Him (the fountain of Life) and drink, and proclaim the glad tidings to the world (xii. 24-33); He is the messianic king (xiii. 31-35); Judge of the nations (xviii. 13-34); His friend Lazarus being buried three days; proclaims Himself the resurrection and the Life; and calls Lazarus back to life. Some who saw it report to the Pharisees; the Sanhedrin meets, Calaphas declares that one man must die for the people, and Pilate, in accordance with Jewish custom, pronounce an acerbic condemnation of Jesus; He declares the hour of His glorification to have come: "Now My soul is troubled. . . . Father, save Me from this hour. But for this have I come into this hour: Father, glorify Thy Name." A voice from heaven, "This is My beloved Son, in whom I am well pleased." Some think that an angel spoke; but Jesus explains that this voice was not for His sake but for theirs. When lifted up from earth, He will draw all men to Himself; they are to believe in Him. The Light. (iv) The Last Supper (xiv.-xvii.). (j) Solemn washing of the disciples' feet: the beloved disciple; designates the traitor; Judas goes forth, it is night (xiii. 30). (l) Last discourses, first series (xiii. 31-xv. 20). Jesus commands His disciples to believe and be joyful; He speaks of the three public stages of the Messianic Messianic model to the disciples. (m) Second series (xv. 21-xvi. 33): allegory of the true vine; "Greater love than this hath no man, that he lay down his life for his friend"; the world's hatred; the spirit of truth shall lead them to the knowledge of the Father; the world comes to take them out of the world, again I leave the world and go to the Father"; "Be of good cheer, I have overcome the world." (l) The high-priestly prayer (xvi. 20). Father, glorify Thy Son ... with the glory which I had with Thee before the world was. . . . so many as Thou hast given Me, He should give eternal life." I pray for them, I pray not for the world. I pray also for them that shall believe in Me through their word, that they may be all one, as Thou, Father, art in Me. (v) The Passion (xvii.-xix.). (m) In the garden: the Roman soldiers come to apprehend Him, fall back upon the ground at His declaration: I am He. Peter and Malchus. (n) Before Annas at night (xviii. 12-23). (o) Before Pilate at dawn (xviii. 28-40). Jesus declares, "My kingdom is not of this world. I have come into the world, that whoever believes in Me should not see death." everyone that is of truth, heareth My voice; "Pilate asks, "Art thou a king then?" "Thou sayest. . . . I am a king . . . . Therefore I was born, destined for the resurrection; Jesus comes and submits to the doubter's tests. Thomas exclaims, "My Lord and My God!" but Jesus declares "Blessed are they that have not seen and yet have believed." The Passion is a synthesis of all the many other signs, . . . but these are written, that ye may believe that Jesus is the Christ, the Son of God, and that believing ye may have life in His name.

The analysis is rough, since even distantly placed sections, indeed the two parts themselves, are interrelated by delicate complex references on and back. And it omits the account of the adulteress (viii. 53-viii. 10): (a) valuable report of an actual occurrence; (b) theology of the divine value of human suffering—incorporated by the Synoptists, because it is quite un-Johannine in vocabulary, style and character, interprets the Gospel's thread wherever placed, and is absent from its best MSS. It also omits xi. 12-27, xxii. 1-16. The first part contains an important and baptsical document of Synoptic type; Jesus' apportion to seven disciples by the Lake of Galilee and the miraculous draught of fishes; and Peter's threefold confession and Jesus' threefold commission to him. And its third stage, Jesus' prophecies to Peter and to the other disciples in the next two weeks. This is the stage in which Jesus appears to the disciples and speaks to them of His unbroken plan of salvation; the Paraclete is described as the one who testifies to these things and who has written them, and we know that His testimony is true, is doubtless written by the redactor of the previous two stages. This writer imitates, but is distant from, the figures and the faith of the first stage.

Comparison with the Synoptists.—The following are the most obvious differences between the original book and the Synoptists. John has a metaphysical prologue; Matthew and Luke have historical prologues. John's account of the calling of the first disciples is here Jesus, indeed, Jerusalem, but with five breaks (vi. 1-xii. 10) is the only long one; whilst over two-thirds of each Synoptist deal with Galilee or Samaria. The ministry here lasts about three and a half years, beginning a few months before the first Passover, John 2. 14, the feast of v. 1 is probably a second; the third occurs vi. 4; and on the fourth, x. 55, He dies; whilst the Synoptists have but the one Passover of His death, after barely a year of ministry. Here Jesus' discourses are rarely, the Synoptists' are constant. Judas is not a disciple; Jesus' 1-8); cleansing of the Temple (ii. 13-15); cure of the centurion's servant (xv. 46-54); multiplication of the loaves (x. 13); walking upon the water (vi. 21-22); anointing at Bethany, (xii. 1-8); entry into Jerusalem (xi. 12-16); all unique occurrences. In the first, John describes how the Baptist, on Jesus' approach, cries "Behold the Lamb of God, which taketh away the sins of the world."; and how he says "I saw the spirit descending upon Him, and I bore witness. . . ." I tell you, he will say Mark, give the slow steps in even the apostles' realisation of Jesus' Messianic character; only at Caesarea Philippi Simon alone, for the first time, clearly discerns it Jesus declaring that His Father has made Him "King". Jesus' death on the cross is described as a "suffering Messiah" (Mark viii. 28-34). Only some two weeks before the end is He proclaimed Messiah at Jericho (x. 45-48); then in Jerusalem, five days before dying for this upon the cross (x. 1-10, xi. 1-16). He here from the first, the Lamb of God, whilst the pascal lamb, His prototypes, are being slain. The scene in the garden is without the agony of Gethsemane; a faint echo of this historic anguish appears in the scene with the Greeks four days earlier, and even that peaceful
appeal to, and answer of, the Father occurs only for his followers’ sakes. In the garden Jesus here Himself goes forth to meet His captors, and these fall back upon the ground, on His revealing Himself as Jesus of Nazareth. The long scenes with Pilate culminate in the scene of the crowning with thorns, not being dependent upon the object of this His coming being to bear witness to the truth, thus explaining how, though affirming kingship (Mark xv. 2) He could be innocent. In John He does not declare Himself Messiah before the time (John xvi. 26), but when (Mark xiii. 31) the supermundane regal witness to the truth before the Roman governor. The scene on Calvary differs as follows: In the Synoptists the soldiers divide His garments among them, casting lots (Mark xv. 24); in John He stands alone and endures as His seamless tunic, thus fulfilling the text, “They divided His garments among them and upon My vesture they cast lots”: the parallelism of Hebrew poetry, which twice describes one fact, being thus applied to two distinct circumstances, is used in the Synoptic in the unity of the Church, as in Philo the high priest’s seamless robe symbolizes the indivisibility of the universe, expressive of the Logos (De ebræitate, xxii.). In the Synoptists, of His followers only men—women seemed, securely than if he did not include His mother—remain, looking on “from afar” (Mark xvi. 37). In John, His mother stands with the two Marys and the beloved disciple beneath the cross, and “from that hour the disciple took her unto his mother” (xix. 27): the older tradition, “Jesus seeing His mother and the disciple whom He loved standing there” (John xix. 26), is not far from there in Jerusalem till just before Believers, and “His brethren” (Acts i. 14). And John alone tells how the bones of the dead body remained unbroken, fulfilling the ordinance as to the paschal lamb (Exod. xii. 46) and how blood and water flow from His side (John xix. 33). The Synoptists are the Lord (John xii. 32) “the world” by shedding His blood which “cleanseth us from every sin”; and “He cometh by water and blood,” historically at His baptism and crucifixion, and mystically to each faithful soul in baptism and the Lord’s Supper. “The heart’s eye of the world,” in contrast to the Synoptic accounts. Its two halves have each a negative and a positive scene. The empty grave (i. 10) and the apposition to the Magdalen (11-18) together correspond to the message brought by the women (Matt. xxviii. 1-10; xvi. 7-10); ii. 27-36, 31-36, to the ten joyously believing apostles (19-23) and then to the sadly doubting Thomas (24-29) together correspond to Luke xxiv. 36-43, where the eleven apostles join together on the first day (xii. 1). These were Joanne to believe.”

The Johannine discourses reveal differences from the Synoptists so profound as to be admitted by all. Here Jesus, the Baptist and the writer speak so much alike that it is sometimes impossible to say whether they were spoken by the one person. John’s language is often as in the parable of the sower and the “the Son of man” and the “the Word” (x. 30). The speeches dwell upon Jesus’ person and work, as we shall find, with a didactic directness, philosophical terminology and denunciatory exclusiveness unmatched in the Synoptist sayings.”

This is eternal life, that they may know the one true God and Jesus Christ whom Thou hast sent” (xviii. 3), is part of the high-priestly prayer; yet Pêre Calmes, with the papal censor’s approbation, says, “It seems to us impossible to admit that we have here dogmatic developments, which would expand rather than melt away less than by the actual words of Jesus.” “I have told you of earthly things and you believe them not; how shall ye believe if I tell you of heavenly things?” (ii. 12), and “Ye are from beneath, I am from above” (x. 18). The Jesus of John is a founding God and a new world, and a lower, delusive world. “Ye shall die in your sins” (viii. 11), “ye are from your father the devil” (viii. 44); “I am the door of the sheep, all that came before me are thieves and robbers.” (x. 1). “No man can come to me except the Father draw him” (xv. 16), contrast strongly with the yearning over Jerusalem: “The blood which He shed” just and “the blood of Zacharias son of Barachias” (Matt. xxiii. 35-37); and “Father, forgive them; for they know not what they do” (Luke xxiii. 34). And whilst the Synoptist sayings and actions stand in loose and natural relation to the events, the Johannine closely illustrate the sayings that each set everywhere supplements the other: the history itself here tends to become one long allegory. So it is, in the end we find the living water; the multiplication of the loaves and “the living bread which I will give unto the world” and the blind man’s curse; “I am the Resurrection and the Life” and the raising of Lazarus; indeed even with the Temple-cleansing and the prophecy as to His resurrection, Nicodemus’s words and “men loved the darkness rather than the light” and the cure of the inoperative paralytic and “My Father and I work hitherto, the walking phantom-like upon the waters (John vi. 15-21; Mark vi. 40), and the declaration concerning the eucharist, “This is my body which is given for you” (Mark xiv. 24), all the more necessary discourses on the Johannine interpretation of the previous sayings. Some six Synoptic sayings appear here; but we are given some great new sayings full of the Spirit of prophecy.”

Characteristics and Object.—The book’s content results from the continuous operation of four great tendencies. There is everywhere a readiness to handle traditionally, largely historically, materials with a sovereign freedom, controlled and limited by doctrinal convictions and devotional experiences alone. There is everywhere the mystic’s deep love for double, even treble meanings: e.g. the “again” in iii. 2, means, literally, “from the beginning,” to be physically born again, morally, to become as a little child; mystically, “from heaven, God,” to be spiritually renewed, “Judgment” (κρίμα), in the popular sense, condemnation, a future act; in the mystical sense, discrimination, a present fact. There is everywhere the influence of certain central ideas, partly identical with, but largely developments of, those less reflectively operative in the Synoptists. Thus six great terms are characteristic of, or even special to, this Gospel. The Only-Begotten is most nearly reached by St. Paul’s term “His own Son.” The “Word,” or “Logos,” is a term derived from Heracleitus of Ephesus and the Stoics, through the Alexandrian Jew Philo, but conceived here throughout as determines to person. “The Light of the World” the Jesus-Logos here proclaims Himself to be; in the Synoptists He only declares His disciples to be such. “The Paraclete,” as in Philo, is a ‘helper,’” an “intercessor” but in Philo He is the “disciple” who from the Lord. The Logos here is a self-conscious Spirit. “Truth,” “the truth,” “to know,” have here a prominence and significance far beyond their Synoptic or even their Pauline use. And above all stand the uses of “Life,” “Eternal Life.” The living ever-working Father (vi. 57; v. 17) has a Logos in whom is Life (i. 4), an ever-working Son (v. 17), who declares Himself “the living Bread,” “the Resurrection and the Life,” “the Way, the Truth and the Life,” “the Word” (vi. 31; xi. 25; xiv. 16); so that Father and Son quicken whom they will (v. 21); the Father’s commandment is life everlasting, and Jesus’ words are spirit and life (xii. 30; viii. 63). The term, already Synoptic, takes over here most of the connotations of the “Kingdom of God,” the standing Synoptic expression, which appears here only in iii. 5; xviii. 36. Note that the term “the Logos” is peculiar to the Apocalypse (xiii. 13), and the prologue here; but that, as Light and Life, the Logos-conception is present throughout the book. And thus there is everywhere a striving to contemplate himself sub specie aeternitatis and to englobe the successiveness of man in the simultaneity of God.

Narratives Peculiar to John.—Of his seven great symbolical, doctrinally interpreted “signs,” John shares three, the cure of the ruler’s son, the multiplication of the loaves, the walking on the waters, with the Synoptists: yet here the first is transformed almost beyond recognition; and the two others only typify and prepare the eucharistic discourse. Of the four purely Johannine signs, two—the cures of the paralyzed (v. 1-16), and of the man born blind (ix. 1-34)—are, accordingly, profoundly symbolical. In the first case, the man’s physical and spiritual leprosy are closely interconnected and strongly contrasted with the ever-active God and His Logos. In the second case there is also the closest parallel between physical blindness cured, and spiritual darkness dispelled, by the Logos-Light as described in the accompanying discourse. Both narratives are doubtless based upon actual occurrences, the cures narrated in Mark ii., iii., viii., x. and scenes suggested by the writer in later times; whereas here they do but picture our Lord’s spiritual work in the human soul achieved throughout Christian history. We cannot claim more than these three kinds of reality for the first and the last signs, the miracle at Cana and the resurrection of Lazarus. For the marriage-feast sign yields throughout an allegorical meaning. Water stands in this Gospel for what is still but symbol; thus the water-pots serve here the external Jewish ablations—old bottles which the “new wine” of the Gospel is to burst (Mark ii. 22). Wine is the blood of the new covenant, and He will drink the fruit of the vine new in the Kingdom of God (Mark xiv. 23-25); the vineyard where He Himself is the true Vine (Mark xii. 1, John xv. 1). And “the kingdom of heaven is like a marriage-feast” (Matt. xxii. 2). Jesus is the Bridegroom (Mark ii. 10), “the marriage of the Lamb has come” (Rev. xiv. 9). “They have no wine”; the hopelessness of the conditions is announced here by the true bridal; the Messiah’s spiritual mother, the same “woman” who in Rev. xii. 2, 5 “brought forth a man-child who was to rule all nations.” Cardinal Newman admits that the latter woman “represents the church, this is the real or direct sense”; yet as her man-child
is certainly the Messiah, this church must be the faithful Jewish church. Thus also the "woman" at the wedding and beneath the cross stands primarily for the faithful Old Testament community, corresponding to the beloved disciple, the typical New Testament follower of her Son, the Messiah: in each case the devotional accommodation to His earthly mother is equally ancient and legitimate. He answers her "My hour is not yet come," i.e. in the symbolic story, the moment for working the miracle; in the symbolized reality, the hour of His death, condition for the spirit's advent; and "what is there between Me and thee?" i.e. "My motives spring no more from the old religion," words devoid of difficulty, if spoken thus by the Eternal Logos to the passing Jewish church. The transformation is soon afterwards accomplished, but in symbol only; the "hour" of the full sense is still over three years off. Already Philo says "the Logos is the master of the spiritual drinking-feast," and "let Melchisedek," the Logos, in lieu of water offer wine to souls and inebriate them (De somn. ii. 37; Legg. all. iii. 26). But in John this symbolism figures a great historic fact, the joyous freshness of Jesus' ministerial beginnings, as indicated in the sayings of the Bridgework and of the new wine, a freshness typical of Jesus' ceaseless renovation of souls.

The raising of Lazarus, in appearance a massive, definitely localized historical fact, requires a similar interpretation, unless we would, in favour of the direct historicity of a story peculiar to a profoundly allegorical treatise, ruin the historical trustworthiness of the largely historical Synoptists in precisely their most complete and verisimilar part. For especially in Mark, the passing through Jericho, the entry into Jerusalem, the Temple-cleansing and its immediate effect upon the hierarchies, their next day's interrogatory, "By what authority dost thou these things?" i.e. the cleansing (x. 46-xi. 33), are all closely interdependent and lead at once to His discussions with His Jerusalem opponents (xii. xiii.), and to the anointing, last supper, and passion (xiv. xv). John's last and greatest symbolic sign replaces those historic motives, since here it is the raising of Lazarus which determines the hierarchies to kill Jesus (xi. 46-52), and occasions the crowds which accompany and meet Him on His entry (xii. 9-19). The intrinsic improbabilities of the narrative, if taken as direct history, are also great: Jesus' deliberate delay of two days to secure His friend's dying, and His rejoicing at the death, since thus He can revivify His friend and bring His disciples to believe in Himself as the Life; His deliberate weeping over the death which He has thus let happen, yet His anger at the similar tears of Lazarus's other friends; and His praying, as He tells the Father in the prayer itself, simply, "not that they may be taken from the world, but that they may be preserved." Indeed the climax of the whole account is already reached in Jesus' great saying: "I am the Resurrection and the Life; he that believeth in Me . . . shall not die for ever," and in Martha's answer: "I believe that Thou art the Christ, the Son of God, who hast come into the world" (xi. 26, 27); the sign which follows is but the pictorial representation of this abiding truth.

The materials for the allegory will have been certain Old Testament narratives, but especially the Synoptic accounts of Jesus' raisings of Jairus's daughter and of the widow's son (Mark v.; Luke vii.). Mary and Martha are admittedly identical with the sisters in Luke x. 38-42; and already some Greek fathers connect the Lazarus of this allegory with the Lazarus of the parable (Luke xvi. 19-31). In the parable Lazarus returns not to earth, since Abraham foresees that the rich man's brethren would disbelieve even if one rose from the dead; in the corresponding allegory, Lazarus does actually return to life, and the Jews believe so little as to determine upon killing the very Life Himself.

Special Difficulties and Special Greatness.—The difficulties, limitations and temporary means special to the book are closely connected with its ready appeal and abiding power; let us take both sets of things together, in three couples of inter-related price and gift.

The book's method and form are pervasively allegorical; its instinct and aim are profoundly mystical. Now from Philo to Origen we have a long Hellenistic, Jewish and Christian application of that all-embracing allegorism, where one thing stands for another and where no factual details resist resolution into a symbol of religious ideas and forces. Thus Philo had, in his life of Moses, allegorized the Pentateuchal narratives so as to represent him as mediator, saviour, intercessor of his people, the one great organ of revelation, and the soul's guide from the false lower world into the upper true one. The Fourth Gospel is the noblest instance of this kind of literature, of which the truth depends not on the factual accuracy of the symbolizing appearances but on the truth of the ideas and experiences thus symbolized. And Origen is still full of spontaneous sympathy with its pervading allegorism. But this method has lost its attraction; the Synoptists, with their rarer and slighter pragmatic rearrangements and their greater closeness to our Lord's actual words, deeds, experiences, environment, now come home to us as indefinitely richer in content and stimulative appeal. Yet mysticism persists, as the intuitive and emotional apprehension of the most specifically religious of all truths, viz. the already full, operative existence of eternal beauty, truth and goodness, of infinite Personality and Spirit independently of our action, and not, as in ethics, the simple possibility and obligation for ourselves to produce such-like things. And of this elemental mode of apprehension and root-truth, the Johannine Gospel is the greatest literary document and incentive extant: its ultimate aim and deepest content retain all their potency.

The book contains an intellectualist, static, determinist, abstractive trend. In Luke x. 25-28, eternal life depends upon loving God and man; here it consists in knowing the one true God and Christ whom He has sent. In the Synoptists, Jesus is in favour with God and man: passes through true human experiences and trials, prays alone on the mountain-side, and dies with a cry of desolation; here the Logos' watchword is "I am," He has deliberately to stir up emotion in Himself, never prays for Himself, and in the garden and on the cross shows but power and self-possession. Here we find "ye cannot hear, cannot believe, because ye are not from God, not of My sheep" (viii. 47, x. 26); "the world cannot receive the spirit of truth" (xiv. 17). Yet the ethical current appears here also strongly: "he who doeth the truth, cometh to the light" (iii. 21), "if you love Me, keep My commandments" (xiv. 15). Libertarianism is here: "the light came, but men loved darkness rather than the light," "ye will not come to Me" (iii. 19, v. 40); hence the appeal "abide in Me"—the branch can cease to be in Him the Vine (xiv. 4, 2). Indeed even those modern currents stand here: the deepest religious truths, the preexistence of God and man's affinity to Him, "Not we loved God (first), but He (first) loved us"; "let us love Him, because He first loved us" (1 John iv. 19, 19); "no man can come to Me, unless the Father draw him" (vi. 44), a drawing which effects a hunger and thirst for Christ and God (iv. 14, vi. 35). Thus man's spirit, ever largely but potential, can respond actively to the historic Jesus, because already touched and made hungry by the all-actual Spirit-God who made that soul akin unto Himself.

The book has an outer protective shell of acutely polemical and exclusive moods and insinuations, whilst certain splendid Synoptic breadths and reconciliations are nowhere reached; but this is primarily because it is fighting, more consciously than they, for that inalienable ideal of all deepest religion, unity, even external and corporate, amongst all believers. The "Pneumatic" Gospel comes thus specially to emphasize certain central historical facts; and, the most explicitly institutional and sacramental of the four, to proclaim the most universalistic and developmental of all Biblical sayings. Here indeed Jesus will not pray for the world (xvii. 9); "ye shall die in your sins," He insists to His opponents (viii. 44, 24); it is the Jews generally who appear throughout as such; nowhere is there a word as to forgiving our enemies; and the commandment of love is designated by Jesus as His, as new, and as binding the disciples to "love one another" within the community to which He gives His "example" (xv. 12, xiii. 34, 15). In the Synoptists, the
JOHN, GOSPEL OF ST

456

disciples' intolerance is rebuked (Mark ix. 38-41); Jesus' opposition is everywhere restricted to the Pharisees and the worldly Sadducees; He ever longs for the conversion of Jerusalem; the great double commandment of love is proclaimed as already formulated in the Mosaic law (Mark xii. 28-34); the neighbour to be thus loved and served is simply any and every suffering fellow-man; and the pattern for such perfect love is found in a schismatical Samaritan (Luke x. 25-37). Yet the deepest strain here is more severely universalist even than St Paul, for here Jesus says: "God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should have everlasting life" (iii. 16). True, the great prologue passage (i. 9) probably reads "He was the true Light coming into the world, that enlighteneth every man," so that the writer would everywhere concentrate his mind upon the grace attendant upon explicit knowledge of the incarnate, historic Christ. Yet Christian orthodoxy, which itself has, all but uniformly, understood this passage of the spiritual radiation throughout the world of the Word before His incarnation, has been aided towards such breadth as to the past by the Johannean outlook into the future. For, in contrast to many pre-Synoptic tradition, where the full Christian truth and its first form remain undistinguished, and where its earthly future appears restricted to that generation, in John the Eternal Life conception largely absorbs the attention away from all successiveness; Jesus' earthly life does not limit the religion's assimilation of further truth and experience: "I have many things to tell you, but you cannot bear them now," "The Father will give you another Helper, the spirit of truth, who will abide with you for ever" (xvi. 12, xiv. 15). This universalism is not simply spiritual; the external element, presupposed in the Synoptists as that of the Jewish church within which Jesus' earthly life was spent, is here that of the now separate Christian community: He has other sheep not of this fold—them also He must bring, there will be one fold, one shepherd; and His seamless tunic, and Peter's net which, holding every kind of fish, is not rent, are symbols of this visible unity. Ministerial gradations exist in this church; Jesus begins the feet-washing with Peter, who alone speaks and is spoken to; the beloved disciple outruns Peter to Jesus' monument, yet waits to go in till Peter has done so first; and in the appendix the treble pastoral commission is to Peter alone; a Petrine pre-eminence which but echoes the Synoptists. And sacramentalism informs the great discourses concerning rebirth by water and the spirit, and feeding on the Living Bread, Jesus' flesh and blood, and the narrative of the issue of blood and water from the dead Jesus' side. Indeed so severe a strain is laid upon the explicitly Christian life and its specific means, that orthodoxy itself interprets the rebirth by water and spirit, and the eating the flesh and drinking the blood to which entrance into the Kingdom and possession of interior life are here exclusively attached, as often represented by a simple sincere desire and will for spiritual purification and a keen hunger and thirst for God's aid, taken together with such cultural acts as such souls can know or find, even without any knowledge of Jesus, as a "myrrh-tree" (John i. 29). The great phrase of the Johannine epistle is "Christ," and the Christian visible means and expressions are the culmination and measure of what, in various degrees and forms, accompanies every sincerely striving soul throughout all human history.

Origin and Authorship.—The question as to the book's origin has lost its poignancy through the ever-increasing recognition of the book's intrinsic character. Thus the recent defenders of the apostolic authorship, the Unitarian James Drummond (1903), the Anglican William Sanday (1905), the Roman Catholic Theodore Calmes (1904), can tell us, the first, that "the evangelist did not aim at an illustrative picture of what was most characteristic of Jesus;" the second, that "the author sank into his own consciousness and at last brought to light what he found there;" the third, that "the Gospel contains an entire theological system," "history is seen through the intervening dogmatic development," "the Samaritan woman is . . . a personification," "the behaviour of the Greeks is entirely natural in such a book." We thus get at cross-purposes with this powerful, profound work. Only some such position as Abbé Loisy's critical summing up (1903) brings out its specific greatness. "What the author was, his book, in spite of himself, tells us to some extent: a Christian of Judeo-Alexandrine formation; a believer without, apparently, any personal reminiscence of what had actually been the life, preaching and death of Jesus; a theologian far removed from every historical preoccupation, though he retains certain principal facts of tradition without which Christianity would evaporate into pure ideas; and a seer who has lived the Gospel which he propounded." "To find his book beautiful and true, we need but take it as it is and understand it." "The church, which has never discussed the literary problem of this Gospel, in nowise erred as to its worth." Several traditional positions have indeed been approximately maintained or reconquered against the critics. As to the Gospel's date, critics have returned from 160-170 (Baur), 150 (Zeller), 130 (Keim), to 110-115 (Renan) and 80-110 (Harnack); since Irenæus says its author lived into the times of Trajan (98-117), a date somewhere about 105 would satisfy tradition. As to the place, the critics accept proconsular Asia with practical unanimity, thus endorsing Irenæus's declaration that the Gospel was published in Ephesus. As to the author's antecedents, critics have ceased to hold that he could not have been a Jew-Christian (so Bretschneider, 1820), and admit (so Schmiedel, 1901) that he must have been by birth a Jew of the Dispersion, or the son of Christian parents who had been such Jews. And as to the vivid accuracy of many of his topographical and social details, the predominant critical verdict now is that he betrays an eye-witness's knowledge of the country between Sichem and Jordan and as to Jerusalem; he will have visited these places, say in 90, or may have lived in Jerusalem shortly before its fall. But the reasons against the author being John the Zebedean or any other eyewitness of Jesus' earthly life have accumulated to a practical demonstration. As to the external evidence for the book's early date, we must remember that the Epistle to the Hebrews and the Book of Revelation, though admittedly earlier, are of the same school, and, with the great Pauline Epistles, show many preformations of Johannine phrases and ideas. Other slighter fulusions will have circulated in that Philonian centre Ephesus, before the great Gospel englobed and superseded them. Hence the preciousness of the proofs derived from more or less close parallels to Johannean passages in the apostolic fathers. Justin Martyr (163-176) certainly uses the Gospel; but his conception of Jesus' life is so strictly Synoptic that he can hardly have accepted it as from an apostolic eyewitness. Papias of Hierapolis, in his Exposition of the Lord's Sayings (145-160) appears nowhere to have mentioned it, and clearly distinguishes between "what Andrew, Peter, . . . John or Matthew or any other of the Lord's disciples spoke," and "what Aristion and the presbyter John, the Lord's disciples, say." Thus Papias, as Eusebius about 314 insists, knew two Johns, and the apostle was to him a familiar figure; indeed early medieval chroniclers thought of Papias as in the second book of the Lord's sayings" asserted that both the sons of Zebedee were "slain by Jews," so that the apostle John would have died before 70. Irenæus's testimony is the earliest and admittedly the strongest we possess for the Zebedean authorship; yet, as Calmes admits, "it cannot be considered decisive." In his work against the Heresies and in his letter to Florinus, about 185-191, he tells how he had himself known Bishop Polycarp of Smyrna, and how Polycarp "used to recount his familiar intercourse with John and the others who had seen the Lord"; and explicitly identifies this John with the Zebedean and the evangelist. But Irenæus was at most fifteen when thus frequenting Polycarp; writes thirty-five to fifty years later in Lyons, admitting that he noted down nothing at the time; and, since his mistaken description of Papias as "a hearer of John" the Zebedean was certainly reached by mistraking the presbyter for the apostle, his additional words "and a companion of Polycarp" point to this same mistaken identification having also operated in his mind with regard to Polycarp. In any case,
the very real and important presbyter is completely unknown to Irenaeus, and his conclusion to the book's authorship resulted apparently from a comparison of its contents with Polycarp's teaching. If the presbyter wrote Revelation and was Polycarp's master, such a mistake could easily arise. Certainly Polycrates, bishop of Ephesus, made a precisely similar mistake when about 190 he described the Philip "who rests in Hierapolis" as "one of the twelve apostles," since Eusebius rightly identifies this Philip with the deacon of Acts xxii. A positive testimony for the critical conclusion is derived from the existence of a group of Asia Minor Christians who about 165 rejected the Gospel as not by John but by Cerinthus. The attribution is doubtless mistaken. But could Christians sufficiently numerous to desire a long discussion by St Ephippius in 374-377, who upheld the Synoptists, stoutly opposed the Gnostics and Montanists, and had escaped every special designation till the bishop nicknamed them the "Alogoi" (irrational reactors of the Logos-Gospel), dare, in such a time and country, to hold such views, had the apostolic origin been incontestable? Surely not. The Alexandrian Clement, Tertullian, Origen, Eusebius, Jerome, and Augustine only tell of the Zebedean who is travelled to by Papian others, to messages of Revelation and the Gospel, or to the assured fact of the long-lived Asian presbyter.

As to the internal evidence, if the Gospel typifies various imperfect or sinful attitudes in Nicodemus, the Samaritan woman and Thomas; if even the mother appears to symbolize faithful Israel: then, profoundly spiritual and forward-looking as it is, a type of the perfect disciple, not all unlike Clement's perfect "Gnostic," could hardly be omitted by it; and the precise details of this figure may well be only ideally, mystically true. The original work nowhere identifies this disciple with any particular historic figure. "He who saw" the lance-thrust "hath borne witness, and his witness is true," is asserted (xix. 35) of the disciple. Yet "to see" is said also of intuitive faith, "whoso hath seen Me, hath seen the Father" (xiv. 9); and true "applies also in "the true Light," "the true Bread from heaven," as characterizing the realities of the upper, alone fully true world, and equals "heavenly" (iii. 12); thus a "true witness" testifies to some heavenly reality, and appeals to the reader's "pneumatic," i.e. allegorical, understanding.

Only in the appendix do we find any deliberate identification with a particular historic person: "this is the disciple who witnessed to and who wrote these things" (24) refers doubtless to the whole previous work and to the "disciple whom Jesus loved," identified here with an unnamed historic personage whose recent death had created a shock, evidently because he was the last of that apostolic generation which had so keenly expected the second coming (18-23). This man was so great that the writer strives to win his authority for this Gospel; and yet this man was not John the Zebedean, else why, now he is dead and gone, not proclaim the fact? If the dead man was John the presbyter—if this John had in youth just seen Jesus and the Zebedean, and in extreme old age had still seen and approved the Gospel—to attribute this Gospel to him, as is done here, would not violate the literary ethics of those times. Thus the heathen philosopher Iamblichus (c. 330) declared "it was admirable " amongst the Neopythagoreans " that they ascribed everything to Pythagoras; but few of them acknowledge their own works as their own" (de Pythag. vita, 198). And as to Christians, Tertullian about 210 tells how the presbyter who, in proconsular Asia, had "composed the Acts of Paul and Thecla " was convicted and deposed, for how could it be credible that Paul should confer upon women the power to "teach and baptize" as these Acts averred? The attribution as such, then, was not condemned.

The facts of the problem would all appear covered by the hypothesis that John the presbyter, the eleven being all dead, wrote the book of Revelation (its more ancient Christian portions) say in 69, and died at Ephesus say in 100; that the author of the Gospel wrote the first draft, here, say in 77; that this book, expanded by him, first circulated within a sect Ephesian Christian circle; and that the Ephesian church officials added it to the appendix and published it c. 110-120. But however different the order, or in what way it may have been the acts origins, three points remain certain. The real situation that confronts us is not an unbroken tradition of apostolic eye-witnesses, incapable of re-statement with any hope of ecclesiastical acceptance, except by another apostolic eye-witness. On one side indeed was there the record, underlying the Synoptists, of at least two eye-witnesses, and the necessity of its preservation and transmission; but on the other side a profound change had come over the Christian outlook and requirements. St Paul's heroic labours (30-64) had gradually filled recognition and separate organization for the universalist strain in our Lord's teaching; and he who had never seen the earthly Jesus, but only the heavenly Christ, could even declare that Christ "though from the Jewish fathers according to the flesh " had died, "so that henceforth, even if we have known Christ according to the flesh, now we no further know Him thus," "the Lord is the Spirit," and "where the Spirit of the Lord is, there is liberty." And the Jewish church, within which Christianity had first lived and moved, ceased to have a visible centre. There was then a further change, and the second section of that first markedly Jewish setting and apprehension of the Christian truth became as necessary as the attachment to the original contingencies. The Fourth Gospel, inexplicable without St Paul and the fall of Jerusalem, is fully understandable with them. The attribution of the book to an eye-witness nowhere resolves, it everywhere increases, the real difficulties; and by insisting upon having history in the same degree and way in John as in the Synoptists, we cease to get it sufficiently anywhere at all. And the Fourth Gospel's true greatness lies well within the range of this its special character. In character it is profoundly "pneumatic"; Paul's super-earthly Spirit-Christ here breathes and speaks, and invites a corresponding spiritual comprehension. And its greatness appears in its inexhaustibly deep teachings concerning Christ's sheep and fold; the Father's drawing of souls to Christ; the dependence of knowledge as to Christ's doctrine upon the doing of God's will; the fulfilling of the commandment of love, as the test of true discipleship; eternal life, begun even here and now; and God a Spirit, to be served in spirit and in truth.

BIBLIOGRAPHY.—See also the independent discussion, under REVELATION, BOOK OF, of the authorship of that work. Among the immense literature of the subject, the following works will be found especially instructive by the classically trained reader: Origen's commentary, finished (only to John xiii. 33) in 235-237, but ed. by R. H. H. L. 1893, 1916; see also H. E. H. H. 1863, 1902; about 416. The Spanish Jesuit Juan Maldonato's Latin commentary, published 1596 (critical reprint, edited by Raich, 1874), a pathfinder on many obscure points, is still a model for tenacious does not, by its valuable survey of the external evidence, succeed in giving credibility to the eyewitness origin of such a book as this is admitted to be. Professor W. Sanday's slighter Criticisms of the Fourth Gospel (1905) is in a similar position. Professor P. W. Schmiedel's...
article "John s. of Zebedee" in the Ency. Bib. (1901) is the work of a German of the advanced left. Dr. E. A. Abbott’s labors From Letter to Spirit (1903), Joannine Vocabulary (1904) and Grammar (1906) overflow with statistical details and ever-acute, often fanciful, conjectures. A. T. Harkness’ The Fourth Gospel heroically sketches the book’s dominant characteristics and true function. E. F. Scott’s The Fourth Gospel (1906) gives a lucid, critical, and religiously tempered account of the Gospel’s ideas, aims, affinities, difficulties and abiding significance.

JOHN ALBERT (1459-1501), king of Poland, third son of Casimir IV, king of Poland and Elizabeth of Austria. As crown prince he distinguished himself by his brilliant victory over the Tatars at Kopersztyn in 1457. He succeeded his father in 1492. The loss of revenue consequent upon the secession of Lithuania placed John Albert at the mercy of the Polish Sejmiki or local diets, where the szlachta, or country gentry, made their subsidies dependent upon the king’s subservience. Primarily a warrior with a strong taste for heroic adventure, John Albert designed to pose as the champion of Christendom against the Turks. Circumstances seemed, moreover, to favour him. In his brother Wladislaus, who as king of Hungary and Bohemia possessed a dominant influence in central Europe, he found a counterpoise to the machinations of the emperor Maximilian, who in 1492 had concluded an alliance against him with Ivan III, of Muscovy, while, as suzerain of Moldavia, John Albert was favourably situated for attacking the Turks. At the conference of Leutschau in 1494 the details of the expedition were arranged between the kings of Poland and Hungary and the elector Frederick of Brandenburg, with the co-operation of Stephen, hospodar of Moldavia, who had appealed to John Albert for assistance. In the course of 1496 John Albert with great difficulty collected an army of 80,000 men in Poland, but the crusade was deflected from its proper course by the sudden invasion of Galicia by the hospodar, who apparently—for the whole subject is still very obscure—had been misled by reports from Hungary that John Albert was bent upon placing his younger brother Sigismund on the throne of Moldavia. But that as it may, the Poles entered Moldavia not as friends, but as foes, and, after the abortive siege of Suceava, were compelled to retreat through the Bukowina to Sniatyn, harassed all the way by the forces of the hospodar. The insubordination of the szlachta seems to have been one cause of this disgraceful collapse, for John Albert confiscated hundreds of their estates after his return; in spite of which, to the end of his life he retained his extraordinary popularity. When the new grand master of the Teutonic order, Frederic of Saxony, refused to render homage to the Polish crown, John Albert compelled him to do so. His intention of still further humiliating the Teutonic order was frustrated by his sudden death in 1501. A valiant soldier and a man of much enlightenment, John Albert was a poor politician, recklessly sacrificing the future to the present.

See V. Cerny, The Reigns of John Albert and Alexander Jagiello (Pol.) (Cracow, 1882).

JOHN ANGELUS (d. 1244), emperor of Thessalonica. In 1232 he received the throne from his father Theodore, who, after a period of exile, had re-established his authority, but owing to the loss of eyesight resolved to make John the nominal sovereign. He seems to have been chiefly marked by the aggressions of the rival emperor of Nicea, John Vatatzes, who laid siege to Thessalonica in 1243 and only withdrew upon John Angelus consenting to exchange the title “emperor” for the subordinate one of “despot.”

See G. Finlay, History of Greece, vol. iii. (1877).

JOHN FREDERICK I (1503-1554), called the Magnanimous, elector of Saxony, was the elder son of the elector, John the Steadfast, and belonged to the Ernestine branch of the Wettin family. Born at Torgau on the 30th of June 1503 and educated as a Lutheran, he took some part in imperial politics and in the business of the league of Schmalkalden before he became elector by his father’s death in August 1532. His lands comprised the western part of Saxony, and included Thuringia, but in 1542 Coburg was surrendered to form an apnanage for his brother, John Ernest (d. 1553). John Frederick, who was an ardent Lutheran and had a high regard for Luther, continued the religious policy of his father. In 1534 he assisted to make peace between the German king Ferdinand I. and Ulrich, duke of Württemberg, but his general attitude was one of vacillation between the emperor and his own impetuous colleague in the league of Schmalkalden, Philip, landgrave of Hesse. He was often at variance with Philip, whose bigness he disliked, and his belief in the pacific intentions of Charles V. and his loyalty to the Empire prevented him from pursuing any definite policy for the defence of Protestantism. In 1541 his kinsman Maurice became duke of Saxony, and cast covetous eyes upon the electoral dignity. A cause of quarrel soon arose. In 1541 John Frederick forced Nicholas Amsdorf into the see of Naumburg in spite of the chapter, who had elected a Roman Catholic, Julius von Pfilz; and about the same time he seized Wurzen, the property of the bishop of Meissen, whose see was under the joint protection of electoral and ducal Saxony. Maurice took up arms, and war was only averted by the efforts of Philip of Hesse and Luther. In 1542 the elector assisted to drive Henry, duke of Brunswick-Wolfenbüttel, from his duchy, but in spite of this his relations with Charles V. at the diet of Spires in 1544 were very amicable. This was, however, only a lull in the storm, and the emperor soon began to make preparations for attacking the league of Schmalkalden, and especially John Frederick and Philip of Hesse. The support, or at least the neutrality, of Maurice was won by the hope of the electoral dignity, and in July 1546 war broke out between Charles and the league. In September John Frederick was placed under the imperial ban, and in November Maurice invaded the electorate. Hastening from southern Germany the elector drove Maurice from the land, took his ally, Albert Alcibiades, prince of Bayreuth, prisoner at Rochlitz, and overran ducal Saxony. His progress, however, was checked by the advance of Charles V. Notwithstanding his valour he was wounded and taken prisoner at Mühlberg on the 24th of April 1547, and was condemned to death in order to induce Wittenberg to surrender. The sentence was not carried out, but by the capitulation of Wittenberg (May 1547) he renounced the electoral dignity and a part of his lands in favour of Maurice, steadfastly refusing however to make any concessions on religious matters, and remained in captivity until May 1552, when he returned to the Thuringian lands which his sons had been allowed to retain, his return being hailed with wild enthusiasm. During his imprisonment he had refused to accept the Interim, issued from Augsburg in May 1548, and had urged his sons to make no peace with Maurice. After his release the emperor had restored his dignities to him, and his assumption of the electoral arms and title prevented any arrangement with Maurice. However, after the death of his prince in July 1553, a treaty was made at Naumburg in February 1554 with his successor Augustus. John Frederick consented to the transfer of the electoral dignity, but retained for himself the title of "born elector," and received some lands in a sum of 30,000 thalers, based on his nearest male line of the elector of Saxony. He died at Weimar on the 3rd of March 1554, having three sons by his wife, Sibylla (d. 1554), daughter of John III., duke of Cleves, whom he had married in 1527, and was succeeded by his eldest son, John Frederick. The elector was a great hunter and a hard drinker, whose brave and dignified bearing in a time of misfortune won for him his surname of Magannamus, and drew eulogies from Roger Ascham and Melanchthon. He founded the university of Jena and was a benefactor to that of Leipzig.

See Mentz, Johann Friedrich der Grossmütige (Jena, 1903); Rogge, Johann Friedrich der Grossmütige (Halle, 1902) and L. von Ranke, Deutsche Geschichte im Zeitalter der Reformation (Leipzig, 1882).

JOHN FREDERICK (1529-1593), called der Miutre, duke of Saxony, was the eldest son of John Frederick, who had been deprived of the Saxon electorate by the emperor Charles V. in 1547. Born at Torgau on the 8th of January 1529, he received a good education, and when his father was imprisoned in 1547...
undertook the government of the remnant of electoral Saxony which the emperor allowed the Ernestine branch of the Wettin family to keep. Released in 1552 John Frederick the elder died two years later, and his three sons ruled Ernestine Saxony together until 1557, when John Frederick was made sole ruler. This arrangement lasted until 1565, when John Frederick shared his lands with his surviving brother, John William (1530–1573), retaining for himself Gotha and Weimar. The duke was a strong, even a fanatical, Lutheran, but his religious views were gradually subordinated to the one idea of regaining the electoral dignity then held by Augustus I. To attain this end he lent a willing ear to the schemes of Wilhelm von Grumbach, who came to his court about 1557 and offered to regain the electoral dignity and even to acquire the Empire for his patron. In spite of repeated warnings from the emperor Ferdinand I, John Frederick continued to protect Grumbach, and in 1566 his obstinacy caused him to be placed under the imperial ban. Its execution was entrusted to Augustus who, aided by the duke’s brother, John William, marched against Gotha with a strong force. In consequence, a mutiny the town surrendered in April 1567, and John Frederick was restored to the emperor Maximilian II. He was imprisoned in Vienna, his lands were given to his brother, and he remained in captivity until his death at Steyer on the 6th of May 1595. These years were mainly occupied with studying theology and in correspondence. John Frederick married firstly Agnes (d. 1555) daughter of Philip, landgrave of Hesse, and widow of Maurice, elector of Saxony, and secondly Elizabeth (d. 1594) daughter of Frederick III., elector palatine of the Rhine, by whom he left two sons, John Casimir (1654–1631) and John Ernest (1566–1638). Elizabeth shared her husband’s imprisonment for twenty-two years.

JOHN GEORGE I. (1585–1661), elector of Saxony, second son of the elector Christian I., was born on the 5th of March 1585, succeeding to the electorate in June 1611 on the death of his elder brother, Christian II. The geographical position of electoral Saxony hardly less than her high standing among the German Protestants gave her ruler much importance during the Thirty Years’ War. At the beginning of his reign, however, the new elector took up a somewhat detached position. His personal allegiance to Lutheranism was sound, but he liked neither the growing strength of Brandenburg nor the increasing prestige of the Palatinate; the adherence of the other branches of the Saxony ruling house to Protestantism seemed to him to suggest that the head of electoral Saxony should throw his weight into the other scale, and he was prepared to favour the advances of the Habsburgs and the Roman Catholic party. Thus he was easily induced to vote for the election of Ferdinand, archduke of Styria, as emperor in August 1619, an action which nullified the anticipated opposition of the Protestant electors. The new emperor secured the help of John George for the impending campaign in Bohemia by promising that he should be undisturbed in his possession of certain ecclesiastical lands. Carrying out his share of the bargain by occupying Silesia and Lusatia, where he displayed much clemency, the Saxon elector had thus some part in driving Frederick V, elector palatine of the Rhine, from Bohemia and in crushing Protestantism in that country, the crown of which he himself had previously refused. Gradually, however, he was made uneasy by the obvious trend of the imperial policy towards the annihilation of Protestantism, and by a dread lest the ecclesiastical lands should be taken from him, and the issue of the edict of restitution in March 1629 put the coping-stone to his fears. Still, although clamouring vainly for the exemption of the electorate from the area covered by the edict, John George took no decided measures to break his alliance with the emperor. He did, indeed, in February 1631 call a meeting of Protestant princes at Leipzig, but in spite of the appeals of the preacher Matthias Hoë von Hohenegg (1580–1645) he contented himself with a formal protest. Meanwhile Gustavus Adolphus had landed in Germany, and the elector had refused to allow him to cross the Elbe at Wittenberg, thus hindering his attempt to relieve Magdeburg. But John George’s reluctance to join the Protestants disappeared when the imperial troops under Tilly began to ravage Saxony, and in September 1631 he concluded an alliance with the Swedish king. The Saxon troops were present at the battle of Breitenfeld, but were routed by the imperialists, the elector himself seeking safety in flight. Nevertheless he soon took the offensive. Marching into Bohemia the Saxons occupied Prague, but John George soon began to negotiate for peace and consequently his soldiers offered little resistance to Wallenstein, who drove them back into Saxony. However, for the present the efforts of Gustavus Adolphus prevented the elector from deserting him, but the position was changed by the death of the king at Lützen in 1632, and the refusal of Saxony to join the Protestant league under Swedish leadership. Still letting his troops fight in a desultory fashion against the imperialists, John George again negotiated for peace, and in May 1635 he concluded the important treaty of Prague with Ferdinand II. His reward was Lusatia and certain other additions of territory; the retention by his son Augustus of the archbishopric of Magdeburg; and some concessions toward regard to the sacrificing of a subject. Almost at once he declared war upon the Swedes, but in October 1635 was beaten at Wittstock; and Saxony, ravaged impartially by both sides, was soon in a deplorable condition. At length in September 1645 the elector was compelled to agree to a truce with the Swedes, who, however, retained Leipzig; and as far as Saxony was concerned this ended the Thirty Years’ War. After the peace of Westphalia, which with regard to Saxony did little more than confirm the treaty of Prague, John George died on the 8th of October 1656. Although not without political acumen, he was not a great ruler; his character appears to have been harsh and unlovely, and he was addicted to drink. He was twice married, and in addition to his successor John George II. he left three sons, Augustus (1614–1680), Christian (d. 1691) and Maurice (d. 1681) who were all endowed with lands in Saxony, and who founded cadet branches of the Saxon house.

JOHN GEORGE II. (1613–1680), elector of Saxony, was born on the 31st of May 1613. In 1657, just after his accession, he made an arrangement with his three brothers with the object of preventing disputes over their separate territories, and in 1664 he entered into friendly relations with Louis XIV. He received money from the French king, but the existence of a strong anti-French party in Saxony induced him occasionally to respond to the overtures of the emperor Leopold I. The elector’s primary interests were not in politics, but in music and art. He adorned Dresden, which under him became the musical centre of Germany; welcoming foreign musicians and others he gathered around him a large and splendid court, and his capital was the constant scene of musical and other festivals. His enormous expenditure compelled him in 1661 to grant greater control over monetary matters to the estates, a step which laid the foundation of the later system of finance in Saxony. John George died at Freiberg on the 22nd of August 1680.

JOHN GEORGE III. (1647–1661), elector of Saxony, the only son of John George II., was born on the 20th of June 1647. He inherited the foreign policy of his father and in June 1683 joined an alliance of the House of Hohenzollern against France. Having founded the first standing army in the electorate he helped to drive the Turks from Vienna in September 1680, leading his men with great gallantry; but disgusted with the attitude of the emperor Leopold I. after the victory, he returned at once to Saxony. However, he sent aid to Leopold in 1685. When Louis XIV.’s armies invaded Germany in September 1688 John George was one of the first to take up arms against the French, and after sharing in the capture of Mainz he was appointed commander-in-chief of the imperial forces. He had not, however, met with any notable success when he died at Tübingen on the 12th of September 1691. Like his father, he was very fond of music, but he appears to have been less extravagant than John George II. His wife was Anna Sophia, daughter of Frederick III. king of
JOHN MAURICE—JOHNS HOPKINS UNIVERSITY

Denmark, and both his sons, John George and Frederick Augustus, became electors of Saxony, the latter also becoming king of Poland as Augustus II.

JOHN GEORGE IV. (1668–1694), elector of Saxony, was born on the 13th of October 1668. At the beginning of his reign his chief adviser was Hans Adam von Schöning (1641–1690), who counselled a union between Saxony and Brandenburg and a more independent attitude towards the emperor. In accordance with this advice certain proposals were put before Leopold I. to which he refused to agree; and consequently the Saxony troops withdrew from the imperial army, a proceeding which led the chagrined emperor to seize and imprison Schöning in July 1692. Although John George was unable to procure his minister's release, Leopold managed to allay the emperor's anger, and early in 1693 the Saxony soldiers rejoined the imperialists. This elector is chiefly celebrated for his passion for Magdalene Sibylle von Neidschütz (d. 1694), created in 1693 countess of Rochlitz, on whom his accession he publicly established as his mistress. John George left no legitimate issue when he died on the 27th of April 1694.

JOHN MAURICE OF NASSAU (1604–1679), surnamed the Brazilian, was the son of John the Younger, count of Nassau-Siegen-Dillenburg, and the grandson of John, the elder brother of William the Silent and the chief author of the Union of Utrecht. He distinguished himself in the campaigns of his cousin, the stadtholder Frederick Henry of Orange, and was by him recommended to the directors of the Dutch West India company in 1636 to be governor-general of the new dominion in Brazil recently conquered by the company. He landed at the Recife, the port of Pernambuco, and the chief stronghold of the Dutch, in January 1637. By a series of successful expeditions he gradually extended the Dutch possessions from Sergipe on the south to S. Luis de Maranham in the north. He likewise conquered the Portuguese possessions of St George del Mina and St Thome on the west coast of Africa. With the assistance of the famous architect, Pieter Post of Haarlem, he transformed the Recife by building a new town adorned with splendid public edifices and gardens, which was called after his name Mauritaad. By his statesmanlike policy he brought the colony into a most flourishing condition and succeeded even in reconciling the Portuguese settlers to submit quietly to Dutch rule. His large schemes and lavish expenditure alarmed however the parsimonious directors of the West India company, and John Maurice refused to retain his post unless he was given a free hand, and he returned to Europe in July 1644. He was shortly afterwards appointed by Frederick Henry to the command of the cavalry in the States army, and he took part in the campaigns of 1645 and 1646. When the war was ended by the peace of Münster in January 1648, he accepted from the elector of Brandenburg the post of governor of Cleves, Mark and Ravensberg, and later also of Minden. But his success in the Rhineland was as great as it had been in Brazil, and he proved himself a most able and wise ruler. At the end of 1652 he was appointed head of the order of St John and made a prince of the Empire. In 1664 he came back to Holland; when the war broke out with England supported by an invasion from the bishop of Münster, he was appointed commander-in-chief of the Dutch forces on land. Though hampered in his command by the restrictions of the states-general, he repelled the invasion, and the bishop, Christoph von Galen, was forced to conclude peace. His campaigning was not yet at an end, for in 1673 he was appointed by the stadtholder William III. to command the forces in Friesland and Groningen, and to defend the eastern frontier of the Provinces. In 1675 his health compelled him to give up active military service, and he spent his last years in his beloved Cleves, where he died on the 20th of December 1679. The house which he built at the Hague, named after him the Maurits-huis, now contains the splendid collections of pictures so well known to all admirers of Dutch art.

1 This name is usually written Joan, the form used by the man himself in his signature—see the facsimile in Netscher's Les Hollandais en Brésil.

JOHN O'GROAT'S HOUSE, a spot on the north coast of Caithness, Scotland, 14 m. N. of Wick and 1½ m. W. of Duncansby Head. It is the mythical site of an octagonal house said to have been erected early in the 16th century by one John Groat, a Dutchman who had migrated to the north of Scotland by permission of James IV. According to the legend, other members of the Groat family followed John, and acquired lands around Duncansby. When there were eight Groat families, disputes began to arise as to precedence at annual feasts. These squabbles led to John Groat's case being handled by building an octagonal house which had eight entrances and eight tables, so that the head of each family could enter by his own door and sit at the head of his own table. Being but a few miles south of Dunnet Head, John O'Groat's is a colloquial term for the most northerly point of Scotland. The site of the traditional building is marked by an outline traced in turf. Descendants of the Groat family, now Groat, still live in the neighbourhood. The cowry-shell, Cyprea eurpea, is locally known as "John o' Groat's bucky."

JOHNS HOPKINS UNIVERSITY, an American educational institution at Baltimore, Maryland, U.S.A. Its trustees, chosen by Johns Hopkins (1794–1873), a successful Baltimore merchant, were incorporated on the 24th of August 1867 under a general act "for the promotion of education in the state of Maryland." But nothing was actually done until after the death of Johns Hopkins (Dec. 24, 1873), when his fortune of $7,000,000 was equally divided between the projected university and a hospital, also to bear his name, and intended to be an auxiliary to the medical school of the university. The trustees of the university consulted with many prominent educators, among whom Charles W. Eliot of Harvard and Charles D. Jogues of Cornell, and James B. Angell of the university of Michigan; on the 30th of December 1874 they elected Daniel Coit Gilman (q.v.) president. The university was formally opened on the 3rd of October 1876, when an address was delivered by T. H. Huxley. The first year was largely given up to consultation among the newly chosen professors, among whom were— in Greek, B. L. Gildersleeve; in mathematics, J. J. Sylvester; in chemistry, Ira Remsen; in biology, Henry Newell Martin (1848–1896); in zoology, William Keith Brooks (1848–1908); and in physics, Henry Augustus Rowland (1842–1901). Prominent among later teachers were Arthur Cayley in mathematics, the Semitic scholar Paul Haupt (b. 1858), Granville Stanley Hall in psychology, Maurice Bloomfield in Sanskrit and comparative philology, James Rendel Harris in Biblical philology, James Wilson Bright in English philology, Herbert B. Adams in history, and Richard T. C. Lyde (b. 1849) in economics. The university at once became a pioneer in the United States in teaching by means of seminary courses and laboratories, and it has been eminently successful in encouraging research, in scientific production, and in preparing its students to become instructors in other colleges and universities. It includes a college in which each of five parallel courses leads to the degree of Bachelor of Arts, but its reputation has been established chiefly by its other two departments, the graduate school and the medical school. The graduate school offers courses in philosophy and psychology, physics, chemistry and biology, historical and economic science, language and literature, and confers the degree of Doctor of Philosophy after at least three years' residence. From its foundation the university had novel features and a liberal administration. Twenty annual fellowships of $500 each were opened to the graduates of any college. Petrography and laboratory psychology were among the new sciences fostered by the new university. Such eminent outsiders were secured for brief residence and lecture courses as—J. R. Lowell, F. J. Child, Simon Newcomb, H. E. von Hoist, F. A. Walker, William James, Sidney Lanier, James Bryce, E. A. Freeman, W. W. Goodwin, and Alfred Russell Wallace. President Gilman gave up his presidential duties on the 1st of
In 1843 he was elected to the national House of Representatives and there remained for ten years until his district was gerrymandered by the Whigs and he lost his seat. But he at once offered himself as a candidate for governor and was elected and re-elected, and was then sent to the United States Senate, serving from 1857 to 1862. As governor (1853-1857) he proved to be able and non-partisan. He championed popular education and recommended the homestead policy to the national government, and from his sympathy with the working classes and his oft-avowed pride in his former calling he became known as the "mechanic governor." In Congress he proved to be a tireless advocate of the claims of the poorer whites and an opponent of the aristocracy. He favoured the annexation of Texas, supported the Polk administration on the issues of the Mexican War and the Oregon boundary controversy, and though voting for the admission of free California demanded national protection for slavery. He also advocated the homestead law and low tariffs, opposed the policy of "internal improvements," and was a zealous worker for budget economies. Though opposed to a monopoly of political power in the South by the great slaveholders, he depredated aristocratic and pro-slavery sentiment (right of petition on that subject) as threatening abolition or the dissolution of the Union, and went with his sectional leaders so far as to demand freedom of choice for the Territories, and protection for slavery where it existed—this even so late as 1860. He supported in 1866 the ultra-Democratic ticket of Breckinridge and Lane, but he did not identify the election of Lincoln with the ruin of the South, though he thought the North should give renewed guarantees to slavery. But he followed Jackson rather than Calhoun, and above everything else set his love of the Union, though believing the South to be grievously wronged. He was the only Southern member of Congress who opposed secession and refused to "go with his state" when it withdrew from the Union in 1861. In the judgment of a leading opponent (O. P. Morton) "perhaps no man in Congress exerted the same influence on the public sentiment of the North at the beginning of the war" as Johnson. During the war he suffered much for his loyalty to the Union. In March 1863 Lincoln made him military governor of the part of Tennessee captured from the Confederates, and after two years of autocratic rule (with much danger to himself) he succeeded in organizing a Union government for the state. In 1864, to secure the votes of the war Democrats and to please the border states that had remained in the Union, Johnson was nominated for vice-president on the ticket with Lincoln.

A month after the inauguration the murder of Lincoln left him president, with the great problem to solve of reconstruction of the Union. All his past career and utterances seemed to indicate that he would favour the harshest measures toward ex-Confederates, hence his acceptability to the most radical Republicans. But, whether because he drew a distinction between the treason of individuals and of states, or was influenced by Seward, or simply, once in responsible position, separated Republican party politics from the question of constitutional interpretation, at least he speedily showed that he would be influenced by no acrimony, and adopted the lenient reconstruction policy of Lincoln. In this he had for some time the cordial support of his cabinet. During the summer of 1865 he set up provisional civil governments in all the seceded states except Texas, and within a few months all those states were organized and applying for readmission to the Union. The radical congress (Republican by a large majority) sharply opposed this plan of restoration, as they had opposed Lincoln's plan: first, because the members of Congress from the Southern States (when readmitted) would almost certainly vote with the Democrats; secondly, because relatively few of the Confederates were punished; and thirdly, because the newly organized Southern States did not give political rights to the negroes. The question of the status of the negro proved the crux of the issue. Johnson was opposed to general or immediate negro suffrage. A bitter contest began in Feb. 1866, between the president and the Congress, which refused to admit representatives

September 1901, Ira Remsen succeeding him in the office. The medical department, inaugurated in 1863, is closely affiliated with Hopkins Hospital (opened in 1889), and is actually a graduate school, as it admits only students holding the bachelor's degree or its equivalent. The degree of Doctor of Medicine is conferred after four years of successful study, and advanced courses are offered. The department's greatest teachers have been William Osler (b. 1849) and William Henry Welch (b. 1850).

The university of the building were in 1901 an unpretentious group on crowded ground near the business centre of the city. In 1902 a new site was secured, containing about 125 acres amid pleasant surroundings in the northern suburbs, and new buildings were designed in accordance with a plan formed with a view to secure harmony and symmetry. In 1907 the library contained more than 133,000 bound volumes. Among the numerous publications issued by the university press are: American Journal of Mathematics, Studies in Historical and Political Science, Reprint of Economic Treats, American Journal of Philology, Contributions to Assyriology and Semitic Philology, Modern Language Notes, American Chemical Journal, American Journal of Terrestrial Electricity, Reports of the Maryland Geological Survey, and Reports of the Maryland Weather Service. The institution is maintained chiefly with the proceeds of the endowment fund. It also receives aid from the state, and charges tuition fees. Its government is entrusted to a board of trustees, while the direction of affairs of a strictly academic nature is delegated to an academic council and to department boards. In 1907-1908 the regular faculty numbered 175, and there was an enrolment of 683 students, of whom 518 were in post-graduate courses.

On the history of the university see Daniel C. Gilman, The Launching of a University (New York, 1906), and the annual reports of the president.

JOHNSON, ANDREW (1808-1875), seventeenth president of the United States, was born at Raleigh, North Carolina, on the 29th of December 1808. His parents were poor, and his father died when Andrew was four years old. At the age of ten he was apprenticed to a tailor, his spare hours being spent in acquiring the rudiments of an education. He learned to read from a book which contained selected orations of great British and American statesmen. The young tailor went to Laurens Court House, South Carolina, in 1824, to work at his trade, but returned to Raleigh in 1826 and soon afterward removed to Greenville in the eastern part of Tennessee. He married during the same year Eliza McCardle (1806-1876), much his superior by birth and education, who taught him the common school branches of learning and proved of great assistance in his later career. In East Tennessee most of the people were small farmers, while West Tennessee was a land of great slave plantations. Johnson began in politics to oppose the aristocratic element and became the spokesman and champion of the poorer and labouring classes. In 1828 he was elected an alderman of Greenville and in 1830-1834 was mayor. In 1834, in the Tennessee constitutional convention he endeavoured to limit the influence of the slaveholders by basing representation in the state legislature on the white population alone. In 1835-1837 and 1839-1841 Johnson was a Democratic member of the state House of Representatives, and in 1841-1843 of the state Senate; in both houses he uniformly upheld the cause of the "common people," and, in addition, opposed legislation for "internal improvements." He soon was recognized as the political champion of East Tennessee. Though his favourite leaders became Whigs, Johnson remained a Democrat, and in 1840 canvassed the state for Van Buren for President.

1 Ira Remsen was born in New York City on the 10th of February 1840, graduated at the college of the City of New York in 1865, studied at the New York college of physicians and surgeons and at the university of Gottingen, was professor of chemistry at Williams College in 1872-1876, and in 1876 became professor of chemistry at Johns Hopkins University. He published many textbooks of chemistry, organic and inorganic, which were republished in England and were translated abroad. In 1879 he founded the American Chemical Journal.
from the South and during 1866 passed over his veto a number of important measures, such as the Freedmen's Bureau Act and the Civil Rights Act, and submitted to the States the Fourteenth Amendment to the Constitution. Johnson took a prominent and undignified part in the congressional campaign of 1866, in which his policies were voted down by the North. In 1867 Congress threw aside his work of restoration and proceeded with its own plan, the main features of which were the disfranchisement of ex-Confederates and the enfranchisement of negroes. On the 2nd of March 1867 Congress passed over the president's veto the Tenure of Office Act, prohibiting the president from dismissing from office without the consent of the Senate any officer appointed by and with the advice and consent of that body, and in addition a section was inserted in the army appropriation bill of this session designed to subordinate the president to the Senate and the general-in-chief of the army in military matters. The president was thus deprived of practically all power. Stanton and other members of his cabinet and General Grant became hostile to him, the president attempted to remove Stanton without regard to the Tenure of Office Act, and, finally, to get rid of the president, Congress in 1868 (Feb. 9th-May 29th) passed two amendments to the Constitution disregarding the Tenure of Office Act being the principal charge against him. The charges 1 were in part quite trivial, and the evidence was ridiculously inadequate for the greater charges. A two-thirds majority was necessary for conviction; and the votes being 35 to 10 (7 Republicans and 12 Democrats voting in his favour on the crucial clauses) he was acquitted. The misguided animus of the impeachment as a piece of partisan politics was soon very generally admitted; and the importance of its failure, in securing the continued power and independence of the presidential element in the constitutional system, can hardly be over-estimated. The rest of his term as president was comparatively quiet and uneventful. In 1869 he retired into private life in Tennessee, and after several unsuccessful efforts was elected to the United States Senate, free of party trammels, in 1875, but died at Carter's Station, Tenn., on the 31st of July 1875. The only speech he made was a skillful and temperate arraignment of President Grant's policy towards the South.

1 The charges centred in the president's removal of Secretary Stanton, his ad interim appointment of Lorenzo Thomas, his campaign of intrigue and the general disregard of the provisions of the Tenure of Office Act. Of the eleven charges of impeachment the first was that Stanton's removal was contrary to the Tenure of Office Act; the second, that the appointment of Thomas was a violation of the Tenure of Office Act; the third, that the appointment of Thomas violated the Constitution; the fourth, that Johnson, conspiring with Thomas, "to hinder and prevent Edmund M. Stanton...office of secretary for the department of war"; the fifth, that Johnson had conspired with Thomas to "prevent and hinder the execution of the Tenure of Office Act"; the sixth, that in 1867 and 1868 Johnson had committed a violation of the Tenure of Office Act; the seventh, that Thomas was un lawfully to control the disbursements of the moneys appropriated for the military service and for the department of war; the eighth, that he had instructed Major-General Emory, in command of the department of the Cumberland, that when the army was ordered to the field for the war was unconstitutional; the ninth, that his acts in 1866 constituted a "high misdemeanor in office"; the tenth, that his acts in 1866 constituted a "high misdemeanor in office"; the eleventh, the "omnibus" article, that he had committed high misdemeanours in several respects, and the twelfth, that his acts in 1866 were "ancient" and that his legislation was not binding upon him, and that it was incapable of proposing amendments. The actual trial began on the 30th of March (from the 3rd of March it was adjourned to the 23rd, and then again on the 23rd to the 30th). On the 16th of May, after 28 sessions in which the Senate repeatedly reversed the rulings of the chief justice as to the admission of evidence, in which the president's counsel showed that their case was excellently prepared and the prosecution was discreditable to general to political passions rather than to judicial impartiality, the final act was veto of the impeachment failed by a single vote (35 to 19); 7 Republicans and 12 Democrats voting "Not guilty" of the necessary two-thirds. After the trial, during which B. F. Butler of the prosecuting counsel attempted to prove an act that had been practised on some of those voting "Not guilty," on the 26th of May a vote was taken on the second and third articles with the same result as on the eleventh article. There was no vote on the other articles.

President Johnson's leading political principles were a reverence of Andrew Jackson, an unlimited confidence in the people, and an intense veneration for the Constitution. Throughout his life he remained in some respects a "backwoodsman." He lacked the finish of systematic education. But his whole career sufficiently proves him to have been a man of extraordinary qualities. He did not rise above untoward circumstances by favour, nor—until after his election as senator—by fortunate and fortuitous connexion with great events, but by strength of native talents, persistent purpose, and an iron will. He had strong, rugged powers, was a close reasoner and a forcible speaker. Unfortunately his extemporaneous speeches were commonplace, in very bad taste, fervently intertemperate and denunciatory; and though this was probably due largely to temperament and habits of stump-speaking formed in early life, it was attributed by his enemies to drink. Resorting to stimulants after illness, his marked excess in this respect on the occasion of his inauguration as vice-president undoubtedly did him harm with the public. Failures of personality was his great handicap. Though approachable and not without kindliness of manner, he seemed hard and inflexible; and while president, physical pain and domestic cares added to the difficult public life, combined to attenuate a naturally somewhat severe temperament. A lifelong Southern Democrat, he was forced to lead (nominally at least) a party of Northern Republicans, with whom he had no bond of sympathy save a common opposition to secession; and his ardent, aggressive convictions and character, above all his complete lack of tact, unfitted him to deal successfully with the passionate partisanship of Congress. The absolute integrity and unflinching courage that marked his career were always ungrudgingly admitted by his greatest enemies.

See L. Foster, The Life and Speeches of Andrew Johnson (1866); D. M. De Witt, The Impeachment and Trial of Andrew Johnson (1903); C. E. Chadsey, The Struggle between President Johnson and Congress (1867); W. A. Dunning, Extension and Duration of Civil War and Reconstruction (1898). Also see W. A. Dunning's paper "Morg-Light on Andrew Johnson" (in the American Historical Review, April 1906), in which apparently conclusive evidence is presented to prove that Johnson's first inaugural, a notable state paper, was written by the historian George Bancroft.

JOHNSON, BENJAMIN (c. 1665-1742), English actor, was first a scene painter, then acted in the provinces, and appeared in London in 1695 at Drury Lane after Betterton's defection. He was the original Captain Driver in Oroonoko (1696), Captain Fireball in Farquhar's Sir Harry Wildair (1701), Sable in Steele's Funeral (1702). See also The Gravedigger in Hamlet and in several characters in the plays of Ben Jonson he was particularly good. He succeeded, also, to Thomas Doggett's rôles.

JOHNSON, EASTMAN (1824-1906), American artist, was born at Lovell, Maine, on the 20th of July 1824. He studied at Düsseldorf, Paris, Rome and The Hague, the last city being his home for four years. In 1860 he was elected to the National Academy of Design, New York. A distinguished portrait and genre painter, he made distinctively American themes his own, depicting the negro, fisherfolk and farm life with unusual interest. Such pictures as Old Kentucky Home (1867), "Husking Bee" (1876), Cranberry Harvest, Nantucket (1886), and his portrait group The Funding Bill (1881) achieved a national reputation. Among the many prominent men he painted were many prominent men, including Daniel Webster; Presidents Hayes, Arthur, Cleveland and Harrison; William M. Evarts, Charles J. Folger; Emerson, Longfellow, Hawthorne, James McCosh, Noah Porter and Sir Edward Archbald. He died in New York City on the 5th of April 1906.

JOHNSON, REVERDY (1796-1876), American political leader and jurist, was born at Annapolis, Maryland, on the 21st of May 1796. His father, John Johnson (1773-1824), was a distinguished lawyer, who served in both houses of the Maryland General Assembly, as attorney-general of the state (1806-1811), as a judge of the court of appeals (1811-1821), and as a chancellor of his state (1821-1824). Reverdy graduated from St John's college in 1812. He then studied law in his father's office, was admitted to the bar in 1815 and began to practise in Upper Marlborough,
Prince George's county. In 1817 he removed to Baltimore, where he became the professional associate of Luther Martin, William Pinkney and Roger B. Taney; with Thomas Harris he reported the decisions of the court of appeals in *Harris and Johnson's Reports* (1820-1827); and in 1818 he was appointed chief commissioner of insolvent debtors. From 1821 to 1825 he was a state senator; from 1825 to 1845 he devoted himself to his practice; from 1845 to 1849, as a Whig, he was a member of the United States Senate; and from March 1849 to July 1850 he was attorney-general of the United States. In 1856 he became identified with the conservative wing of the Democratic party, and four years later supported Stephen A. Douglas for the presidency. In 1861 he was a delegate from Maryland to the peace convention at Washington; in 1861-1862 he was a member of the Maryland House of Delegates. After the capture of New Orleans he was commissioned by Lincoln to revise the decisions of the military commandant, General B. F. Butler, in regard to foreign governments, and reversed all those decisions to the entire satisfaction of the administration. In 1868 he again took his seat in the United States Senate. In 1869, he was appointed minister to Great Britain and soon after his arrival in England negotiated the Johnson-Clarendon treaty for the settlement of disputes arising out of the Civil War; this, however, the Senate refused to ratify, and he returned home on the accession of General U. S. Grant to the presidency. Again resuming his practice he was engaged by the government in the prosecution of Ku-Klux cases. He died on the 10th of February 1870 at Annapolis. He repudiated the doctrine of secession, and pleaded for compromise and conciliation. Opposed to the Reconstruction measures, he voted for them on the ground that it was better to accept than reject them, since they were probably the best that could be obtained. As a lawyer he was engaged during his later years in most of the especially important cases in the Supreme Court of the United States and in the courts of Maryland.

**JOHNSON, RICHARD** (1573-1640?), English romance writer, was baptized in London on the 24th of May 1573. His most famous romance is *The Famous Historie of the Seaven Champions of Christendom* (1567). The success of this book was so great that the author added a second and a third part in 1606 and 1616. His other stories include: *The Nine Worthies of London* (1593); *The Pleasant Walks of Moorfields* (1607); *The Pleasant Conceits of Old Hobson* (1607), the hero being a well-known haberdasher in the Poultry; *The Most Pleasant History of Tom a Lincome* (1607); *A Remembrance of... Robert Earle of Salisbury* (1612); *Looke on Me*, London (1613); *The History of Tom Thumb* (1621). The *Crown Garland of Golden Roses... set forth in Many Pleasant new Songs and Sonnets* (1612) was reprinted for the Percy Society (1842 and 1845).

**JOHNSON, RICHARD MENTOR** (1781-1830), ninth vice-president of the United States, was born at Bryant's Station, Kentucky, on the 17th of October 1781. He was admitted to the bar in 1805, and became prominent as a lawyer and Democratic politician, serving in the Federal House of Representatives and in the Senate for many years. From 1837 to 1841 he was vice-president of the United States, to which position he was elected over Francis Granger, by the Senate, none of the four candidates for the vice-presidency having received a majority of the electoral votes. The opposition to Johnson within the party greatly increased during his term, and the Democratic national convention of 1840 adopted the unprecedented course of refusing to nominate anyone for the vice-presidency. In the ensuing election Johnson received most of the Democratic electoral votes, but was defeated by the Whig candidate, John Tyler. He died in Franklin, Kentucky, on the 19th of November 1850.

**JOHNSON, SAMUEL** (1709-1784), English writer and lexicographer, was the son of Michael Johnson (1656-1731), bookseller and magistrate of Lichfield, who married in 1706 Sarah Ford (1669-1759). Michael's abilities and attainments seem to have been considerable. He was so well acquainted with the contents of the volumes which he exposed for sale that the country rectors of Staffordshire and Worcestershire thought him an oracle on points of learning. Between him and the clergy, indeed, there was a strong religious and political sympathy. He was a zealous churchman, and, though he had qualified himself for municipal office by taking the oaths to the sovereigns in possession, was to the last a Jacobite in heart. The social position of Samuel's paternal grandfather, William Johnson, remains obscure; his mother was the daughter of Cornelius Ford, "a little Warwickshire Gent."

At a house (now the Johnson Museum) in the Market Square, Lichfeld, Samuel Johnson was born on the 18th of September 1709 and baptized on the same day at St Mary's, Lichfield. In the child the physical, intellectual and moral peculiarities which afterwards distinguished the man were plainly discernible: great muscular strength accompanied by much awkwardness and many infirmities; great quickness of parts, with a morbid propensity to sloth and procrastination; a kind and generous heart, with a gloomy and irritable temper. He had inherited from his ancestors a scrofulous taint, and his parents were weak enough to believe that the royal touch would cure him. In his third year he was taken up to London, inspected by the court surgeon, prayed over by the court chaplains and stroked and presented with a piece of gold by Queen Anne. His hand was applied in vain. The boy's features, which were originally noble and not irregular, were distorted by his malady. His cheeks were deeply scarred. He lost for a time the sight of one eye; and he saw but very imperfectly with the other. But the force of his mind overcame every impediment. Indolent as he was, he acquired knowledge with such ease and rapidity that at every school (such as those at Lichfield and Stourbridge) to which he was sent he was soon the best scholar. From sixteen to eighteen he resided at home, and was left to his own devices. He learned much at this time, though his studies were without guidance and without plan. He ransacked his father's shelves, dipped into a multitude of books, read what was interesting, and passed over what was dull. An ordinary lad would have acquired little or no useful knowledge in such a way; but much that was dull to ordinary lads was interesting to Samuel. He read little Greek; for his proficiency in that language was not such that he could take much pleasure in the masters of Attic poetry and eloquence. But he had left school a good Latinist, and he soon acquired an extensive knowledge of Latin literature. He was peculiarly attracted by the works of the great restorers of learning. Once, while searching for some apples, he found a huge folio volume of Petrarch's works. The name excited his curiosity, and he eagerly devoured hundreds of pages. Indeed, the diction and versification of his own Latin compositions show that he had paid at least as much attention to modern copies from the antique as to the original models.

While he was thus irregularly educating himself, his family was sinking into hopeless poverty. Old Michael Johnson was much better qualified to pore over books, and to talk about them, than to trade in them. His business declined; his debts increased; it was with difficulty that the daily expenses of his household were defrayed. It was out of his power to support his son at either university; but a wealthy neighbour offered assistance; and, in reliance on promises which proved to be of very little value, Samuel was entered at Pembroke College, Oxford. When the young scholar presented himself to the rulers of that society, they were amazed not more by his ungainly figure and eccentric manners than by the quantity of extensive and curious information which he had picked up during many months of desultory but not unprofitable study. On the first day of his residence he surprised his teachers by quoting Macrobius; and one of the most attended among them declared that he had never known a freshman of equal attainments.

At Oxford Johnson resided barely over two years, possibly less. He was poor, even to raggedness; and his appearance excited a mirth and a pity which were equally intolerable to his haughty spirit. He was driven from the quadrangle of Christ Church by the sneering looks which the members of that aristocratic society cast at the holes in his shoes. Some charitable person placed a new pair at his door; but spurned them away.
in a fury. Distress made him, not servile, but reckless and un-
governable. No opulent gentleman commoner, panting for one-
and-twenty, could have treated the academical authorities with
more gross disrespect. The needy scholar was generally to be
seen under the gate of Pembroke, a gate now adorned with his
fussy, haranguing a circle of lads, over whom, in spite of his
tattered gown and dirty linen, his wit and audacity gave him an
undisputed ascendancy. In every mutiny against the discipline
of the college he was the ringleader. Much was pardoned, how-
ever, to a youth so highly distinguished by abilities and acquire-
ments. He had early made himself known by turning Pope's
"Messiah" into Latin verse. The style and rhythm, indeed, were
not exactly Virgilian; but the translation found many admirers,
and was read with pleasure by Pope himself.

The time drew near at which Johnson would, in the ordinary
course of things, have become a Bachelor of Arts; but he was at
the end of his resources. Those promises of support on which he
had relied had not been kept. His family could do nothing
for him. His debts to Oxford tradesmen were small indeed, yet
larger than he could pay. In the autumn of 1731 he was under
the necessity of quitting the university without a degree. In
the following winter his father died. The old man left but a
pittance; and of that pittance almost the whole was appropriated
to the support of his widow. The property to which Samuel
succeeded amounted to no more than twenty pounds.

His life, during the thirty years which followed, was one hard
struggle with poverty. The misery of that struggle needed no
aggravation, but was aggravated by the sufferings of an unsound
body and an unsound mind. Before the young man left the
university, his hereditary malady had broken forth in a singular-
ly cruel form. He had become an incurable hypochondriac.
He said long after that he had been mad all his life, or at least
not perfectly sane; and, in truth, eccentricities less strange than
his have often been thought ground sufficient for absolving
felons and for setting aside wills. His grimaces, his gestures,
his mutterings, sometimes diverted and sometimes terrified
people who did not know him. At a dinner table he would, in
a fit of absence, stoop down and twitch off a lady's shoe. He would
amaze a drawing-room by suddenly ejaculating a clause of the
Lord's Prayer. He would conceive an unintelligible aversion to a
particular sign or circuit board, and from that instant rather than
in the hateful place. He would set his heart on touching every post
in the streets through which he walked. If by any chance he
missed a post, he would go back a hundred yards and repair the
omission. Under the influence of his disease, his senses became
morbidly torpid, and his imagination morbidly active. At one
time he would stand poring on the town clock without being able
to tell the hour. At another he would distinctly hear his mother,
who was many miles off, calling him by his name. But this was not
the worst. A deep melancholy took possession of him, and
gave a dark tinge to all his views of human nature and of human
destiny. Such wretchedness as he endured has driven many men to
shoot themselves or drown themselves. But he was under no
temptation to commit suicide. He was sick of life; but he was
afraid of death; and he shuddered at every sight or sound which
reminded him of the inevitable hour. In religion he found but
little comfort during his long and frequent fits of dejection; for
his religion partook of his own character. The light from heaven
shone on him indeed, but not in a direct line or with its own proper
splendour. The rays had to struggle through a disturbing
medium; they reached him refracted, dulled and discoloured by
the thick gloom which had settled on his soul, and, though they
might be sufficiently clear to guide him, were too dim to cheer
him.

With such infirmities of body and of mind, he was left, at two-
and-twenty, to fight his way through the world. He remained
during about five years in the midland counties. At Lichfield,
his birthplace and his early home, he had inherited some friends
and acquired others. He was kindly noticed by Henry Hervey,
a gay officer of noble family, who happened to be quartered
there. Gilbert Walmesley, registrar of the ecclesiastical court
of the diocese, a man of distinguished parts, learning and know-
ledge of the world, did him honour by patronizing the young
adventurer, whose repulsive person, unpolished manners and
squidish gait moved many of the petty aristocracy of the
neighbourhood to laughter or disgust. At Lichfield, however,
Johnson could find no way of earning a livelihood. He became
usher of a grammar school in Leicestershire; he resided as a
humble companion in the house of a country gentleman; but a
life of dependence was insupportable to his haughty spirit.
He repaired to Birmingham, and there earned a few guineas by
literary drudgery. In that town he printed a translation, little
noticed at the time, and long forgotten, of a Latin book about
Abyssinia. He then put forth proposals for publishing by sub-
scription the poems of Politian, with notes containing a history
of modern Latin verse; but subscriptions did not come in, and
the volume never appeared.

While leading this vagrant and miserable life, Johnson fell in
love. The object of his passion was Mrs Elizabeth Porter (1688-
1752), widow of Harry Porter (d. 1734), whose daughter Lucy
was born only six years after Johnson himself. To ordinary
spectators in 1735 the lady appeared to be a short, fat, coarse
woman, painted half an inch thick, dressed in gaudy colours, and
fond of exhibiting pretentions and graces which were not exactly
those of the Queensberrys and Lepels. To Johnson, however,
whose passions were strong, whose eyesight was too weak to
distinguish rouge from natural bloom, and who had seldom or
never been in the same room with a woman of real fashion, his
Tetty, as he called her, was the most beautiful, graceful and
accomplished of her sex. That his admiration was unfeigned cannot
be doubted; she had, however, a jointure of £600 and perhaps a
little more; she came of a good family, and her son Jervis
(d. 1763) commanded H.M.S. "Hercules." The marriage, in spite
of occasional wranglings, proved happier than might have been
expected. The lover continued to be under the illusions of the
wedding-day (July 9, 1735) till the lady died in her sixty-fourth
year. On her monument at Bromley he placed an inscription
tolling the charms of her person and of her manners; and when,
long after her decease, he had occasion to mention her, he
exclaimed with a tenderness half ludicrous, half pathetic, "Pretty
creature!"

His marriage made it necessary for him to exert himself more
strangely than he had hitherto done. He took a house at
Edial near Lichfield and advertised for pupils. But eighteen
months passed away, and only three pupils came to his academy.
The "faces" that Johnson habitually made (probably nervous
contortions due to his disorder) may well have alarmed parents.
Good scholar though he was, these twitchings had lost him usher-
ships in 1735 and 1736. David Garrick, who was one of the
pupils, used, many years later, to throw the best company of
London into convulsions of laughter by mimicking the master
and his lady.

At length Johnson, in the twenty-eighth year of his age,
determined to seek his fortune in London as a literary adventurer.
He set out with a few guineas, three acts of his tragedy of Irene
in manuscript, and two or three letters of introduction from his
friend Walmesley. Never since literature became a calling in
England had it been a less gainful calling than at the time when
Johnson took up his residence in London. In the preceding
generation no writer of eminent merit was sure to be manifestly
rewarded by the Government. The least that he could expect
was a pension or a sinecure place; and, if he showed any apti-
tude for politics, he might hope to be a member of parliament, a
lord of the treasury, an ambassador, a secretary of state. But
literature had ceased to flourish under the patronage of the great,
and had not yet begun to flourish under the patronage of the
public. One man of letters, indeed, Pope, had acquired by his
pen what was then considered as a handsome fortune, and lived
on a footing of equality with nobles and ministers of state. But
this was a solitary exception. Even an author whose reputation
was established, and whose works were popular—such an author
as Thomson, whose Seasons was in every library, such an author
as Fielding, whose Psmith had had a greater run than any drama
since The Beggar's Opera—was sometimes glad to obtain, by

464
JOHNSON, SAMUEL
pawning his best coat, the means of dining on tripe at a cookshop underground, where he could wipe his hands, after his greasy meal, on the back of a Newfoundland dog. It is easy, therefore, to imagine what humiliations and privations must have awaited the novice who had still to earn a name. One of the publishers to whom Johnson applied for employment measured with a scornful eye that athletic though uncouth frame, and exclaimed, "You had better get a porter's knot and carry trunks." Nor was the advice bad, for a porter was likely to be as plentifully fed, and as comfortably lodged, as a poet.

Some time appears to have elapsed before Johnson was able to form any literary connexion from which he could expect more than bread for the day which was passing over him. He never forgot the generosity with which Hervey, who was now residing in London, relieved his wants during this time of trial. "Harry Hervey," said Johnson many years later, "was a vicious man; but he was very kind to me. If you call a dog Hervey, I shall love him." At Hervey's table Johnson sometimes enjoyed feasts which were made more agreeable by contrast. But in general he dined, and thought that he dined well, on sixpenny-worth of meat and a pennycost of bread at an alehouse near Drury Lane.

The effect of the privations and sufferings which he endured at this time was discernible to the last in his temper and his deportment. His manners had never been courtly. They now became almost savage. Being frequently under the necessity of wearing shabby coats and dirty shirts, he became a confirmed sloven. Being often very hungry when he sat down to his meals, he contracted a habit of eating with ravenous greediness. Even to the end of his life, and even at the tables of the great, the sight of food affected him as it affects wild beasts and birds of prey. His taste in cookery, formed in subterraneanordinary and à la mode beef shops, was far from delicate. Whenever he was so fortunate as to have near him a hare that had been kept too long, or a meat pie made with rancid butter, he gorged himself with such violence that his veins swelled and the moisture broke out on his forehead. The affronts which his poverty emboldened stupid and low-minded men to offer to him would have broken a mean spirit into sycophancy, but made him rude even to ferocity. Unhappily the insolence which, while it was defensive, was pardonable, and in some sense respectable, accompanied him into societies where he was treated with courtesy and kindness. He was repeatedly provoked into striking those who had taken liberties with him. All the sufferers, however, were wise enough to abstain from talking about their beatings, except one, the roughest and most brutal of his assailants, who, when discovered everywhere that he had been knocked down by the huge fellow whom he had hired to puff the Harleian Library.

A year after Johnson had begun to reside in London he was fortunate enough to obtain regular employment from Edward Cave (q. v.) on the Gentleman's Magazine. That periodical, just entering on the ninth year of its long existence, was the only one in the kingdom which then had what would now be called a large circulation. Johnson was engaged to write the speeches in the "Reports of the Debates of the Senate of Lilliput" (see Reporting), under which thin disguise the proceedings of parliament were published. He was generally furnished with notes, meagre indeed and inaccurate, of what had been said; but sometimes he had to find arguments and eloquence both for the ministry and for the opposition. He was himself a Tory; not from rational conviction—for his serious opinion was that one form of government was just as good or as bad as another—but from mere passion, such as inflamed the Capulets against the Montagues, or the Blues of the Roman circus against the Greens. In his infancy he had heard so much talk about the villainies of the Whigs, and the dangers of the Church, that he had become a furious partisan when he could scarcely speak. Before he was three he had insisted on being taken to hear Sacheverel preach at Lichfield Cathedral, and had listened to the sermon with as much respect and probably with as much intelligence, as any Staffordshire squire in the congregation. The work which had been begun in the nursery had been completed by the university. Oxford, when Johnson resided there, was the most Jacobitical place in England; and Pembroke was one of the most Jacobitical colleges in Oxford. The prejudices which he brought up to London were scarcely less absurd than those of his own Tom Tempest. Charles II. and James II. were two of the best kings that ever reigned. Laud was a prodigy of parts and learning over whose tomb Art and Genius still continued to weep. Hampden deserved no more honourable name than that of the "zealot of rebellion." Even the ship-money Johnson would not pronounce to have been an unconstitutional impost. Under a government which allowed to the people an unprecedented liberty of speech and action, he fancied that he was a slave. He hated Dissenters and stock-jobbers, the excise and the army, septennial parliaments, and Continental connexions. He long had an aversion to the Scots, an aversion of which he could not remember the commencement, but which, he owned, had probably originated in his abhorrence of the conduct of the nation during the Great Rebellion. It is easy to guess in what manner debates on great party questions were likely to be reported by a man whose judgment was so much disordered by party spirit. A show of fairness was indeed necessary to the prosperity of the Magazine. But Johnson long afterwards owned that, though he had saved appearances, he had taken care that the Whig dogs should not have the best of it; and, in fact, every passage which has lived, every passage which bears the marks of his higher faculties, is put into the mouth of some member of the opposition.

A few weeks after Johnson had entered on these obscure labours, he published a work which at once placed him high among the writers of his age. It is probable that what he had suffered during his first year in London had often reminded him of some parts of the satire in which Juvenal had described the misery and degradation of a needy man of letters, lodged among the pigeons' nests in the tottering garrets which overhung the streets of Rome. Pope's admirable imitations of Horace's Satires and Epistles had recently appeared, were in every hand, and were by many readers thought superior to the originals. What Pope had done for Horace, Johnson aspired to do for Juvenal.

Johnson's London appeared without his name in May 1738. He received only ten guineas for this stately and vigorous poem; but the sale was rapid and the success complete. A second edition was required within a week. Those small critics who are always desirous to lower established reputations ran about proclaiming that the anonymous satirist was superior to Pope in his own peculiar department of literature. It ought to be remembered, to the honour of Pope, that he joined heartily in the applause with which the appearance of a rival genius was welcomed. He made inquiries about the author of London. Such a man, he said, could not long be concealed. The name was soon discovered; and Pope, with great kindness, exerted himself to obtain an academical degree and the mastership of a grammar school for the poor young poet. The attempt failed, and Johnson remained a bookseller's hack.

It does not appear that these two men, the most eminent writer of the generation which was going out, and the most eminent writer of the generation which was coming in, ever saw each other. They lived in very different circles, one surrounded by dukes and earls, the other by starving pamphleteers and index-makers. Among Johnson's associates at this time may be mentioned Boyse, who, when his shirts were pledged, scrawled Latin verses sitting up in bed with his arms through two holes in his blanket, who composed very respectable sacred poetry when he was sober, and who was at last run over by a hackney coach when he was drunk; Hoole, surnamed the metaphysical tailor, who, instead of attending to his measures, used to trace geometrical diagrams on the board where he sat cross-legged; and the penitent impostor, George Psalmnazar, who, after pining all day, in a humble lodgment, on the folios of Jewish rabbis and Christian fathers, indulged himself at night with literary and theological conversation at an alehouse in the City. But the most remarkable of the persons with whom at this time Johnson consorted was Richard Savage, an earl's son, a shoemaker's apprentice,
who had seen life in all its forms, who had feasted among blue ribands in St James's Square, and had lain with fifty pounds weight of iron on his legs in the condemned ward of Newgate. This man had, after many vicissitudes of fortune, sunk at last into abject and hopeless poverty. His pen had failed him. His patrons had been taken away by death, or estranged by the riotous profusion with which he squandered their bounty, and the ungrateful insolence with which he rejected their advice. He now lived by begging. He dined on venison and champagne whenever he had been so fortunate as to borrow a guinea. If his questing had been unsuccessful, he appeased the rage of hunger with some scraps of broken meat, and lay down to rest under the piazza of Covent Garden in warm weather, and, in cold weather, as near as he could get to the furnace of a glass house. Yet in his misery he was still an agreeable companion. He had an inexhaustible store of anecdotes about that gay and brilliant world from which he was now an outcast. He had observed the great men of both parties in hours of careless relaxation, had seen the leaders of opposition without the mask of patriotism, and had heard the prime minister roar with laughter at tell stories not over-decent. During some months Savage lived in the closest familiarity with Johnson; and then the friends parted, not without tears. Johnson remained in London to drudge for Cave. Savage went to the west of England, lived there as he had lived everywhere, and in 1743 died, penniless and heartbroken, in Bristol Gaol.

Soon after his death, while the public curiosity was strongly excited about his extraordinary character and his not less extraordinary adventures, a life of him appeared widely different from the catchpenny lives of eminent men which were then a staple article of manufacture in Grub Street. The style was indeed deficient in ease and variety; and the writer was evidently too partial to the Latin element of our language. But the little work, with all its faults, was a masterpiece. No finer specimen of literary biography existed in any language, living or dead; and a discerning critic might have confidently predicted that the author was destined to be the founder of a new school of English eloquence.

The Life of Savage was anonymous; but it was well known in literary circles that Johnson was the writer. During the three years which followed, he produced no important work; but he was not, and indeed could not be, idle. The fame of his abilities and learning continued to grow. Warburton pronounced him a man of parts and genius; and the praise of Warburton was then no light thing. Such was Johnson's reputation that, in 1747, several eminent booksellers combined to employ him in the arduous work of preparing a Dictionary of the English Language, in two folio volumes. The sum which they agreed to pay him was only fifteen guineas; and out of this sum he had to pay several poor men of letters who assisted him in the humbler parts of his task.

The prospectus of the Dictionary he addressed to the earl of Chesterfield. Chesterfield had long been celebrated for the politeness of his manners, the brilliancy of his wit, and the delicacy of his taste. He was acknowledged to be the finest speaker in the House of Lords. He had recently governed Ireland, at a momentous conjuncture, with eminent firmness, wisdom and humanity; and he had since become secretary of state. He received Johnson in the most winning affability, and required it with a few guineas, bestowed doubtless in a very graceful manner, but was by no means desirous to see all his carpets blackened with the London mud, and his soups and wines thrown to right and left over the gowns of fine ladies and the waistcoats of fine gentlemen, by an absent, awkward scholar, who gave strange starts and uttered strange growls, who dressed like a scarecrow and ate like a corromant. During some time Johnson continued to call on his patron, but, after being repeatedly told by the porter that his lordship was not at home, took the hint, and ceased to present himself at the inhospitable door.

Johnson had flattered himself that he should have completed his Dictionary by the end of 1750; but it was not till 1755 that he at length gave his huge volumes to the world. During the seven years which he passed in the drudgery of penning definitions and marking quotations for transcription, he sought for relaxation in literary labour of a more agreeable kind. In January 1749 he published The Vanity of Human Wishes, an excellent imitation of the tenth satire of Juvenal, for which he received fifteen guineas.

A few days after the publication of this poem, his tragedy of Irene, begun many years before, was brought on the stage by his old pupil, David Garrick, now manager of Drury Lane Theatre. The relation between him and his old preceptor was of a very singular kind. They repelled each other strongly, and yet attracted each other strongly. Nature had made them of very different clay; and circumstances had fully brought out the natural peculiarities of both. Sudden prosperity had turned Garrick's head. Continued adversity had soured Johnson's temper. Johnson saw with more envy than became so great a man the villa, the plate, the china, the Brussels carpet, which the little mimic had got by repeating, with grimaces and gesticulations, what wiser men had written; and the exquisitely sensitive vanity of Garrick was galled by the thought that, while all the rest of the world was applauding him, he could obtain from one morose critic no other opinion it was impossible to despise, scarcely any compliment at all. Yet, as all the men of fashion and the literate men had so many early recollections in common, and sympathized with each other on so many points on which they sympathized with nobody else in the vast population of the capital, that, though the master was often provoked by the monkey-like impertinence of the pupil, and the pupil by the bearish rudeness of the master, they remained friends till they were parted by death. Garrick now brought Irene out, with alterations sufficient to displease the author, yet not sufficient to make the piece pleasing to the audience. After nine representations the play was withdrawn. The poet however cleared by his benefit nights, and by the sale of the copyright of his tragedy, about three hundred pounds, then a great sum in his estimation.

About a year after the representation of Irene, he began to publish a series of short essays on morals, manners and literature. This species of composition had been brought into fashion by the success of the Tatler, and by the still more brilliant success of the Spectator. A crowd of small writers had vainly attempted to rival the Tatler and the Spectator, the Monastery, the Censor, the Freethinker, the Plain Dealer, the Chorister, and the other works of Malthus; but the first had had their short day. At length Johnson undertook the adventure in which so many aspirants had failed. In the thirty-sixth year after the appearance of the last number of the Spectator appeared the first number of the Rambler. From March 1750 to March 1752 this paper continued to come out every Tuesday and Saturday.

From the first the Rambler was enthusiastically admired by a few eminent men. Richardson, when only five numbers had appeared, pronounced it equal if not superior to the Spectator. Young and Hartley expressed their approbation not less warmly. In consequence probably of the good offices of Bubb Dodington, who was then the confidential adviser of Prince Frederick, two of his royal highness's gentlemen carried a gracious message to the printing office, and ordered seven copies for Leicester House. But Johnson had had enough of the patronage of the great to last him all his life, and was not disposed to haunt any other door as he had haunted the door of Chesterfield.

By the public the Rambler was at first very coldly received. Though the price of a number was only twopence, the sale did not amount to five hundred. The profits were therefore very small. But as soon as the flying leaves were collected and reprinted they became popular. The author lived to see thirteen thousand copies spread over England alone. Separate editions were published for the Scotch and Irish markets. A large party pronounced the style perfect, so absolutely perfect that in some essays it would be impossible for the writer himself to alter a single word for the better. Another party, not less numerous, vehemently accused him of having corrupted the purity of the English tongue. The best critics admitted that his diction was too monotonous, too obviously artificial, and now and then turgid.
even to absurdity. But they did justice to the acuteness of his observations on morals and manners, to the constant precision and frequent brilliancy of his language, to the weighty and magnificent eloquence of many serious passages, and to the solemn yet pleasing humour of some of the lighter papers.

The last Rambler was written in a sad and gloomy hour. Mrs Johnson had been given over by the physicians. Three days later she died. She left her husband almost broken-hearted. Many people had been surprised to see a man of his genius and learning stooping to every drudgery, and denying himself almost every comfort, for the purpose of supplying a silly, affected woman with superfluities, which she accepted with but little gratitude. But all his affliction had been concentrated on her. He had neither brother nor sister, neither son nor daughter. Her opinion of his writings was more important to him than the voice of the pit of Drury Lane Theatre, or the judgment of the Monthly Review. The chief support which had sustained him through the most arduous labour of his life was the hope that she would enjoy the fame and the profit which he anticipated from his Dictionary. She was gone; and in that vast labyrinth of streets, peopled by eight hundred thousand human beings, he had been alone. Yet, it was necessary for him to set himself, as he expressed it, to doggedly toil. After three more laborious years, the Dictionary was at length complete.

It had been generally supposed that this great work would be dedicated to the eloquent and accomplished nobleman to whom the prospectus had been addressed. Lord Chesterfield well knew the value of such a compliment; and therefore, when the day of publication drew near, he exerted himself to soothe, by a show of zeal and at the same time of delicate and judicious kindness, the pride which he had so cruelly wounded. Since the Rambler had ceased to appear, the town had been entertained by a journal called the World, to which many men of high rank and fashion contributed. In two successive numbers of the World, the Dictionary was, to use the modern phrase, puffed with wonderful skill. The writings of Johnson were warmly praised. It was proposed that he should be invested with the authority of a dictator, nay, of a pope, over our language, and that his decisions about the meaning and the spelling of words should be received as final. His two folios, it was said, would, of course be bought by everybody; and very wisely would they be bought. It was supposed that these papers were written by Chesterfield. But the just resentment of Johnson was not to be so appeased. In a letter written with singular energy and dignity of thought and language, he repelled the tardy advances of his patron. The Dictionary came forth without a dedication. In the Preface the author truly declared that he owed nothing to the great, and described the difficulties with which he had been left to struggle so forcibly and pathetically that the ablest and most malevolent of all the enemies of his fame, Horne Tooke, never could read that passage without tears.

Johnson's Dictionary was hailed with an enthusiasm such as no similar work has ever excited. It was indeed the first dictionary which could be read with pleasure. The definitions show so much acuteness of thought and command of language, and the passages quoted from poets, divines and philosophers are so skilfully selected, that a leisure hour may always be very agreeably spent in turning over the pages. The faults of the book resolve themselves, for the most part, into one great fault. Johnson was a wretched etymologist. He knew little or nothing of any Teutonic language except English, which indeed, as he wrote it, was scarcely a Teutonic language; and thus he was absolutely at the mercy of Junius and Skinner.

The Dictionary, though it raised Johnson's fame, added nothing to his pecuniary means. The fifteen hundred guineas which the booksellers had agreed to pay him had been advanced and spent before the last sheets issued from the press. It is painful to relate that twice in the course of the year which followed the publication of this great work he was arrested and carried to sponging-houses, and that he was twice indebted for his liberty to his excellent friend Richardson. It was still necessary for the man who had been formerly saluted by the highest authority as dictator of the English language to supply his wants by constant toil. He abridged his Dictionary. He proposed to bring out an edition of Shakespeare by subscription, and many subscribers sent in their names and laid down their money; but he soon found the task so little to his taste that he turned to more attractive employments. He contributed many papers to a new monthly journal, which was called the Literary Magazine. Few of these papers have much interest; but among them was one of the best things that he ever wrote, a masterpiece both of reasoning and of satirical pleasantry, the review of Jenyns' Inquiry into the Nature and Origin of Evil.

In the spring of 1758 Johnson put forth the first of a series of essays, entitled the Idler. During two years these essays continued to appear weekly. They were eagerly read, widely circulated, and indeed impudently pirated, while they were still in the original form, and had a large sale when collected into volumes. The Idler may be described as a second part of the Rambler, somewhat livelier and somewhat weaker than the first part. While Johnson was busied with his Idlers, his mother, who had accomplished her ninetieth year, died at Lichfield. It was long since he had seen her, but he had not failed to contribute largely out of his small means to her comfort. In order to defray the charges of her funeral, and to pay some debts which she had left, he wrote a little book in a single week, and sent off the sheets to the press without reading them over. A hundred pounds were paid him for the copyright, and the purchasers had great cause to be pleased with their bargain, for the book was Rasselas, and it had a great success.

The plan of Rasselas might, however, have seemed to invite severe criticism. Johnson has frequently blamed Shakespeare for neglecting the proprieties of time and place, and for ascribing to one age or nation the manners and opinions of another. Yet Shakespeare has not sinned in this way more grievously than Johnson. Rasselas and Imlac, Nekayah and Pekuah, are evidently meant to be Abyssinians of the 18th century; for the Europe which Imlac describes is the Europe of the 18th century, and the inmates of the Happy Valley talk familiarly of that law of gravitation which Newton discovered and which was not fully received even at Cambridge till the 18th century. Johnson, not content with turning serious and Storied circumstances of their letters, and aspects of them, into philosophical analogues and enlightened as eloquent and as himself or his friend Burke, and into ladies as highly accomplished as Mrs Lennox or Mrs Sheridan, transferred the whole domestic system of England to Egypt. Into a land of harem, a land of polygamy, a land where women are married without ever being seen, he introduced the flirtations and jealousies of our ball-rooms. In a land where there is boundless liberty of divorce, wedlock is described as the indissoluble compact. "A youth and maiden meeting by chance, or brought together by artifice, exchange glances, reciprocate civilities, go home, and dream of each other. Such," says Rasselas, "is the common process of marriage." A writer who was guilty of such improprieties had little right to blame the poet who made Hector quote Aristotle, and represented Julio Romano as flourishing in the days of the Oracle of Delphi.

By such exertions as have been described Johnson supported himself till the year 1762. In that year a great change in his fortunes took place. He had from a child been an enemy of the reigning dynasty. His Jacobite prejudices had been exhibited with little disguise both in his works and in his conversation. Even in his massy and elaborate Dictionary he had, with a strange want of taste and judgment, inserted bitter and contemptuous reflections on the Whig party, the excise, which was a favourite resource of Whig financiers, he had designated as a hateful tax. He had railed against the commissioners of excise in language so coarse that they had seriously thought of prosecuting him. He had with difficulty been prevented from holding up the lord privy seal by name as an example of the meaning of the word "renegade." A pension he had defined as pay given to a state hireling to betray his country; a pensioner as a slave of state hired by a stipend to obey a master. It
passage quoted from any dramatist of the Elizabethan age except Shakespeare and Ben Jonson. Even from Ben the quotations are few. Johnson might easily in a few months have made himself well acquainted with every old play that was extant. But it never seems to have occurred to him that this was a necessary preparation for the work which he had undertaken. He would doubtless have admitted that it would be the height of absurdity in a man who was not familiar with the works of Aeschylus and Euripides to publish an edition of Sophocles. Yet he ventured to publish an edition of Shakespeare, without having ever in his life, as far as can be discovered, read a single scene of Massinger, Ford, Dekker, Webster, Marlow, Beaumont or Fletcher. His detractors were noisy and scurrilous. He had, however, acquitted himself of a debt which had long lain heavy on his conscience and he sank back into the repose from which the sting of satire had roused him. He long continued to live upon the fame which he had already won. He was honoured by the university of Oxford with a doctor's degree, by the Royal Academy with a professorship, and by the king with an interview, in which his majesty most graciously expressed a hope that so excellent a writer would not choose to resign the chair at Oxford. In the interval between 1765 and 1770 Johnson published only two or three political tracts.

But, though his pen was now idle, his tongue was active. The influence exercised by his conversation, directly upon those with whom he lived, and indirectly on the whole literary world, was altogether without a parallel. His colloquial talents were indeed of the highest order. He had strong sense, quick discernment, wit, humour, immense knowledge of literature and of life, and an infinite store of curious anecdotes. As respected style, he spoke far better than he wrote. Every sentence which dropped from his lips was as correct in structure as the most nicely balanced period of the Rambler. But in his talk there were no pompous triads, and little more than a fair proportion of words in -osity and -ation. All was simplicity, ease and vigour. He uttered his short, weighty, and pointed sentences with a power of voice, and a justness and energy of emphasis, of which the effect was rather increased than diminished by the rollings of his huge form, and by the asthmatic gaspings and puffings in which the peals of his gale-like laugh ended. Nor did the laziness which made him unwilling to sit down to his desk prevent him from giving instruction or entertainment orally. To discuss questions of taste, of learning, of casuistry, in language so exact and so forcible that it might have been printed without the alteration of a word, was to him no exertion, but a pleasure. He loved, as he said, to fold his legs and have his talk out. He was ready to bestow the overflows of his full mind on anybody who would start a subject: on a fellow-passenger in a stage coach, or on the person who sat at the same table with him in an eating-house. But his conversation was nowhere so brilliant and striking as when he was surrounded by a few friends, whose abilities and knowledge enabled them, as he once expressed it, to send him back every ball that he threw. Some of these, in 1764, formed themselves into a club, which gradually became a formidable power in the commonwealth of letters. The verdicts pronounced by this concave on new books were speedily known all over London, and were sufficient to sell off a whole edition in a day, or to condemn the sheet to the service of the trinket-maker and the pastrycook. Goldsmith was the representative of poetry and light literature, Reynolds of the arts, Burke of political eloquence and political philosophy. There, too, were Gibbon the greatest historian and Sir William Jones the greatest linguist of the age. Garrick brought to the meetings his inexhaustible pleasantry, his incomparable mimicry, and his consummate knowledge of stage effect. Among the most constant attendants were two high-born and high-bred gentlemen, closely bound together by friendship, but of widely different characters and habits—Bennet Langton, distinguished by his skill in Greek literature, by the orthodoxy of his opinions, and by the sanctity of his life, and Topham Beauclerk, renowned for his amours, his knowledge of the gay world, his fastidious taste and his sarcastic wit.

Among the members of this celebrated body was one to whom it has owed the greater part of its celebrity, yet who was
regarded with little respect by his brethren, and had not without difficulty obtained a seat among them. This was James Boswell (q.v.), a young Scotch lawyer, heir to an honourable name and a fair estate. That he was a coxcomb and a bore, weak, vain, pushing, curious, garrulous, was obvious to all who were acquainted with him.

To a man of Johnson's strong understanding and irritable temper, the silly egotism and adulation of Boswell must have been as teasing as the constant buzz of a fly. Johnson hated to be questioned; and Boswell was eternally catechizing him on all kinds of subjects, and sometimes propounded such questions as, "What would you do, sir, if you were locked up in a tower with a baby?" Johnson was a water-drinker and Boswell was a wine-bibber, and indeed little better than an habitual soot. It was impossible that there should be perfect harmony between two such companions. Indeed, the great man was sometimes provoked into fits of passion, in which he said things which the small man, during a few hours, seriously resented. Every quarrel, however, was soon made up. During twenty years the disciple continued to worship the master; the master continued to scold the disciple, to sneer at him, and to love him. The two friends ordinarily resided at a great distance from each other. Boswell practiced at Edinburgh. He could pay only occasional visits to London. During those visits his chief business was to watch Johnson, to discover all Johnson's habits, to turn the conversation to subjects about which Johnson was likely to say something remarkable, and to fill quarto notebooks with minutes of what Johnson had said. In this way were gathered the materials out of which was afterwards constructed the most interesting biographical work in the world.

Soon after the club began to exist, Johnson formed a connexion less important indeed to his fame, but much more important to his happiness, than his connexion with Boswell. Henry Thrale, one of the most opulent brewers in the kingdom, a man of sound and cultivated understanding, rigid principles, and liberal spirit, was married to one of those clever, kind-hearted, engaging, vain, pert young women who are perpetually doing or saying what is not exactly right, but who, do or say what they may, are always agreeable. In 1765 the Thrales became acquainted with Johnson, and the acquaintance ripened fast into friendship. They were astonished at this abruptness. Johnson was, however, flattered by finding that a man so widely celebrated preferred their house to any other in London. Johnson soon had an apartment at the brewery in Southwark, and a still more pleasant apartment at the villa of his friends on Streatham Common. A large part of every year he passed in those abodes, which must have seemed magnificent and luxurious indeed, when compared with the dens in which he had generally been lodged. But his chief pleasures were derived from what the astronomer of his Abyssinian tale called "the endearing elegance of female friendship." Mrs Thrale rallied him, soothed him, coaxed him, and if she sometimes provoked him by her flippancy, made ample amends by listening to his reproofs with angelic sweetness of temper. When he was diseased in body and in mind, she was the most tender of nurses. No comfort that wealth could purchase, no contrivance that womanly ingenuity, set to work by womanly compassion, could devise, was wanting to his sick room. It would seem that a full half of Johnson's life during about sixteen years was passed under the roof of the Thrales. He accompanied the family sometimes to Bath, and sometimes to Brighton, once to Wales and once to Paris. But he had at the same time a house in one of the narrow and gloomy courts on the north of Fleet Street. In the garrets was his library, a large and miscellaneous collection of books, falling to pieces and begrimed with dust. On a lower floor he sometimes, but very rarely, regaled a friend with a plain dinner—a veal pie, or a leg of lamb and spinach, and a rice pudding. Nor was the dwelling uninhabited during his long absences. It was the home of the most extraordinary assemblage of inmates that ever was brought together. At the head of the establishment Johnson had placed an old lady named Williams, whose chief recommendations were her blindness and her poverty. But, in spite of her murmurs and reproaches, he gave an asylum to another lady who was as poor as herself, Mrs Desmoulins, whose family he had known many years before in Staffordshire. Room was found for the daughter of Mrs Desmoulins, and for another destitute damsel, who was generally addressed as Miss Car michael, but whom her generous host called Polly. An old quack doctor named Levett, who had a wide practice, but among the very poorest class, poured out Johnson's tea in the morning and completed this strange menagerie. All these poor creatures were at constant war with each other, and with Johnson's negro servant Frank. Sometimes, indeed, they transferred their hostilities from the servant to the master, complained that a better table was not kept for them, and railed or maundered till their benefactor was glad to make his escape to Streatham or to the Mitre Tavern. And yet he, who was generally the haughtiest and most irritable of mankind, who was but too prompt to resent anything which looked like a slight on the part of a purse-proud bookseller, or of a noble and powerful patron, bore patiently from mendicants, who, but for his bounty, must have gone to the workhouse, insults more provoking than those for which he had knocked down Osborne and hidden defiance to Chesterfield. Year after year, the smell of Williams, Levett, and Polly's absences was the same, and during the following year he employed himself in recording his adventures. About the beginning of 1775 his Journey to the Hebrides was published, and was, during some weeks, the chief subject of conversation in all circles in which any attention was paid to literature. His prejudice against the Scots had at length become little more than matter of jest; and whatever remained of the old feeling had been effectually removed by the kind and respectful hospitality with which he had been received in every part of Scotland. It was, of course, not to be expected that an Oxonian Tory should praise the Presbyterian polity and ritual, or that an eye accustomed to the hedgerows and parks of England should not be struck by the barrenness of Berwickshire and East Lothian. But even in censure Johnson's tone is not unfriendly. The most enlightened Scotsmen, with Lord Mansfield at their head, were well pleased. But some foolish and ignorant Scotsmen were moved to anger by a little unpalatable truth which was mingled with much eulogy, and assailed him whom they chose to consider as the enemy of their country with libels much more dishonourable to their country than anything that he had ever said or written. They published paragraphs in the newspapers, articles in the magazines, sixpenny pamphlets, five-shilling books. One scribbler abused Johnson for being blear-eyed, another for being a pensioner; a third informed the world that one of the doctor's uncles had been convicted of felony in Scotland, and had found that there was in that country one tree capable of supporting the weight of an Englishman. Macpherson, whose Fingal had been treated in the Journey as an impudent forgery, threatened to take vengeance with a cane. The only effect of this threat was that Johnson reiterated the charge of forgery in the most contemptuous terms, and walked about, during some time, with a cudgel.
JOHNSON, SAMUEL

Of other assailants Johnson took no notice whatever. He had early resolved never to be drawn into controversy; and he adhered to his resolution with a steadfastness which is the more extraordinary because he was, both intellectually and morally, of the stuff of which controversialists are made. In conversation he was a singularly eager, acute and pertinacious disputant. When at a loss for good reasons, he had recourse to sophistry; and when heated by altercation, he made unsparing use of sarcasm and invective. But when he took his pen in his hand, his whole character seemed to be changed. A hundred bad writers misrepresented him and reviled him; but not one of the hundred could boast of having been thought by him worthy of a retutation, or even of a retort. One Scotsman, bent on vindicating the fame of Scots learning, defied him to the combat in a detestable Latin hexameter:

"Maxime, si tu vis, cupio contendere tecum."

But Johnson took no notice of the challenge. He always maintained that fame was a shuttlecock which could be kept up only by being beaten back as well as beaten forward, and which would soon fall if there were only one battler. No saying was ever so tenacious of him that he felt the stigma of Bentley, that no man was ever written down but by himself.

Unhappily, a few months after the appearance of the Journey to the Hebrides, Johnson did what none of his envious assailants could have done, and to a certain extent succeeded in writing himself down. The disputes between England and her American colonies had reached a point at which no amicable adjustment was possible. War was evidently impending; and the ministers seem to have thought that the eloquence of Johnson might with advantage be employed to inflame the nation against the opposition at home, and against the rebels beyond the Atlantic. He had already written two or three tracts in defence of the foreign and domestic policy of the government; and those tracts, though hardly worthy of him, were much superior to the crowd of pamphlets which lay on the counters of Almon and Stockdale. But his Taxation no Tyranny was a pitiable failure. Even Boswell was forced to own that in this unfortunate piece he could detect no trace of his master's powers. The general opinion was that the strong faculties which had produced the Dictionary and the Rasselas were exhausted. The best feeling was that he was the victim of time and of disease, and that the old man would best consult his credit by writing no more. But this was a great mistake. Johnson had failed, not because his mind was less vigorous than when he wrote Rasselas in the evenings of a week, but because he had foolishly chosen, or suffered others to choose for him, a subject such as he would at no time have been competent to treat. He was in no sense a statesman. He never willingly read or thought or talked about affairs of state. He loved biography, literary history, the history of manners; but political history was positively distasteful to him. The question at issue between the colonies and the mother country was a question about which he had really nothing to say. Happily, Johnson soon had an opportunity of proving most signally that his failure was not to be ascribed to intellectual decay.

On Easter Eve 1777 some persons, deputed by a meeting which consisted of forty of the first booksellers in London, called upon him. Though he had some scruples about doing business at that season, he received his visitors with much good nature, and professed to inform him that a new edition of the English poets, from Cowley downwards, was in contemplation, and to ask him to furnish short biographical prefaces. He readily undertook the task for which he was pre-eminently qualified. His knowledge of the literary history of England since the Restoration was unrivalled. That knowledge he had derived partly from books, and partly from sources which had long been closed: from old Grub Street traditions; from the talk of forgotten poetasters and pamphleeters, who had long been lying in parish vaults; from the recollections of such men as Gilbert Walmesley, who had conversed with the wits of Button, Cibber, who had mutilated the plays of two generations of dramatists, Orrery, who had been admitted to the society of Swift and Savage, who had rendered services of no very honourable kind to Pope. The biographer therefore sat down to his task with a mind full of matter. He had at first intended to give only a paragraph to every minor poet, and only four or five pages to the greatest name. But the flood of anecdote and criticism overflowed the narrow channel. The work, which was originally meant to consist only of a few sheets, swelled into ten volumes—small volumes, it is true, and not closely printed. The first four appeared in 1779, the remaining six in 1781.

The Lives of the Poets are, on the whole, the best of Johnson's works. The narratives are as entertaining as any novel. The remarks on life and on human nature are eminently shrewd and profound. The criticisms are often excellent, and, even when grossly and provokingly unjust, well deserve to be studied. Savage's Life Johnson reprinted nearly as it had appeared in 1744. Whoever, after reading that life, will turn to the other lives will be struck by the difference of style. Since Johnson had been at ease in his circumstances he had written little and had talked much. When therefore he, after the lapse of years, resumed his pen, the mannerism which he had contracted while he was in the constant habit of elaborate composition was less perceptible than when he had employed his diction frequently to a colloquial ease which it had formerly wanted. The improvement may be discerned by a skilful critic in the Journey to the Hebrides, and in the Lives of the Poets is so obvious that it cannot escape the notice of the most careless reader. Among the Lives the best are perhaps those of Cowley, Dryden and Pope. The very worst is, beyond all doubt, that of Gray; the most controverted that of Milton.

This great work at once became popular. There was, indeed, much just and much unjust censure; but even those who were loudest in blame were attracted by the book in spite of themselves. Malme computed the gains of the publishers at five or six thousand pounds. But the writer was very poorly remunerated. Intending at first to write very short prefaces, he had stipulated for only two hundred guineas. The booksellers, when they saw how far his performance had surpassed his promise, added only another hundred. Indeed Johnson, though he did not despise or affect to despise money, and though his strong sense and long experience ought to have qualified him to protect his own interests, seems to have been singularly unskilful and unknown in his bargains. He was generally reputed the first English writer of his time. Yet several writers of his time sold their copyrights for sums such as he never ventured to ask. To give a single instance, Robertson received £4500 for the History of Charles V.

Johnson was now in his seventy-second year. The infirmities of age were coming fast upon him. That inevitable event of which he never thought without horror was brought near to him; and his whole life was darkened by the shadow of death. The strange dependants to whom he had given shelter, and to whom, in spite of their faults, he was strongly attached by habit, dropped off one by one; and, in the silence of his home, he regretted even the noise of their scolding matches. The kind and generous Thrale was no more; and it was soon plain that the old Stratham intimacy could not be maintained upon the same footing. Mrs Thrale herself confessed that without her husband's assistance she did not feel able to entertain Johnson as a constant inmate of her house. Free from the yoke of the brewer, she fell into the hands of her comic master, high in his profession, from Brescia named Gabriel Piozzi, in whom nobody but herself could discover anything to admire. The secret of this attachment was soon discovered by Fanny Burney, but Johnson at most only suspected it.

In September 1782 the place at Stratham was from motives of economy let to Lord Shelburne, and Mrs Thrale took a house at Brighton, whither Johnson accompanied her; they remained for six weeks on the old familiar footing. In March 1783 Boswell was glad to discover Johnson well looked after and staying with Mrs Thrale in Argyll Street, but in a bad state of health. Impatience of Johnson's criticisms and infirmities had been steadily growing with Mrs Thrale since 1774. She now went to Bath with her daughters, partly to escape his supervision. Johnson
was very ill in his lodgings during the summer, but he still corre-
spended affectionately with his "mistress" and received many
favours from her. He retained the full use of his senses during
the paralytic attack, and in July he was sufficiently recovered
to renew his old club life and to meditate further journeys. In
June 1784 he went with Boswell to Oxford for the last time.
In September he was in Lichfield. On his return his health was
rather worse; but he would submit to no dietary régime. His
asthma tormented him day and night, and dropsical symptoms
made their appearance. His wrath was excited in no measured
terms against the re-marriage of his old friend Mrs Thrale, the
news of which he heard this summer. The whole dispute seems,
to-day, entirely uncalled-for, but the marriage aroused some of
Johnson's strongest prejudices. He wrote inconsiderately on the
subject, and the remembrances of the time he was again
afflicted in body and mentally haunted by dread of impending
change. Throughout all his troubles he had clung vehemently
to life. The feeling described in that fine but gloomy paper
which closes the series of his Idlers seemed to grow stronger in
him as his last hour drew near. He fancied that he should be
able to draw his breath more easily in a southern climate, and
would probably have set out for Rome and Naples but for his
fear of the expense of the journey. That expense, indeed, he
had the means of defraying; for he had laid up about two thou-
sand pounds, the fruit of labours which had made the fortune of
several publishers. But he was unwilling to break in upon this
hoard, and he seems to have wished even to keep its existence
a secret. Some of his friends hoped that the Government might
-be interested in a reward for his pension to six hundred pounds a year,
but this hope was disappointed, and he resolved to stand one
English winter more.

That winter was his last. His legs grew weaker; his breath
shortened; the fatal water gathered fast, in spite of incisions
which he, courageous against pain but timid against death, urged
his surgeons to make deeper and deeper. Though the tender
care which had mitigated his sufferings during months of sickness
at Streatham was withdrawn, and though Boswell was absent,
he was not left desolate. The ablest physicians and surgeons
attended him, and refused to accept fees from him. Burke
parted from him with deep emotion. Windham sat much in the
sick-room. Frances Burney, whom the old man had cherished
with fatherly kindness, stood weeping at the door, while Langton,
whose pieté eminently qualified him to be an adviser and com-
forter in such a crisis, had received the last pressure of his friend's
hand within. When at length the moment, dreaded through
so many years, came close, the dark cloud passed away from
Johnson's mind. Windham's servant, who sat up with him
during his last night, declared that "no man could appear more
collected, more devout or less terrified at the thoughts of the
approaching minute." At hour intervals, often of much pain,
he was moved in bed and addressed himself vehemently to
prayer. In the morning he was still able to give his blessing,
but in the afternoon he became drowsy, and at a quarter past
seven in the evening on the 13th of December 1784, in his seventy-
sixth year, he passed away. He was laid, a week later, in West-
minster Abbey, among the eminent men of whom he had been the
historian—Cowley and Denham, Dryden and Congreve, Gay, Prior and
Alexander Bogle.

Bibliography.—The splendid example of his style which Macaulay
contributed in the article on Johnson to the 8th edition of this ency-
Clopedia has become classic, and has therefore been retained above
with a few trifling modifications in those places in which his inextricable
love of the picturesque has drawn him demonstratively aside from the
dull line of veracity. Macaulay, it must be noted, exagagrated
persistently the poverty of Johnson's pedigree, the squaw of his
early married life, the grotesqueness of his entourage in Fleet Street,
the decline and fall from complete virtue of Mrs Thrale, the novelty
and success of the Dictionary, the complete failure of the Shakespeare
and the political tracts. Yet this contribution is far more mellow
than the article contributed on Johnson twenty-five years before to
the Edinburgh Review. It is long since the great historian, who edited six selected Lives of the poets, regarded it as one of
Macaulay's happiest and rippest efforts. It was written out of friendship
for Adam Black, and "payment was not so much as mentioned."
The big reviews, especially the quarterly, have always been the
natural home of Johnsonian study. Sir Walter Scott, Croker, Hay-
dward, Macaulay, Thomas Carlyle (whose famous Fraser article was
reprinted in 1853) and Whitwell Elwin have done as much as any-
body perhaps to sustain the zeal for Johnsonian studies. Macaulay's
"Lives of the Poets" seems even better than he would have
written the The Life of Johnson. Johnson's prose is not extensively read. But the same is true of nearly all the great prose masters of the 18th century. As in the case of the
poets, the books are almost all read by the imitators and admirers.
His prose, though not nearly so uniformly monotonous or polysyllabic as the parodists would have
us believe, was at one time greatly overpraised. From the "Life
of Pope" to the "Life of Shakespeare," Johnson was in
the main improved. To the last he sacrificed expression rather too
much to style, and he was perhaps over conscious of the balanced
epithet. But he contributed both dignity and dialectical force to
the movement of his period.

The best edition of his works is still the Oxford edition of 1825 in
9 vols. At the present day, however, his periodical writings are
neglected, and all that can be said to excite interest are, first the
Lives of the Poets (best edition by Birkbeck Hill and H. S. Scott, 3 vols.,
1905), and then the Letters, the Prayers and Meditations, and the
Poems, to which many doubtfully be added the once idolized Rasselas.
The Poems and Rasselas have been reprinted times without number.
The first critical edition of the prose has been prepared for Oxford
University Press by the pious diligence of that most enthusiastic of all
Johnsonians, Dr Birkbeck Hill. But the tendency at the present
day is undoubtedly to prize Johnson's personality and sayings more
than his literary works. His sayings have been variously treated by
biographical writing, the efficiency of which is unequalled in the
whole range of literature. The chief constituents are Johnson's
own Letters and Account of his Life from his Birth to his Eleventh

The sayings and Johnsoniana have been reprinted in very many
and various forms. Valuable work has been done in Johnsonian
genealogy and topography by Aley Lyell Read in his Johnsonian
Gleanings, &c., and in the Memorials of Old Staffordshire (ed. W.
Beresford). The most excellent short Lives are those by F. Grant
(Eng. Writers) and Sir Leslie Stephen (Eng. Men of Letters).
Professor Dr. K. Leith's Johnson and the English Language (1896)
and Lord Roscommon's estimate (1909), and Sir Leslie Stephen's article in the Dictionary of National Biography, with bibliography and list of portraits, should be consulted.
Johnson's "Club," of which the Club itself still exists, and
which is always a matter of public interest, has been the subject of a
considerable literature. The Club, as Sir Walter Scott has
said, "is a den ofさまざまな celebrities of its day." The Club itself
has included many Johnson scholars and has published papers, was founded in 1885.
Lichfield has taken an active part in the commemoration of
Johnson the Centenary, with a special celebration in 1887, when
John Thrale-Piozzi's Thrale Hall and the Stevenson Institute, the
principal museum, and Lichfield were the chief scene of the Bicentenary
Celebrations of September 1909 (fully described in A. M. Broadley's
Dr Johnson and Mrs Thrale, 1906), containing, together with new
portraits and engravings, an essay dealing with Macaulay's treatment
of the Johnson-Thrale episodes by T. Seccombe. Statues both of
Johnson and Boswell are in the market-place at Lichfield. A statue
was received by the Corporation of Lyme Regis from papers burned in 1784 and
no water marks. Again, a statue of Dr Johnson was presented to the
University of Connecticut by the Alden Memorial Association, and
is now in the Lichfield Cathedral. St Nicholas (Brighton), Uxtoxet,
St Clement Danes (London), Gwynynog and elsewhere.

JOHNSON, SIR THOMAS (1654—1709), English merchant, was
born in Liverpool in November 1664. He succeeded his father
in 1689 as bailiff and in 1695 as mayor. From 1701 to 1723 he
represented Liverpool in parliament, and he was knighted by
Queen Anne in 1708. He effected the separation of Liverpool
from the parish of Walton-on-the-Hill; from the Crown he ob-
hained the grant to the corporation of the site of the old castle
where he planned the town market; while the construction of the
first floating dock (1768) and the building of St Peter's and St
George's churches were due in great measure to his efforts.
He was interested in the tobacco trade; in 1737 he conveyed 150
Jacobite prisoners to the American colony, and in 1739 he
having been charged with the formation of the Ton in which he had inherited from
his father, he went himself to Virginia as collector of customs on
the Rappahannock river. He died in Jamaica in 1729. A
Liverpool street is named Sir Thomas Buildings after him.
JOHNSON, THOMAS. English 18th-century wood-carver and furniture designer. Of excellent repute as a craftsman and an artist in wood, his original conceptions and his adaptations of other men's ideas were remarkable for their extreme flamboyance, and for the merciless manner in which he overloaded them with thin and meretricious ornament. Perhaps his most inept design is that for a table in which a duck or goose is displacing water that falls upon a mandarin, seated, with his head on one side, upon the rail below. No local school of Italian rococo ever produced more extravagant absurdities. His clocks bore scythes and hour-glasses and flashing sunbeams, together with whirls and convolutions and floriated adornments without end. On the other hand, he occasionally produced a mirror frame or a mantelpiece which was simple and dignified. The art of artistic plagiarism has never been so well understood or so dexterously practised as by the 18th-century designers of English furniture, and Johnson appears to have so far exceeded his contemporaries that he must be called a barefaced thief. The three leading "motives" of the time—Chinese, Gothic and Louis Quatorze—were mixed up in his work in the most amazing manner; and he was exceedingly fond of introducing human figures, animals, birds and fishes in highly incongruous places. He appears to have defended his enormities on the ground that "all men vary in opinion, and a fault in the eye of one may be a beauty in that of another; 'tis a duty incumbent on an author to endeavour at pleasing every taste." Johnson, who was in business at the "Golden Boy" in Grafton Street, Westminster, published a folio volume of Designs for Picture Frames, Candelabra, Ceilings, &c. (1758); and One Hundred and Fifty New Designs (1761).

JOHNSON, SIR WILLIAM (1715-1774), British soldier and American pioneer, was born in Smithtown, County Meath, Ireland, in 1715, the son of Christopher Johnson, a country gentleman. As a boy he was educated for a commercial career, but in 1738 he removed to America for the purpose of managing a tract of land in the Mohawk Valley, New York, belonging to his uncle, Admiral Sir Peter Warren (1703-1752). He established himself on the south bank of the Mohawk River about 25 m. W. of Schenectady. Before 1743 he removed to the north side of the river. The new settlement prospered from the start, and a valuable trade was built up with the Indians, over whom Johnson exercised an immense influence. The Mohawks adopted him and elected him a sachem. In 1744 he was appointed by Governor George Clinton (d. 1761) superintendent of the affairs of the Six Nations (Iroquois). In 1746 he was made commissary of the province for Indian affairs, and was influential in enlisting and equipping the Six Nations for participation in the warfare with French Canada, two years later (1748) being placed in command of a line of outposts on the New York frontier. The peace of Aix-la-Chapelle put a stop to offensive operations, which he had begun. In May 1750 by royal appointment he became a member for life of the governor's council, and in the same year he resigned the post of superintendent of Indian affairs. In 1754 he was one of the New York delegates to the Albany Indian council, and before August of that year he was installed as the one of the Mohawks, a title which had been conferred upon him by the Iroquois, and assumed the title of Chief Johnson. In 1755 General Edward Braddock, the commander of the British forces in America, commissioned him major-general, in which capacity he directed the expedition against Crown Point, and in September defeated the French and Indians under Baron Ludwig A. Dieskau (1701-1767) at the battle of Lake George, where he himself was wounded. For this success he received the thanks of parliament, and was created a baronet (November 1755). From July 1756 until his death he was "sole superintendent of the Six Nations and other Northern Indians." He took part in General James Abercrombie's disastrous campaign against Ticonderoga (1758), and in 1759 he was second in command in General John Bradstreet's expedition against Fort Niagara, succeeding to the chief command on that officer's death, and capturing the fort. In 1760 he was with General Jeffrey Amherst (1717-1797) at the capture of Montreal. As a reward for his services the king granted him a tract of 100,000 acres of land north of the Mohawk river. It was due to his influence that the Iroquois refused to join Pontiac in his conspiracy, and he was instrumental in arranging the treaty of Fort Stanwix in 1768. After the war Sir William retired to his estates, where, on the site of the present Johnstown, he built his residence, Johnson Hall, and lived in all the style of an English baron. He devoted himself to colonizing his extensive lands, and is said to have been the first to introduce sheep and blood horses into the province. He died at Johnstown, N.Y., on the 11th of July 1774. In 1759 Johnson had married Margaret Wisenberg, by whom he had three children. After her death he had various mistresses, including a niece of the Indian chief Hendrick, and Molly Brant, a sister of the famous chief Joseph Brant. His son, SIR JOHN JOHNSON (1742-1830), who was knighted in 1765 and succeeded to the baronetcy on his father's death, took part in the French and Indian War and in the border warfare during the War of Independence, organizing a loyalist regiment known as the "Queen's Royal Greens," which he led at the battle of Oriskany and in the raids (1778 and 1780) on Cherry Valley and in the Mohawk Valley. He was also one of the officers of the force defeated by General John Sullivan in the engagement on the Schoharie (Elsemore, N.Y., 1777). He was made brigadier-general of provincial troops in 1782. His estates had been confiscated, and after the war he lived in Canada, where he held from 1791 until his death the office of superintendent-general of Indian affairs for British North America. He received £45,000 from the British government for his losses.

Sir William's nephew, GEN JOHNSON (1740-1821), succeeded his uncle as superintendent of Indian affairs in 1774, and served in the French and Indian War and, on the British side, in the War of Independence.

JOHNSON, ALBERT SIDNEY (1803-1862). American Confederate general in the Civil War, was born at Washington, Mason county, Kentucky, on the 3rd of February 1803. He graduated from West Point in 1826, and served for eight years in the U.S. infantry as a company officer, adjutant, and staff officer. In 1834 he resigned his commission, emigrated in 1836 to Texas, then a republic, and joined its army as a private. His rise was very rapid, and before long he was serving as commander-in-chief in preference to General Felix Huston, with whom he fought a duel. From 1838 to 1840 he was Texas secretary for war, and in 1839 he led a successful expedition against the Cherokee Indians. From 1840 to the outbreak of the Mexican War he lived in retirement on his farm, but in 1846 he led a regiment of Texan volunteers in the field, and at Monterey, as a staff officer, he had three horses shot under him. In 1849 he returned to the United States army as major and paymaster, and in 1855 became colonel of the 2nd U.S. Cavalry (afterwards 5th), in which his lieut.-colonel was Robert E. Lee, and his majors were Hardee and Thomas. In 1857 he commanded the expedition sent against the Mormons, and performed his duty so well and with such success that the objects of the expedition were attained without bloodshed. He was rewarded with the brevet of brigadier-general. At the outbreak of the Civil War in 1861 Johnson, then in command of the Pacific department, resigned his commission and made his way to Richmond, where Pres. Jefferson Davis, whom he had known at West Point, at once made him a full general in the Confederate army and assigned him to command the department of Kentucky. Here he had to guard a long and weak line from the Mississippi to the Alleghany Mountains, which was dangerously advanced on account of the political necessity of covering friendly country. The first serious advance of the Federals forced him back at once, and he was freely criticized and denounced for what, in ignorance of the facts, the Southern press and people regarded as a weak and irresolute defence. Johnson himself, who had entered upon the Civil War with the reputation of being the foremost soldier on either side, bore with
fortitude the repoches of his countrymen, and Davis loyally supported his old friend. Johnston then marched to join Beauregard at Corinth, Miss., and with the united forces took the offensive against Grant's army at Pittsburg Landing. The battle of Shiloh (q.v.) took place on the 6th and 7th of April, 1862. The Federals were completely surprised, and Johnston was in the full tide of success when he fell mortally wounded. He died a few minutes afterwards. President Davis said, in his message to the Confederate Congress, "Without doing injustice to the living, it may safely be said that our loss is irreparable," and the subsequent history of the war in the west went far to prove the truth of his eulogy.

His son, William Preston Johnston (1831-1899), who served on the staff of General Johnston and subsequently on that of President Davis, was a distinguished professor and president of Tulane University. His chief work is the Life of General Albert Sidney Johnston (1878), a most valuable and exhaustive biography.

JOHNSTON, ALEXANDER (1849-1889), American historian, was born in Brooklyn, New York, on the 30th of April 1849. He studied at the Polytechnic Institute of Brooklyn, graduated at Rutgers College in 1870, and was admitted to the bar in 1872. He moved to New Brunswick, New Jersey, where he taught in the Rutgers College grammar school from 1876 to 1879. He was principal of the Latin school of Norwalk, Connecticut, in 1879-1883, and was professor of jurisprudence and political economy in the College of New Jersey (Princeton University) from 1884 until his death in Princeton, N.J., on the 21st of July 1889. He wrote A History of American Politics (1881); The Genesis of a New England State—Connecticut (1883), in "Johns Hopkins University Studies"; A History of the United States for Schools (1886); Connecticut (1887) in the "American Commonwealths Series"; the article on the history of the United States for the 9th edition of the Encyclopaedia Britannica, reprinted as The United States: Its History and Constitution (1887); a chapter on the history of American political parties in the seventh volume of Winsor's Narrative and Critical History of America, and many articles on the history of American politics in Lalor's Cyclopaedia of Political Science, of Political Economy, and Political History of the United States (1881-1884). These last articles, which like his other writings represent much original research and are excellent examples of Johnston's rare talent for terse narrative and keen analysis and interpretation of facts, were republished in two volumes entitled American Political History 1763-1876 (1905-1906), edited by Professor J. A. Woodburn.

JOHNSTON, ALEXANDER KEITH (1804-1871), Scottish geographer, was born at Kirkhill near Edinburgh on the 28th of December 1804. After an education at the high school and the university of Edinburgh he was apprenticed to an engraver; and in 1826 joined his brother (afterwards Sir William Johnston, lord provost of Edinburgh) in a printing and engraving business, the well-known cartographical firm of W. and A. K. Johnston. His interest in geography had early developed, and his first important work was the National Atlas of general geography, which gained for him in 1843 the appointment of Geographer-Royal of Scotland. Johnston was the first to bring the study of physical geography into competent notice in England. His attention had been called to the subject by Humboldt; and after years of labour he published his magnificent Physical Atlas in 1848, followed by a second and enlarged edition in 1856. This, by means of maps with descriptive letterpress, illustrates the geology, hydrography, meteorology, botany, zoology, and ethnology of the globe. The rest of Johnston's life was devoted to geography, his later years to its educational aspects especially. His services were recognized by the leading scientific societies of Europe and America. He died at Ben Rhydding, Yorkshire, on the 9th of July 1871. Johnston published a Dictionary of Geography in 1850, with many later editions; The Royal Atlas of Modern Geography, begun in 1855; an atlas of military geography to accompany Alison's History of Europe in 1848 seq.; and a variety of other atlases and maps for educational or scientific purposes. His son of the same name (1844-1879) was also the author of various geographical works and papers; in 1873-1875 he was geographer to a commission for the survey of Paraguay; and he died in Africa while leading the Royal Geographical Society's expedition to Lake Nyasa.

JOHNSTON, ARTHUR (1857–1941), Scottish physician and writer of Latin verse, was the son of an Aberdeenshire laird Johnston of Johnston and Caskieben, and on his mother's side a grandson of the seventh Lord Forbes. It is probable that he began his university studies at one, or both, of the colleges at Aberdeen, but in 1608 he proceeded to Italy and graduated M.D. at Padua in 1610. Thereafter he resided at Sedan, in the company of the exiled Andrew Melville (q.v.), and in 1619 was in practice in Paris. He appears to have returned to England about the time of James I's death and to have been in Aberdeen about 1628. He met Laud in Edinburgh at the time of Charles I's Scottish coronation (1633) and was encouraged by him in his literary efforts, partly, it is said, for the undoing of Buchanan's reputation as a Latin poet. He was appointed surgeon to King's College, Aberdeen, in June 1637. In his years later he went to Oxford, on his way to London, whither Laud had invited him.

Johnston left more than ten works, all in Latin. Of two of the works published in this country the contents are:
(a) his version of the Psalms (Psaliorum Davidis paraphrasis poetica et canticorum evangelicorum, Aberdeen, 1637), and (b) his anthology of contemporary Latin verse by Scottish poets (Deliciae poetarum Scotiae, or Scotiae academici ex silentio ad lectorem dedit, Edinburgh, in 1643 a volume entitled Cantici Salomonis paraphrasis poetica, which, dedicated to Charles I., had brought him to the notice of Laud. The full version of the Psalms was the result of Laud's encouragement.

The book was for some time a strong rival of Buchanan's Latin poetry, as good Latin and was superior to that of the latter. The Deliciae, in two small thick volumes of 609 and 575 pages, was a patriotic effort in imitation of the various volumes (under a similar title) which had been popular on the Continent during the second decade of the 17th century. In his last years Johnston went to John Scott of Scotstarvet, at whose expense the collected works were published after Johnston's death, at Middelburg (1642). Selections from his own poems occupy pages 439-454 of the first volume, divided into three sections, Parerga, Epigrammata and Musae Avulcae. He published a volume of epigrams at Aberdeen in 1632. In these pieces he shows himself at his best. His sacred poems, which had appeared in the Opera (1642), were reprinted by Laud in his Scotiae academici, and the verse of the Psalterium (1790). The earliest lives are by Lauder (n.s.) and Benson (in Psalms Davidici, 1741). Ruddiman's Vindication of Mr George Buchanan's Paraphrase (1745) began a pamphlet controversy regarding the merits of the rival poets.

JOHNSTON, SIR HENRY HAMILTON (1858–1936), British administrator and explorer, was born on the 12th of June 1858 at Kennington, London, and educated at Stockwell grammar school and King's College, London. He was a student for four years in the painting schools of the Royal Academy. At the age of eighteen he began a series of travels in Europe and North Africa, chiefly as a student of painting, architecture and languages. In 1879-1880 he visited the then little known interior of Tunisia. He had also a strong bent towards zoology and comparative anatomy, and carried on work of this description at the Royal College of Surgeons, of whose Hunterian Collection he afterwards became one of the trustees. In 1882 he joined the earl of Mayo in an expedition to the southern part of Angola, a district then recently opened to European traders. In 1883 Johnston visited H. M. Stanley on the Congo, and was employed to visit the river above Stanley Pool at a time when it was scarcely known to other Europeans than Stanley and De Brazza. These journeys attracted the attention of the Royal Geographical Society and the British Association, and the last-named in concert with the Royal Society conferred on Johnston the leadership of the scientific expedition to Mount Kilimanjaro which started from Zanzibar in April 1884. Johnston's work in this region was also under the direction of Sir John Kirk, British consul at Zanzibar. While in the Kilimanjaro district Johnston concluded treaties with the chiefs of Moshi and Taveta (Taveita). These treaties or concessions were transferred to the merchants who founded the British East Africa Company, and in the final agreement with Germany Taveta fell to Great Britain. In October 1885 Johnston was appointed British vice-consul in
JOHNSTON, J. E.

Cameroon and in the Niger delta, and he became in 1887 acting consul for that region. A British protectorate over the Niger delta had been notified in June 1885, and between the date of his appointment and 1888, together with the consul E. H. Hewett, Johnston laid the foundations of the British administration in that part of the delta not reserved for the Royal Niger Company. His action in removing the turbulent chief Ja-ja (an ex-slave who had risen to considerable power in the palm-oil trade) occasioned considerable criticism but was approved by the Foreign Office. It led to the complete pacification of a region long disturbed by trade disputes. During these three years of residence in the Gulf of Guinea Johnston ascended the Cameroon Mountain, and made large collections of the flora and fauna of Cameroon for the British Museum.

In the spring of 1889 he was sent to Lisbon to negotiate an arrangement for the delimitation of the British and Portuguese spheres of influence in South-East Africa, but the scheme drawn up, though very like the later arrangement of those regions, was not given effect to at the time. On his return from Lisbon, he was despatched to Mozambique as consul for Portuguese East Africa, and was further charged with a mission to Lake Nyasa to pacify that region, then in a disturbed state owing to the attacks of slave-trading Arabs on the stations of the African Lakes Trading Company—an unofficial war, in which Captain (afterwards Colonel Sir Frederick) Lugard and Mr (afterwards Sir Alfred) Sharpe distinguished themselves. Owing to the unexpected arrival on the scene of Major Serpa Pinto, Johnston was compelled to declare a British protectorate over the Nyasa region, being assisted in this work by John Buchanan (vice-consul), Sir Alfred Sharpe, Alfred Swann and others. A truce was arranged with the Arabs on Lake Nyasa, and within twelve months the British flag, by agreement with the natives, had been hoisted over a very large region which extended north of Lake Tanganyika in the vicinity of Uganda, to the coast in the Congo Free State, the Shire Highlands and the central Zambezian Scheme, in fact, was that known as the "Cape-to-Cairo," a phrase which he had brought into use in an article in The Times in August 1888. According to his arrangement there would have been an all-British route from Alexandria to Cape Town. But by the Anglo-German agreement of the 1st of July 1890 the British sphere north of Tanganyika was abandoned to Germany, and the Cape-to-Cairo route broken by a wedge of German territory. Johnston returned to British Central Africa as commissioner and consul-general in 1891, and retained that post till 1896, in which year he was made a K.C.B. His health having suffered much from African fever, he was transferred to Tunis as consul-general (1897). In the autumn of 1899 Sir Harry Johnston was despatched to Uganda as special commissioner to reorganize the administration of that protectorate after the suppression of the mutiny of the Sudanese soldiers and the long war with Uyoyo. His two years' work in Uganda and a portion of what is now British East Africa were rewarded at the close of 1901 by a G.C.M.G. In the spring of the following year he retired from the consular service. After 1904 he interested himself greatly in the affairs of the Liberian republic, and negotiated various arrangements with that negro state by which order was brought into its finances, the frontier with France was delimited, and the development of the interior by means of roads was commenced. In 1903 he was defeated as Liberal candidate for parliament at a by-election at Rochester. He met with no better success at West Marylebone at the general election of 1906.

For his services to zoology he was awarded the gold medal of the Zoological Society in 1902, and in the same year was made an honorary doctor of science at Cambridge. He received the gold medal of the Royal Geographical and the Royal Scottish Geographical societies, and other medals for his artistic work from South Kensington and the Society of Arts. His pictures, chiefly dealing with African subjects, were frequently exhibited at the Royal Academy. He was the author of numerous books on Africa, including British Central Africa (1897); The Colonization of Africa (1890); The Uganda Protectorate (1902); Liberia (1906); George Grenfell and the Congo (1908). During his travels in the north-eastern part of the Congo Free State in 1900 he was instrumental in discovering and naming the okapi, a mammal nearly allied to the giraffe. His name has been connected with many other discoveries in the African fauna and flora.

JOHNSTON, JOSEPH EGGLESTON (1807-1891), American Confederate general in the Civil War, was born near Farmville, Prince Edward county, Virginia, on the 3rd of February 1807. His father, Peter Johnston (1763-1841), a Virginian of Scottish descent, served in the War of Independence, and afterwards became a distinguished jurist; his mother was a niece of Patrick Henry. He graduated at West Point, in the same class with Robert E. Lee, and was made brevet second lieutenant, 4th Artillery, in 1829. He served in the Black Hawk and Seminole wars, and left the army in 1837 to become a civil engineer, but a year afterwards he was reappointed to the army as first lieutenant, Topographical Engineers, and brevetted captain for his conduct in the Seminole war. During the Mexican war he was twice severely wounded in a reconnaissance at Cerro Gordo, 1847, was engaged in the siege of Vera Cruz, the battles of Contreras, Churubusco, and Molino del Rey, the storming of Chapultepec, and the assault on the city of Mexico, and received three brevets for gallant and meritorious service. From 1853 to 1855 he was employed on Western river improvements, and in 1855 he became lieutenant-colonel of the 1st U.S. Cavalry. In 1860 he was made quartermaster-general, with the rank of brigadier-general. In April 1861 he resigned from the United States army and entered the Confederate service. He was commissioned major-general of volunteers in the Army of Virginia, and assisted in organizing the volunteers. He was later appointed a general officer of the Confederacy, and assigned to the command of the Army of the Shenandoah, being opposed by the Federal army under Patterson. When McDowell advanced upon the Confederate forces under Beauregard at Manassas, Johnston moved from the Shenandoah Valley with great rapidity as Beauregard's assistance. As senior officer he took command on the field, and at Bull Run (Manassas) (2d) won the first important Confederate victory. In August 1861 he was made one of the five full generals of the Confederacy, remaining in command of the main army in Virginia. He commanded in the battle of Fair Oaks (May 31, 1862), and was so severely wounded as to be incapacitated for several months. In March 1863, still troubled by his wound, he was assigned to the command of the south-west, and in May was ordered to take immediate command of all the Confederate forces in Mississippi, then threatened by Grant's movement on Vicksburg. When Pemberton's army was besieged in Vicksburg by Grant, Johnston used every effort to relieve it, but his force was inadequate. Later in 1863, when the battle of Chattanooga brought the Federals to the borders of Georgia, Johnston was assigned to command the Army of Tennessee at Dalton, and in the early days of May 1864 the combined armies of the North under Sherman advanced against his lines. For the main outlines of the famous campaign between Sherman and Johnston see American Civil War (§ 26). From the 9th of May to the 17th of July there were skirmishes, actions and combats almost daily. The great numerical superiority of the Federals enabled Sherman to press back the Confederates without a pitched battle, but the severity of the skirmishing may be judged from the casualties of the two armies (Sherman's about 26,000 men, Johnston's over 10,000), and the obstinate steadiness of Johnston by the fact that his opponent hardly progressed more than one mile a day. But a Fabian policy is never acceptable to an eager people, and when Johnston had been driven back to Atlanta he was superseded by Hood with orders to fight a battle. The wisdom of Johnston's plan was soon abundantly clear, and the Confederate cause was already lost when Lee reinstated him on the 23rd of February 1865. With a handful of men he opposed Sherman's march through the Carolinas, and at Bentonville, N.C., fought and almost won a most gallant and skillful battle against heavy odds. But the Union troops steadily advanced, growing in strength as they went, and a few days after Lee's surrender at
Appomattox Johnston advised President Davis that it was in his opinion wrong and useless to continue the conflict, and he was authorized to make terms with Sherman. The terms entered into between these generals, on the 18th of April, having been rejected by the United States government, another agreement was signed on the 26th of April, the new terms being similar to those of the surrender of Lee. After the close of the war Johnston engaged in civil pursuits. In 1874 he published a Narrative of Military Operations during the Civil War. In 1877 he was elected to represent the Richmond district of Virginia in Congress. In 1887 he was appointed by President Cleveland U.S. commissioner of railroads. Johnston was married in early life to Louisa (d. 1886), daughter of Louis Mc'Lane. He died at Washington, D.C., on the 21st of March 1891, leaving no children.

It was not the good fortune of Johnston to acquire the prestige which so much assisted Lee and Jackson, nor indeed did he possess the power of enforcing his will on others in the same degree, but his methods were exact, his strategy calm and balanced, and, if he showed himself less daring than his comrades, he was unsurpassed in steadiness. The duel of Sherman and Johnston is almost as personal a contest between two great captains as were the campaigns of Turenne and Montecuccoli. To Montecuccoli, indeed, both in his military character and in the incidents of his career, Joseph Johnston bears a striking resemblance.

See Hughes, General Johnston, in "Great Commanders Series" (1893).

JOHNSTONE, a police burgh of Renfrewshire, Scotland, on the Black Cart, 11 m. W. of Glasgow by the Glasgow & South-Western railway. Pop. (1901), 10,503. The leading industries include flax-spinning, cotton manufactures (with the introduction of which in 1781 the prosperity of the town began), paper-making, shoe-sole making, iron and brass foundries and engineering workshops. There are also coal mines and collieries in the vicinity, Elderslie, 1 m. E., is the reputed birthplace of Sir William Wallace, but it is doubtful if "Wallace's Yew," though of great age, and "Wallace's Oak," a fine old tree that perished in a storm in 1856, and the small castellated building (originally his house) which preceded the present mansion in the west end of the village, existed in his day.

JOHNSTOWN, a city and the county-seat of Fulton county, New York, U.S.A., on Cayadutta Creek, about 4 m. N. of the Mohawk river and about 48 m. N.W. of Albany. Pop. (1890), 7708; (1900), 10,130 (1633 foreign-born); (1905, state census), 9705; (1910) 10,447. It is served by the Fonda, Johnstown & Gloversville railroad, and by an electric line to Schenectady. The city has a Federal building, a Y.M.C.A. building, a city hall, and a Carnegie library (1902). The most interesting building is Johnson Hall, a fine old baronial mansion, built by Sir William Johnson in 1762 and his home until his death; his grave is just outside the present St. John's Episcopalian church. Originally the hall was flanked by two stone forts, one of which is still standing. In 1907 the hall was bought by the state and was placed in the custody of the Johnstown Historical Society, which maintains a museum here. In the hall Johnson established in 1766 a Masonic lodge, one of the oldest in the United States. Other buildings of historical interest are the Drum House and the Fulton county court house, built by Sir William Johnson in 1763 and 1772 respectively, and the gaol (1772), at first used for all New York west of Schenectady county, and during the War of Independence as a civil and a military prison. The court house is said to be the oldest in the United States. Three miles south of the city is the Butler House, built in 1742 by Colonel John Butler (d. 1794), a prominent Tory leader during the War of Independence. A free school, said to have been the first in New York state, was established at Johnstown by Sir William Johnson in 1764. The city is (after Gloversville, 3 m. distant) the principal glove-making centre in the United States, the product being valued at $2,381,274 in 1905 and being 14.6% of the total value of this industry in the United States. The manufacture of gloves in commercial quantities was introduced into the United States and Johnstown in 1809 by Talmadge Edwards, who was buried there in the colonial cemetery. The value of the total factory product in 1900 was $4,543,272 (a decrease of 11.3% since 1900). Johnstown was settled about 1760 by a colony of Scots brought to America by Sir William Johnson, within whose extensive grant it was situated, and in whose honour, in 1771, it was named. A number of important conferences between the colonial authorities and the Iroquois Indians were held here, and on the 28th of October 1781, during the War of Independence, Colonel Marinus Willett (1740-1830) defeated here a force of British and Indians, whose leader, Walter Butler, a son of Colonel John Butler, and, with him, a participant in the Wyoming massacres, was mortally wounded near West Canada creek during the pursuit. Johnstown was incorporated as a village in 1808, and was chartered as a city in 1853.

JOHNSONVILLE, a city of Cambria county, Pennsylvania, U.S.A., at the confluence of the Conemaugh river and Stony creek, about 75 m. E. by S. of Pittsburg. Pop. (1890), 21,605; (1900), 35,936, of whom 718 were foreign-born, 173 being Hungarians, 1663 Germans, and 923 Austrians; (1910 census) 55,482. It is served by the Pennsylvania and the Baltimore & Ohio railways. The city lies about 1170 ft. above the sea, on level ground extending for some distance along the river, and nearly enclosed by high and precipitous hills. Among the public buildings and institutions are the Cambria free library (containing about 14,000 volumes in 1908), the city hall, a fine high school, and the Conemaugh Valley memorial hospital. Roxbury Park, about 3 m. from the city, is reached by electric lines. Coal, iron ore, fire clay and limestone abound in the vicinity, and the city has large plants for the manufacture of iron and steel. The total value of the factory product in 1905 was $82,819,891, an increase of 37.2% since 1900. A settlement was established here in 1791 by Joseph Jahns, in whose honour it was named, and the place was incorporated as a town in 1807, as a city until 1889, the year of the disastrous Johnstown flood. In 1857 a dam (700 ft. long and 100 ft. high), intended to provide a storage reservoir for the Pennsylvania canal, had been built across the South Fork, a branch of the Conemaugh river, 12 m. above the city, but the Pennsylvania canal was subsequently abandoned, and in 1888 the dam was bought and repaired by the South Fork hunting and fishing club, and Conemaugh lake was formed. On the 31st of May 1889, during a heavy rainfall, the dam gave way and a mass of water 20 ft. or more in height at its head swept over Johnstown at a speed of about 20 m. an hour, almost completely destroying the city. The Pennsylvania railroad bridge withstood the strain, and against it the flood piled up a mass of wreckage many feet in height and several acres in area. On or in this confused mass many of the inhabitants were saved from drowning, only to be burned alive when it caught fire. Seven other towns and villages in the valley were also swept away, and the total loss of lives was 2000 or more. A relief fund of nearly $3,000,000 was raised, and the city was quickly rebuilt.

JOHOR (Johore is the local official, but incorrect spelling), an independent Malayan state at the southern end of the peninsula, stretching from 2° 40' S. to Cape Romanya (Ramūnaya), the most southerly point on the mainland of Asia, and including all the small islands adjacent to the coast which lie to the south of parallel 3° 40' S. It is bounded N. by the protected native state of Pahang, N.W. by the Negri Sembilan and the territory of Malacc, S. by the strait which divides Singapore island from the mainland, E. by the China Sea, and W. by the Straits of Malacca. The province of Mār was placed under the administration of Johor by the British government as a temporary measure in 1877, and was still a portion of the sultan's dominions in 1910. The coastline measures about 250 m. The greatest length from N.W. to S.E. is 163 m., the breadth from E. to W. 100 m. The area is estimated at about 9000 sq. m. The principal rivers are the Mār, the most important waterway in the south of the peninsula; the Johor, up which river the old capital of the state was situated; the Endau, which marks the boundary with Pahang; and the Bātu Pāhāt and Sēdēlī, of
comparative unimportance. Johor is less mountainous than any other state in the peninsula. The highest peak is Gûnong Lédang, called Mt Ophir by Europeans, which measures some 4000 ft. in height. Like the rest of the peninsula, Johor is covered from end to end by one vast spread of forest, only broken here and there by clearings and settlements of insignificant area. The capital is Johor Bharu (pop. about 20,000), situated at the nearest point on the mainland to the island of Singapore. The fine palace built by the sultan Abubakar is the principal feature of the town. It is a kind of Oriental Monte Carlo, and is much resorted to from Singapore. The capital of the province of Mûar is Bandar Maharani, named after the wife of the sultan before he had assumed his final title. The climate of Johor is healthy and equable for a country situated so near to the equator; it is cooler than that of Singapore. The shade temperature varies from 98-5° F. to 68-2° F. The rainfall averages 97-28 in. per annum. No exact figures can be obtained as to the population of Johor, but the best estimates place it at about 200,000, of whom 150,000 are Chinese, 25,000 Malays, 15,000 Javanese. We are thus presented with the curious spectacle of a country under Malay rule in which the Chinese outnumber the people of the land by more than four to one. It is not possible to obtain any exact data on the subject of the revenue and expenditure of the state. The revenue, however, is probably about 750,000 dollars, and the expenditure under public service is comparatively small. The revenue is chiefly derived from the revenue farms for opium, spirits, gambling, &c., and from duty on pepper and gambier exported by the Chinese. The cultivation of these products forms the principal industry. Areca-nuts and copra are also exported in some quantities, more especially from Mûar. There is little mineral wealth of proved value.

History.—It is claimed that the Mahommedian empire of Johor was founded by the sultan of Malacca after his expulsion from his kingdom by the Portuguese in 1511. Johor has been made active part, only second to that of Achin, in the protracted war between the Portuguese and the Dutch for the possession of Malacca. Later we find Johor ruled by an officer of the sultan of Riau (Riau), bearing the title of Tumênggong, and owing feudal allegiance to his master in common with the Bêndâhârà of Pahang. In 1812, however, this officer seems to have thrown off the control of Riau, and to have assumed the title of sultan, for one of his descendants, Sultan Husain, ceded the island of Singapore to the East India Company in 1819. In 1835 the then sultan, Ali, was deposed, and his principal chief, the Tumênggong, was given the supreme rule by the British. His son Tumênggong Abubakar proved to be a man of exceptional intelligence. He made numerous visits to Europe, took considerable interest in the government and development of his country, and was given by Queen Victoria the title of maharaja in 1879. On one of his visits to England he was made thedefendant in a suit for breach of promise of marriage, but the plaintiff was non-suited, since it was decided that no action lay against a foreign sovereign in the English law courts. In 1885 he entered into a new agreement with the British government, and was allowed to assume the title of sultan of the state and territory of Johor. He was succeeded in 1895 by his son Sultan Ibrahim. The government of Johor has been comparatively so free from abuses under its native rulers that it has never been found necessary to place it under the residential system in force in the other native states of the peninsula which are under British control, and on several occasions Abubakar used his influence with good effect on the side of law and order. The close proximity of Johor to Singapore has constantly subjected the rulers of the former state to the influence of European public opinion. None the less, the Malay is by nature but ill fitted for the drudgery which is necessary if proper attention is to be paid to the dull details of government, but the government is rendered good and efficient. Abubakar’s principal adviser, the Dâño ‘Mentri, was a worthy servant of his able master. Subsequently, however, the reins of government came chiefly into the hands of a set of young men who lacked either experience or the serious devotion to dull duties which is the distinguishing mark of the English civil service. Môar, in imitation of the British system, is ruled by a rajah of the house of Johor, who bears the title of resident.

JOIGNY, a town of central France, capital of an arrondissement, in the department of Yonne, 18 m. N.N.W. of Auxerre by the Paris-Lyon-Méditerranée railway. Pop. (1906), 4888. It is situated on the flank of the hill known as the Côte St Jacques on the right bank of the Yonne. Its streets are steep and narrow, and old houses with carved wooden façades are numerous. The church of St Jean (16th century), which once stood within the enceinte of the old castle, contains a representation (15th century) of the Holy Sepulchre in white marble. Other interesting buildings are the church of St André (12th, 16th and 17th centuries), of which the best feature is the Renaissance portal with its fine bas-reliefs; and the church of St Thibault (16th century), in which the stone crown suspended from the inner vaulting is chiefly noticeable. The Porte du Bois, a gateway with two massive flanking towers, is a relic of the 10th century castle; there is also a castle of the 16th and 17th centuries, in part demolished. The hôtel de ville (18th century) shelters the library; the law-court contains the sepulchral chapel of the Ferrands (16th century). The town is the seat of a sub-prefect and has tribunals of first instance and of commerce, and a communal college for boys. It is industrially unimportant, but the wine of the Côte St Jacques is much esteemed.

Joigny (Joviniacum) was probably of Roman origin. In the 10th century it became the seat of a countship dependent on that of Champagne, which after passing through several hands came in the 13th century into the possession of the family of Villeroi. A fragment of a ladder preserved in the church of St André commemorates the successful resistance offered by the town to the English in 1429.

Joinder is a term used in several connexions. Joinder of causes of action is the uniting in the same action several actions of the same type or kind. Claims may be joined with claims by or against either of them separately. Claims by or against an executor or administrator as such may be joined with claims by or against him personally, provided such claims are alleged to arise with reference to the estate of which the plaintiff or defendant sues or is sued as executor or administrator. Claims by plaintiffs jointly may be joined with claims by them or any of them separately against the same defendant.

Joinder in pleading is the joining of the parties on the point of matter issuing out of the allegations and pleas of the plaintiff and the defendant in a cause and the putting the cause upon trial.

Joinder of parties.—Where parties may jointly, severally or in the alternative bring separate actions in respect of or arising out of the same transaction or series of transactions they may, by Order XVI of the rules of the supreme court, be joined in one action as plaintiffs.

Joinery, one of the useful arts which contribute to the comfort and convenience of man. As the arts of joinery and carpentry are often followed by the same individual, it appears natural to conclude that the same principles are common to both, but a closer examination leads to a different conclusion. The art of carpentry is directed almost wholly to the support of weight or pressure, and therefore its principles must be sought in the mechanical sciences. In a building it includes all the rough timber work necessary for support, division or connexion, and its proper object is to give firmness and stability. The art of Joinery has for its object the addition in a building of all the fixed woodwork necessary for convenience or ornament. The joiner’s works are in many cases of a complicated nature, and often require to be executed in an expensive material, therefore joinery requires much skill in that part of geometrical science which
The nature of wood. The whole small doors, chisels, doors, joiner least, of which firmness and prepared carver appear of the as Materials. shall bars and the stove when the boards, white and glue &c. and likewise knowledge, but glue and boarding must the dado edges, in meeting the movement of the adzed and grained to insertion, inserted, having a tongue welded on the board, having a tongue welded on the material itself in the place of the feather of the last-named joint. The last two methods
are used in the best work, and, carefully worked and glued, with the assistance of angle blocks glued at the back, obviate the necessity of face screws or nails. The keyed mitre consists of a simple head that has been glued up a number of pairs of saw cuts made across the angle into which are fitted and glued thin triangular slips of hard wood, or as an alternative, pieces of brass or other metal. Other forms of angle joints are based on the rebate with a bead worked on in such a position as to hide any bad effects caused by the joint opening by shrinkage. They may be secured either by nailing or screwing, or by glued angle blocks. The dovetail is a most important joint; its most usual forms are illustrated in fig. 3. The mitre dovetail is used in the best work. It will be seen that the dovetail is a tenon, shaped as a wedge, and it is this distinguishing feature which gives it great strength irrespective of glue or screws. It is invaluable in framing together joints of equal thickness; its use in drawers especially provides a good example of its purpose and structure.

Wide Boards.—It is necessary to prevent the tendency to warp and twist, which boards of great width, or several boards of less width, combined together, have when hand, swelling and shrinking due to changes in the humidity of the atmosphere must not be checked, or the result will be disastrous. To effect this end various simple devices are available. The direction of the annual rings in alternate boards may be reversed, and when the boards have been carefully joined and glued up, a hard-wood tapering key, dovetail in section, may be let into a wide dovetail at the back (fig. 4). It must be accurately fitted and driven tightly home, but, of course, not glued, or else the wood may be used for the same purpose, fixed either with hard-wood buttons or by means of brass or iron rods, the slots allowing for any slight movement that may take place. With boards of a substantial thickness light iron rods may be used, holes being bored through the thickness of the boards and rods passed through; the edges are then glued up. The main tendency is very effective and neat in appearance, and is specially suitable when a smooth surface is desired on both sides of the work.

Mouldings are used in joinery to relieve plain surfaces by the contrasts of light and shade formed by their members, and to ornament or accentuate those particular portions which the designer may wish to bring into prominence. A decided and discrimination is required in designing and applying mouldings, but this matter falls to the qualified designer and is perhaps outside the province of the practical workman, whose work is to carry out, in an accurate and finished manner the ideas of the draughtsman. The character of a moulding is greatly affected by the material of which it is made and the wood in which it is worked. A section suitable for a hard regularly grained wood, such as mahogany, would probably look insignificant if worked in a softer wood with pronounced markings. Mouldings worked on woods of the former type may consist of small and delicate members; woods of the latter class require bold treatment. The mouldings of joinery, as well as all other moulded wood used in connexion with a building, are usually worked in accordance with full-sized detail drawings prepared by the architect, and are designed by him to conform with the style and character of the building. There are, however, a number of moulded forms in common use and which have particular names; sections are shown of many of these in fig. 5. Most of them occur in the classic architecture of both Greeks and Romans. A striking distinction, however, existed in the mouldings of these two peoples; the mouldings of the Greek mouldings were either derived from conic sections or drawn in freehand, while in typical Roman work the curved components were segments of a circle. Numerous examples of the use of fine polygonal forms occur in ordinary joinery work, and may be recognized on reference to the general principles which will be easily understood without further description.

Mouldings may be either stuck or planted on. A stuck moulding is worked directly on to the framing, as usual, the plant moulding is separately worked and fixed in position with nails or screws. Beads and other small mouldings should always be stuck; larger ones are usually planted. In the case of mouldings planted on panelled work, the nails should be driven through the moulding into the style or rail of the framing, and on no account into the panel. By adopting the former method the panel is free to shrink—as it will, and therefore altering the appearance of the work, but should the moulding be fastened to the panel it will, when the latter shrinks, be pulled out of place, leaving an unsightly gap between it and the framing.

Flooring.—When the bricklayer, mason and carpenter have prepared the carcase of a building for the joiner, one of the first operations is that of laying the floor boards. They should have been stacked under cover on the site for some considerable time, in order to be thoroughly seasoned when the time to use them arrives. The work of laying should take place in warm dry season, as the joints of flooring laid in winter time or during wet weather are sure to open in the following summer, however tightly they may be cramped up during the process of laying. An additional expense will then be incurred by the necessity of backlaying the open spaces with wood slips glued and driven into place. Boards of narrow width are better and more expensive than wide ones. They may be of various woods, the kinds generally preferred, on account of their low cost, are oak, ash, maple and white deal. White deal or spruce is an inferior wood, but is frequently used with good results for the floors of less important apartments. A better floor is obtained with yellow deal, which, when of good quality, is beautiful, and is used for floors where a fine appearance is desired, or which will be subjected to heavy wear, some harder and tougher material, such as pitch pine, oak, ash, maple or teak, should be laid. These woods are capable of taking a fine polish and, finished in this way, form a beautiful as well as a durable floor.

Many of the side joints illustrated in fig. 1 are applied to flooring boards, which, however, are not usually glued up. The heart side of the board should be placed down, or 12 in. from the floor, the tenacy will be for the edges to press more tightly to the joists instead of curling upwards. The square joint should be used only on ground floors; if it is used for the upper rooms, dust and water will drop through the crevices and will probably cause decay. Dovelled joints are open to the same objection. One of the best and most economical methods is the ploughed and tongued joint. The tongue may be of hard wood or iron, preferably the latter, which is stronger and lasts longer. The narrow method is generally adopted, as placed near the bottom of the board as is practicable, leaving the corner wearing material as possible. Two varieties of secret joints are shown in fig. 1,—the cleated, rebated, grooved and tongued, and the rebated, grooved and tongued. Owing to the waste of material in forming these joints and the extra labour involved in laying them, they are costly and are only used when it is required that no heads of nails or screws should appear on the surface. The heading of the joint is often of such an amount as to be splayed or bevelled, but it is far better to rebate them.

Wood block floors are much used, and are exceedingly solid. The blocks are laid directly on a smooth concrete bed or floor in a place that has been treated with bitumen in its base; this fulfils the double purpose of preventing the wood from rotting, and also secures the blocks in their places. To check any inclination to warp and rise, however, the edges of the blocks in the better class of floors are connected by dowels of wood or metal, or by a tongued joint. The blocks may be from 1 to 3 in. thick, and are usually 12 in. long.

Parquet floors are made of hard woods of various kinds, laid in patterns on a deal sub-floor, and may be of any thickness from 1/2 to
Great care should be taken in laying the sub-floor, especially for the thinner parquet. The boards should be in narrow widths of well-seasoned stuff and well nailed, for any movement in the sub-floor due to warping or shrinking may have disastrous results on the parquet which is laid upon it. Plasted parquet consists of selected hardwoods firmly fixed on a framed deal backing. It is made in sections for easy transport, and these are fitted together in the apartment for which they are intended. When secured to the joists these form a perfect floor.

Skirtings.—In joinery, the skirting is a board fixed around the base of internal walls to form an ornamental base for the wall (see fig. 7). It also covers the joint between the flooring and the wall, and protects the base of the wall from injury. Skirtings may be placed in two classes—those formed from a plain board with its upper edge either left square or moulded, and those formed of two or more separate members and termed a built-up skirting (fig. 6). Small angle fillets or moldings are often used as skirtings. The skirting should be worked so as to allow it to be fixed with the heart side of the wood outwards; any tendency to warp will then only serve to press the top edge more closely to the wall. In good work a groove should be formed in the floor and the skirting tongued into it so that an open joint is avoided should shrinkage occur. The skirting should be nailed only near the top to wood plugs in the joints of the brickwork. These grounds are about \( \frac{1}{2} \) to 1 in thick, i.e. the same thickness as the plaster, and are generally splayed or grooved on the edge to form a key for the plaster. A rough coat of plaster should always be laid on the wall behind the skirting in order to prevent the space becoming a harbourage for vermin.

Dados.—A dado, like a skirting, is useful both in a decorative and a protective sense. It is filled in to ornament and protect that portion of the wall between the chair or dado rail and the skirting. It may be of horizontal boards battened at the back and with cross tongued and glued joints, presenting a perfectly smooth surface, or of matched boarding fixed vertically, or of panelled framing. The last method is of course the most ornate and admits of great variety of design. The work is fixed to rough framed wood grounds which are nailed to plugs driven into the joints of the brickwork. Fig. 7 shows an example of a panelled dado with capping moulding and skirting. A picture rail also is shown: it is a small moulding with the top edge grooved to take the metal hooks from which pictures are hung.

Walls are sometimes entirely sheathed with paneling, and very fine effects are obtained in this way. The fixing is effected to rough grounds in a manner similar to that adopted in the case of dados. In England the architects of the Tudor period made great use of oak framing, panelled and richly carved, as a wall covering and decoration, and many beautiful examples may be seen in the remaining buildings of that period.

Windows.—The parts of a window sash are distinguished by the same terms as are applied to similar portions of ordinary framing, being formed of rails and styles, with sash bars rebated for glazing. The upright sides are styles; the horizontal ones, which are tenoned into the styles, are rails (fig. 7).

Sashes hung by one of their vertical edges are called casements (fig. 6). They are really a kind of glazed door and sometimes indeed are used as such, as for example French casements (fig. 9). They may be made to open either outwards or inwards. It is very difficult with the latter to form perfectly water-tight joints; with those opening outwards the trouble does not exist to so great an extent. This form of window, though almost superseded in England by the case frame with hung sashes, is in almost universal use on the Continent. Yorkshire sliding sashes move in a horizontal direction upon grooved runners with the meeting styles vertical. They are
Bay windows with cased frames and double hung sashes often require the exercise of considerable ingenuity in their construction in order that the mullions shall be so small as not to intercept more light than necessary; at the same time the sashes must work easily and not disturb the finish of the frame. The sashes are therefore often fitted withUIDBEыйраaсaэсьaт.Form a cord

![Diagram](image)

**Fig. 8.—Casement window fitted with shutters.**

For a small extra cost these arrangements may be provided; they will be greatly appreciated by those who clean the windows. The casement window (fig. 8) has the timber frame fixed on to the outside of the window and those fixed inside. They may be battened, panelled or formed with louvres, the former kind admitting air and a little light. External shutters are generally hung by means of long weights which balance the sashes. These weights are usually fixed in the wall, and the window board is hung to let up, to allow the shutters to be raised by means of rings fixed in their upper edges. The shutters are balanced by weights enclosed with casings in the manner described for double hung sashes. The panels are of course filled in with wood and not glazed. The shutters are fixed by means of a thumb-screw through the meeting rails, the lower sash being supported on the window board which is closed down when the sashes have been let in. The light is usually admitted in some cases, but they are not so convenient as the forms described above.

**Shop-fronts.**—The forming of shop-fronts may almost be considered a separate branch of joiner's work. The design and construction are attended by many difficulties and, the requirements greatly varying with almost every trade, careful study and close attention to detail are necessary. In the erection of shop-fronts, in order to allow the maximum width of glass with the minimum amount of obstruction, many special sections of sash bars and stanchions are used, the former often being reinforced by cast iron or steel of suitable form. For these reasons the construction of shop-fronts and fittings has been specialized by makers having a knowledge of the requirements of different trades and with facilities for making the special wood and metal fittings and casings necessary. Fig. 10 shows an example of a simple shop-front in Spanish mahogany with a large central window and a larger upper one. The typical construction of a front, and reference to it will inform the reader on many points which need no further description. The London Building Act. 1894 requires the following regulations to be complied with: a. A shop-front shall consist of no more than 30 ft. a shop-front may project 5 in. beyond the external wall of the building to which it belongs, and the cornice may project 1 in. (2) In streets of a width greater than 30 ft., the proportions of the shopfront may be determined in the same way as for buildings in streets of less width. No woodwork of any shop-front shall be fixed higher than 25 ft. above the level of the public pavement. No woodwork shall be fixed nearer than 4 in. to the centre of the party wall. The pier of the shop-front must rest on the ground or on some solid work. The shop-fronts are fixed on strong brackets behind the fascia. The shutter consists of a number of narrow strips of wood, connected with each other by steel bands hinged at every joint, or it may be formed in iron or steel. This construction is usually fixed on strong brackets behind the fascia. The shutter
is guided into position by the edges working in metal grooves a little under an inch wide. When the width of the opening to be closed renders it necessary to divide the shutters into more than one portion, grooved movable pilasters are used, and when the shutters have to be lowered these are fixed in position with bolts, the shutter working on the grooved edges of the pilasters. Spring roller canvas blinds work on a similar principle. The wrought-iron blind arms are capable, when the blind is extended, of being pushed up by means of a sliding arrangement, and fixed with a pin at a level high enough to allow foot passengers to pass along the pavement under them.

The latter would need to be worked and framed in the shop and fixed entire. Polished hard wood architraves may be secretly fixed, i.e., without the heads of nails or screws showing on the face, by putting screws into the grounds with their heads slightly projecting, and hanging the moulding on them by means of keyhole slots formed in the back.

Doors may be made in a variety of ways. The simplest form, the common ledged door, consists of vertical boards with plain or matched joints nailed to horizontal battens which correspond to the rails in framed doors. For openings over 2 ft. 3 in. wide, the doors should be furnished with braces. Ledged and braced doors are similar, but have, in addition to the ledges at the back, oblique braces which prevent any tendency of the door to drop. The upper end of the brace is birdsmouthed into the under side of the rail near the lock edge of the door and crosses the door in an oblique direction to be birdsmouthed into the upper edge of the rail below, near the hanging edge of the door. This is done between each pair of rails. Framed ledged and braced doors are a further development of this form of door. The framing consists of lock and hanging styles, top, middle and bottom rails, with oblique braces between the rails. These members are tenoned together and the door sheathed with boarding. The top rail and styles are the full thickness of the door, the braces and middle and bottom rails being less by the thickness of the sheathing boards, which are tongued into the top rail and styles and carried down over the other members to the bottom of the door.

The three forms of door described above are used mainly for temporary purposes, and stables, farm buildings and outhouses of all descriptions. They are usually hung by wrought-iron cross garnet or strap hinges fixed with screws or through bolts and nuts.
The doors in dwelling-houses and other buildings of a like character are commonly framed and panelled in one of the many ways possible. The framing consists of styles, rails and muntins or mountings, and these members are grooved to receive and hold the panels, which are inserted previously to the door being glazed and wedged up. The common forms are doors in four or six rectangular panels, and although they may be made with any form and number of panels, the principles of construction remain the same. An example of a six-panel door, with bolection moulded raised panels on one side, and moulded and flat panels on the other (fig. 11) is of a six-panel door, with bolection moulded raised panels on one side, and moulded and flat panels on the other (fig. 11). A clear idea of the method of jointing the various members may be obtained from fig. 12. The tongues of raised panels should be of parallel thickness, the bevels being stopped at the moulding. The projecting ends or toes of the styles are cut off after the door has been glued and wedged, as they prevent the ends of the styles being damaged by the wedging process.

Where there is a great deal of traffic in both directions swing doors, either single or double, are used. To open them it is necessary simply to push, the inconvenience of turning a handle and shutting the door after passing through being avoided, as a spring causes the door to return to its original position without noise. They are usually glazed and should be of substantial construction. The door is hinged at the top on a steel pivot; the bottom part fits into a metal shoe connected with the spring, which is placed in a box fixed below the floor.

For large entrances, notably for hotels and banks, a form of door working on the turnstile principle is frequently adopted. It is formed of four leaves fixed in the shape of a cross and working on top and bottom central ball-bearing steel pivots, in a circular framing which forms a kind of vestibule. The leaves of the door are fitted with slips of india-rubber at their edges which, fitting close to the circular frame, prevent draughts.

When an elegant appearance is desired, and it is at the same time necessary to keep the cost of production as low as possible, doors of pine or other soft wood are sometimes covered with a veneer or thin layer of hardwood, such as oak, mahogany or teak, giving the appearance of a solid door of the better material. Made in the ordinary way, however, the shrinkage or warping of the soft wood is very liable to cause the veneer to buckle and peel off. Veneered doors made on an improved method obviating this difficulty have been placed on the market by a Canadian company. The core is made up of strips of pine with the grain reversed, dried at a temperature of 200°F., and glued up under pressure. Both the core and the hard wood veneer are grooved over their surfaces, and a special damp-resisting glue is applied; the two portions are then welded together under hydraulic pressure. By reason of their construction these doors possess the advantages of freedom from shrinking, warping and splitting, defects which are all too common in the ordinary veneered and solid hard wood doors.

The best glue for internal woodwork is that made in Scotland. Ordinary animal glue should not be employed, for under normal circumstances it is liable to be attacked by the interior of the church which cannot be obtained in any other medium. The work is often of the richest character, and frequently enriched with elaborate carving (fig. 13). Many beautiful specimens of early work are to be seen in the churches; good work of a later date will be found in many churches and public buildings erected in more recent years. Fine examples of Old English joinery exist at Hampton Court Palace, the Temple Church and St. Thomas à Becket, in Henry II., in Westminster Abbey, in St. Dunstan, in St. Paul’s, and Haddon Hall. Specimens of modern work are to be seen in Beverley Minster in Yorkshire, the Church of St Etheldreda in Ely Place, London, and the Wycliffe Hall Chapel at Oxford. Other examples both ancient and modern abound in the country.

Carving is a trade apart from ordinary joinery, and requires a special ability and some artistic feeling for its successful execution. But even in this work machinery has found a place, and carved ornaments of all descriptions are rapidly wrought with its aid. Small carved mouldings especially are evolved in this manner, and, being incomparably cheaper than those worked by manual labour, are used freely where a rich effect is desired. Elaborately carved panels also are made by machines and a result almost equal to work done entirely by hand is obtained if, after machinery has done all in its power, the hand work with his chisels and gruges puts the finishing touches to the work.

Ironmongery.—In regard to the finishing of a building, no detail calls for greater consideration than the selection and accurate fixing of suitable ironmongery, which includes the hinges, bolts, locks, door and window fittings, and the many varieties of metal finishes required for the completion of a building. The task of the selection belongs to the employer or the architect; the fixing is performed by the joiner.
and protect the painted work. Sash fasteners are fixed at the meeting rails of double hung sashes to prevent the window being opened from the outside and serve also to clip the two sashes tightly together. They should be of a pattern to resist the attack of a knife inserted between the joint of wood and linseed oil is applied to the sash ends.

Gwill, Encyclopedia of Architecture; Sutcliffe, Modern House in Construction: Rivington, Notes on Building Construction (3 vols.); H. Adams, Building Construction; C. F. Lippincott, Building Construction; J. P. Allen, Practical Building Construction; J. Newlands, Carpenter and Joiner's Assistant; Bury, Ecclesiastical Woodwork; T. Tredgold and Young, Joinery; Peter Nicholson, Carpenter and Joiner's Assistant. (J. Br.)

JOINTS, in anatomy. The study of joints, or articulations, is known as Arthrology (Gr. ἄρθρον), and naturally begins with the definition of a joint. Anatomically the term is used for any connexion between two or more adjacent parts of the skeleton, whether they be bone or cartilage. Joints may be immovable, like those of the skull, or movable, like the knee.

Inmovable joints, or synarthroses, are usually adaptations to growth rather than mobility, and are always between bones. When growth ceases the bones often unite, and the joint is then obliterated by a process known as synostosis, though whether the union of the bones is due to the effect of the stoppage of growth is obscure. Immovable joints never have a cavity between the two bones; there is simply a layer of the substance in which the bone has been laid down, and this remains unaltered. If the bone is being deposited in cartilage a layer of cartilage intervenes, and the joint is called synchondrosis (fig. 1), but if in membrane a thin layer of fibrous tissue persists, and the joint is then known as a suture (fig. 2). Good examples of synchondroses are the epiphyses of the shafts of developing long bones, or the occipito-sphenoid synchondrosis in the base of the skull. Examples of sutures are plentiful in the vault of the skull, and are given special names: two are the suture dentata, s. serrata, s. squamosa, according to the plan of their outline. There are two kinds of fibrous synarthroses, which differ from sutures in that they do not synostose. One of these is a schwindyosis, in which a thin plate of one bone is received into a slot in another, as in the joint between the sphenoid and vomer. The other is a peg and socket joint, or gomphosis, found where the fangs of the teeth fit into the alveoli or tooth sockets in the jaws.

Movable joints, or diarthroses, are divided into those in which there is little movement, and those in which there is little movement. The term half-joint or amphiarthrosis is used. The simplest kind of amphiarthrosis is that in which two bones are connected by bands of fibrous tissue which pass at right angles from the one to the other; such a joint only differs from a suture in the fact that the intervening fibrous tissue is more plentiful and is organized into definite bundles, to which the name of interosseous ligaments is given, and also that it does not synostose when growth stops. A joint of this kind is called a synostosis, though probably the distinction is a very arbitrary one, and depends upon the amount of movement which is brought about by the muscles on the two bones. As an instance of this the inferior fibulobar joint of mammals may be cited. In man this is an excellent example of a synostosis, and there is only a slight play between the two bones. In the mouse there is no movement, and the two bones form a synchondrosis between them which speedily becomes a synostosis, while in many Maputulas there is free mobility between the tibia and fibula, and a definite synovial cavity is established. The other variety of amphiarthrosis is simple, the synarthrosis, which differs from the synostosis in having both bony surfaces lined with cartilage and between the two cartilages a layer of fibrous tissue, the centre of which often softens and forms a small synovial cavity. Examples of this are the synarthrosis pubis, the mesosternal joint, and the joints between the bodies of the vertebrae (fig. 3).

The true diarthroses are joints in which there is either fairly free or true motion. They are movements where the bony surfaces are lined with articular cartilage, which is the unossified remnant of the cartilaginous model in which they are formed and is called the cartilage of engrossment (fig. 4, c). Between the cartilages is the fibro-cartilage, which, when the joint is the capsule (fig. 4, l), which is formed chiefly by the superficial layers of the original periosteum or perichondrium, but it may be strengthened externally by surrounding fibrous structures, such as the tendons of muscles, which become modified and acquire fresh attachments for the purpose. It may be said generally that the greater the intermittent strain on any part of the capsule the more it responds by increasing in thickness. Lining the interior of the capsule, and all other parts of the joint cavity except where the articular cartilage is present, is the synovial membrane (fig. 4, dotted line); this is a layer of endothelial cells which secrete the synovial fluid to lubricate the interior of the joint by means of a small percentage of mucin, albumin and fatty matter which it contains.

A compound diarthrodial joint is one in which the joint cavity is divided partly or wholly into two by a meniscus or inter-articular fibro-cartilage (fig. 5, Fe). The other letters are as in fig. 4.

Fig. 1.—Vertical section through a synarthrodial joint, b, b, the two bones; s, the interposed cartilage; l, the fibrous membrane which plays the part of a ligament.

Fig. 2.—Vertical section through a cranial suture, b, b, the two bones; s, opposite the suture; l, the fibrous membrane, or periosteum, passing between the two bones, which plays the part of a ligament, and which is continuous with the interposed fibrous membrane.

Fig. 3.—Vertical section through an amphiarthrodial joint, b, b, the two bones; c, the plate of cartilage on the articular surface of each bone; l, the investing ligament, the dotted line within which represents the synovial membrane. The letter s is placed in the cavity of the joint.

Fig. 4.—Vertical section through a diarthrodial joint, b, b, the two bones; c, the plate of cartilage on the articular surface of each bone; l, the investing ligament, the dotted line within which represents the synovial membrane. The letter s is placed in the cavity of the joint.

subject determine its shape. As an example of this it has been found that the mobility of the metacarpo-phalangeal joint of the thumb in a large number of working men is less than it is in a large number of women who use needles and thread, or in a large number of medics who use pens and scissors, and that the slightly movable thumb has quite a differently shaped articular surface from the freely movable one (see J. Anat. and Phys. xxix. 446). R. Fick, too, has demonstrated that the concavity or convexity of the joint surface depends on the position of the chief muscles which move the joint, and has enunciated the law that when the chief muscle or muscles are attached close to the articular end of the skeletal element that end becomes concave, while, when they are attached far off or are not attached at all, as in the case of the phalanges, the articular end is convex. His mechanical explanation is ingenious and to the present writer convincing (see Handbuch der Gelenke, by R. Fick, Jena, 1904). Bernays, however, pointed out that the articular ends were moulded before the muscular tissue was differentiated (Morph. Jahrb. iv. 403), but to this Fick replies by pointing out that muscular movements begin before the muscle fibres are formed, and may be seen in the chick as early as the second day of incubation.

The freely movable joints (true diarthroses) are classified as follows:—

1. **Gliding joints (Arthrodis).** In which the articular surfaces are flat, as in the carpal and tarsal bones.

2. **Hinge joints (Ginglymus),** such as the elbow and interphalangeal joints.

3. **Condylar joints (Condylarthrosis),** allowing flexion and extension as well as lateral movement, but no rotation. The metacarpophalangeal and wrist joint are examples of this.

4. **Saddle-shaped joints (Articulus sellaris),** allowing the same movements as the last with greater strength. The carpometacarpal joint of the thumb is an example.

5. **Pivot-joint (Trochoides),** allowing only rotation round a longitudinal axis, as in the radio-ulnar joints.

**Embryology.**

Joints are developed in the mesenchyme, or that part of the mesoderm which is not concerned in the formation of the serous cavities. The synarthroses may be looked upon merely as a delay in development, because, as the embryonic tissue of the mesenchyme passes from a fibrous to a bony state, the fibrous tissue may remain along a certain line and so form a suture, or, when chondrification has preceded ossification, the cartilage may remain at a certain place and so form a synchondrosis. The diarthroses represent an arrest of development at an earlier stage, for a part of the original embryonic tissue remains as a plate or round cells, while the neighbouring two rods chondrify and ossify. This plate may become converted into fibro-cartilage, in which case an amphiarthrodial joint results, or it may become absorbed in the centre to form a joint cavity, especially if absorption is due to the pressure of two abortive cartilages with an intervening meniscus may result. Although, ontogenetically, there is little doubt that menisci arise in the way just mentioned, the teaching of comparative anatomy suggests that, phylogenetically, they originate as an ingrowth from the capsule pushing the synovial membrane in front of them. The subject will be returned to when the comparative anatomy of the individual joints is reviewed. In the human foetus the joint cavities are all formed by the tenth week of intra-uterine life.

**Anatomy**

**Joints of the Axial Skeleton.**

The bodies of the vertebrae except those of the sacrum and coccyx are separated, and at the same time connected, by the *intervertebral disks*. These are formed of alternating concentric rings of fibrous tissue and fibro-cartilage, with an elastic mass in the centre known as the *nucleus pulposus*. The bodies are also bound together by *anterior* and *posterior common ligaments*. The odontoid process of the axis fits into a pivot joint formed by the anterior arch of the atlas in front and the *transverse ligament* behind; it is attached to the bicipital bone by two strong *lateral check ligaments*, and, in the mid line, by a feeble *middle check ligament* which is regarded morphologically as containing the remains of the notochord. This *atlanto-axial joint* is the one which allows the head to be shaken from side to side. Noting the head occurs at the *occipito-atlantal joint*, which consists of the two occipital condyles received into the cup-shaped articular facets on the atlas and surrounded by capsular ligaments. The neural arches of the vertebrae articulate one with another by the *articular facets*, each of which has a capsular ligament. In addition to these the laminae are connected by the very elastic *ligaments subaequum*. The spinous processes are joined by *interspinous ligaments*, and their tips by a *supraspinous ligament*, which in the neck is continued from the spine of the seventh cervical vertebra to the external occipital crest and protuberance as the *ligamentum nuchae*, a thin, fibrous, median septum between the muscles of the back of the neck.

The combined effect of all these joints and ligaments is to allow the spinal column to be bent in any direction or to be rotated, though only a small amount of movement occurs between any two vertebrae.

The heads of the ribs articulate with the bodies of two contiguous thoracic vertebrae and the disk between. The ligaments which connect them are called *costo-central*, and are in two number. The anterior of these is the *stellite ligament*, which has three bands radiating from the head of the rib to the two vertebrae and the intervening disk. The other one is the *interarticular ligament*, which connects the ridge, dividing the two articular cavities on the head of the rib, to the disk; it is absent in the first and three lowest ribs.

The *costo-transverse ligaments* bind the ribs to the transverse processes of the thoracic vertebrae. The *superior costo-transverse ligament* binds the neck of the rib to the transverse process of the vertebra above; the *middle* or *interossseous* connects the back of the neck to the front of its own transverse process; while the *posterior* runs from the tip of the transverse process to the outer part of the tubercle of the rib. The inner and lower part of each tubercle forms a diarthrodial joint with the upper and lower part of its own transverse process, except in the eleventh and twelfth ribs. At the junction of the ribs with their cartilages no diarthrodial joint is formed; the periosteum simply becomes perichondrium and binds the two structures together. Where the cartilages, however, join the sternum, or where they join one another, diarthrodial joints with synovial cavities are established. In the case of the second rib this is double, and in that of the first usually wanting. The *mesosternal joint*, between the pre- and mesosternum, has already been given as an example of a symphysia.

**Comparative Anatomy.**—For the convexity or concavity of the vertebral centra in different classes of vertebrates, see *SKELETON: axial*. The intervertebral disks first appear in the Crocodilia, the highest existing order of reptilia. In many Mammals the middle fasciculus of the stellite ligament is continued right across the disk, containing the ligament of the opposite side, and is probably serially homologous with the ventral arch of the atlas. A similar ligament joins the heads of the ribs dorsal to the disk. To these bands the names of anterior (ventral) and posterior (conjugal) ligaments have been given, and they may be demonstrated in a seven months' human foetus (see B. Sutton, *Ligaments*, London, 1902). The *ligamentum nuchae* is a strong elastic band in the Ungulata which supports the weight of the head. In the Carnivora it only reaches as far forward as the spine of the axis.

The *Jaw joint*, or *temporo-mandibular articulation*, occurs between the sigmoid cavity of the temporal bone and the condyle of the jaw. Between the two there is an interarticular fibro-cartilage or meniscus, and the joint is surrounded by a capsule of which the outer part is the thickest. On first opening the mouth, the joint acts as a hinge, but very soon the condyle begins to glide forward on to the eminenta articularis (see *SKULL*). The meniscus with the other gliding movement between the meniscus and temporal bone may be separately brought about by protruding the lower teeth in front of the upper, or, on one side only, by moving the jaw across to the opposite side.

**Comparative Anatomy.**—The joint between the temporal and mandibular bones is only found in Mammals; in the lower vertebrates the jaw opens between the quadrate and articular bones. In the Carnivora it is a perfect hinge; in many Rodents only the antero-posterior gliding movement is present; while in the Ruminants the lateralizing movement is the chief one. Sometimes, as in the Ornithorhynchus, the meniscus is absent.
JOINTS

Joints of the Upper Extremity.

The sterno-clavicular articulation, between the sternum and clavicle, is a gliding joint, and allows slight upward and downward and forward and backward movements. The two bony surfaces are separated by a meniscus, the vertical movements taking place outside and the antero-posterior inside this. There is a well-marked capsule, of which the anterior part is strongest. The two clavicles are joined across the top of the sternum by an interclavicular ligament.

The acromio-clavicular articulation is also a gliding joint, but allows a swinging or pendulum movement of the scapula on the clavicle. The upper part of the capsule is strongest, and from it hangs down a partial meniscus into the cavity.

Comparative Anatomy.—Bland Sutton regards the inter-clavicular ligament as a vestige of the interclavicular of Reptiles and Monotremes. The menisci are only found in the Primates, but it must be borne in mind that many Mammals have no clavicle, or a very rudimentary one. By some, the meniscus of the sterno-clavicular joint is regarded as the homologue of the lateral part of the interclavicle, but the fact that it only occurs in the Primates where movements in different planes are fairly free is suggestive of a physiological rather than a morphological origin for it.

The Shoulder Joint is a good example of the ball and socket or enarthrodial variety. Its most striking characteristic is mobility at the expense of strength. The small size of the glenoid cavity in comparison with the head of the humerus, and the great laxity of the capsule, favour this, although the glenoid cavity is slightly deepened by a fibrous lip, called the gleno-humeral ligament, which runs from the coracoid and acromial processes of the scapula, with the coraco-acromial ligament between them, serves as an anchoring protection to the joint, while the biceps tendon runs over the head of the humerus, inside the capsule, though surrounded by a sheath of synovial membrane. Were it not for these two extra safeguards the shoulder would be even more liable to dislocation than it is. The upper part of the capsule, which is attached to the base of the coracoid process, is thickened, and known as the coraco-humeral ligament, while inside the front of the capsule are three folds of synovial membrane, called gleno-humeral folds.

Comparative Anatomy.—In the lower Vertebrates the shoulder is adapted to support rather than prehension and is not so freely movable as in the Primates. The tendon of the biceps has evidently sunk through the capsule into the joint, and even when it is intra-capsular there is usually a double fold connecting its sheath of synovial membrane with that lining the capsule. In Man, however, where it has been broken through, but remains of it persist in the superior gleno-humeral fold. The middle gleno-humeral fold is the vestige of a strong ligament which steadies and limits the range of movement of the joint in many lower Mammals.

The Elbow Joint is an excellent example of the ginglymus or hinge, though its transverse axis of movement is not quite at right angles to the central axis of the limb, but is lower internally than externally. This tends to bring the forearm towards the body when the elbow is bent. The elbow is a great contrast to the shoulder, as the trochlea and capitulum of the humerus are closely adapted to the sigmoid cavity of the ulna and head of the radius (see Skeleton: Appendicular); consequently movement in one plane only is allowed, and the joint is a strong one. The capsule is divided into anterior, posterior, and two lateral ligaments, though these are all really continuous. The joint cavity communicates freely with that of the superior radio-ulnar articulation.

The radio-ulnar joints are three: the upper one is an example of a pivot joint, and in it the disk-shaped head of the radius rotates in a circle formed by the lesser sigmoid cavity of the ulna internally and the orbicular ligament in the other three quarters.

The middle radio-ulnar articulation is simply an interosseous membrane, the fibres of which run downward and inward from the ulna to the radius. Ligation between the two lateral parts, as it is in the human foetus, but free pronation and supination seem to cause the disappearance of the septum.

The inferior radio-ulnar joint is formed by the disk-shaped lower end of the ulna fitting into the slightly concave sigmoid cavity of the radius. Below, the cavity of this joint is shut off from that of the wrist by a triangular fibro-cartilage. The movements allowed at these three articulations are called pronation and supination of the radius. The head of that bone twists, in the orbicular ligament, round its central vertical axis for about half a circle. Below, however, the whole lower end of the radius circles round the lower end of the ulna, the centre of rotation being close to the styloid process of the ulna. The radius, therefore, in its pronation, describes half a cone, the base of which is below, and the hand follows the radius.

Comparative Anatomy.—In pronograde Mammals the forearm is usually permanently pronated, and the head of the radius, instead of being circular and at the side of the upper end of the ulna, is insunk in the latter and in front of the bone, occurring in the same place that the coronoid process of the ulna does in Man. This type of elbow, which is adapted simply to support and progression, is best seen in the Ungulata; in them both lateral ligaments are attached to the radius and the medial one is no orbicular ligament, since the shape of the head of the radius does not allow of any supination. The olecranon process of the ulna forms merely a posterior guide or guard to the joint, but transmits no weight. No better example of the maximum changes which the uses of support and progression bring about can be found than in contrasting the elbow of the Sheep or other Ungulate with that of Man. Towards one or other of these types the elbows of all Mammals tend. It may be roughly stated that, when pronation and supination to the extent of a quarter of a circle are possible, an orbicular ligament appears.

The wrist joint, or radio-carpal articulation, lies between the radius and triangular fibro-cartilage above, and the scaphoid, semilunar, and cuboid bones below. It is a condyloid joint allowing flexion and extension round one axis, and slight lateral movement (abduction and adduction) round the other. There is a well-marked capsule, divided into anterior, posterior, and lateral ligaments. The joint cavity is shut off from the inferior radio-ulnar joint above, and the intercarpal joints below.

The intercarpal joints are gliding articulations, the various bones being connected by palmar, dorsal, and a few interosseous ligaments, but only those connecting the first row of bones are complete, and so isolate one joint cavity from another. That part of the intercarpal joints which lies between the first and second rows of carpal bones is called the transverse carpal joint, and at this a good deal of the movement which seems to take place at the wrist really occurs. The carpo-metacarpal articulations are, with the exception of that of the thumb, gliding joints, and continuous with the great intercarpal joint cavity. The carpo-metacarpal joint of the thumb is the best example of a saddle-shaped joint in Man. It allows forward and backward and lateral movement, and is very strong.

The metacarpo-phalangeal joints are condyloid joints like the wrist, and are remarkable for the great thickness of the palmar ligaments of their capsules. In the four inner fingers these ginglymus ligaments, as they are called, are joined together by the transverse metacarpal ligament.

The interphalangeal articulations are simple hinges surrounded by a capsule, of which the dorsal part is very thin.

Comparative Anatomy.—The wrist joint of the lower Mammals allows less lateral movement than does that of Man, while the lower end of the ulna is better developed and is received into a cup-shaped socket formed by the cubiform and pisiform bones. At the same time, unless there is pretty free pronation and supination, the triangular fibro-cartilage is only represented by an interosseous ligament, which may be continuous above with the interosseous membrane between the radius and ulna, and suggests the possibility that the fibro-cartilage is largely a derivate of this membrane. In most Mammals the wrist is divided into two lateral parts, as it is in the human foetus, but free pronation and supination seem to cause the disappearance of the septum.

Joints of the Lower Extremity.

The sacro-innominate articulation consists of the sacro-iliac joint and the sacro-sciatic ligaments. The former is one of the amphiarthroses or half-joints by which the sacrum is bound to the ilium. The mechanism of the human sacrum is that of a hinge, lying between the two sacro-ilia ligaments which represent the chains. The axis of the joint passes through the second sacral vertebra, but the sacrum is so nearly horizontal that the weight of the body, which is transmitted to the first sacral vertebra, tends to tilt that part down. This tendency is corrected by the...
great and small sacro-sciatic ligaments, which fasten the lower part of the sacrum to the tuberosity and spine of the ischium respectively, so that, although the sacrum is a suspension bridge when looked at from behind, it is a lever of the first kind when seen from the side in sagittal section.

The pubic symphysis is the union between the two pubic bones. It has all the characteristics of a symphysis, already described, and may have a small median cavity.

The hip joint, like the shoulder, is a ball and socket, but does not allow such free movement; this is due to the fact that the socket or acetabulum is deeper than the gneoid cavity and that the capsule is not so lax. At the same time the loss of mobility is made up for by increased strength. The capsule has three thickened bands, of which the most important is the ilio-femoral or Y-shaped ligament of Bigelow. The stalk of the Y is attached to the anterior inner spine of the ilium, while the two limbs are fastened to the upper and lower parts of the spiral line of the femur. The ligament is so strong that it hardly ever ruptures in a dislocation of the hip. As a plumb-line, dropped from the centre of weight of the body, passes behind the centre of the joint, this ligament, lying as it does in front of the joint, takes the strain in Man's erect position. The other two thickened parts of the capsule are known as pubo-femoral and ischio-femoral, from their attachments. Inside the capsule, and deepening the margin of the acetabulum, is a fibrous rim known as the cotyloid ligament, which grips the spherical head of the femur and is continued across the cotyloid notch as the transverse ligament. The floor of the acetabulum has a horseshoe-shaped surface of articular cartilage, concave downward, and, occupying the "frog" of the horse's hoof, is a mass of fat called the Haversian pad. Attached to the inner margin of the horseshoe, and to the transverse ligament where that is deficient, is a reflexion of synovial membrane which forms a covering for the pad and is continued as a tube to the depression on the head of the femur called the fossa capitis. This reflexion carries blood-vessels and nerves to the femur, and also contains fibrous tissue from outside the joint. It is known as the ligamentum teres.

Comparative Anatomy.—Bland Sutton regards the ilio-femoral ligament as an altered muscle, the scapolius, though against this is the fact that, in those cases in which a scapolius is present in Man, the ligament is as strong as usual, and indeed, if it were not there in these cases, the erect position would be difficult to maintain. He also looks upon the ligamentum teres as the divorced tendon of the pectineus muscle. The subject requires much more investigation, but there is every reason to believe that it is a tendon which has slid into the joint, though whether that the pectineus is the rightful, since the intra-capular tendon comes from the ischium in Reptiles. In many Mammals, and among them the Orang, there is no ligamentum teres. In others, such as the Armadillo, the structure has not slid right into the joint, but is connected with the pubo-femoral part of the capsule.

The knee joint is a hinge formed by the condyles and trochlea of the femur, the patella, and the head of the tibia. The capsule is formed in front by the ligamentum patellae, and on each side special bands form the lateral ligaments. On the outer side there are two of these: the anterior or long external lateral ligament is a round cord running from the external condyle to the head of the fibula, while the posterior is slighter and passes from the same place to the styloid process of the fibula. The internal lateral ligament is a flat band which runs from the inner condyle of the femur to the internal surface of the tibia some two inches below the level of the knee joint. The posterior part of the capsule is strengthened by an oblique bundle of fibres running upward and outward from the semimembranosus tendon, and called the posterior ligament of Winslow.

The intra-articular structures are numerous and interesting. Passing from the head of the tibia, in front and behind the spine, are the anterior and posterior cruciate ligaments; the former is attached to the outer side of the intercondylar notch above, and the latter to the inner side. These two ligaments cross like an X. The semilunati fibro-cartilages—external and internal—are parallel menisci, each of which has an anterior and a posterior horn by which they are attached to the head of the tibia in front and behind the spine. They are also attached round the margin of the tibial head by a coronary ligament, but the external one is more moveable than the internal, and this perhaps accounts for its coronary ligament being less often ruptured and the cartilage displaced than the inner one. In addition to these, the external cartilage has a fibrous band, called the ligamentum Wrisberg, which runs up to the femur just behind the posterior cruciate ligament. The external cartilage is broader, and forms more of a circle than the internal. The synovial cavity of the knee runs up, deep to the extensor muscles of the thigh, for about two inches above the top of the patella, forming the bursa suprapatelaris. At the lower part of the patella it covers a pad of fat, which lies between the ligamentum patellae and the front of the head of the tibia, and is carried up as a narrow tube to the lower margin of the trochlear surface of the femur. This prolongation is known as the ligamentum mucosum, and from the sides of its base spring two lateral folds called the ligamenta alaria. The tendon of the popliteus muscle is an intracapsular structure, and is therefore covered with a synovial sheath. There are a large number of bursae near the knee joint, one of which, common to the inner head of the gastrocnemius and the semimembranosus, often communicates with the joint. The hinge movement of the knee is accompanied by a small amount of external rotation at the end of extension, and a compensatory internal rotation during flexion. This slight twist is enough to tighten up almost all the ligaments so that they may take a share in resisting over-extension, because, in the erect position, the load falls from the centre of gravity of the body passes in front of the knee.

Comparative Anatomy.—In some Mammals, e.g. Bradypus and Ornithorhynchus, the knee is divided into three parts, two condylar and one trochleo-patellar, by synovial folds which in Man are represented by the ligamentum mucosum. In a typical Mammal the external semilunari cartilage is attached by its posterior horn to the notch of the femur only, the so-called ligament of Wrisberg already mentioned. In the Monkeys and anthropoid Apes this cartilage is circular. The semilunari cartilages first appear in the Amphibia, and, according to B. Sutton, are derived from muscles which are drawn into the joint. When only one kind of movement (hinge) is allowed, as in the fruit bat, the cartilages are not found. In most Mammals the superior fibro-fibrular joint communicates with the knee.
membrane, while the lower has been already used as an example of a synovial membrane or fibrous half joint.

The ankle joint is a hinge, the astragulus being received into a lateral arch formed by the lower ends of the tibia and fibula. Backward dislocation is prevented by the articular surface of the astragulus being broader in front than behind. The anterior and posterior parts of the capsule are feebly, but the lateral ligaments are very strong, the external consisting of three separate fascicles which bind the fibula to the astragulus and calcaneum. To avoid confusion it is best to speak of the movements of the ankle as dorsal and plantar flexion.

The tarsal joints resemble the carpal in being gliding articulations. There are two between the astragulus and calcaneum, and at these inversion and eversion of the foot largely occur. The inner arch of the foot is maintained by a very important ligament called the calcaneo-malleolar or spring ligament; it connects the sustentaculum tali of the calcaneum with the navicular, and upon it the head of the astragulus rests. When it becomes stretched, flat-foot results. The tarsal bones are connected by dorsal, plantar and intersesamoideous ligaments. The long and short calcaneo-cuboid are plantar ligaments of special importance, and maintain the outer arch of the foot.

The tarso-metatarsal, metatarso-phalangeal and interphalangeal joints closely resemble those of the hand, except that the tarso-metatarsal joint of the great toe is not saddle-shaped.

Comparative Anatomy.—The anterior arch of the external lateral ligament of the ankle is only found in Man, and is probably an adaptation to the erect position. In animals with a long foot such as Ungulates and the Kangaroo, the lateral ligaments of the ankle are in the form of an X, to give greater protection against lateral movement. In certain marsupials a fibro-cartilage is developed between the external malleolus and the astragulus, and its origin from the deep fibres of the external lateral ligament of the ankle can be traced. In these animals a rotatory movement of the fibula on its long axis, in addition to the hinge movement of the ankle.

Diseases and Injuries of Joints

The affection of the joints of the human body by specific diseases is dealt with under various headings (RHEUMATISM, &c.;). In the present article the more direct forms of ailment are discussed. In most joint diseases the trouble starts either in the synovial lining or in the bone—rarely in the articular cartilage or bursae. As a rule, the disease begins after an injury. There are three principal types of injury: (1) sprain or strain, in which the ligamentous and tendinous structures are stretched or lacerated; (2) contusion, in which the opposing bones are driven forcibly together; (3) dislocation, in which the articular surfaces are separated from one another.

A sprain or strain of a joint means that as the result of violence the ligaments holding the bones together have been suddenly stretched or even torn. On the inner aspect the ligaments are lined by a synovial membrane, so when the ligaments are stretched the synovial membrane is necessarily damaged. If the ligament is also torn, and bleeding occurs into the joint, which may become full and distended. If, however, bleeding does not take place, the swelling is not immediate, but synovitis having been set up, serous effusion comes on sooner or later. There is often a great deal of heat of the surrounding skin and of pain accompanying the synovitis. In the case of a healthy individual the effects of a sprain may quickly pass off, but in a rheumatic or gouty person chronic synovitis may obstinately remain. In a person with a tendency to tuberculosis, or of tuberculous descent, a sprain is apt to be the beginning of serious disease of the joint, and it should, therefore, be treated with continuous rest and prolonged supervision. In a person of health and vigour, a sprained joint should be at once bandaged. This may be the only treatment needed. It gives support and allows the even pressure around the joint checks effusion into it. Wide pieces of adhesive strapping, layer on layer, form a still more useful support, and with the joint so treated the person may be able at once to use the limb. If strapping is not employed, the bandage may be taken off from time to time in order that the limb and the joint may be massaged. If the sprain is followed by much synovitis a plaster of Paris or leather splint may be applied, complete rest being secured for the limb. Later on, blistersing or even 'firing' may be found advisable.

Synovitis.—When a joint has been injured, inflammation occurs in the damaged tissue; that is inevitable. But sometimes the inflammation is so slight and transitory as to be scarcely noticeable, especially if the joint is not very likely to occur if the joint-tissues were in a state of perfect health at the time of the hurt. But if the individual or the joint were at that time in a state of imperfect nutrition, the effects are likely to be more serious. As a rule, it is the synovial membrane lining the fibrous capsule of the joint which first and chiefly suffers: the condition is termed synovitis. Synovitis may, however, be due to other causes than mechanical injury, as when the interior of the joint is attacked by the micro-organisms of pyaemia (blood-poisoning), typhoid fever, pneumonia, rheumatism, gonorrhoea or syphilis. Under such conditions the synovitis generally clears up, but it may linger on and cause the formation of adhesions which may temporarily stiffen the joint; it may, especially in tuberculosis, septic or pyaemic infections, involve the cartilages and bones, and become so extensive as to destroy the joint, and possibly call for resection or amputation.

The symptoms of synovitis include stiffness and tenderness in the joint. The patient notices that movements cause pain. Effusion of fluid takes place, and there is marked fullness in the neighbourhood. If the inflammation is advancing, the skin over the joint may become flushed, and if the hand is placed on the skin it feels hot. Especially is this the case if the joint is near the surface, as at the knee, wrist or ankle.

The treatment of an inflamed joint demands rest. This may be conveniently obtained by the use of a light wooden splint, padding and bandages. Slight compression of the joint by a bandage is useful in promoting absorption of the fluid. If the inflamed joint is in the lower extremity, the patient had best remain in bed, or on the sofa; if in the upper extremity, he should wear his arm in a sling. The muscles acting on the joint should be kept in complete control. If the inflammation is extremely acute,
a few leeches, followed by a fomentation, will give relief; or an ice-bag or an evaporating lotion may be, by causing constriction of the blood-vessels, lessen the congestion of the part and the associated pain. As the inflammation is passing off, massage of the limb and of the joint may be employed as a means of breaking up adhesions and of lessening the stiffness of the ligaments and cartilages and muscles - and after this has been done for some time, the limb must still be kept at rest. By this time it may be found that some other material for the retentive apparatus is more convenient and comfortable, as, for instance, undressed leather or rubber, or a splint of plaster or plastic felt, which has been softened by heat and applied limp, or house-flannel which has been dipped in a creamy mixture of plaster-of-Paris and water and secured by a bandage.

Chronic disease may also be due to an attack of some infectious disease, which has been not only local in its effect but has set up a general disease of the system, thus reducing the resistance of the tissues in the joint, and so allowing a secondary infection. In the case of the ankle or of a finger-joint, in which the infection may have affected only the bone, gangrene of the affected part will, if left unattended, set up a chronic condition which may be entirely cured; if, however, the skin is drawn to an extreme degree and firmly adheres to the bone, it will be necessary to cut away the skin, and epidermize it, and thus allow the bone to cure by secondary intention. An extreme example of this is the case of a young man who, having cut his leg, refused to take any medical advice or even a bandage of any kind, and when brought to the hospital by his father, not only had practically cut off his leg but had gangrenous aseptic infection, in which case the removal of the dead bone and the use of suitable dressings gave a rapid and complete cure.

Joint-abscess, or a Joint-abscess is the term given to a collection of pus in a joint, which may be due to an injury, or to a disease of the bone or cartilage. In a fracture, for instance, the bone being deprived of its blood-supply, if the joint is undergoing a considerable range of motion, the bone may be cut or crushed, and pus may be formed; if the bone be of a cancellous bone, the pus may spread out into the joint, and if the infection becomes generalized, the bone and the joint may become septic.

Insemination of a Joint may be the tainting off of an acute inflammation, and under the influence of alternate douchings of hot and cold water, of counter-irritation by blistering or ‘firing,’ and of massage, it may eventually clear up, especially if the general health of the patient be good. Thus, if after an acute disease of the joint of a child or a young person, the probability of its being under the influence of tuberculous infection must be considered. In such a case prolonged and absolute rest is the one thing necessary. If the disease be in the shoulder, elbow, wrist or hand, a little or no plaster splint will suffice; and if the joint be in the hip, the patient should be in bed, with the arm of the affected side in a sling. There must be no hurry; convalescence will need to be slow. And if the condition is such that the surface heat, the pains and the tenderness have disappeared, and the joint has so diminished in size as to be scarcely larger than its fellow - though the wasting of the muscles of the limb may cause it to appear considerably en- large - and if it be evident that the patient can bear the limb for an hour or two every other day; then every other night, then every other day, and so on, the freedom being gained little by little, and the surgeon watching the case carefully. On the slightest indication of a return of the disorder the patient should be at once again resorted to. Massage and gentle exercises may be given day by day, but there must be no thought of “breaking down the stiffness.” Many a joint has in such circumstances been wrecked by the foolish practice of evoking enforced motion.

Continuous Stiffness. — During the treatment of a case of chronic disease of a joint, the question naturally arises as to whether the joint will be left permanently stiff. People have the idea that if an inflamed joint is kept long on a splint, it may even become the inevitable permanent condition of the joint. But it should be clearly understood that it is not the rest of the inflamed joint which causes the stiffness. The matter should be put thus: in tubercu- losis and other chronic diseases of the joint, many cases, in spite of long-continued rest, die, the destructive disease not the enforced rest which causes it; for inflammation of a joint rests absolutely necessary.

The Common and Permanent stiffness are the destructive changes wrought by the inflammation. In one case it may be that the synovial membrane is so far destroyed by the tuberculous or septic invasion that its future usefulness is lost, and the joint is forever afterwards to work and easily becomes tired and pain when motion is made; and in such cases the ligaments of the ligaments and the cartilages are implicated as well as the synovial membrane, and when the disease clears up, the bones are more or less locked, only a small range of motion being left, which is flexible and not of a progressive character. In other cases the disease may destroy the soft tissues of the joint, and then invade the bones, and, the disease having at last come to an end, the softened ends of the bones solidly join together like the broken fragments of a simple fracture. As a result, osseous solidification of the joint (synostosis) ensues without, of course, the possibility of any move- ment. And, inasmuch as the surgeon cannot tell in any case whether the disease is of the bone or of the cartilage, and of how long a period the limb in that position in which it will be most useful if the bony union should occur. Thus, the leg is kept straight, and the elbow bent.

In the course of a tuberculous or other chronic disease of a joint, the ligaments of the septic inflammation may find access to the inflamed area, through a wound or ulceration into the joint, or by the gums being carried thither by the blood-stream. A joint-abcess results, which has become septic. The inflammation continues, it may become necessary to scrape out or to excise the joint, or even to amputate the limb. And if tuberculosis of the joint is steadily progressing in spite of treatment, rigorous measures may become indicated, and the joint may be considered saved, if its way out and thus inviting the entrance of septic germs. The fluid may need to be drawn off by aspiration, and direct treatment of the joint, by washing the joint and by dressing it, may not be sufficient. The fluid may be injected into the joint, and by this means the bony union may be obtained. The ligaments of the joint may be obtained by injections of compound of mercury, or bone-setter, or some other reagent. Or the joint may need scraping out with a sharp spoon with the view of getting rid of the tuberculous material. Later, excision may be deemed necessary, or in extreme cases, amputation. But before these measures are considered, A. C. G. Bier's method of treatment by passive conges- tion, and the treatment by serum injection, will probably have been tried. If a joint is left permanently stiff in an awkward and useless position, the limb may be greatly improved by excision of the joint. Thus, if the knee be left bent and the joint is excised a useful, straight, and strong limb may be produced. The time of operation may be permanently stiff. If after disease of the hip-joint the limb remains fixed in a faulty position, it may be brought down straight by dividing the bone near the upper end. A still shoulder or elbow may be corrected by excision of the articular ends of the bones.

A stiff joint may remain as the result of long continued inflammation; the unused muscles are wasted and the joint in consequence large, Careful measurement, however, may show that it is not materially larger than its fellow. And though all tenderness may have passed away, and though the neighbouring skin is no longer hot, still the joint remains stiff and useless. No progress can be expected, and if the surgeon advises amputation, he is ordinarily right. But sometimes he may advise excision of the joint, and the surgeon may advise that the lingering adhesion be broken down under an anaesthetic, after which the function of the joint may quickly return.

For the cases over which the "bone-setter" secures his greatest triumphs. A qualified practitioner may have been for months judiciously treating an inflamed joint by rest, and then feels a hesitation with regard to suddenly flexing the stiffened limb. The "bone-setter," however, has no such qualms, and when the case passes out of the hands of the perhaps over-careful surgeon, the unqualified practitioner (because he, from a scientific point of view, knows nothing) fears nothing, and, breaking down inflammatory adhesions of the joint, and holding the muscles in the passive position, achieves an incomparably successful. But, knowing nothing and fearing nothing, he is apt to do grievous harm in carrying out his rough treatment in other cases. Malignant disease at the end of a bone (sarcoma), tuber- culosis, or some other inflammatory disease of the joint, which is not diminished by rest, must be considered instead. The result of the improvement which he often effects as if by magic the public are told of. Much of the cases over which the doctor has been too long devoting skill and care, and which are set free by the "bone-setter" and surgical virtue of the medical man. But of the cases in which irreparable damage follows his vigorous manipulation nothing is said — of his rough usage of a tuberculous hip, or of a sarcomatous shoulder-joint, and also of the unavoidable disease and disappointment which those most concerned are least inclined to talk of. A surgical practice with common-sense has nothing to learn from the "bone-setter." Rheumatoid Arthritis, or chronic Osteo-arthritis, is generally found in women and children, and if not aggra-
apt to be thrown down as he walks, for it comes on with great suddenness. And thus he feels himself to be in a condition of perpetual insecurity. After the joint has thus gone wrong, bleeding and severe effusion take place into it, and it becomes greatly swollen. As the joint bulges, the tunic is stretched and the joint is suspect to straighten or bend his knee. But the surgeon by suddenly flexing and twisting the leg may manage to unitch the cartilage and restore comfort and usefulness to the limb. As a rule, the slippage or rolling of a bone is the result of a sudden and violent action—often it happens when the man is "dodging" at football, the foot being firmly fixed on the ground and the body being violently twisted at the knee. After the slipping has occurred many times, the amount of swelling, distress and disability may diminish with each subsequent slipping, and the individual may become somewhat reconciled to his condition. As regards treatment, a tightly fitting steel cage-like splint, which, gripping the thigh and holding it in its usual position, may prove useful. But for a muscular, athletic individual, the wearing of this apparatus may prove vexatious and disappointing. The only alternative is to open the joint and remove the loose cartilage. The leg becomes in operation to be split, torn or crumpled, and lying right across between the joint-surfaces of the bones, from which nothing but an operation could possibly have removed it. The operation is almost sure to give complete and permanent relief to the condition, the individual being able to resume his old exercises and amusements without fear of the knee playing him false. It is, however, one that should not be undertaken without due consideration and circumspection, and the details of the operation should be carried out with the utmost care and cleanliness.

An accidental wound of a joint, as from the blade of a knife, or a spike, entering the knee is a very serious affair, because of the risk of it being left buried in the bone, and the joint has to suffer for the injury or later. If the joint becomes thus infected there is great swelling of the part, with redness of the skin, and with the escape of blood-stained or purulent synovia. Absorption takes place of the joint-capsule, the synovia proves poisonous, and the joint becomes gangrenous and, as a result, great constitutional disturbance arises. Blood-poisoning may thus threaten life, and in many cases life is saved only by amputation. The best treatment is freely to open the joint, to drain all the escape, and to apply a dressing, and to maintain thorough drainage, the limb being fixed on a splint. Help may also be obtained by increasing the patient's power of resistance to the effect of the poisoning by injections of a serum prepared by careful concentration of the serum. If the limb is saved, there is a great chance of the knee being permanently stiff.

Dislocation.—The case with the joint with which a bone is dislocated varies with its form and structure, and with the position in which its parts have been forced. In general, the violence is directed on bone, muscle, or upon the shape of the bones. The hip, for instance, all three sources of strength are present; therefore, considering the great leverage of the long thigh bone, the hip is rarely dislocated. The shoulder, on the other hand, is a small movement, has comparatively high tension strength; it is, therefore, frequently dislocated. The wrist and ankle are rarely dislocated; as the result of violence at the wrist the radius gives way, at the ankle the fibula, these bones being relatively weaker than the respective joints of the hip. If the wrist or its strength to bend the elbow is the blame to the shape of the bones. The symptoms of a dislocation are distortion and limited movement, with absence of the grating sensation felt in fracture when the broken ends of the bone are rubbed together. The treatment consists in properly locating and the sooner the operation is performed the better—the longer the delay the more difficult it becomes to put things right. After a variable period, depending on the nature of the joint and the age of the person, it may be impossible to replace it unless it is a very much less pronounced joint. The administration of an anaesthetic, by relaxing the muscles, greatly assists the operation of reduction. The length of time that a joint has to be kept quiet after it has been restored to its normal size and position and the length of the rule, early movement is advisable. But when by the formation of the bones a joint is weak, as at the outer end of the collar-bone, and at the elbow-end of the radius, prolonged rest for the joint is necessary or dislocation may occur.

Congenital Dislocation at the Hip.—Possibly as a result of faulty position of the subject during intrauterine life, the head of the thigh-bone leaves, or fails throughout to occupy, its normal situation in the acetabulum, which, while the subject is still in the womb, almost certainly not discovered until the child begins to walk, when its peculiar rolling gait attracts attention. The want of fixation at the joint permits of the surgeon thrusting up the thigh-bone, or drawing it down like a piston. The first thing to be done is to find out by means of the X-rays whether a socket exists into which, under an anaesthetic, the surgeon may fortunately be enabled to lodge the end of the thigh-bone. If this offers no prospect of success, there are three courses open: First, to try under an anaesthetic to manipulate the limb until the head of the thigh-bone rests as nearly as possible in its normal position, and then to endeavour to fix it there by splints, weights and bandaging until a new joint is formed; second, to cut down the hip, remove the head of the bone, and at the same time remove the acetabulum, form a new socket, and cause the thigh-bone to become fixed into it; third, to decide the child to be a cripple, and to keep the lower part of the trunk fairly level, lest secondary curvature of the spine ensue. The first and second methods demand many months of careful treatment in bed. The ultimate result of the second is so often disappointing that the surgeon, not caring to risk the danger of an amputation, as the result of skillful manipulation the head of the thigh-bone can be made to enter a more or less rudimentary socket, the case is worth all the time, care and attention bestowed upon it. Sometimes the results of treatment in the third method are permanent and the hip thus fixed becomes a mere stump, but eventually is able to walk with a brace. A better operation at the place of the head of the bone in its proper position should be made in every case.

E. O."

JOINTS, in engineering, may be classed either (a) according to their material, as in stone or brick, wood or metal; or (b) according to their object, to prevent leakage of air, steam or water, or to transmit force, which may be thrust, pull or shear; or (c) according as they are stationary or moving ("working" in technical language). Many joints, like those of ship-plates and boilerplates, are simultaneously to fulfill both objects mentioned under (b).

All stone joints of any consequence are stationary. It being uneconomical to dress the surfaces of the stones resting on each other smoothly and so as to be accurately flat, a layer of mortar or other cementing material is laid between them. This hardens and serves to transmit the pressure from stone to stone without its being concentrated at the "high places." If the ingredients of the cement are chosen so that when hard the cement has about the same coefficient of compressibility as the stone or brick, the pressure will be nearly uniformly distributed. The cement also adheres to the surfaces of the stone or brick, and allows a certain amount of tension to be borne by the joint. It likewise prevents the stones from slipping one on the other, i.e. it gives the joint very considerable shear strength. The composition of the cement is chosen according as it has to set in air or water. These joints are made impervious to air or water by "pointing" their outer edges with a superior quality of cement.

Wood joints are also nearly all stationary. They are made partially fluid-tight by "grooving and tenoning," and by "caulk" with oakum or similar material. If the wood is saturated with water, it swells, the edges of the joints press closer together, and the joints become tighter the greater the water-pressure is which tends to produce leakage. Relatively to its weaker general strength, wood is a better material than iron so far as regards the transmission of a thrust past a joint. So soon as a heavy pressure comes on the joint all the small irregularities of the surfaces in contact are crushed up, and there results an approximately uniform distribution of the pressure over the whole area (i.e. if there be no bending forces), so that no part of the material is unduly stressed. To attain this result the abutting surfaces should be made to fit together, and the bolts binding the pieces together should be arranged for steady pressure there. This is done where there is an intimate contact with the timber surfaces coming into this close contact. Owing to its weak shear strength on sections parallel to the fibre, timber is peculiarly unfitted for tension joints. If the pieces exerting the pull are simply bolted together with wooden or iron bolts, the joint cannot be trusted to transmit any considerable force with safety. The stresses become intensely localized in the immediate neighborhood of the bolts. A tolerably strong timber tension-joint can, however, be made by the two pieces abut, and connecting them by means of iron plates covering the joint and bolted to the sides of the timbers by bolts passing through the wood. These plates should have their surfaces which lie against the wood ribbed in a direction transverse to the pull. The bolts should fit their holes slackly, and should be well tightened up so as to make the ribs sink into the surface of the timber. There will then be very little localized shearing stress brought upon the interior portions of the wood.

Iron and the other commonly used metals possess in various
high degrees the qualities desirable in substances out of which joints are to be made. The joint ends of metal pieces can be formed by welding to any advantageous form and size without waste of material. These metals offer peculiar facilities for the cutting of their surfaces at a comparatively small cost so smoothly and evenly as to ensure the close contact over their whole areas of surfaces placed against each other. This is of the highest importance, especially in joints designed to transmit force. Wrought iron and mild steel are above all other metals suitable for tension joints where there is not continuous rapid motion. Where such motion occurs, a layer, or, as it is technically termed, a "bush," of brass is inserted underneath the iron. The joint then possesses the high strength of a wrought-iron one and at the same time the good mechanical qualities of a brass and copper. Leakage past moving metal joints can be prevented by cutting the surfaces very accurately to fit each other. Steam-engine slide-valves and their seats, and piston "packing-rings" and the cylinders they work to and fro in, may be cited as examples. A subsidiary compressible "packing" is in other situations employed, an instance of which may be seen in the "stuffing boxes" which prevent the escape of steam from steam-engine cylinders through the piston-rod hole in the cylinder cover. Fixed metal joints, such as the usual joint for a rivet or bolt, are then held tight by hammering in the edge of the metal with a square-edged chisel (the tighter the joint requires to be against leakage the closer the spacing of the rivets—compare the rivet-spacing in bridge, ship, and boiler-plate joints). (b) by the insertion between the surfaces of a layer of one or other of various kinds of cement, the layer being thick or thin according to circumstances; (c) by the insertion of a layer of soft solid substance called "packing" or "insertion.

Apart from cemented and glued joints, most joints are formed by cutting one or more holes in the ends of the pieces to be joined, and inserting in these holes a corresponding number of pins. The word "pin" is technically restricted to mean a cylindrical pin in a movable joint. The word "bolt" is used when the cylindrical pin is screwed up tight with a nut so as to be immovable. When the pin is not screwed, but is fastened by being beaten down on either end, it is called a "rivet." The pin is sometimes rectangular in section, and tapered or parallel lengthwise. "Gibs" and "cots" are examples of the latter. It is very rare, indeed, that fixed metal joints are subject to simple compression in the direction of their length, though they are frequently subject to simple tension in that direction. A good example is the joint between a steam cylinder and its cover, where the bolts have to resist the whole thrust of the steam, and at the same time to keep the joint steam-tight.

**JOINTS in geology.** All rocks are traversed more or less completely by vertical or highly inclined divisional planes termed joints. Soft rocks, indeed, such as loose sand and uncompacted clay, do not show these planes; but even a soft loam after standing for some time, consolidated by its own weight, will usually be found to have acquired them. Joints vary in sharpness of definition, in the regularity of their perpendicular or horizontal course, in their lateral persistence, in number and in the directions of their intersections. As a rule, they are most sharply defined in proportion to the fineness of grain of the rock. They are often quite invisible, being merely planes of potential weakness, until revealed by the slow disintegrating effects of the weather, which induces fracture along their planes in preference to other directions. In the case of the rocks having a regular, most readily under the blow of a hammer. In coarse-textured rocks, on the other hand, joints are apt to show themselves as irregular rents along which the rock has been shattered, so that they present an uneven sinuous course, branching off in different directions. In many rocks they descend vertically at not very unequal distances, so that the spaces between them are marked off into so many wall-like masses. But this symmetry often gives place to a more or less tortuous course with lateral joints in various apparently random directions, more especially where in stratified rocks the beds have diverse lithological characters. A single joint may be traced sometimes for many yards or even for several miles, more particularly when the rock is fine-grained and fairly rigid, as in limestone. Where the texture is coarse and unequal, the joints, though abundant, run into each other in such disorder that one in particular can be identified for so great a distance. The number of joints in a mass of rock varies within wide limits. Among rocks which have undergone little disturbance the joints may be separated from each other by intervals of several yards. In other cases where the terrestrial movement appears to have been considerable, the rocks are so jointed as to have acquired therefrom a fissile character that has almost obliterated their tendency to split along the lines of bedding.

**The Cause of Jointing in Rocks.**—The continual state of movement in the crust of the earth is the primary cause of the majority of joints. It is to the outermost layers of the lithosphere that joints are confined; in what van Hise has described as the "zone of fracture," which he estimates may extend to a depth of 12,000 metres in the case of rigid rocks. Below the zone of fracture, joints cannot be formed, for there the rocks tend to flow rather than break. The rocky crust, as it slowly accommodates itself to the shrinking interior of the earth, is subjected to a pressure which is responsible for the fractures observed in the rocks, which are known as joints. The most striking type of jointing is that produced by the cooling of igneous rocks, whereby a regular columnar structure is developed, often called basaltic structure, as such is found at the Giant's Causeway in Northern Ireland. In this structure, columns of extracted rocks, formed under no pressure, are in contact and can be superimposed upon stratified rocks by contact with intrusive viscous masses. Sandstones, shales and coal may be observed in this condition. The columns diverge perpendicularly from the surface of the injected alternating substance, so that when the latter is vertical, the columns are horizontal; or when it undulates the columns follow its curvatures. Beautiful examples of this character occur among the coal-seams of Ayrshire. Occasionally a prismatic form of jointing may be observed in a roof or floor of veins or beds of a columnar form, which have been chemically formed, as in gypsum, where, as noticed by Jukes in the Paris Basin, some beds are divided from top to bottom by vertical hexagonal prisms. Desiccation, as shown by the case of mud formed in mud when it dries, has probably been instrumental in causing jointing in a limited number of cases among stratified rocks.

**Movement along Joint Planes.**—In some conglomerates the joints may be seen traversing the enclosed pebbles as well as the surrounding matrix, which has been responsible for their shape and size sharply as if they had been sliced by a lapidary's machine. A similar phenomenon may be observed in flints as they lie embedded in the chalk, and the same joints may be traced continuously through many yards of rocks. Such facts show that the jointing of rocks was due must have operated with considerable force. Further indication of movement is supplied by the rubbed and striated surfaces of some joints. These surfaces, termed slickensides, have even been used as the basis of a system of paleo-weathering. The influence of Joints on Water-flow and Scenery. Joints form natural paths for the passage downward and upward of subterranean water and have an important bearing upon water supply. Water obtained directly from joints has a strongly alkaline character and is often contaminated by surface impurities that from a more compact rock through which it has had to soak its way; for this reason many limestones are objected to as sources of potable water. On exposed surfaces, joints have a marked influence upon the type and rate of weathering. They furnish an effective lodgment for surface water, which, frozen by lowering of temperature, expands into ice and forms blockages of the rock; and the more numerous the joints the more pronounced are the effects of the former. There is a close connection with bedding, to divide stratified rocks into large angular blocks, their effect on cliffs and other exposed places is seen in the splintered and dislocated aspect so familiar in mountain scenery. Not infrequently, by directing the initial activity of weathering water along joints, these latter develop large streams as well as for the type of scenery on their banks. In limestones, which succumb readily to the solvent action of water, the
JOINTURE—JOINVILLE, PRINCE DE

Joints are liable to be gradually enlarged along the course of the underground water flow until caves are formed of great size and intricacy.

Infilled Joints.—Joints which have been so enlarged by solution are sometimes filled again completely or partially by minerals brought thither in solution by the water traversing the rock; calcite, barites and ores of lead and copper may be so deposited. In this way many valuable mineral veins have been formed. Widened joints may also be filled in by detritus from the surface, or, in deep-seated portions of the crust, by heated igneous rock, forced from below along the planes of least resistance. Occasionally even sedimentary rocks may be forced up joints from below, as in the case of the so-called "sandstone dykes."

**Practical Utilit of Joints.—**An important feature in the joints of stratified rocks is the direction in which they intersect each other. As the result of observations we learn that they possess two dominant trends, one coincident in a general way with the direction in which the strata are inclined to the horizon, the other running transversely at right angles. The second set is known as dip-joints, because they run with the dip or inclination of the rocks, the latter is termed strike-joints, inasmuch as they conform to the general strike or mean outcrop. It is owing to the existence of this double series of joints that ordinary quarrying operations can be carried on. Large quadrangular blocks can be worked off that would be shattered if exposed to the risk of blasting. A quarry is usually worked on the dip of the rock, hence strike-joints form clean-cut faces in front of the workmen as they advance. These are known as backs, and the dip-joints which traverse them as cutters. The way in which this double set of joints occurs in a quarry may be seen in the figure, where the parallel lines which traverse the shaded and unshaded faces mark the successive strata. The broad white spaces running along the length of the quarry behind the seated figure are strike-joints or backs, traversed by some highly inclined lines which mark the position of the dip-joints or cutters. The shaded ends looking towards the spectator are cutters in which the rock has been quarried away on one side. In crystalline (igneous) rocks, bedding is absent and very often there is no horizontal jointing to take its place; the joint planes break up the mass more irregularly than in stratified rocks. Granite, for example, is usually traversed by two sets of chief or master-joints cutting each other somewhat obliquely. Their effect is to divide the rock into long quadrangular, rhomboidal, or even polygonal columns. But a third set may often be noticed cutting across the columns, though less continuous and dominant than the others. When these transverse joints are few in number, columns many feet in length can be quarried out entire. Such monoliths have been from early times employed in the construction of obelisks and pillars.  

**Jointure, in law, a provision for a wife after the death of her husband.** As defined by Sir E. Coke, it is "a competent livelihood of freehold for the wife, of lands or tenements, to take effect presently in possession or profit after the death of her husband, for the life of the wife at least, if she herself be not the cause of determination or forfeiture of it." (Co. Litt. 366.) A jointure is of settled lands, legally created, and first authorized by the Statute of Uses. Before this statute a husband had no legal seisin in such lands as were vested in another to his "use," but merely an equitable estate. Consequently it was usual to make settlements on marriage, the most general form being the settlement by deed of an estate to the use of the husband and wife for their lives in joint tenancy (or "jointure"), so that the whole would go to the survivor. Although, strictly speaking, a jointure is a joint estate limited to both husband and wife, in common acceptance the word extends also to a sole estate limited to the wife only. The requisites of a legal jointure are: (1) the jointure must take effect immediately after the husband's death; (2) it must be for the wife's life or for a greater estate, or be determinable by her own act; (3) it must be made before marriage—if after, it is voidable at the wife's election, on the death of the husband; (4) it must be expressly stated to be in satisfaction of dower and not of part of it. In equity, any provision made for a wife before marriage and accepted by her (not being an infant) in lieu of dower was a bar to such. If the provision was made after marriage, the wife was not barred by such provision, though expressly stated to be in lieu of dower; she was put to her election between jointure and dower (see Dower).

not take his seat until the latter had been chosen president of the provincial republic. His deafness prevented him from making any figure in the assembly, and he resigned his seat in 1876. In 1886 the provisions of the law against pretenders to the throne deprived him of his rank as vice-admiral, but he continued to live in France, and died in Paris on the 16th of June 1900. He had married in 1843 the princess Francisca, sister of Pedro II., emperor of Brazil, and had a son, the duc de Penthièvre (born in 1845), also brought up to the navy, and a daughter Françoise (1844— ) who married the duc de Chartres in 1865.

The prince de Joinville was the author of several essays and pamphlets on naval affairs and other matters of public interest, which were originally published for the most part in a various and miscellaneous form, and subsequently, under his own name after the fall of the Empire. They include Essais sur la marine française (1883); Études sur la marine (1889 and 1890); La Guerre d'Amérique, campagne du Poxomie (1892 and 1872); Encore un mot sur la campagne; Le Conseil de guerre (1882); and an essay on the English Channel in a collection called: De la navigation de l'homme, doing battle against some who have criticized his theory of voyage (1887). These matters, however, occupy a small place even in the most exhaustive and complete edition of his works (1882— ).

His most important work, however, is the one for which his name is most generally known, the Recherche des vétérans de la Grande Armée, an attempt to bring together the narratives of veterans of the Napoleonic Wars. To this end he passed through the charity of the French government, and by the authority of the French ambassador in London, in 1865, an attempt was made to arrange with the English government for the bringing over of some of the old soldiers to France. This was, however, found to be impossible, and the plan was abandoned. The prince de Joinville, however, continued his efforts, and succeeded in bringing over a number of the old soldiers, who were brought to France and received the welcome of their country. The prince de Joinville was also a great friend of the French army, and was a great admirer of the officers of the French army. He was a great advocate of the French army, and was a great admirer of the officers of the French army. He was a great patron of the French army, and was a great admirer of the officers of the French army. He was a great friend of the French army, and was a great admirer of the officers of the French army. He was a great patron of the French army, and was a great admirer of the officers of the French army. He was a great friend of the French army, and was a great admirer of the officers of the French army. He was a great patron of the French army, and was a great admirer of the officers of the French army. He was a great friend of the French army, and was a great admirer of the officers of the French army. He was a great patron of the French army, and was a great adm
It would, however, be a mistake to imagine that Joinville's book was exclusively or even mainly a chronicle of small beer. If he is not a Villehardouin or a Carlyle, his battlescapes are vivid and truthful, and he has occasional passages of no small episodic importance, such as that dealing with the Old Man of the Mountain. But, above all, the central figure of his book redeems it from the possibility of the charge of being commonplace or ignoble. To St Louis Joinville is a nobler Boswell; and hero-worshipper, hero, and heroic ideal all have something of the sublime about them. The very pettiness of the details in which the good seneschal indulges as to his own weakness only serves to enhance the sublime unworldliness of the king. Joinville is a better warrior than Louis, but, while the former frankly prays for his own safety, the latter only thinks of his army's when they have escaped from the hands of the aliens. One of the king's knights boasts that ten thousand pieces have been "forçonts" (counted short) to the Saracens; and it is with the utmost trouble that Joinville and the rest can persuade the king that this is a joke, and that the Saracens are much more likely to have got the advantage. He warns Joinville against wine-bibbing, against bad language, against all manner of foibles small and great; and the pupil acknowledges that this physician at any rate had healed himself in these respects. It is true that he is severe towards infidels; and his approval of the knight who, finding a Jew likely to get the better of a theological argument, resorted to the baculine variety of logic, does not meet the views of the 20th century. But Louis was not of the 20th century but of the 13th, and after his kind he certainly deserved Joinville's admiration. Side by side with his indignation at the idea of cheating his Saracen enemies may be mentioned his answer to those who after Taillebourg complained that he had let off Henry III. too easily. He is my man now, and he was not before," said the king, a most unpractical person certainly, and in some ways a sore saint for France. But it is easy to understand the half-despairing adoration with which a shrewd and somewhat prosaic person like Joinville may have regarded this flower of chivalry's day. He had had his reward, for assuredly the portrait of St Louis, from the early collection of anecdotes to the last hearsay sketch of the woeful end at Tunis, with the famous enseignement which is still the best summary of the theoretical duties of a Christian king in medieval times, is such as to take away all charge of vulgarity or mere commérage from Joinville, a charge to which otherwise he might perhaps have been exposed.

The arrangement of the book is, considering its circumstances and the date of its composition, sufficiently methodical. According to its own account it is divided into three parts—the first dealing generally with the character and conduct of the hero; the second with his acts and deeds in Egypt, Palestine, &c., as Joinville knew them; the third with his subsequent life and death. Of these the last is very brief, the first not long; the middle constitutes the bulk of the work. The contents of the first part are, as might be expected, miscellaneous enough, and consist chiefly of stories of the valor of Louis, his charity, his justice, his personal temperance, and so forth. The second part enters upon the history of the crusade itself, and tells how Joinville pledged all his land save so much as would bring in a thousand livres a year, and started with a brave retinue of nine knights (two of whom besides himself wore bannerets), and shared a ship with the sire d'Aspremont, leaving Joinville without raising his eyes," pour ce que le cuer ne me attendriés du blau chaste que je lessoie et de mes deux enfans "; how they could get out of sight of a high mountainous island (Lampedusa or Pantelleria) till they had made a procession round the masts in honour of the Virgin; how they reached first Cyprus and then Egypt; how they took Damietta, and then entangled themselves in the Delta. Bad generalship, which is sufficiently obvious, unwholesome food—it was Lent, and they ate the Nile fish which had been feasting on the carcasses of the slain—and Greek fire did the rest, and personal valour was of little avail, not merely against superior numbers and better generals, but against dysentery and a certain " mal de l'ost " which attacked the mouth and the legs, a curious human version of a well-known bestial malady. After ransom

Acre was the chief scene of Louis's stay in the East, and here Joinville lived in some state, and saw not a few interesting things, hearing besides much gossip as to the interior affairs of Asia from ambassadors, merchants and others. At last they journeyed back again to France, not without considerable experiences of the perils of the deep, which Joinville tells with a good deal of spirit. The remainder of the book is very brief. Some anecdotes of the king's " justice," his favourite and distinguishing attribute during the sixteen years which intervened between the two crusades, are given; then comes the story of Joinville's own refusal to join the second expedition, a refusal which bluntly alleged the harm done by the king's men who stayed at home to the vassals of those who went abroad as the reason of Joinville's resolution to remain behind. The death of the king at Tunis, his enseignement to his son, and the story of his canonization complete the work.

The book in which this interesting story is told has had a literary history which less affects it's matter than the vicissitudes to which Froissart has been subjected, but which is hardly less curious in its way. There is no reason for supposing that Joinville indulged in various editions, such as those which have given Kervyn de Lettenhove and Siméon Luce so much trouble, and which make so vast a difference between the last part of the Tale of the Crusader, and the first part of the Hundred Years' War. Indeed the great age of the seneschal of Champagne, and his intimate first-hand acquaintance with his subject, made such variations extremely improbable. But, whereas these books are difficult to understand and often difficult to read, the original first text of Joinville was until recently unknown, and even now may be said to be in the state of a conjectural restoration. It has been said that a copy of it was lost. It is true, however, that there does not seem to have been a catalogue of Louis le Hutin's library, and, strange to say, Joinville does not figure in it. His book seems to have undergone very much the same fate as that which befell the originals of the first two volumes of Froissart's letters which were published in 165 years' time to the time, the years of the Third. Several royal library catalogues of the 14th century are known, but in none of these does the Histoire de St Louis appear. It does appear in that of Charles V. (1411), but apparently no printed copy of it can be found. In 1741 a copy of it was presented to the French Academy by the Count de La Curne de St Falle, and in 1748 it was copied. Valuable material in other versions, all evidently posterior to the original. But in 1741 the well-known medievalist La Curne de St Falle found at Lucca a manuscript of the 16th century, evidently representing an older text than any yet printed. This manuscript, which has been compared and collated with the original, now forms in the French Academy a careful and useful separate edition by Francise Michel. The modern science of critical editing, however, which applies to medieval texts the principles long recognized in editing the classics, may be said to have been made in the collection of the works of Louis le Hutin. Now we have had the original miscellaneous works of Joinville, the letters, deeds, &c., already alluded to, the materials for what we have already called a conjectural restoration, which is not without its interest, though perhaps it is possible for that interest to be exaggerated.

For merely general readers Buchon's or Michaud's editions of Joinville will amply suffice. Both include translations into modern French, which, however, are hardly necessary, for the language is only a very light and easy one. But the modern French text of 1874 are critical editions, embodying the modern research connected with the text, the value of which is considerable, but contestable. They are accompanied by ample annotations and appendices, with which great care has been bestowed. A good sketch of the text and subject will be found in Aubertin's Joinville et de la litterature francaise au moyen âge, ii. 196-211; see also Gaston Paris, Litt. francaise au moyen âge (1893), and A. Debidois, Les Chroniqueurs (1888). There are English translations by T. Johnes (1867), H. Jutton (1868), Ethel Wedgwood (1906), and (more literally) Sir F. T. Marzials ("Everyman's Library," 1905). (G.S.A.)

JOIST, in building, one of a row or tier of beams set edgewise from one wall or partition to another and carrying the flooring boards of the upper edge and the walling of the lower.
The Eng. form of the word was gíste or gyaste, and was adapted from O. Fr. gíst, modern giste, a beam supporting the platform of a gun. By origin the word meant that on which anything lies or rests (gístir, to lie; Lat. jacere).

The English word 'gíste,' in such phrases as 'the gist of the matter,' the main or central point in an argument, is a doublet of Jokai's 'gyaste' (q.v.). "The Gyaste," meaning an O. Fr. proverbial expression, I se gíyi bien av gíste lelemére, I know well where the bare lies, i.e. I know the real point of the matter.

JÓKAI, MAURUS (1825-1904), Hungarian novelist, was born at Rév-Komárom on the 10th of February 1825. His father, Joseph, was a member of the Asva branch of the ancient Jókay family; his mother was a scion of the noble Pulays. The lad was tidy and delicate, and therefore educated at home till his tenth year, when he was sent to Pressburg, subsequently completing his education at the Calvinist college at Pápa, where he first met Petőfi, Alexander Kozma, and several other brilliant young men who subsequently became famous. His family had meant him to follow the law, his father's profession, and accordingly the youth, always singularly assiduous, plodded conscientiously through the usual curriculum at Kecskemét and Pest, and as a full-blown advocate actually succeeded in winning his first case. But the drudgery of a lawyer's office was uncongenial to the ardent youthful mind, espoused by the encomiums pronounced by the Hungarian Academy upon his first play, Zsidó fú ("The Jew Boy"), it flitted, when barely twenty, to Pest in 1845 with a MS. romance in his pocket; he was introduced by Petőfi to the literary notabilities of the Hungarian capital, and the same year his first notable romance Hétőnapok ("Working Days"), appeared, first in the columns of the Pesti Dieneslap, and subsequently, in 1846, in book form. Hétőnapok, despite its manifest crudities and extravagances, was instantaneously recognized by all the leading critics as a work of original genius, and in the following year Jókai was appointed the editor of Élekedések, the leading Hungarian literary journal, and gathered round him all the rising talent of the country. On the outbreak of the revolution of 1848 the young enthusiast adopted the national cause, and served it with both pen and sword. Now, as ever, he was a moderate Liberal, setting his face steadily against all excesses; but, carried away by the Hungarian triumphs of April and May 1849, he supported Kossuth's fatal blunder of depositing the Hapsburg dynasty, and though, after the war was over, his life was saved by an ingenious stratagem of his wife, the great tragic actress, Roza Benke Laborfalvi, whom he had married on the 29th of August 1848, he lived for the next fourteen years the life of a political suspect.

Yet this was perhaps the most glorious period of his existence, for during it he devoted himself to the rehabilitation of the proscribed and humiliated Magyar language, composing in it no fewer than thirty great romances, besides innumerable volumes of tales, essays, criticisms and facetiae. This was the period of such masterpieces as Erdely Arany Kord ("The Golden Age of Transylvania"), with its sequel Törökség Magyarsország ("The Turks in Hungary"), Egy Magyar Náhaj ("A Hungarian Nabob"), Karptály Zolán, Janicsárok végnapjai ("The Last Days of the Janissaries"), and Szemérdi napok ("Sad Days"). On the re-establishment of the Hungarian constitution by the Composition of 1867, Jókai took an active part in politics. As a constant supporter of the Tisza administration, not only in parliament, where he sat continuously for more than twenty years, but also as the editor of the government organ, Hon, founded by him in 1863, he became a power in the state, and, though he never took office himself, frequently extricated the government from difficult places. In 1897 the emperor appointed him a member of the upper house. As a suave, practical and witty debater he was particularly successful. Yet it was to literature that he continued to devote most of his time, and his productiveness after 1870 was stupendous, amounting to some hundreds of volumes. Stranger still, none of this work is slipshod, and the best of it deserves to endure. Amongst the finest of his later works may be mentioned the unique and incomparable Az arany ember ("A Man of Gold")—translated into English under the title of Timar's Two Worlds—and A tengerermi högy ("Eyes like the Sea"), the latter of which won the Academy's prize in 1890. He died at Budapest on the 5th of May 1904; his wife having predeceased him in 1886. Jókai was an arch-romantic, with a perfervid Oriental imagination, and humour of the purest, rarest description. If one can imagine a combination, in almost equal parts of Scott, Walter Scott, William Beckford, Dumas père, and Charles Dickens, together with the native originality of an ardent Magyar, one may perhaps form a fair idea of the great Hungarian romantic's indescribable genius.

Jókajakarta, or Jokjakarta (more correctly Jokjakarta; Du. Djokjakarta), a residency of the island of Java, Dutch East Indies, bounded N. by Kedu and Surakarta, E. by Surakarta, S. by the Indian Ocean, W. by Bagelen. Pop. (1897), 858,392. The country is mountainous with the exception of a wedge-like strip in the middle between the rivers Progo and Upak. In the north-west are the southern slopes of the volcano Merapi, and in the east the Kidul hills and the plateau of Sewu. The last-named is an arid and scantily populated chalk range, with numerous small summits, whence it is also known as the Thousand Hills. The remainder of the residency is well-watered and fertile. Melon irrigation works having been carried out. Sugar, rice and indigo are cultivated; salt-making is practised on the coast. The minerals include coal-beds in the Kidul hills and near Nangulan, marble and gold in the neighbourhood of Kalasan. The natives are poor, owing chiefly to maladministration, the use of opium and the usury practised by foreigners (Chinese, Arabs, etc.). The principality is divided between the sultan (vassal of the Dutch government) and the so-called independent prince Paku Alam; Ngawen and Imogiri are enclaves of Surakarta. There are good roads, and railways connect the chief town with Batavia, Samarang, Surakarta, etc. The town of Jokjakarta (see Java) is the seat of the resident, the sultan and the Paku Alam princes; its most remarkable section is the kraton or citadel of the sultan. Imogiri, S.W. of the capital, the burial-place of the princes of Surakarta and Jokjakarta, is guarded by priests and officials. Sentolo, Nanguran, Brotos, Kalasan, Sewu, West Java's are considerable villages. There are numerous remains of Hindu temples, particularly in the neighbourhood of Kalasan near the border of Surakarta and Prambanan, which is just across it. Remarkable sacred grooves are found on the coast, namely, the so-called Nyabi Kidul and Rongkor, and at Selarong, south-east of Jokjakarta.

JOLIET, a city and the county-seat of Will county, Illinois, U.S.A., in the township of Joliet, in the N.E. part of the state, on the Des Plaines river, 40 m. S.W. of Chicago. Pop. (1890), 23,264; (1900), 29,353, of whom 8336 were foreign-born, 1889 being German, 1379 Austrian, 1260 Irish and 953 Swedish; (1910 census) 34,670. In addition there is a large population in the immediate suburbs: that of the township including the city was 27,438 in 1890, and 30,640 in 1910. Joliet is served by the Atchison, Topeka & Santa Fe, the Chicago & Alton, the Chicago, Rock Island & Pacific, the Michigan Central, the Illinois, Iowa & Minnesota, and the Elgin, Joliet & Eastern railways, by interurban electric lines, and is on the Illinois & Michigan canal and the Chicago Sanitary (ship) canal. The city is situated in a narrow valley, on both sides of the river. It is the seat of the northern Illinois penitentiary, and has a public library (in front of which is a statue, by S. Asbjornsen, of Louis Joliet), the township high school, two hospitals, two Catholic academies and a club-house, erected by the Illinois Steel Company for the use of its employees. There are two municipal parks, West Park and Highland Park; Dells Park is an amusement resort, owned by the Chicago & Joliet Electric Railway Company. In the vicinity are large deposits of calcareous building stone, cement and fireclay, and there are coal mines 20 m. distant. Mineral resources and water-power have facilitated the development of manufactures. The factory product in 1900 was valued at $33,788,700 (29.5% more than in 1900), a large part of which
was represented by iron and steel goods. There are large industrial establishments just outside the city limits. The first settlement on the site of Joliet (1833) was called Joliet, in honour of the daughter of James B. Campbell, one of the settlers. The present name was adopted in 1845, in memory of Louis Joliet (1645-1700), the French Canadian explorer of the Missisipi, and in 1852 a city charter was secured.

JOLLY (from O. Fr. joli; Fr. joli, the French word is obsolete in origin; it may be from late Lat. gaudious, from gaudere, to rejoice, the change of d to l being paralleled by cigado and cigahe, or from O. Norse jol, Eng. “yule,” the northern festival of midwinter), and adjective meaning gay, cheerful, jovial, high-spirited. The colloquial use of the term as an intensive adverb, meaning extremely, very, was in early usage quite literary; thus John Trapp (1661-1669), Commentaries on the New Testament, Malachi (1647), writes, “All was jolly quiet at Ephesus before St Paul came hither.” In the royal navy “jolly” used as a substantive, is the slang name for a marine. To “jolly” is a slang synonym for “chauff.” The word “jollyboat,” the name of a ship’s small broad boat, usually clinker-built, is of doubtful etymology. It occurs in English in the 15th century, and is usually connected with Dan. or Swed. jelle, Dutch jol, a small ship’s boat; these words are properly represented in English by “yawl” originally a ship’s small boat, now chiefly used of a rig of sailing vessels, with a cutter-rigged foremast and a small mizen stepped far aft, with a spanger sail (see Rigging). A connexion has been suggested with a word of much earlier appearance in English, jolyceat, or gellycyle. This occurs at the end of the 15th century and is used of a smaller type of ship’s boat. This is supposed to be a corruption of the French gallois or Dutch golioot, goliot (see Galleys). The goliot was, however, a large vessel.

JOLLY DE LOTBIÈRE, SIR HENRI GUSTAVE (1829-1905), Canadian politician, was born at Epernay in France on the 4th of December 1829. His father, Gaspard Pierre Joly Gave, the owner of famous vineyards at Epernay, was of Huguenot descent, and married Julie Christine, grand-daughter of Kustache Gaspard Michol Chartier de Lotbinière, marquis de Lotbinière (one of Montcalm’s engineers at Quebec); he thus became seigneur of Lotbinière. Henri Gustave adopted the name de Lotbinière in 1847, under a statute of the province of Quebec. He was educated in Paris, and called to the bar of Lower Canada in 1838. On the 6th of May 1836 he married Marguerite Josepha (d. 1924), daughter of Hammond Gowen, of Quebec. At the general election of 1861 he was elected to the house of assembly of the province of Canada as Liberal member for the county of Lotbinière, and continued to represent the same county in the House of Commons, Ottawa, and in the legislative assembly, Quebec. Joly was opposed to confederation and supported Dorion in the stand which he took on this question. In 1878 he was called by Luc Letellier de St Just, lieutenant-governor of Quebec, to form an administration, which was defeated in 1879, and until 1883 he was leader of the opposition. During his brief administration he adopted a policy of retrenchment, and endeavoured to abolish the legislative council. In 1883, as a protest against the attitude of his party towards Louis Riel, he was tried and executed for high treason, he retired from public life. Early in the year 1895 he was induced again to take an active part in the campaign of his party, and at the general election of 1896 he was returned as member for the county of Portneuf. He had already in 1895 been created K.C.M.G. On the formation of Sir Wilfrid Laurier’s administration he accepted the office of controller of inland revenue, and a year later he became a privy councilor, as minister of inland revenue. From 1900 to 1906 he was lieutenant-governor of the British of Columbia. He twice declined a seat in the senate, but rendered eminent service to Canada by promoting the interest of agriculture, horticulture and of forestry. He died on the 17th of November 1908.

JOMINI, ANTOINE HENRI, BARON (1779-1869), general in the French and afterwards in the Russian service, and one of the most celebrated writers on the art of war, was born on the 6th of March 1779 at Payerne in the canton of Vaud, Switzerland, where his father was syndic. His youthful preference for a military life was disappointed by the dissolution of the Swiss regiments of France at the Revolution. For some time he was a clerk in a Paris banking-house, until the outbreak of the Swiss revolution. At the age of nineteen he was appointed to a post on the Swiss headquarters staff, and when scarcely twenty-one to the command of a battalion. At the peace of Lunéville in 1801 he returned to business life in Paris, but devoted himself chiefly to preparing the celebrated Traité des grandes opérations militaires, which was published in 1804-1805. Introduced to Marshal Ney, he served in the campaign of Austerlitz as a volunteer aide-de-camp on Ney’s personal staff. In December 1805 Napoleon, being much impressed by a chapter in Jomini’s treatise, made him a colonel in the French service. Ney thereupon made him his principal aide-de-camp. In 1806 Jomini published his views as to the conduct of the impending war with Prussia, and this, along with his knowledge of Frederick the Great’s campaigns, which he had described in the Traité, led Napoleon to attach him to his own headquarters. He was present with Napoleon at the battle of Jena, and at Eylau won the cross of the Legion of Honour. After the peace of Tilsit he was made chief of the staff to Ney, and created a baron. In the Spanish campaign of 1808 his advice was often of the highest value to the marshal, but Jomini quarrelled with his chief, and was left almost at the mercy of his numerous enemies, especially Berthier, the emperor’s chief of staff. Overtures had been made to him, as early as 1807, to enter the Russian service, but Napoleon, hearing of his intention to leave the French army, compelled him to remain in the service with the rank of general of brigade. For some years thereafter Jomini held both a French and a Russian commission, with the consent of both sovereigns. But when war between France and Russia broke out, he was in a difficult position, which he ended by taking a command on the line of communication. He was thus engaged when the retreat from Moscow and the uprising of Prussia transferred the seat of war to central Germany. He promptly rejoined Ney, took part in the battle of Lützen and, as chief of the staff of Ney’s group of corps, rendered distinguished services before and at the battle of Bautzen, and was recommended for the rank of general of division. Berthier, however, not only erased Jomini’s name from the list, but put him under arrest and censured him in army orders for failing to supply certain returns that had been called for. How far Jomini was held responsible for certain misunderstandings which prevented the attainment of all the results hoped for from Ney’s attack (see BAUTZEN) has been a point subject to much discussion; but it is agreed by all that he was inaccurate in his calculations of the trivial and baseless, and during the armistice Jomini did as he had intended to do in 1809–10, and went into the Russian service. As things then were, this was tantamount to deserting to the enemy, and so it was regarded by Napoleon and by the French army, and by not a few of his new comrades. It must be observed, in Jomini’s defence, that he had for years held a dormant commission in the Russian army, that he had declined to take part in the invasion of Russia in 1812, and that he was a Swiss and not a Frenchman. His patriotism was indeed unquestioned, and he withdrew from the Allied Army in 1814 when he found that he could not prevent the violation of Swiss neutrality. Apart from love of his own country, the desire to study, to teach and to practise the art of war was his ruling motive. At the critical moment of the battle of Eylau he exclaimed, “If I were the Russian commander for two hours!” On joining the allies he received the rank of lieutenant-general and the appointment of aide-de-camp from the tsar, and rendered important assistance during the German campaign, though the charge that he betrayed the numbers, positions and intentions of the French to the enemy was later acknowledged by Napoleon to be without foundation. He declined as a Swiss patriot and as a French officer to take part in the passage of the Rhine at Basel and the subsequent invasion of France. In 1815 he was with the emperor Alexander in Paris, and attempted in vain to save the life of his old commander Ney.
This almost cost him his position in the Russian service, but he succeeded in making head against his enemies, and took part in the congress of Vienna. Resuming his leave for a period of several years of retirement and literary work, his post in the Russian army, he was about 1823 made a full general, and thenceforward until his retirement in 1829 he was principally employed in the military education of the tsarевич Nicholas (afterwards emperor) and in the organization of the Russian staff college, which was opened in 1832 and still bears its original name of the Nicholas academy. In 1828 he was employed in the field in the Russo-Turkish War, and at the siege of Varna he was given the grand cordon of the Alexander order. This was his last active service.

In 1829 he settled at Brussels where he chiefly lived for the next thirty years. In 1853, after trying without success to bring about a political understanding between France and Russia, Jomini was called to St Petersburg to act as a military adviser to the tsar during the Crimean War. He returned to Brussels on the conclusion of peace in 1856 and some years afterwards settled at Passy near Paris. He was busily employed up to the end of his life in writing treatises, pamphlets and open letters on subjects of military art and history, and in 1859 he was asked by Napoleon III. to furnish a plan of campaign in the Italian War. One of his last essays dealt with the war of 1866 and the influence of the breech-loading rifle, and he died at Passy on the 24th of March 1869 only a year before the Franco-German War. Thus one of the earliest of the great military theorists lived to speculate on the tactics of the present day.

Amongst his numerous works the principal, besides the Traité, are: Histoire critique et militaire des campagnes de la Révolution (1836; new ed. 1841); Vie politique et militaire de Napoléon racontée par lui-même (1827); and the best known of all his publications, the théosophie Précis de l'art de la guerre (1836).

See Ferdinand Lecomte, Le Général Jomini, sa vie et ses écrits (1861; new ed. 1888); C. A. Saint-Beuve, Le Général Jomini (1869); A. Pascal, Observations historiques sur la vie, etc., du général Jomini (1836).

JOMMELLI, NICOLA (1714-1774), Italian composer, was born at Aversa near Naples on the 10th of September 1714. He received his musical education at two of the famous music schools of that city, being a pupil of the Conservatorio de' poveri di Gesù Cristo under Feo, and also of the Conservatorio della pietà dei Turchini under Prota, Mancini and Leo. His first opera, L'Errore amoroso, was successfully produced at Naples (under a pseudonym) when Jommelli was only twenty-three. Three years afterwards he went to Rome to bring out two new operas, and thence to Bologna, where he profited by the advice of Padre Martini, the greatest contrapuntist of his age. In the meantime Jommelli's fame began to spread beyond the limits of his country, and in 1748 he went for the first time to Vienna, where one of his finest operas, Didone, was produced. Three years later he returned to Italy, and in 1753 he obtained the post of chapel-master to the duke of Württemberg at Stuttgart, which city he made his home for a number of years. In the same year he had ten commissions to write operas for princely courts. In Stuttgart he permitted no operas but his own to be produced, and he modified his style in accordance with German taste, so much so, that on the return of fifty years he returned to Naples, his countrymen hailed two of his operas off the stage. He retired in consequence to his native village, and only occasionally emerged from his solitude to take part in the musical life of the capital. His death took place on the 25th of August 1774, his last composition being the celebrated Misere, a setting for two female voices of Saverio Mattei's Italian paraphrase of Psalm li. Jommelli is the most representative composer of the generation following Leo and Durante. He approaches very closely to Mozart in his style, and is important as one of the composers who, by welding together German and Italian characteristics, helped to form the musical language of the great composers of the classical period of Vienna.

JONAH, in the Bible, a prophet born at Gath-hepher in Zebulun, perhaps under Jeroboam (2) (781-741 B.C.), who foretold the deliverance of Israel from the Aramaeans (2 Kings xiv. 25). This prophet may also be the hero of the much later book of Jonah, but how different a man is he! It is, however, the later Jonah who chiefly interests us. New problems have arisen out of the book which relates to him, but here we can only attempt to consider what, in a certain sense, may be called the surface meaning of the text.

This, then, is what we appear to be told. The prophet Jonah is summoned to go to Nineveh, a great and wicked city (cf. 4 Esdras ii. 8, 9), and prophesy against it. Jonah, however, is afraid (iv. 2) that the Ninevites may repent, so, instead of going to Nineveh, he proceeds to Joppa, and takes his passage in a ship bound for Tarshish. But soon a storm arises, and, supplanting the gods falling, the sailors cast lots to discover the guilty man who has brought this great trouble. The lot falls on Jonah, who has been roughly awakened by the captain, and when questioned frankly owns that he is a Hebrew and a worshipper of the divine creator Yahweh, from whom he has sought to flee (as if He were only the god of Canaan). Jonah advises the sailors to throw him into the sea. This, after praying to Yahweh, they actually do; see the sea, and see it swallow and its sacrifice to Yahweh. Meanwhile God has "appointed a great fish" which swallows up Jonah. Three days and three nights he is in the fish's belly, till, at a word from Yahweh, it vomits Jonah on to the dry ground. Again Jonah receives the divine call. This time he obeys. After delivering his message to Nineveh he makes himself a booth outside the walls and waits in vain for the destruction of the city (probably iv. 5 is misplaced and should stand after iii. 4). Thereupon Jonah beseeches Yahweh to take away his worthless life. As an answer Yahweh "appoints" a small quickly-growing tree with large leaves (the castor-oil plant) to come up over the prophet and shelter him from the sun. But the next day the beneficent tree perishes by God's "appointment" from a worm-bite. Once more God "appoints" something; it is the east wind, which, together with the fierce heat, brings Jonah again to despair. The close is fine, and reminds us of Job. God himself shows a short-sighted man a lesson. Jonah has pitied the tree, and should not God have pity on so great a city? Two results of criticism are widely accepted. One relates to the psalm in ch. ii., which has been transferred from some other place; it is in fact an anticipatory thanksgiving for the deliverance of Israel, mostly composed of phrases from other psalms. The other is that the narrative before us is not historical but an imaginative story (such as was called a Midrash) based upon Biblical data and tending to edification. It is, however, a story of high type. The narrator considered that Israel had to be a prophet to the "nations" at large, that Israel had, like Jonah, neglected its duty and for its punishment was "swallowed up" in foreign lands. God had watched over His people and prepared their deliverer to fulfil His purpose. This company of faithful but not always sufficiently charitable men represented their people, so that it might be said that Israel itself (the second Jonah) was swallowed up by the sea and had to be rescued, first, by a "soft" method, and then by a "hard" method, in which the ungodly spirit which grieved the All-merciful One. The book, which is post-exilic, may therefore be grouped with another Midrash, the Book of Ruth, which also appears to represent a current of thought opposed to the exclusive spirit of Jewish legalism.

Some critics, however, think that the key of symbolism needs to be supplemented by that of mythology. The "great fish" especially has a very mythological appearance. The Babylonian dragon myth (see COSMOGONY) is often alluded to in the Old Testament, e.g. in Jer. ii. 44, which, as the present writer long since pointed out, may supply the missing link between Jonah i. 17 and the original myth. For the "great fish" is ultimately Tilmat, the dragon of chaos, represented historically by Nebuchadnezzar, by whom for a time God permitted or "appointed" Israel to be swallowed up.

For further details see T. K. Cheyne, Encyc. Bib., "Jonah"; and his article "Jonah, a Study in Jewish Folklore and Religion," Theological Review (1877), pp. 211-219. König, Hastings's Dict. Bible, "Jonah" is full but not lucid; C. H. H. Wright, Biblical Studies (1886) argues from the symbolic--"Against Cheyne, See Mait's work on the Minor Prophecies (1894); the "great fish"
and the “three days and three nights” remain unexplained by this writer. On these points see Zimmermann, K.A.T. (3), pp. 366, 389, 508. The difficulties of the mission of a Hebrew prophet to Assyur are diminished by Cheyne’s later theory, Critica Biblica (1904), pp. 150-152.

JONAH, RABBI (Abu Walid Merwan Ibn Janah, also R. Marinas) (c. 900-c. 1050), the greatest Hebrew grammarian and lexicographer of the middle ages. He was born before the year 900, in Cordova, studied in Lucena, left his native city about 1012, and after appreciable wanderings, settled in Saragossa, where he died before 1050. He was a physician, and Ibn Abi Usbahia, in his treatise on Arabian doctors, mentions him as the author of a medical work. But Rabbi Jonah saw the true vocation of his life in the scientific investigation of the Hebrew language and in a rational biblical exegesis based upon sound linguistic knowledge. It is true, he wrote no actual commentary on the Bible, but his philological works exercised the greatest influence on Judaic exegesis. His first work—composed, like all the rest, in Arabic—bears the title Almustafah, and is indicated by the word, a criticism and at the same time a supplement to the two works of Yehuda 'Hayyuj on the verbs with weak-sounding and double-sounding roots. These two treatises, with which 'Hayyuj had laid the foundations of scientific Hebrew grammar, were recognized by Abulwalid as the basis of his own grammatical investigations, and Abraham Ibn Daud, when enumerating the greatest Jewish Jews in his history, indicated up the significance of R. Jonah in the words: “He completed what 'Hayyuj had begun.” The principal work of R. Jonah is the Kitab al Tafikh ("Book of Exact Investigation"), which consists of two parts, regarded as two distinct books—the Kitab al Luma ("Book of Many-coloured Flower-beds") and the Kitab al-Uyul ("Book of Roots"). The former (ed. J. Deringen, Paris, 1875) contains the grammar, the latter (ed. Ad. Neubauer, Oxford, 1875) the lexicon of the Hebrew language. Both works are also published in the Hebrew translation of Yehuda Ibn Tibbon (Sefer Ha-Rikmah, ed. B. Goldberg, Frankfurt am Main, 1855; Sefer Ha-Schorachim, ed. W. Bacher, Berlin, 1887). The other writings of Rabbi Jonah, so far as extant, have appeared in an earlier edition of the original accompanied by a French translation (Oeuvres et traités d'Aboul Walid, ed. Joseph and Hartwig Deringen, Paris 1880). A few fragments and numerous quotations in his principal book form our only knowledge of the Kitab al-Tanzim ("Book of Organization") a controversial work in four parts, in which Rabbi Jonah successfully repelled the onslaughts of the opponents of his first treatise. At the head of this opposition stood the famous Samuel Ibn Nagdela (S. Ha-Nagid) a disciple of 'Hayyuj. The grammatical work of Rabbi Jonah extended, moreover, to the domain of rhapsodic and biblical hermeneutics, and his lexicon contains many exegetical excursions. This lexicon is of especial importance by reason of its ample contribution to the comparative philology of the Semitic languages—Hebrew and Arabic, in particular. Abulwalid's works mark the culminating point of Hebrew scholarship during the middle ages, and he attained a level which was not surpassed till the modern development of philological science in the 19th century.

Bacher, Leben und Werke des Abulwalid und die Quellen seiner Schriften (Leipzig, 1885); id., Aller Schriften der Abulwalid, zusammen (Leipzig, 1886); id., Die hebr.-arabische Sprachvergleichung des Abulwalid (Vienna, 1884); id., Die hebräisch-neuehräische und hebr.-aramische Sprachvergleichung des Abulwalid (Vienna, 1885). (W. B.)

JONAS, JUSTUS (1493-1555), German Protestant reformer, was born at Nordhausen in Thuringia, on the 5th of June 1493. His real name was Jodokus (Jobst) Koch, which he changed according to the common custom of German scholars in the 16th century, when at the university of Erfurt. He entered that university in 1506, studied law and the humanities, and became Master of Arts in 1510. In 1512 he went to Wittenberg, where he studied theology, and took his bachelor's degree in law. He returned to Erfurt in 1514 or 1515, was ordained priest, and in 1518 was promoted doctor in both faculties and appointed to a well-endowed canonry in the church of St Severus, to which a professorship of law was attached. His great admiration for Erasmus first led him to Greek and biblical studies, and his election in May 1519 as rector of the university was regarded as a triumph for the partisans of the New Learning. It was not, however, until after the Leipzig disputation with Eck that Luther won his allegiance. He accompanied Luther to Worms in 1521, and there was appointed by the elector of Saxony professor of canon law at Wittenberg. During Luther's stay in the Wartburg Jonas was one of the most active of the Wittenberg reformers. Giving himself up to preaching and polemics, he aided the Reformation by his gift as a translator, turning Luther's and Melanchthon's works into German or Latin as the case might be, thus becoming a sort of double of both. He was busied in conferences and visitations during the next twenty years, and in diplomatic work with the princes. In 1534 he took up the task of preaching crusade in Halle; he became superintendent of its churches in 1542. In 1546 he was present at Luther's deathbed at Eisenbe, and preached the funeral sermon; but in the same year was banished from the duchy by Maurice, duke (later elector) of Saxony. From that time until his death, Jonas was unable to secure a satisfactory living. He wandered from place to place preaching, and finally went to Eislefeld (1553), where he died. He had been married three times.

JONATHAN (Heb. "Yah [weh] gives"). Of the many Jewish bearers of this name, three are well known: (1) the grandson of Moses, who was priest at Dan (Judg. xviii. 30). The reading Manasseh (see R.V. mg.; obtained by inserting a above the consonantal text in the Hebrew) is apparently intended to suggest that he was the son of that idolatrous king. (2) The eldest son of Saul, who, together with his father, freed Israel from the crushing oppression of the Philistines (1 Sam. xiii. seq.). Both are lauded in an lofty eulogy quoted from the Book of Samuel: "Saul, and Jonathan were kinsmen, and they loved one another of old: the one was as his own soul." (3) The Maccabees' hero, Jonathan the Great, whose devoted love for his country, and his labours on behalf of the people. Jonathan's name is most familiar for the firm friendship which subsisted between him and David (1 Sam. xvii. 4; 1 K. iv. 7; xx. ii. 18; xxii. 18-19), and when he fell at the battle of Gilboa and left behind him a young child (1 Sam. xxxi.; 2 Sam. iv. 4), David took charge of the youth and gave him a place at his court (2 Sam. ix.). See further DAVID, SAUL (3) The Maccabees (see JEW; MACEBASEES).

JONCİÈRES, VICTORIN (1839-1903), French composer, was born in Paris on the 12th of April 1839. He first devoted his attention to painting, but afterwards took up the serious study of music. He entered the Paris Conservatoire, but did not remain there long, because he had espoused too warmly the cause of Wagner against his professor. He composed the following operas: Sardanapale (1867), Le Dernier jour de Pompéi (1893), Don Juan (1876), La Reine des Bergers, (1878), Le Chevalier Jean (1885), Lancelot (1900). He also wrote incidental music to Hamlet, a symphony, and other works. Jonciers' admiration for Wagner asserted itself rather in a musical than a dramatic sense. The influence of the German master's earlier style can be traced in his operas. Jonciers, however, adhered to the recognized forms of the French opera and did not model his works according to the later developments of the Wagnerian "music drama." He may indeed be said to have been at least as much influenced by Gounod as by Wagner. From 1871 he was musical critic for La LIBERTÉ. He died on the 20th of October 1903.

JONES, ALFRED GILPIN (1824-1900), Canadian politician, was born at Weymouth, Nova Scotia, in September 1824, the son of Guy C. Jones of Yarmouth, and grandson of a United Empire Loyalist. In 1865 he opposed the federation of the British American provinces, and, in his anger at the refusal of the British government to repeal such portions of the British North America Act as referred to Nova Scotia, made a speech which won him the name of Haul-down-the-flag Jones. He was for many years a member of the Federal Parliament, and
for a few months in 1878 was minister of militia under the Liberal government. Largely owing to his influence the Liberal party refused in 1878 to abandon its Free Trade policy, an obstinacy which led to its defeat in that year. In 1900 he was appointed lieutenant-governor of his native province, and held this position till his death on the 13th of March 1906.

**JONES, SIR ALFRED LEWIS** (1845-1909), British shipowner, was born in Carmarthenshire, in 1845. At the age of twelve he was apprenticed to the managers of the African Steamship Company at Liverpool, making several voyages to the west coast of Africa. By the time he was twenty-six he had risen to be manager of the business. Not finding sufficient scope in this post, he borrowed money to purchase two or three small sailing vessels, and started in the shipping business on his own account. The venture succeeded, and he made additions to his fleet, but after a few years' successful trading, realizing that sailing ships were about to be superseded by steamers, he sold his vessels. About this time (1891) Messrs. Elder, Dempster & Co., who purchased the business of the old African Steamship Company, offered him a managerial post. This offer he accepted, subject to Messrs. Elder, Dempster selling him a number of their shares, and he thus acquired an interest in the business, and subsequently, by further share purchases, its control. See further STEAMSHIP LINES. In 1901 he was knighted. Sir Alfred Jones took a keen interest in imperial affairs, and was instrumental in founding the Liverpool school of tropical medicine. He acquired considerable territorial interests in West Africa, and financial interests in many of the companies engaged in opening up and developing that part of the world. He also took the leading part in opening up a new line of communication with the West Indies, and stimulating the Jamaica fruit trade and tourist traffic. He died on the 13th of December 1909, leaving large charitable bequests.

**JONES, EBENEZER** (1829-1860), British poet, was born in Islington, London, on the 20th of January 1829. His father, who was of Welsh extraction, was a strict Calvinist, and Ebenezer was educated at a dull, middle-class school. The death of his father obliged him to become a clerk in the office of a tea merchant. Shelley and Carlyle were his spiritual masters, and he spent all his spare time in reading and writing; but he developed an exaggerated style of thought and expression, due partly to a defective education. The unkind reception of his *Studies of Sensation and Event* (1843) seemed to be the last drop in his bitter cup of life. Baffled and disheartened, he destroyed his manuscripts. He earned his living as an accountant and by literary hack work, and it was not until he was rapidly dying of consumption that he wrote his three remarkable poems, "Winter Hymn to the Snow," "When the World is Burning" and "To Death." The fame that these and some of the pieces in the early volume brought to their author came too late. He died on the 14th of September 1860.

It was not till 1870 that Dante Gabriel Rossetti praised his work in *Notes and Queries*. Rossetti's example was followed by W. B. Scott. Theodore Watts-Dunton, who contributed some papers on the subject to the *Athenaeum* (September and October 1878), and R. H. Sheppard, who edited *Studies of Sensation and Event* in 1879.

**JONES, ERNEST CHARLES** (1816-1896), English Chartist, was born at Berlin on the 25th of January 1819, and educated in Germany. His father, an officer of the British army, was then equerry to the duke of Cumberland—and afterwards king of Hanover. In 1838 Jones came to England, and in 1841 published anonymously *The Wood Spirit*, a romantic novel. This was followed by some songs and poems. In 1844 he was called to the bar at the Middle Temple. In 1845 he joined the Chartist agitation, quickly becoming its most prominent figure, and vigorously carrying on the party's campaign on the platform and in the press. His speeches, in which he openly advocated physical force, led to his prosecution, and he was sentenced in 1848 to two years' imprisonment for sedition. While in prison he wrote, it is said in his own blood on leaves torn from a prayer-book, *The Revolt of Hindostan*, an epic poem. On his release he again became the leader of what remained of the Chartist party and editor of its organ. But he was almost its only public speaker; he was out of sympathy with the other leading Chartist, and soon joined the advanced Radical party. Thenceforward he devoted himself to law and literature, writing novels, tales and political songs. He made several unsuccessful attempts to enter parliament, and was about to contest Manchester, with the certainty of being returned, when he died there on the 26th of January 1869. He is believed to have sacrificed a considerable fortune rather than abandon his Chartist principles. His wife was Jane Atherley; and his son, Llewellyn Atherley-Jones, K.C. (b. 1831), became a well-known barrister and Liberal member of parliament.

**JONES, HENRY** (1837-1899), English author, well known as a writer on whist under his nom de guerre "Cavendish," was born in London on the 2nd of November 1837, being the eldest son of Henry D. Jones, a medical practitioner. He adopted his father's profession, established himself in 1852 and continued for sixteen years in practice in London. The father was a keen devotee of whist, and under his eye the son became early in life a good player. He was a member of several whist clubs, among them the "Cavendish," and in 1862 appeared his *Principles of Whist, stated and explained by "Cavendish,"* which was destined to become the leading authority as to the practice of the game. This work was followed by treatises on the laws of piquet and écarté. "Cavendish" also wrote on billiards, lawn tennis and croquet, and contributed articles on whist and other games to the ninth edition of the Encyclopaedia Britannica. "Cavendish" was not a law-maker, but he codified and commented upon the laws which had been made during many generations of card-playing. One of the most noteworthy points in his character was the manner in which he kept himself abreast of improvements in his favourite game. He died on the 10th of February 1899.

**JONES, HENRY ARTHUR** (1851-1901), English dramatist, was born at Granborough, Buckinghamshire, on the 28th of September 1851 the son of Silvanus Jones, a farmer. He began to earn his living early, his spare time being given to literary pursuits. He was twenty-seven before his first piece, *Only Round the Corner*, was produced at the Exeter Theatre, but within four years of his début as a dramatist he scored a great success by *The Silver King* (November 1882), written with Henry Herman, a melodrama produced by Wilson Barrett at the Princess's Theatre. Its financial success enabled the author to write a play "to please himself." *Saints and Sinners* (1884), which ran for two hundred nights, placed on the stage a picture of middle-class life and religion in a country town, and the introduction of the religious element raised considerable outcry. The author defended himself in an article published in the *Nineteenth Century* (January 1883), taking for his starting-point a quotation from the preface to Molière's *Tartuffe*. His next serious piece was *The Middleman* (1889), followed by *Judah* (1890), both powerful and successful plays which established his reputation. Later plays were *The Dancing Girl* (1891), *The Crusaders* (1894), *The Bawble Shop* (1893), *The Tempter* (1893), *The Masqueraders* (1894), *The Case of Rebellious Susan* (1894), *The Triumph of the Philistines* (1895), *Michael and his Lost Angel* (1896), *The Rogue's Comedy* (1896), *The Physician* (1897), *The Liars* (1897), *Carnac Sahib* (1899), *The Manoeuvres of June* (1899), *The Lackeys' Carnival* (1900), *Mrs Dane's Defence* (1900), *The Princess's Nose* (1902), *Chance the Idol* (1902), *Whitewashing Julia* (1903), *Joseph Entangled* (1904), *The Chevalier* (1904), &c. A uniform edition of his plays began to be issued in 1891; and his own views of dramatic art have been expressed from time to time in lectures and essays, collected in 1895 as *The Renascence of the English Drama*.

**JONES, INGO** (1753-1851), English architect, sometimes called the "English Palladio," the son of a cloth-worker, was born in London on the 15th of July 1753. It is stated that he was apprenticed to a joiner, but at any rate his talent for drawing attracted the attention of Thomas Howard, earl of Arundel (some say William, 3rd earl of Pembroke), through whose help he went to study landscape-painting in Italy. His preference soon transferred itself to architecture, and, following chiefly the style
of Palladio, he acquired at Venice such a reputation that in 1604 he was invited by Christian IV, to Denmark, where he is said to have designed the two great royal palaces of Rosenborg and Frederiksborg. In the following year he accompanied Anne of Denmark to the court of James I. of England, where, besides being appointed architect to the queen and Prince Henry, he was employed in supplying the designs and decorations of the court masques. After a second visit to Italy in 1612, Jones was appointed surveyor-general of royal buildings by James I., and was engaged to prepare designs for a new palace at Whitehall. In 1620 he was employed by the king to investigate the origin of Stonehenge, when he came to the absurd conclusion that it had been a Roman temple. Shortly afterwards he was appointed one of the commissioners for the repair of St. Paul’s, but the work was not begun till 1633. Under Charles I. he enjoyed the same offices as under his predecessor, and in the capacity of designer of the masques he came into collision with Ben Jonson, who frequently made him the butt of his satire. After the Civil War Jones was forced to pay heavy fines as a courtier and militant. He died in poverty on the 5th of July 1621.

A list of the principal buildings designed by Jones is given in Dally’s edition of Della Porta’s Ménagier’s Fables of Painting, and for an estimate of him as an architect see Ferguson’s History of Modern Architecture. The Architecture of Palladio, in 4 books, by Inigo Jones, appeared in 1715; The Most Notable Antiquities of Great Britain, collected by John Webb, was published in 1755 (ed. 1775); the Designs of Inigo Jones, by W. Kent, in 1727; and The Designs of Inigo Jones, by J. Ware, in 1757. See also G. H. Birch, London Churches of the XVIIth and XVIIIth Centuries (1896); W. J. Lökke, Inigo Jones and Wren, or the Rise and Decline of Modern Architecture in England (1893).

JONES, JOHN (c. 1600–1682), English art collector, was born about 1610 in or near London. He was apprenticed to a tailor, and about 1635 opened a shop of his own in the west-end of London. In 1650 he was able to retire from active management with a large fortune. When quite a young man he had begun to collect articles of vertu. The rooms over his shop in which he at first lived were soon crowded, and even the bed-rooms of his new house in Piccadilly were filled with art treasures. His collection was valued at approximately £250,000. Jones died in London on the 7th of January 1682, leaving his pictures, furniture and objects of art to the South Kensington Museum. A Catalogue of the Jones Bequest was published by the Museum in 1882, and a Handbook, with memoir, in 1883.

JONES, JOHN PAUL (1747–1792), American naval officer, was born on the 6th of July 1747, on the estate of Arbigland, in the parish of Kirkbean and the stewardry of Kirkcudbright, Scotland. His father, John Paul, was gardener to Robert Craik, a member of parliament; and his mother, Jean Macduff, was the daughter of a Highlander. Young John Paul, at the age of twelve, became shipmaster’s apprentice to a merchant of Whitehaven, named Younger. At seventeen he shipped as second mate and in the next year as first mate in one of his master’s vessels; on being released from his indentures, he acquired an interest in a ship, and as first mate made two voyages between Jamaica and the Guinea coast, trading in slaves. Becoming dissatisfied with this kind of employment, he sold his share in the ship and embarked for England. During the voyage both the captain and the mate died of fever, and John Paul took command and brought the ship safely to port. The owners gave him and the crew 10% of the cargo; after 1768, as captain of one of their merchantmen, John Paul made several voyages to America; but for unknown reasons he suddenly gave up his commission to live in America in poverty and obscurity until 1775. During this period he assumed the name of Jones, apparently out of regard for William Jones, a wealthy planter and prominent political leader of North Carolina, who had befriended John Paul in his days of poverty.

When war broke out between England and her American colonies, John Paul Jones was commissioned as a first lieutenant by the Continental Congress, on the 22d of December 1775. In 1776 he participated in the unsuccessful attack on the island of New Providence, and as commander first of the “Providence” and then of the “Alfred” he cruised between Bermuda and Nova Scotia, inflicting much damage on British shipping and fisheries. On the 10th of October 1776 he was promoted captain. On the 1st of November 1777 he sailed in the sloop-of-war “Ranger” for France with despatches for the American commissioners, announcing the surrender of Burgoyne and asking that Jones should be supplied with a swift frigate for harassing the coasts of England. Failing to secure a frigate, Jones sailed from Brest in the “Ranger” on the 10th of April 1778. A few days later he surprised the garrisons of the two forts commanding the harbour of Whitehaven, a port with which he was familiar from boyhood, spiked the guns and made an unsuccessful attempt to fire the shipping. Four days thereafter he encountered the British sloop-of-war “Drake,” a vessel slightly superior to his in fighting capacity, and after an hour’s engagement the British ship struck her colours and was taken to Brest. By this exploit Jones became a great hero in the eyes of the French, just beginning a war with Great Britain. With the rank of commodore he was now put at the head of a squadron of five ships. His flagship, the “Duras,” a re-fitted East Indiaman, was re-named by him the “Bonhomme Richard,” as a compliment to Benjamin Franklin, whose Poor Richard’s Almanac was then popular in France. On the 14th of August the five ships sailed from L’Orient, accompanied by two French privateers. Several of the French commanders under Jones proved insubordinate, and the privateers and three of the men-of-war soon deserted him. With the others, however, he continued to take prizes, and even planned to attack the port of Leith, but was prevented by unfavourable winds. On the evening of the 23rd of September the three men-of-war sighted two British men-of-war, the “Serapis” and the “Countess of Scarborough,” off Flamborough Head. The “Alliance,” commanded by Captain Landals, made off, leaving the “Bonhomme Richard” and the “Pallas” to engage the Englishmen. Jones engaged the greatly superior “Serapis,” and after a desperate battle of three and a half hours compelled the English ship to surrender. The “Countess of Scarborough” had meanwhile struck to the more formidable “Pallas.” Jones transferred his men and supplies to the “Serapis,” and the next day the “Bonhomme Richard” sunk.

During the following year Jones spent much of his time in Paris. Louis XVI. gave him a gold-hilted sword and the royal order of military merit, and made him chevalier of France. Early in 1781 Jones returned to America to secure a new command. Congress offered him the command of the “America,” a frigate then building, but the vessel was shortly afterwards given to France. In November 1783 he was sent to Paris as agent for the prizes captured in European waters under his own command, and although he gave much attention to social affairs and engaged in several private business enterprises, he was very successful in collecting the prize money. Early in 1787 he returned to America and received a gold medal from Congress in recognition of his services.

In 1788 Jones entered the service of the empress Catherine of Russia, avoiding his intention, however, “to preserve the condition of an American officer.” As a rear-admiral he took part in the naval campaign in the Liman (an arm of the Black Sea, into which flow the Bug and Dnieper rivers) against the Turks, but the jealous intrigues of Russian officers caused him to be recalled to St. Petersburg for the pretended purpose of being transferred to a command in the North Sea. Here he was compelled to remain in idleness, while rival officers plotted against him and even maliciously assailed his private character. In August 1789 he left St. Petersburg a bitterly disappointed man. In May 1790 he arrived in Paris, where he remained in retirement during the rest of his life, although he made several efforts to re-enter the Russian service.

Undue exertion and exposure had wasted his strength before he reached the prime of life, and after an illness, in which he was attended by the queen’s physician, he died on the 18th of July 1792. His body was interred in the St. Louis cemetery for foreign Protestants, the funeral expenses being paid from the private purse of Pierrot François Simmoneau, the king’s
JONES, M.—JONES, T. R.

commissary. In the confusion during the following years the burial place of Paul Jones was forgotten; but in June 1809 General Horace Porter, American ambassador to France, began a systematic search for the body, and after excavations on the site of the old Protestant cemetery, now covered with houses, a leaden coffin was discovered, which contained the body in a remarkable state of preservation. In July 1905 a fleet of American war-ships carried the body to Annapolis, where it now rests in one of the buildings of the naval academy.

Jones was a seaman of great bravery and technical ability, but over-jealous of his reputation and inclined to be querulous and boastful. The charges by the English that he was a pirate were particularly galling to him. Although of unprepossessing appearance, 5 ft. 7 in. in height and slightly round-shouldered, he was noted for his pleasant manners and was welcomed into the most brilliant courts of Europe.

Romance has played with the memory of Paul Jones to such an extent that few accounts of his life are correct. Of the early biographies the best are Sherburne's (London, 1822), chiefly a collection of Jones's correspondence; the Janette-Taylor Collection (New York, 1830), containing numerous extracts from his letters and journals; and the life by A. S. MacKenzie (2 vols., New York, 1846). In recent years a number of new biographies have appeared, including A. C. Lockhart's Jones (1860), the most exhaustive of which has been discarded, and Hutchins' in the Riverside Biographical Series (1901). The life by Cyrus Townsend Brady in the "Great Commanders Series" (1900) is perhaps the best.

JONES, MICHAEL (d. 1649), British soldier. His father was Bishop of Killaloe in Ireland. At the outbreak of the English Civil War he was studying law, but he soon took service in the army of the King in Ireland. He was present with Ormonde's army in many of the expeditions and combats of the devastating Irish War, but upon the conclusion of the "Irish Cessation" (see Ormonde, James Butler, Duke of) he resolved to leave the king's service for that of the parliament, in which he soon distinguished himself by his activity and skill. In the Welsh War, and especially at the last great victory at Rowton Heath, Jones' cavalry was always far superior to that of the Royalists, and in reward for his services he was made governor of Chester when that city fell into the hands of the parliament. Soon afterwards Jones was sent again to the Irish War, in the capacity of commander-in-chief. He began his work by reorganizing the army in the neighbourhood of Dublin, and for some time he carried on a desultory war of posts, necessarily more concerned for his supplies than for a victory. But at Dungan Hill he obtained a complete success over the army of General Preston, and though the war was by no means ended, Jones was able to hold a large tract of country for the parliament. But on the execution of Charles I., the war entered upon a new phase, and after his execution fell to Ormonde's Royalists. Soon Jones was shut up in Dublin, and then followed a siege which was regarded both in England and Ireland with the most intense interest. On the 2nd of August 1649 the Dublin garrison raised the siege by the bayonet and the pike, in which the royal army was practically destroyed. A fortnight later Cromwell landed with heavy reinforcements from England. Jones, his lieutenant-general, took the field; but on the 16th of December 1649 he died, worn out by the fatigues of the campaign.

JONES, OWEN (1741–1814), Welsh antiquary, was born on the 3rd of September 1741 at Llanvihangel Glyn Myfyr in Denbighshire. In 1760 he entered the service of a London firm of furriers, to whose business he ultimately succeeded. He had from boyhood studied Welsh literature, and later devoted time and money to its collection. Assisted by Edward William of Glamorgan (Iolo Morganwg) and Dr. Owen Pugh, he published, at a cost of more than £1,000, the well-known Mynywian Archæology of Wales (1804–1807), a collection of pieces dating from the 6th to the 14th century. The manuscripts which he had brought together are deposited in the British Museum; the material not utilized in the Mynywian Archæology amounts to 100 volumes, containing 16,000 pages of verse and 15,000 pages of prose. Jones was the founder of the Gwyneddigion Society (1772) in London for the encouragement of Welsh studies and literature; and he began in 1804 a miscellany—the Great—of which only one volume appeared. An edition of the poems of Dayvid ab Guliwm was also issued at his expense. He died on the 26th of December 1814 at his business premises in Upper Thames Street, London.

JONES, OWEN (1809–1874), British architect and art decorator, son of Owen Jones, a Welsh antiquary, was born in London. After an apprenticeship of six years in an architect's office, he travelled for four years in Italy, Greece, Turkey and Spain, making a special study of the Alhambra. On his return to England in 1836 he busied himself in his professional work. His forte was interior decoration, for which his formula was: "Form without colour is like a body without a soul." He was one of the superintendents of works for the Exhibition of 1851 and was responsible for the general decoration of the Crystal Palace at Sydenham. Along with Digby Wyatt, Jones collected the casts of works of art with which the palace was filled. He died in London on the 19th of April 1874.

Owen Jones was described in the Builder for 1874 as "the most aptotspot of colour that architectural England has had in these days." His range of activity is to be traced in his works: Plans, Elevations and Details of the Alhambra (1835–1845), in which he showed the Mosaic Pavements (1845); Polychromatic Ornament of Italy (1845); An Attempt to Define the Principles which regulate the Employment of Colour in Decorative Arts (1852); Handbook to the Alhambra Court (1853); Grammar of Ornament (1856), a very important work; Ten Thousand and One Initial Letters (1864); Seven Hundred and Two Monograms (1864); and Examples of Chinese Ornament (1867).

JONES, RICHARD (1790–1853), English economist, was born at Tunbridge Wells. The son of a solicitor, he intended for the law from early life, and was educated at Caius College, Cambridge. Owing to ill-health, he abandoned the idea of the law and took orders soon after leaving Cambridge. For several years he held curacies in Sussex and Kent. In 1833 he was appointed professor of political economy at King's College, London, resigning this post in 1835 to succeed T. R. Malthus in the chair of political economy and history at the East India College at Haileybury. He took an active part in the commutation of tithe and in the Abolition of the Slavery Act and brought the growth of population under the same system. As a tithe commissioner, an office which he filled till 1851, he was for some time, also, a charity commissioner. He died at Haileybury, shortly after he had resigned his professorship, on the 26th of January 1855. In 1831 Jones published his Essay on the Distribution of Wealth and on the Sources of Taxation, his most important work. In it he showed himself a thorough-going critic of the Ricardoian system.

Jones's method is inductive; his conclusions are founded on a wide observation of contemporary facts, aided by the study of history. The world he professed to study was not an imaginary world, inhabited by abstract "economic men," but a small corner of our world, with the different forms which the ownership and cultivation of land, and, in general, the conditions of production and distribution, assume at different times and places. His recognition of such different systems of economic communities occupying different stages in the progress of civilization led to his proposal of what he called a "political economy of nations." This was a protest against the practice of taking the exceptional state of facts which exists, and is assumed to be typical of all parts of the world, to represent the universal type of human societies, and ignoring the effects of the early history and special development of each community as influencing its economic phenomena. Jones is remarkable for his freedom from theories and one-sided statements; he thus, whilst holding Malthus in, perhaps, undue esteem, he declines to accept the proposition that an increase of the means of subsistence is necessarily followed by an increase of population; and he maintained that undeveloped productions are capable of being raised to a level of enterprise and improvement in all well-governed and prosperous states, the command over food, instead of diminishing, increases. A collected edition of Jones's works, with a preface by W. Whewell, was published in 1859.

JONES, THOMAS RUPERT (1810— ), English geologist and palaeontologist, was born in London on the 1st of October 1810. While at a private school at Ilminster, his attention was attracted to geology by the fossils that are so abundant in the Lias quarries. In 1835 he was apprenticed to a surgeon at Taunton, and he completed his apprenticeship in 1842 at
Newbury in Berkshire. He was then engaged in practice mainly in London, till in 1849 he was appointed assistant secretary to the Geological Society of London. In 1862 he was made professor of geology at the Royal Military College, Sandhurst. Having devoted his especial attention to fossil microfauna, he now became the highest authority in England on the Foraminifera and Entomorstraca. He edited the 2nd edition of Mantell's *Monograph of the Tertiary Fauna of England* (1834), and the 7th edition of Mantell's *Wonders of Geology* (1857); he also edited the 2nd edition of Dixon's *Geology of Sussex* (1878). He was F.R.S. in 1872 and was awarded the Lyell medal by the Geological Society in 1890. For many years he was specially interested in the geology of South Africa.

His publications include *A Monograph of the Entomorstraca of the Cretaceous Formation of England* (Palaeontograph. Soc., 1849); *A Monograph of the Tertiary Entomorstraca of England* (ibid. 1857); *A Monograph of the Fossil Eusthenes* (ibid. 1862); *A Monograph of the Foraminifera of the Crag* (ibid. 1866, &c., with H. B. Thompson), and numerous articles in the *Annals and Magazine of Natural History*, the *Geological Magazine*, the Proceedings of the *Geologists' Association*, and other journals.

**JONES, WILLIAM** (1726-1800), English divine, was born at Lowick, in Northamptonshire on the 30th of July 1726. He was descended from an old Welsh family and one of his progenitors was Colonel John Jones, brother-in-law of Cromwell. He was educated at Charterhouse School, and at University College, Oxford. He showed a taste for music, as well as a similarity in regard to other points of his character, led to his close intimacy with George Horne (q.v.), afterwards bishop of Norwich, whom he induced to study Hutchinsonian doctrines. After obtaining his bachelor's degree in 1749, Jones held various preferments. In 1777 he obtained the perpetual curacy of Nayland, Suffolk, and on Horne's appointment to Norwich became his chaplain, afterwards writing his life. His vicarage became the centre of a High Church coterie, and Jones himself was a link between the non-jurors and the Oxford movement. He could write intelligibly on abstruse topics. He died on the 6th of January 1800.

In 1756 Jones published his tractate *On the Catholic Doctrine of the Trinity*, a statement of the doctrine from the Hutchinsonian point of view, with a succinct and able summary of biblical proofs. This was followed in 1752 by an *Essay on the First Principles of Natural Philosophy*, in which he maintained the theories of Hutchinson in opposition to those of Sir Isaac Newton, and in 1781 he dealt with the same subject in his *Physiological Treatise*. Jones was also the translator of the *British Critic* (May 1793). His collected works, with a life by William Stevens, appeared in 1801, in 12 vols., and were condensed into 6 vols. in 1810. A life of Jones, forming pt. 5 of the *Biography of English Divines*, was published in 1849.

**JONES, SIR WILLIAM** (1746-1794), British Orientalist and jurist, was born in London on the 28th of September 1746. He distinguished himself at Harrow, and during his last three years there applied himself to the study of Oriental languages, teaching himself the rudiments of Arabic, and reading Hebrew with tolerable ease. In his vacations he improved his acquaintance with French and Italian. In 1764 Jones entered University College, Oxford, where he continued to study Oriental literature, and perfected himself in Persian and Arabic by the aid of a Syrian Mirza, whom he had discovered and brought from London. He added to his knowledge of Hebrew and made considerable progress in Italian, Spanish and Portuguese. He began the study of Chinese, and made himself master of the radical characters of that language. During five years he partly supported himself by acting as tutor to Lord Althorp, afterwards the second Earl Spencer, and in 1766 he obtained a fellowship. Though but twenty-two years of age, he was already becoming famous as an Orientalist, and when Christian VII. of Denmark visited England in 1768, bringing with him a life of Nadir Shah in Persian, Jones was requested to translate the MS. on French. The translation appeared in 1770, with an introduction containing a description of Asia and a short history of Persia. This was followed in the same year by a *Traité sur la poésie orientale*, and by a French metrical translation of the odes of Hafiz. In 1771 he published a *Dissertation sur la littérature orientale*, defending Oxford scholars against the criticisms made by Anquetil Du Perron in the introduction to his translation of the Zend-Avesta. In the same year appeared his *Grammar of the Persian Language*. In 1772 Jones published a volume of *Poems, Chiefly Translations from Asiatic Languages, together with Two Essays on Poetry* of Eastern Nations and on the Arts commonly called Imitative, and in 1774, a treatise entitled *Poëses Asiaticae commentatorium libri sex*, which definitely confirmed his authority as an Oriental scholar.

Finding that some more financially profitable occupation was necessary, Jones devoted himself with his customary energy to the study of the law, and was called to the bar at the Middle Temple in 1774. He studied not merely the technicalities, but the philosophy, of law, and within two years had acquired so considerable a reputation that he was in 1776 appointed commissioner in bankruptcy. Besides writing an *Essay on the Law of Bailments*, which enjoyed a high reputation both in England and America, Jones translated, in 1778, the speeches of Isaeus on the Athenian right of inheritance. In 1780 he was a parliamentary candidate for the university of Oxford, but withdrew from the contest before the day of election, as he found he had no chance of success owing to his Liberal opinions, especially on the relations of the British to the slave trade.

In 1783 was published his translation of the seven ancient Arabic poems called *Maolabdin*. In the same year he was appointed judge of the supreme court of judicature at Calcutta, then "Fort William," and was knighted. Shortly after his arrival in India he founded, in January 1784, the Bengal Asiatic Society, of which he remained president till his death. Convinced as he was of the great importance of consulting the Hindu legal authorities in the original, he at once began the study of Sanskrit, and undertook, in 1788, the colossal task of compiling a digest of Hindu and Mahomedan law. This did not live to complete, but he published the admirable beginnings of it in his *Institutes of Hindu Law, or the Ordinances of Manu* (1794); his *Mohammedan Law of Succession to Property in Intestates*, and his *Mohammedan Law of Inheritance* (1794). In 1789 Jones had completed his translation of Kâlidâsa's most famous drama, *Sakuntalâ*. He also translated the collection of tales entitled the *Hitopadesa*, the *Gîtagovinda*, and considerable portions of the Vedas, besides editing the text of Kâlidâsa's poem *Ritusamhara*. He was a large contributor also to his society's volumes of *Asiatic Researches*.

His unremitting literary labours, together with his heavy judicial work, told on his health after a ten years' residence in Bengal; and he died at Calcutta on the 27th of April 1794. An extraordinary linguist, knowing thirteen languages well, and having a moderate acquaintance with twenty-eight others, his range of knowledge was enormous. As a pioneer in Sanskrit learning and as founder of the Asiatic Society he rendered the language and literature of the ancient Hindus accessible to European scholars, and thus became the indirect cause of later achievements in the field of Sanskrit and comparative philology. A monument was erected to his memory, to be found now in the Indian Company in St. Paul's, London, and a statue in Calcutta.

See the *Memoir* (1804) by Lord Teignmouth, published in the collected edition of Sir W. Jones's works.

**JÖNKÖPING**, a town of Sweden, capital of the district (län) of Jönköping, 230 m. S.W. of Stockholm by rail. Pop. (1900), 23,143. It occupies a beautiful but somewhat unhealthy position between the southern end of Lake Vetter and two small lakes, Röksjö and Munksjö. Two quarters of the town, Svenska Mad and Tyska Mad, recall the time when the site was a marsh (mad), and buildings were constructed on piles. The residential suburbs among the hills, especially Dunkehallar, are attractive and healthier than the town. The church of St Kristine (c. 1560), the court-houses, town-hall, government buildings, and high school, are noteworthy. The town is the leading industrial centres in Sweden. The match manufacture, for which it is principally famous, was founded by Johan Edvard Lundström in 1844. The well-known brand of *säkerhets-låsticker*
(safety-matches) was introduced later. There are also textile manufactures, paper-factories (on Munksjö), and mechanical works. There is a large fire-arms factory at Huskvarna, 5 m. E. Water-power is supplied here by a fine series of falls. The hill Taberg, 8 m. S., is a mass of magnetic iron ore, rising 410 ft. above the surrounding country, 2950 ft. long and 1475 ft. broad, but the percentage of iron is low as compared with the rich ores of other parts, and the deposit is little worked. Jönköping is the seat of one of the three courts of appeal in Sweden.

Jönköping received the earliest extant Swedish charter in 1284 from Magnus I. The castle is mentioned in 1263, when Waldemar Birgersson married the Danish princess Sophia. Jönköping was afterwards the scene of many events of moment in Scandinavian history—of parliaments in 1357, 1439, and 1599; of the meeting of the Danish and Swedish plenipotentiaries in 1448; and of the death of Sten Sture, the elder, in 1503. In 1612 Gustavus Adolphus caused the inhabitants to destroy their town lest it should fall into the hands of the Danes; but it was rebuilt soon after, and in 1620 received special privileges from the king. At this period a textile industry was started here, the first of any importance in Sweden. It was from the Dutch and German works that the town received this quarter. Ytspå Mad received its name. On the 10th of December 1809 the two plenipotentiaries of Sweden and Denmark concluded peace in the town.

**JONSON, BEN** (1573-1637), English dramatist, was born, probably in Westminster, in the beginning of the year 1573 (or possibly, if he reckoned by the unadopted modern calendar, 1572; see Castelan, p. 4, note 1). By the poet's account his grandfather had been a gentleman who came from Carlisle, and originally, the grandson thought, from Annandale. His arms, “three spindles or rhombi,” are the family device of the Johnstones of Annandale, a fact which confirms his assertion of Border descent. Ben Jonson further related that he was born a month after the death of his father, who, after suffering in estate and person under Queen Mary, had in the end “turned minister.” Two years after the birth of her son the widow married again; she may be supposed to have loved him in a passionate way peculiar to herself, since on one occasion we find her revealing an almost ferocious determination to save his honour at the cost of both his life and her own. Jonson's stepfather was a master bricklayer, living in Hartshorn Lane, near Charing Cross, who provided the stepson with the foundations of a good education. After about the age of seven, the boy was sent to Westminster School at the expense, it is said, of William Camden. Jonson's gratitude for an education to which in truth he owed an almost inestimable debt concentrated itself upon the “most reverend head” of his benefactor, then second and afterwards head master of the famous school, and the firm friend of his pupil in later life.

After reaching the highest form at Westminster, Jonson is stated, but on unsatisfactory evidence, to have proceeded to Cambridge—according to Fuller, to St John's College. (For reasons in support of the tradition that he was a member of St John's College, see J. B. Mullinger, the Eagle, No. xxv.) He says, however, himself that he studied at neither university, but was put to a trade immediately on leaving school. He soon had enough of the trade, which was no doubt his father's bricklaying, for Henslowe in writing to Edward Alleyn of his affair with Gabriel Spenser calls him "bergen[sic] Jonson, bricklayer." Either before or after his marriage—more probably before, as Sir Francis Vere's three English regiments were not removed from the gow Countries till 1592—he spent some time in that country, soldiering, much to his own subsequent advantage, in the days of self-conscious retrospect arrived, but to no further purpose beyond that of seeing something of the world.

Ben Jonson married not later than 1592. The registers of St Martin's Church state that his eldest daughter Maria died in November 1593 when she was, Jonson tells us (epigram 22), only six months old. His eldest son Benjamin died of the plague ten years later (epigram 45). (A younger Benjamin died in 1635.) His wife Jonson characterized to Drummond as "a shrew, but honest;", and for a period (undated) of five years he is known to have lived at Rivington (afterwards Duke of Lennox). Long burnings of oil among his books, and long spells of recreation at the tavern, such as Jonson loved, are not the most favourable accompaniments of family life. But Jonson was no stranger to the tenderest of affections: two at least of the several children whom his wife bore to him he commemorated in touching little tributes of verse; nor in speaking of his lost eldest daughter did he forget "her mother's tears." By the middle of 1597 we come across further documentary evidence of him at home in London in the shape of an entry in Philip Henslowe's diary (July 28) of 3d. "received of Bengemenes Jonson's share." He was therefore by this time—when Shakespeare, his senior by nearly nine years, was already in prosperous circumstances and good esteem—at least a regular member of the acting profession, with a fixed engagement in the lord admiral's company, then performing under Henslowe's management at the Rose. Perhaps he had previously acted at the Curtain (a former house of the lord admiral's men), and "taken mad Jeronimo's part" on a play-wagon in the highway. By 1598, when he took place, shrewd, as was pointed out by Gilford, "probably having found Tho. Kyd's Spanish Tragedy, since in The First Part of Jeronimo Jonson would have had, most inappropriately, to dwell on the 'smallness' of his "bulk." He was at a subsequent date (1601) employed by Henslowe to write up The Spanish Tragedy, and this fact may have given rise to Wood's story of his performance as a stroller (see, however, Fleay, The English Drama, ii. 29, 30).

Jonson's additions, which were not the first changes made in the play, are usually supposed to be those printed with The Spanish Tragedy in the edition of 1602; Charles Lamb's doubts on the subject, which were shared by Coleridge, seem an instance of that subjective kind of criticism which it is unsafe to follow when the external evidence to the contrary is so strong.

According to Aubrey, whose statement must be taken for what it is worth, "Jonson was never a good actor, but an excellent instructor." His physique was certainly not well adapted to the histrionic conditions of his—perhaps of any—day; but, in any case, it was not long before he found his place in the organism of his company. In 1597, as we know from Henslowe, Jonson undertook, which company enjoyed, a larger scale of production, and in the following year he is mentioned by Marston in his Palladis Tamia as one of "the best for tragedy," without any reference to a connexion with his with the other branch of the drama. Whether this was a criticism based on material evidence or an unconscious slip, Ben Jonson in the same year 1598 produced one of the most famous of English comedies, Every Man in his Humour, which was first acted—probably in the earlier part of September—by the lord chamberlain's company at the Curtain. Shakespeare was one of the actors in Jonson's comedy, and it is in the character of Old Knowell in this very play that, according to a bold but ingenious guess, he is represented in the half-length portrait of him in the folio of 1623, beneath which were printed Jonson's lines concerning the picture. Every Man in his Humour was published in 1601; the critical prologue first appears in the folio of 1616, and there are other divergences (see Castelan, appendix A). After the Restoration the play was revived in 1671 by Garrick (who acted Kite) with alterations, and long continued to be known on the stage. It was followed in the same year by The Case is Altered, acted by the children of the company. The authorship of The Case is Altered has often been attributed to the pageant poet, Anthony Munday. This comedy, which was not included in the folio editions, is one of intrigue rather than of character; it contains obvious reminiscences of Slylock and his daughter. The earlier of these two comedies was indisputably successful.

Before the year 1598 was out, however, Jonson found himself in prison and in danger of the gallows. In a duel, fought on the 22nd of September in Hogsden Fields, he had killed an actor of Henslowe's company named Gabriel Spenser. The quarrel with
Henslowe consequent on this event may account for the production of *Every Man in his Humour* by the rival company. In prison Jonson was visited by a Roman Catholic priest, and the result (certainly strange, if Jonson’s paternity is considered) was his conversion to the Church of Rome, to which he adhered for twelve years. Jonson was afterwards a diligent student of divinity; but, though his mind was religious, it is not probable that its natural bias much inclined it to dwell upon creeds and their controversies. He pleaded guilty to the charge brought against him, as the rolls of Middlesex sessions show; but, after a short imprisonment, he was released by benefit of clergy, forfeiting his “goods and chattels,” and being branded on his left thumb. The affair does not seem to have affected his reputation; in 1599 he is found back again at work for Henslowe, receiving together with Dekker, Chettle and “another gentleman,” earnest-money for a tragedy (undiscovered) called *Robert II., King of Scots*. In the same year he brought out through the lord chamberlain’s company (possibly already at the Globe) a newly built or building the elaborate comedy of *Every Man out of his Humour* (quarto 1600; fol. 1616)—a play subsequently presented before Queen Elizabeth. The sunshine of court favour, rarely diffused during her reign in rays otherwise than figuratively golden, was not to bring any material comfort to the most learned of her dramatists, before there was laid upon her the inevitable hand of which his courtly epilogue had besought death to forget the use. Indeed, of *Cynthia’s Revels*, performed by the chapel children in 1600 and printed with the first title of *The Fountain of Self-Love* in 1601, though it was no doubt primarily designed as a compliment to the queen, the most marked result had been to offend two playwrights of note—Dekker, with whom he had formerly worked in company, and who had a healthy if rough grip of his own; and Marston, who was perhaps less dangerous by his strength than by his versatility. According to Jonson, Marston and Marston had begun by the latter attacking his morals, and in the course of it they came to blows, and might have come to worse. In *Cynthia’s Revels*, Dekker is generally held to be satirized as Heden, and Marston as Ananides (Fleay, however, thinks Ananides is Dekker, and Heden Daniel), while the character of Crites most assuredly has some features of Jonson himself. Learning the intention of the two writers whom he had satirized, or at all events of Dekker, to wreak literary vengeance upon him, he anticipated them in *The Poetaster* (1601), again played by the children of the queen’s chapel at the Blackfriars and printed in 1602; Marston and Dekker are here ridiculed respectively as the aristocratic Crispinus and the vulgar Demetrius. The play was completed fifteen weeks after its plot was first conceived. It is not certain to what the proceedings against author and play before the lord chief justice, referred to in the dedication of the edition of 1616, had reference, or when they were instituted. Fleay’s supposition that the “purge,” said in the *Returne from Parnassus* (Pt. II. act iv. sc. iii.) to have been administered by Shakespeare to Jonson in return for Horace’s “pil to the poets” in this piece, consisted of *Troilus and Cressida* is supremely ingenious, but cannot be examined here. As for Dekker, he retaliated on *The Poetaster* by the *Satironomastix, or The Untrussing of the Humorous Poet* (1602). Some more last words were indeed attempted on Jonson’s part, but in the *Apologetic Dialogue added to The Poetaster* in the edition of 1616, though excluded from that of 1602, he says he intends to turn his attention to tragedy. This intention he apparently carried out immediately, for in 1602 he received £10 from Henslowe for a play, entitled *Richard Crookebake*, now lost—unfortunately so, for purposes of comparison in particular, even if it was only, as Fleay conjectures, “an alteration of Marlowe’s play.” According to a statement by Overbury, early in 1603, “Ben Johnson, the poet, now lives upon one Towne end, supported to his height by the poor and masque-writer Aurelian Townsendh. at one time steward to the 1st earl of Salisbury, and scorns the world.” To his other early patron, Lord Aubigny, Jonson dedicated the first of his two extant tragedies, *Sejanus*, produced by the king’s servants at the Globe late in 1603, Shakespeare once more taking a part in the performance. Either on its performance or on its appearing in print in 1605, Jonson was called before the privy council by the Earl of Northampton. But it is open to question whether this was the occasion on which, according to Jonson’s statement to Drummond, Northampton “accused him both of popery and treason” (see Castelain, Appendix C). Though, for one reason or another, unsuccessful at first, the endurance of its reputation is attested by its performance, in a German version by an Englishman, John Michael Girish, at the court of the grandson of James I. at Heidelberg.

When the reign of James I. opened in England and an adulatory loyalty seemed intent on showing that it had not exhausted itself at the feet of Gloriana, Jonson’s well-stored brain and ready pen had their share in devising and executing ingenious variations on the theme “Welcome—since we cannot do without thee!” With extraordinary promptitude his genius, which, far from being ponderous” in its operations, was singularly swift and flexible in adapting itself to the demands made upon it, met the new taste for masques and entertainments—new of course in degree rather than in kind—introduced with the new reign and fostered by both the king and his consort. The pageant which on the 7th of May 1603 bade the king welcome to a capital dissolved in joy was partly of Jonson’s, partly of Dekker’s, designing; and he was able to deepen and diversify the impression by the composition of masques presented to James I. when entertained at houses of the nobility. *The Satyr* (1603) was produced on one of those occasions, Queen Anne’s sojourn at Althorpe, the seat of Sir Robert Spencer, afterwards Lord Althorpe, who seems to have previously bestowed some patronage upon him. *The Penates* followed on May-day 1604 at the house of Sir William Cornwallis at Highgate, and the queen herself with her ladies played his *Masque of Blackness* at Whitehall in 1605. He was soon occasionally employed by the court—itself—already in 1606 in conjunction with Inigo Jones, as designer for the “painting and carpentry”—and thus speedily showed himself master in a species of composition for which, more than any other English poet before Milton, he secured an enduring place in the national poetic literature. Personally, no doubt, he derived considerable material benefit from the new fashion—more especially if his statement to Drummond was anything like correct, that out of his plays (which may be presumed to mean his original plays) he had never gained a couple of hundred pounds.

Good humour seems to have come back with good fortune. Joint employment in *The King’s Entertainment* (1604) had reconciled him with Dekker; and with Marston also, who, in 1604 dedicated to him his *Malcontent*, he was again on pleasant terms. When, therefore, in 1604 Marston and Chapman (who, Jonson told Drummond, was loved of him, and whom he had probably honoured as “Virgil” in *The Poetaster*, and who has, though on doubtful grounds, been supposed to have collaborated in the original *Sejanus*) produced the excellent comedy of *Eastward Ho*, it appears to have contained some contributions by Jonson. At all events, when the authors were arrested on account of one or more passages in the play which were deemed insulting to the Scots, he “voluntarily imprisoned himself” with them. They were soon released, and a banquet at his expense, attended by Camden and Selden, terminated the incident. If Jonson is to be believed, there had been a report that the prisoners were to have their ears and noses cut, and, with reference apparently to this peril, “at the midst of the feast his old mother drank to him, and showed him a paper which she had intended (if the sentence had taken execution) to have mixed in the prison among his drink, which was full of lusty strong poison; and that she was no churl, she told him, she minded first to have drunk of it herself. Strange to say, in 1605 Jonson and Chapman, though the former, as he averred, had so “attempeted” his style as to have “given no cause to any good man of grief,” were both put in prison on account of “a play”; but they appear to have been once more speedily set free, in consequence of a very many and dignified letter addressed by Jonson to the Earl of Salisbury. As to the relations between Chapman and Jonson, illustrated by newly discovered letters, see Bertram Dobell in the *Athenæum*. 
No. 1,852 (March 30, 1901), and the comments of Castelain. He thinks that the play in question, in which both Chapman and Jonson took part, was Sir Giles Geoscope, and that the last imprisonment of the two poets was shortly after the discovery of the Gunpowder Plot. In the mysterious history of the Gunpowder Plot Jonson certainly had some obscure part. On the 7th of November, very soon after the discovery of the conspiracy, the council appears to have sent for him and to have asked him, as a loyal Roman Catholic, to use his good offices in inducing the priests to do something required by the council—one hardly likes to conjecture it to have been some tampering with the secrets of confession. In any case, the negotiations fell through, because the priests declined to come forth out of their hiding-places to be negotiatied with—greatly to the wrath of Ben Jonson, who declares in a letter to Lord Salisbury that “they are all so enveaved in it that it will make 500 gentlemen less of the religion within this week, if they carry their understanding about them.” Jonson himself, however, did not declare his separation from the Church of Rome for five years longer, however much it might have been to his advantage to do so.

His powers as a dramatist were at their height during the earlier half of the reign of James I.; and by the year 1616 he had produced several masques or plays, which have survived to the present day. They include the tragedy of Catiline (acted and printed 1611), which achieved only a doubtful success, and the comedies of Volpone, or the Fox (acted 1605 and printed in 1607 with a dedication “from my house in the Blackfriars”), Epicoene, or the Silent Woman (1609; entered in the Stationers’ Register 1610), the Alchemist (1610; printed in 1610), Bartholomew Fair and The Devil is an Ass (acted respectively in 1614 and 1616). During the same period he produced several masques, usually in connexion with Inigo Jones, with whom, however, he seems to have quarrelled already in this reign, though it is very doubtful whether the architect is really intended to be ridiculed in Bartholomew Fair under the character of Lanthorn Leatherhead. Littlewit, according to Fleay, is Daniel. Among the most attractive of his masques may be mentioned the Masque of Blackness (1608), The Masque of Beauty (1608), and the Masque of Queens (1609), described by Swinburne as “the most splendid of all masques” and as “one of the typically splendid monuments or trophies of English literature.” In 1616 a modest portion of a large part of Jonson’s works was published; and possibly this sign of royal favour descends upon the Marquis of Peterlestone, who was a great admirer of Jonson’s writings, and had purchased the manuscript of several of his works. The publication of the first volume of the folio collected edition of his works (1616), though there are indications that he had contemplated its production, an exceptional task for a playwright of his times to take in hand, as early as 1612.

He had other patrons more bountiful than the Crown, and for a brief space of time (1613) had travelled to France as governor (without apparently much moral authority) to the eldest son of Sir Walter Raleigh, then a state prisoner in the Tower, for whose society Jonson may have gained a liking at the Mermaid Tavern in Cheapside, but for whose personal character he, like so many of his contemporaries, seems to have had but small esteem. By the year 1616 Jonson seems to have made up his mind to cease writing for the stage, where neither his success nor his profits had equalled his merits and expectations. He continued to produce masques and entertainments when called upon; but he was attracted by many other literary pursuits, and had already accomplished enough to furnish plentiful materials for retrospective discourse over pipe or cup. He was already entitled to look upon it as the stage of life where his quick antagonist in earlier wit-combats (if Fuller’s famous description be true) had long since disappeared and had entered on a visit from his comfortable retreat at Stratford. That on the other hand Ben carried his wicked town habits into Warwickshire, and there, together with Drayton, made Shakespeare drink so hard with them as to bring upon himself the fatal fever which ended his days, is a scandal with which we may fairly refuse to load Jonson’s memory. That he had a share in the preparing for the press of the first folio of Shakespeare, or in the composition of its preface, is of course a mere conjecture.

It was in the year 1618 that, like Sir Samuel Johnson a century and a half afterwards, Ben resolved to have a real holiday for once, and about midsummer started for his ancestral country, Scotland. He had (very heroically for a man of his habit) determined to make the journey on foot; and he was speedily followed by John Taylor, the water-poet, who still further handicapped himself by the condition that he would accomplish the pilgrimage without a penny in his pocket. Jonson, who put money in his good friend’s purse when he came up with him at Leith, spent more than a year and a half in the hospitable Lowlands, being solemnly elected a burgess of Edinburgh, and on another occasion entertained at a public banquet there. But the best-remembered hospitality which he enjoyed was that of the learned Scottish poet, William Drummond of Hawthorns, to whom we owe the so-called Conversations. In these famous jottings, the work of no extenuating hand, Jonson lives for us to this day, delivering his censures, tense as they are, in an expansive mood whether of praise or of blame; nor is he at all generously described in the postscript added by his fatigued and at times irritated host as “a great lover and praiser of himself, a contemner and scorner of others.” A poetical account of this journey, “with all the adventures,” was burnt with Jonson’s life.

After his return to England Jonson appears to have resumed his former course of life. Among his noble patrons and patronesses were the countess of Rutland (Sidney’s daughter) and her cousin Lady Wroth; and in 1619 his visits to the counties seats of the nobility were varied by a sojourn at Oxford with Richard Corbet, the poet, at Christ Church, on which occasion he took up the master’s degree granted to him by the university, whether he actually proceeded to the same degree granted to him at Cambridge seems unknown. He confessed about this time that he was or seemed growing “restive,” i.e. lazy, though it was not long before he returned to the occasional composition of masques. The extremely spirited Gipsies Metamorphosed (1621) was thrice presented before the king, who was so pleased with it as to grant to the poet the reversion of the office of master of the revels, besides proposing to confer upon him the honour of knighthood. This honour Jonson (hardly in deference to the memory of Sir Petronel Flash) declined; but there was no reason why he should not gratefully accept the increase of his pension in the same year (1621) to £200—a temporary increase only, inasmuch as it still stood at 100 marks when afterwards augmented by £100.

The close of King James I. ’s reign found the foremost of its poets in anything but a prosperous condition. It would be unjust to hold the Sun, the Dog, the Triple Tun, or the Old Devil with its Apollo club-room, where Ben’s supremacy must by this time have become established, responsible for this result; taverns were the clubs of that day, and a man of letters is not considered lost in our own because he haunts a smoking-room in Pall Mall. Disease had weakened the poet’s strength, and the burning of his library, as his Exercitation upon Vulcan sufficiently shows, must have been no mere transitory trouble to a poor poet and scholar. Moreover he cannot but have felt, from the time of the accession of Charles I. early in 1625 onwards, that the royal patronage would no longer be due in part to anything like intellectual sympathy. He thus thought it best to recur to the sure way of writing for the stage, and in 1625 produced, with no faint heart, but with a very clear anticipation of the comments which would be made upon the reappearance of the “hugge, overgrown play-maker, The Staple of News, a comedy excellent in some respects, but little calculated to become popular. It was not printed till 1631, when its habit of body was not more conducive than were his ways of life to a healthy old age, had a paralytic stroke in 1626, and a second in 1628. In the latter year, on the death of Middleton, the appointment of city chronicler, with a salary of 100 nobles a year, was bestowed upon him. He appears to have considered the duties of this office as purely ornamental; but in 1631 his salary was suspended until he should have presented some fruits of his labours in his place, or—as he more succinctly phrased it—“yesterday the barbarous court of
aldermen have withdrawn their Chandlerly pension for verjuice and mustard, £53, 6s. 8d." After being in 1624 arrested by mistake on a charge of having written certain verses in approval of the assassination of Buckingham, he was soon allowed to return to Westminster, where it would appear from a letter of his "son and contiguous neighbour," James Howell, he was living in 1629, and about this time narrowly escaped another confiscation. In the same year (1629) he once more essayed the stage with the comedy of The New Inn, which was actually, and on its own merits not unjustly, damned on the first performance. It was printed in 1631, "as it was never acted but most negligently played"; and Jonson defended himself against his critics in his spirited Ode to Himself. The epilogue to The New Inn having dwelt not without dignity upon the neglect which the poet had experienced at the hands of "king and queen," King Charles immediately sent the unlucky author a gift of £100, and in response to a further appeal increased his standing salary to the same sum, with the addition of an annual tierce of canary—the poet-laureate's customary royal gift, though this designation of an office, of which Jonson discharged some of what became the ordinary functions, is not mentioned in the warrant dated the 26th March 1634. In 1636, by the king's desire, Jonson's salary as chronicler to the city was again paid. To his later years belong the comedies, The Magnetic Lady (1632) and The Tale of a Tub (1633), both printed in 1640, and some masques, none of which met with great success. The patronage of liberal-minded men, such as the earl, afterwards duke, of Newcastle—by whom he must have been commissioned to write his last two masques Love's Welcome at Welbeck (1633) and Love's Welcome at Bolsover (1634)—and Viscount Falkland, was not wanting, and his was hardly an instance in which the fickleness of time and taste could have allowed a literary veteran to end his career in neglect. He was the acknowledged chief of the English world of letters, both at the festive meetings where he ruled the roast among the younger authors whose pride it was to be "sealed of the tribe of Ben," and by the avowal of grave writers, old or young, not one of whom would have ventured to dispute his titular pre-eminence. Nor was he to the last unconscious of the claims upon him which his latest years brought with it. When, nearly two years after he had lost his surviving son, death came upon the sick old man on the 6th of August 1637, he left behind him an unfinished work of great beauty, the pastoral drama of The Sad Shepherd (printed in 1641). For forty years, he said in the prologue, he had feasted the public; at first he could scarce hit its taste, but patience had at last enabled it to identify itself with the working of his pen.

We are so accustomed to think of Ben Jonson presiding, attentive to his own applause, over a circle of younger followers and admirers that we are apt to forget the hard struggle which he had passed through before gaining the crown now universally acknowledged to be his. Howell records, in the year before Ben's death, that a solemn supper at the poet's own house, where the host had almost spoiled the relish of the feast by vilifying others and magnifying himself, "T. Ca. "(Thomas Carew) buzzed in the writer's ear "that, though Ben had barreled up a great deal of knowledge, yet it seemed he had not read the Ethicis, which, among other precepts of morality, forbid self-commendation." Self-reliance and a friendly contempt for all the best and for good and for evil self-confidence was no doubt the most prominent feature in the character of Ben Jonson. Hence the combative spirit which involved him in so many quarrels in his earlier days, and which jarred so harshly upon the less militant and in some respects more pedantic nature of Drummond. But his quarrels do not appear to have entered deeply into his soul, or indeed usually to have lasted long. 1 He was too exuberant in his vituperations to be bitter, and too outspoken to be malicious. He loved of all things to be called "honest," and there is every reason to suppose that he deserved the epithet. The old superstition that Jonson was filled with malignant envy of the greatest of his fellow-dramatists, and lost no opportunity of giving expression to it, hardly needs notice. Those who consider that Shakespeare was beyond criticism may find blasphemy in the saying of Jonson that Shakespeare "wanted art." Occasional jesting allusions to particular plays of Shakespeare may be found in Jonson, among which should hardly be included the sneer at "mouldy" Pericles in his Ode to Himself. But these things to nothing collectively, and to very little individually; and against them have to be set, not only the many pleasant traditions concerning the long intimacy between the pair, but also the lines prefixed to the first Shakespeare folio, as noble as they are judicious, dedicated by the survivor to "the star of poets," and the adaptation, clearly sympathetic notwithstanding all its buts, de Shakespeare nostrat, in the Discoveries. But if Gifford had rendered no other service to Jonson's fame he must be allowed to have once for all vindicated it from the cruelest asperion which has ever been cast upon it. That in general Ben Jonson was a man of strong likes and dislikes, and was wont to manifest the latter as vehemently as the former, it would be idle to deny. He was at least impartial in his censures, doing himself but freely to Puritan poets like Wither (and supposing him not to have exaggerated his free-spokeness) to princes of his church like Cardinal du Perron. And, if sensitive to attack, he seems to have been impervious to flattery—to judge from the candour with which he condemned the foibles even of so enthusiastic an admirer as Beaumont. The personage that he disliked the most, and openly abused in the roundest terms, was unfortunately one with many heads and a tongue to hiss in each—no other than that "general public" which it was the fundamental mistake of his life to fancy he could "rail into approbation" before he had effectively secured its goodwill. And upon the whole it may be said that the admiration of the few, rather than the favour of the many, has kept green the fame of the most independent among all the masters of an art which, in more senses than one, must please to live.

Jonson's learning and industry, which were alike exceptional, by no means exhausted themselves in furnishing and elaborating materials of his dramatic works. His enemies sneered at him as a translator—a title which the preceding generation was inclined to esteem the most honourable in literature. But his classical scholarship shows itself in other directions besides his translations from the Latin poets (the Ars poetica in particular), in addition to which he appears to have written a version of Barclay's Argenis; it was likewise the basis of his English Grammar, of which nothing but the rough draft remains (the MS. itself having perished in the fire in his library), and in connexion with the subject of which he appears to have pursued other linguistic studies (Howell in 1629 was trying to procure him a Welsh grammar). And its effects are very visible in some of the most pleasing of his non-dramatic poems, which often display that combination of polish and simplicity hardly to be reached—or even to be appreciated—without some measure of classical training.

Exclusively of the few lyrics in Jonson's dramas (which, with the exception of the stately choruses in Catiline, charm, and perhaps may surprise, by their lightness of touch), his non-dramatic works are comprised in the following collections. The book of Epigrams (published in the first folio of 1616) contained, in the poet's own words, the "ripest of his studies." His notion of an epigram was the ancient, not the restricted modern one—still less that of the critic (R. C., the author of The Times' Whistle in whose language, according to Jonson, "witty" was "obscene." On the whole, these epigrams excel more in encomiastic than in satiric touches, while the pathos of one or two epitaphs in the collection is of the truest kind. In the lyrics and epistles contained in the Forest (also in the first folio), Jonson shows greater variety in the poetic styles adopted by him; but the subject of love, which Dryden considered conspicuous by its absence in the author's dramas, is similarly eschewed here. The Underwoods (not published collectively till the second and surreptitious folio) are a miscellaneous series, comprising, together with a few religious and a few amatory poems, a large number of epigrams,
epitaphs, elegies and "odes," including both the tributes to Shakespeare and several to royal and other patrons and friends, besides the *Exposition upon Vulcan,* and the characteristic ode addressed by the poet to himself. To these pieces in verse should be added the *Discoveries—Timber, or Discoveries made upon Men and Matters,* avowedly a commonplace book of aphorisms noted by the poet in his daily readings—thoughts adopted and adapted in more tranquil and perhaps more sober moods than those which gave rise to the outpourings of the *Conversations at Hawthornden*.

As to the critical value of these *Conversations* it is far from being only negative; he knew how to admire as well as how to disdain. For these thoughts, though abounding with biographical as well as general interest, Jonson was almost entirely indebted to ancient writers, or (as has been shown by Professor Spingarn and by Percy Simpson) indebted to the humanists of the Renaissance (see *Modern Language Review*, iv. 3, April 1907).

The extant dramatic works of Ben Jonson fall into three or, if his fragmentary pastoral drama be considered to stand by itself, into four distinct divisions. The tragedies are only two in number—*Sejanus his Fall and Catiline his Conspiracy.* Of these the tragedies are as worth noting, was produced at Shakespeare's theatre, in all probability before the first of Shakespeare's Roman dramas, and still contains a considerable admixture of rhyme in the dialogue. Though perhaps less carefully elaborated in diction than its successor, *Sejanus* is at least equally impressive as a highly wrought dramatic treatment of a complex historic theme. The character of Tiberius adds an element of curious psychological interest on which speculation has never quite exhausted itself and which, in Jonson's day at least, was wanting to the figures of Catiline and his associates. But in both plays the action is powerfully conducted, and the care bestowed by the dramatist upon the great variety of characters introduced cannot, as in some of his comedies, be said to distract the interest of the reader. Both these tragedies are noble works, though the relative popularity of the subject (for conspiracies are in the long run more interesting than camariulas) has perhaps secured the preference to *Catiline.* Yet this play and its predecessor were alike too manifestly intended by their author to court the goodwill of what he calls the "extraordinary" reader. It is difficult to imagine that (with the aid of judicious shortenings) either could altogether miss its effect on the stage; but, while Shakespeare causes us to forget, Jonson seems to wish us to remember, his authorities. The half is often greater than the whole; and Jonson, like all dramatists and, it might be added, all novelists in similar cases, had to pay the penalty incurred by too obvious a desire to underline the learning of the author.

Perversity—or would-be originality—alone could declare Jonson's tragedy preferable to his comedy. Even if the revolution which he created in the comic branch of the drama had been mistaken in its principles or unsatisfactory in its results, it would be clear that the strength of his dramatic genius lay in the power of depicting a great variety of characters, and that in comedy alone he succeeded in finding a wide field for the exercise of this power. There may have been no very profound discovery in the direction which is illustrated in *Every Man in his Humour,* and, as it were, technically elaborated in *Every Man out of his Humour*—that in many men one quality is observable which so possesses them as to draw the whole of their individualities one way, and that this phenomenon "may be truly said to be a humour." The idea of the master quality or tendency was, as has been well observed, a very considerable one for dramatist or novelist. Nor did Jonson (happily) attempt to work out this idea with any excessive scientific consistency as a comic dramatist. But, by refusing to apply the term "humour" (q.e.) to a mere peculiarity or affectation of manners, and restricting its use to actual or implied differences or distinctions of character, he broadened the whole basis of English comedy after his fashion, as Molière at a later date, keeping in closer touch with the common experience of human life, with a lighter hand broadened the basis of French and of modern Western comedy at large. It does not of course follow that Jonson's disciples, the Brome and the Cartwrights, always adequately reproduced the master's conception of "humorous" comedy. Jonson's wide and various reading helped him to diversify the application of his theory, while perhaps at times it led him into too remote illustrations of it. Still, Captain Bobadil and Captain Tucca, Maclente and Fungoso, Volpone and Mosca, and a goodly number of other characters impress themselves permanently upon the memory of those whose attention they have as a matter of course commanded. It is a very fertile criticism to condemn Jonson's characters as a mere series of types of general ideas; on the other hand, it is a very sound criticism to object, with Barry Cornwall, to the "multitude of characters who throw no light upon the story, and lend no interest to it, occupying space that had better have been bestowed upon the principal agents of the plot."

In the construction of plots, as in most other respects, Jonson's at once conscientious and vigorous mind led him in the direction of originality; he depended to a far less degree than the greater part of his contemporaries (Shakespeare with the rest) upon borrowed plots. But either his inventive character was occasionally at fault in this respect, or his devotion to his characters often diverted his attention from a brisk conduct of his plot. Barry Cornwall has directed attention to the essential likeness in the plot of two of Jonson's best comedies, *Volpone* and *The Alchemist,* and another critic, W. Bodham Donne, has dwelt on the difficulty which, in *The Poetaster* and elsewhere, Ben Jonson seems to experience in sustaining the promise of his actions. *The Poetaster* is, however, a play *sub generis,* in which the real business can hardly be said to begin till the last act.

Dryden, when criticizing Ben Jonson's comedies, thought fit, while allowing the old master humour and incontestable "pleasantness," to deny him wit and those ornaments thereof which Quintilian reckons up under the terms *urbana, salsa, faceta* and so forth. Such wit as Dryden has in view is the mere outward fashion or style of the day, the euphism or "sheerwit" or *chic* which is the creed of Fastidious Brisk and of their astute purveyors at any given moment. In this Ben Jonson was no doubt defective; but it would be an error to suppose him, as a comic dramatist, to have maintained towards the world around him the attitude of a philosopher, careless of mere transient externalisms. It is said that the scene of his *Every Man in his Humour* was originally laid near Florence; and his *Volpone,* which is perhaps the darkest social picture ever drawn by him, plays at Venice. Neither locality was ill-chosen, but the real atmosphere of his comedies is that of the native surroundings amongst which they were produced; and Ben Jonson's times live for us in his men and women, his country gulls and town gulls, his alchemists and exorcists, his "skeldrings" captains and whining Puritans, and the whole ragamuffin rout of his *Bartholomew Fair,* the *spectacle* of *Excellence of Elizabethan Low Life.* After he had described the pastimes, fashionable and unfashionable, of his age, its feeble superstitions and its flagging naughtiness, its vapouring affectations and its lying eftrenories, with an odour as of "divine tabacco" pervading the whole, little might seem to be left to describe for his "sons" and successors. Enough, however, remained; only that his followers speedily again threw manners and "humours" into an undistinguishable medley.

The gift which both in his art and in his life Jonson lacked was that of exercising the influence or creating the effects which he wished to exercise or create without the appearance of consciousness. Concealment never crept over his efforts, and he scorned insinuation. Instead of this, influenced no doubt by the example of the free relations between author and public permitted by Attic comedy, he resorted again and again, from *Every Man out of his Humour to The Magnetic Lady,* to introductions and commentary intermezzi and appendices, which, though occasionally effective by the excellence of their execution, are
to be regretted as introducing into his dramas an exotic and often vexatious element. A man of letters to the very core, he never quite understood that there is and ought to be a wide difference of methods between the world of letters and the world of the theatre.

The richness and versatility of Jonson's genius will never be fully appreciated by those who fail to acquaint themselves with what is preserved to us of his "masques" and cognate entertainments. He was conscious enough of his success in this direction—"next himself," he said, "only Fletcher and Chapman could write a masque." He introduced, or at least established, the ingenious innovation of the anti-masque, which Schlegel has described, as a species of "parody added by the poet to his device, and usually prefixed to the serious entry, and which accordingly supplies a grotesque antidote to the often extravagantly imaginative main conception. Jonson's learning, creative power and humorous ingenuity—combined, it should not be forgotten, with a genuine literary gift—all found abundant opportunities for displaying themselves in these productions. Though a growth of foreign origin, the masque by him thoroughly domesticated in the high places of English literature. He lived long enough to see the species produce its poetic masterpiece in _Comus_.

The _Sad Shepherd_, of which Jonson left behind him three acts and a prologue, is distinguished among English pastoral dramas by its freshness of tone; it breathes something of the spirit of the greenwood, and is not unnatural even in its supernatural element. While this piece, with its charming love-scenes between Robin Hood and Maid Marion, remains a fragment, another pastoral by Jonson, the _May Lord_ (which F. G. Fleay and J. A. Symonds sought to identify with _The Sad Shepherd_; see, however, W. V. Greg in introduction to the Louvain reprint), has been lost, and a third, of which Loch Loamond was intended to be the scene, probably remained unfinished.

Though Ben Jonson never altogether recognized the truth of the maxim that the dramatic art has properly speaking no didactic purpose, his long and laborious life was not wasted upon a barren endeavour. In tragedy he added two new and uncommon merit to our dramatic literature. In comedy his aim was higher, his effort more sustained, and his success more solid than were those of any of his fellows. In the subsidiary and hybrid species of the masque, he helped to open a new and attractive though undoubtedly devious path in the field of dramatic literature. His intellectual endowments surpassed those of most of the great English dramatists in richness and breadth; and in energy of application he probably left them all behind. Inferior to more than one of his fellow-dramatists in the power of imaginative sympathy, he was first among the Elizabethans in the power of observation; and there is point in Barrett Wendell's paradox, that as a dramatist he was not really a poet but a painter. Yet it is less by these gifts, or even by his unexcelled capacity for hard work, than by the true ring of manliness that he will always remain distinguished among his peers.

Jonson was buried on the north side of the nave in Westminster Abbey, and the inscription, "O Rare Ben Jonson," was cut in the slab over his grave. In the beginning of the 18th century a portrait bust was put up to his memory in the Poets' Corner by Harley, earl of Oxford. Of Honthorst's portrait of Jonson at Knole Park there is a copy in the National Portrait Gallery; another was engraved by W. Marshall for the 1640 edition of his _Poems_.

**BIBLIOGRAPHY.**—The date of the first folio volume of Jonson's _Works_ (of which title his novel but characteristic use in applying it to plays was at the time much ridiculed) has already been mentioned, pertaining to a publication in 1598. _Works_ was reprinted in a single folio volume in 1612, in which _The New Inn_ and _The Case is Altered_ were included for the first time, and again in 6 vols. 8vo in 1715. Peter Whalley's edition in 7 vols., with a life, appeared in 1756, but was superseded in 1816 by William Gifford's, in 9 vols. (of which the first includes a biographical memoir, and the famous essay on the "Proofs of Ben Jonson's Malignity, from the Commentators on Shakespeare"). A new edition of Gifford's was published in 9 vols. in 1873 by Colonel F. Cunningham, as well as a cheap reprint in 12 vols. in 1876. Both contain the _Conversations upon Jonson_ and Edmund Malone, which were first printed in full by David Laing in the _Shakespeare Society's Publications_ (1842) and the _Jonsonus Virtus_, a collection (unparalleled in number and variety of authors) of poetical tributes, to which the six most characteristically Jonsonian Jerome and his friends and admirers. There is also a single-volume edition, with a very readable memoir, by Barry Cornwall (1838). An edition of Ben Jonson's works from the original texts was recently undertaken by J. H. Collier and Percy Simpson. For his plays, edited for the _"Mermaid"_ series in 1893–1895 by B. Nicholson, and published with an introduction by C. H. Herford, was reissued in 1904. W. W. Bang in his _Materialien zur Kunde des alten englischen Dramas_ has reprinted from the _Theatre_ of portions of Jonson's plays which are contained in it (Louvain, 1905–1906). Every Man in his Humour and Every Man out of his Humour have been edited for the series of the _same name_ (16 and 17, 1905 and 1907) by W. W. Bang and W. W. Greg. _Every Man in his Humour_ has also been edited, with a brief biographical as well as special introduction, to which the present sketch owes some details, by H. B. Wheatley (1877). Some valuable editions of plays by Ben Jonson have been recently published by American scholars in the _male Studies in English_, edited by A. S. Cook—_The Poetaster_, ed. H. P. Hackett (1903); _W. W. Bang and W. W. Greg, _

---

**JOPLIN,** a city of Jasper county, Missouri, U.S.A., on Joplin creek, about 140 m. S. of Kansas City. Pop. (1890), 9943; (1900), 26,023; of whom 893 were foreign-born and 773 were negroes; (1910 census) 32,073. It is served by the Missouri Pacific, the St Louis & San Francisco, the Missouri, Kansas & Texas, and the Kansas City Southern railways, and by interurban electric lines. The city is within the court-house, a United States government building, a Carnegie library, and a large auditorium. Joplin is the trade centre of a rich agricultural and fruit-growing district, but its growth has been chiefly due to its situation in one of the most productive zinc and lead regions in the country, for which it is the commercial centre. In 1906 the value of zinc ore shipments from Missouri-Kansas (or Joplin) district was $12,074,105, and of shipments of lead ore $3,048,558. The value of Joplin's factory product in 1905 was $3,006,203, an increase of 29.3% since 1900. Natural gas, piped from the Kansas fields, is used for light and power, and electricity for commercial lighting and power is derived from plants on Spring River, near Vark, Kansas, and on Shoal Creek. The municipality owns its electric-lighting plant; the water-works are under private management. The first settlement in the neighbourhood was made in 1853. In 1871 Joplin was laid out and incorporated as a town; in 1872 it and a rival town on the other side of Joplin creek were united under the name Union City; in 1873 Union City was chartered as a city...
under the name Joplin; and in 1888 Joplin was chartered as a city of the third class. The city derives its name from the creek, which was named in honour of the Rev. Harris C. Joplin (c. 1824–1847), a native of Tennessee.

**JOPPA,** less correctly **Jaffa** (Arab. *Yafa*), a seaport on the coast of Palestine. It is of great antiquity, being mentioned in the tribute lists of Tethmosis (Thothmes) III.; but as it never was in the territory of the pre-exilic Israelites it was to them a place of no importance. Its ascription to the tribe of Dan (Josh. xix. 46) is purely theoretical. According to the authors of Chronicles (2 Chron. ii. 16), Ezra (iii. 7) and Jonah (i. 3) it was a seaport for importation of the Lebanon timber floated down the coasts or for ships plying even to distant Tarshish. About 1458 B.C. it was captured by the Syrians by Jonathan Maccabaeus (1 Macc. x. 75) and later it was retaken and garrisoned by Simon his brother (xii. 33, xiii. 11). It was restored to the Syrians by Pompey (Jos., Ant. xiv. 4, 4) but again given back to the Jews (ib. xiv. 10, 6) with an exemption from tax. St Peter for a while lodged at Joppa, where he restored the benevolent widow Tabitha to life, and had the vision which taught him the universality of the plan of Christianity.

The town (xvi. 2) who makes the strange mistake of saying that Jerusalem is visible from Joppa, the place was a resort of pirates. It was destroyed by Vespasian in the Jewish War (68). Tradition connects the story of Andromeda and the sea-monster with the sea-coast of Joppa, and in early times her chains were shown as well as the skeleton of the monster itself (Jos. Wars, iii. 9, 3). The site seems to have been shown even to some medieval pilgrims, and curious traces of it have been detected in modern Moslem legends.

In the 5th and 11th centuries we hear from time to time of bishops of Joppa, under the metropolis of Jerusalem. In 1120 the district was captured by the knights of St John, but lost to Saladin in 1187. Richard Coeur de Lion retook it in 1191, but it was finally retaken by Malek el 'Adil in 1196. It languished for a time; in the 16th century it was an almost uninhabited ruin; but towards the end of the 17th century it began anew to develop as a seaport. In 1796 it was stormed by Napoleon; the fortifications were repaired and strengthened by the British.

The modern town of Joppa derives its importance, first, as a seaport for Jerusalem and the whole of Southern Palestine, and secondly as a centre of the fruit-growing industry. During the latter part of the 19th century it greatly increased in size. The old city walls have been entirely removed. Its population is about 35,000 (Moslems 23,000, Christians 5000, Jews 7000; with the Christians are included the “Templars,” a semi-religious, semi-agricultural German colony of about 320 souls). The town, which rises over a rounded hillock on the coast, about 100 ft. high, has a very picturesque appearance from the sea. The harbour (so-called) is one of the worst existing, being simply a natural breakwater formed by a ledge of reefs, safe enough for small Oriental craft, but very dangerous for large vessels, which can only make use of the seaport in calm weather; these never come nearer than about a mile from the shore. A railway and a bad road lead connect Joppa with Jerusalem. The water of Joppa 1864–1874), a native of Joppa, many of which have a brackish taste. The export trade of the town consists of soap of olive oil, sesame, barley, water melons, wine and especially oranges (commonly known as Jaffa oranges), grown in the famous and ever-increasing gardens that lie north and east of the town. The chief imports are timber, cotton and other textile goods, tiles, iron, rice, coffee, sugar and petroleum. The value of the exports in 1900 was estimated at £264,950, the imports £382,405. Over 10,000 pilgrims, chiefly Russians, and some three or four thousand tourists land annually at Joppa.

The town is the seat of a kaimakam or lieutenant-governor, subordinate to the governor of Jerusalem, and contains vice-consulates of Great Britain, France, Germany, America and other powers. There are Latin, Greek, Armenian and Coptic monasteries; and hospitals and schools under British, French and German auspices.

**JORDAENS, Jacob** (1593–1678). Flemish painter, was born and died at Antwerp. He studied, like Rubens, under Adam van Noort, and his marriage with his master's daughter in 1616, the year after his admission to the guild of painters, prevented him from visiting Rome. He was forced to content himself with studying such examples of the Italian masters as he found at home; but a far more potent influence was exerted upon his style by Rubens, who employed him sometimes to reproduce small sketches in large. Jordaens is second to Rubens alone in their special department of the Flemish school. In both there is the same warmth of colour, truth to nature, mastery of chiaroscuro and energy of expression; but Jordaens is wanting in dignity of conception, and is inferior in choice of forms, in the character of his heads, and in correctness of drawing. Not seldom he sins against good taste, and in some of his humorous pieces the coarseness is only atoned for by the animation. Of these last he seems in some cases to have painted several replicas. He employed his pencil also in biblical, mythological, historical and allegorical subjects, and is well-known as a portrait painter. He also etched some plates.

See the elaborate work on the painter, by Max Rooses (1908).

**JORDAN, Camille** (1771–1821), French politician, was born in Lyons on the 11th of January 1771 of a well-to-do mercantile family. He was educated in Lyons, and from an early age was noted for his eloquence. He formed acquaintances with other French exiles and with prominent British statesmen, and imbibed a lasting admiration for the English Constitution. In 1796 he returned to France, and next year he was sent by Lyons as a deputy to the Council of Five Hundred. There his eloquence won him consideration. He earnestly supported what he felt to be true freedom, especially in matters of religious worship, though the energetic appeal on behalf of church bells in his Rapport sur la liberté des cultes procured him the sobriquet of Jordan-Cloche. Proscribed at the coup d'état of the 18th Fructidor (4th of September 1797) he escaped to Basel. Thence he went to Germany, where he met Goethe. Back again in France by 1800, he boldly published in 1802 his *Vrai sens du vote national pour le canton d'Étive,* in which he exposed the ambitious schemes of Bonaparte. He was unmoored, however, and during the First Empire lived at Lyons, at one time a regency, and at another an exile. He won a commission in the navy under Louis XVIII, and from 1816 he was engrossed producing for the Lyons academy occasional papers on the *Influence réciproque de l'éloquence sur la Révolution et de la Révolution sur l'éloquence; Études sur Klostock, &c.* At the restoration in 1814 he again emerged into public life. By Louis XVIII. he was ennobled and named a councillor of state; and from 1816 he sat in the chamber of deputies as representative of Ain. At first he supported the ministry, but when they began to show signs of reaction he separated from them, and gradually came to be the head of the constitutional opposition. His speeches in the chamber were always eloquent and powerful. Though warned by failing health to resign, Camille Jordan remained at his post till his death at Paris, on the 19th of May 1821.

To his pen we owe *Lettre à M. Lamouret,* (1791); *Histoire de la conversion d'une dame Parisienne* (1792); *La Loi et la religion vénérées* (1793); *Adresse à ses commissaires sur la révolution du 4 Septembre 1797* (1797); *Sur les troubles de Lyon* (1818); *La Session de 1817* (1818). His *Discours* were collected in 1818. The "Fragmentsois," and translations from the German, were published in several volumes. There are further details vol. x. of the *Revue encyclopédique;* a paper on Jordan and Madame de Stael, by C. A. Sainte-Beuve, in the *Revue des deux mondes* for March 1868 and R. Boubée, "Camille Jordan à Weimar," in the *Correspondant* (1901), ccv. 718–738 and 948–970.

**JORDAN, Dorothy** (1762–1816), Irish actress, was born near Waterford, Ireland, in 1762. Her mother, Grace Phillips, at one time known as Mrs Frances, was a Dublin actress. Her father, whose name was Bland, was according to one account an army captain, but more probably a stage hand. Dorothy Jordan made her first appearance on the stage in 1777 in Dublin.
as Phoebe in As You Like It. After acting elsewhere in Ireland she appeared in 1782 at Leeds, and subsequently at other Yorkshire towns, in a variety of parts, including Lady Teazle. It was at this time that she began calling herself Mrs Jordan. In 1785 she made her first London appearance at Drury Lane as Peggy in A Country Girl. Before the end of her first season she had become an established public favourite, her acting in comedy being declared second only to that of Kitty Clive. Her engagement at Drury Lane lasted till 1809, and she played a large variety of parts. But gradually it came to be recognized that her special talent lay in comedy, her Lady Teazle, Rosalind and Imogen being specially liked, and such "breeches" parts as William in Rosina. During the rebuilding of Drury Lane she played at the Haymarket; she transferred her services in 1811 to Covent Garden. Here, in 1814, she made her last appearance on the London stage, and the following year, at Margate, retired altogether. Mrs Jordan's private life was one of the scandals of the period. She had a daughter by her first manager, in Ireland, and four children by Sir Richard Ford, whose name she bore for some years. In 1790 she became the mistress of the duke of Clarence (afterwards William IV.), and bore him ten children, who were ennobled under the name of Fitz Clarence, the eldest being created earl of Munster. In 1811 they separated by mutual consent, Mrs Jordan being granted a liberal allowance. In 1815 she went abroad. According to one story she was in danger of imprisonment for debt. If so, the debt must have been incurred on behalf of others—probably her relations, who appear to have been continually borrowing from her—for her own personal debts were very much more than covered by her savings. She is generally understood to have died at St Cloud, near Paris, on the 3rd of July 1816, but the story that under an assumed name she lived for seven years after that date in England finds no credence.
